U.S. butter production was 120 million pounds in March, 12 percent below March 1989 but 4 percent above February 1990.

American-type cheese production totaled 255 million pounds, 9 percent above March 1989 and 6 percent above February 1990. Total cheese output (excluding cottage cheese) was 530 million pounds, 7 percent above March 1989 and 12 percent above February 1990.

Creamed cottage cheese production was 48.8 million pounds, 7 percent below March 1989 but was 11 percent above February 1990. Lowfat cottage cheese production was 27.4 million pounds, 1 percent above March 1989 and 13 percent above February 1990.

Canned evaporated and condensed whole milk, at 53.9 million pounds was 3 percent above March 1989 and 17 percent above February 1990.

Frozen desserts: (comparisons with March 1989) Ice cream (hard) 68.6 million gallons, down 4 percent. Ice milk--31.2 million gallons, down 2 percent. Sherbert (hard)--4.05 million gallons, down 11 percent.

MONTANA PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition was rated good to excellent (80 percent of normal) on May 1--7 points higher than last year, and 13 points higher than 1988.

Grass growth was slow to start in the entire eastern part of the state due to dry soils. Rains the end of April improved growth in all but the northeast which remains critically dry.

Cattle and calves moved to summer ranges on May 1 were near 20 percent--about normal for that date.

MONTANA, MAY 1, 1990
PASTURE & RANGE FEED CONDITION
By District as a Percent of Normal

District	1988	1989	1990

Central	74	72	89
Southwest	90	74	78
S. Central	75	80	91
Southeast	52	54	76
Montana	67	73	80

AG PRICES RECEIVED

Montana farm prices at mid-April were slightly higher than average for March, mainly because of increases in cattle and calf prices.

The index of prices received by Montana farmers for all farm products the middle of April was 184 compared with the March index of 181. The all crops index, at 150, was unchanged while the livestock and products index was 214, up 4 points from March.

Price increases were noted for winter wheat, durum wheat, barley, alfalfa hay, steers and heifers, calves, and hogs. Prices went down for spring wheat, oats, cows, sheep, lambs, milk, eggs, and wool.

Nationally, the April all farm products index of prices received increased 1 point from March to 151 percent of its January-December 1977 average. Increases in the prices of oranges, corn, potatoes, and cattle were partially offset by lower prices for tomatoes, milk, eggs, and broilers.

The index was 3 points above a year ago. Higher hog, cattle, and milk prices were the major contributors to the increases over a year ago. Tomatoes, wheat, and soybeans were partially offsetting.

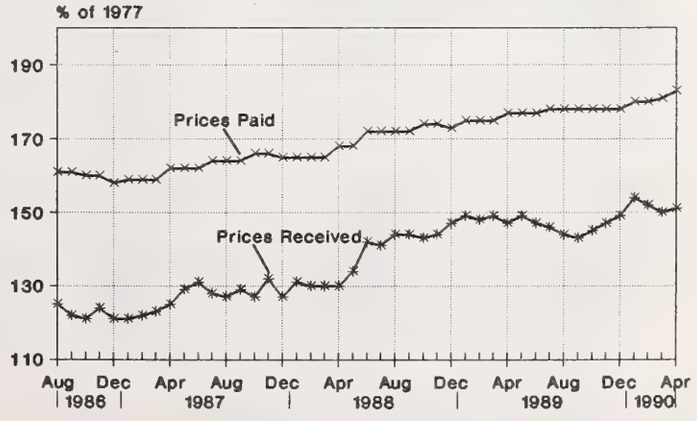
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED

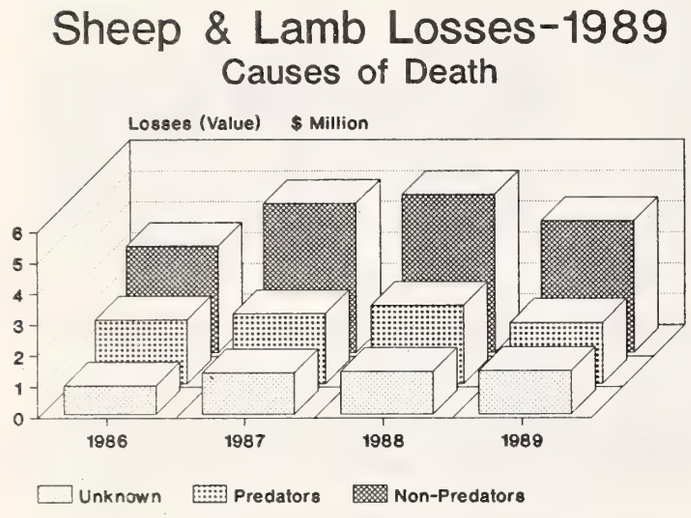


MONTANA SHEEP AND LAMB LOSSES--1989

Montana sheepmen lost 141,000 sheep and lambs to weather, predators, disease and other causes in 1989. Total loss was 6 percent lower than 1988 and represented a value of $7.6 million. The 1989 dollar loss was 15 percent less than the previous year.

Predators caused a $2.0 million loss, non-predator factors caused $4.3 million and unknown causes claimed $1.4 million. Coyote predation remained the single largest cause of death with a $1.5 million loss. This is 20 percent of total value of death losses.

Lambs killed by all predators amounted to 28,200, down 16 percent from last year. Sheep killed by predators totaled 7,700, down 19 percent. Lambs lost to weather, disease, and other non-predator causes totaled 52,500, up 3 percent from 1988. Sheep losses to non-predator factors totaled 28,300, 17 percent less than last year. Lambs lost to unknown causes were 17,300, up 11 percent, and sheep were 7,000, up 6 percent from last year.



MAY 1 HAY STOCKS

Hay stocks on **Montana** farms as of May 1, 1990 were 894 thousand tons, nearly 3 times May 1, 1989 stocks, but 24 percent below the May 1, 1988 stocks level. This year's stocks were 20 percent of 1989 production.

Nationally, hay stocks on farms totaled 27.1 million tons on May 1, 1990. This is 55 percent more than on hand a year earlier but nearly the same as the holdings on May 1, 1988. The low stocks of a year ago reflected the small drought reduced crop of 1988 while the 1989 hay crop was of a more usual size. Disappearance of hay during the December 1, 1989 - May 1, 1990 period totaled 74.1 million tons. This compares with 72.8 million tons during the same period a year earlier.

1989 MEAT ANIMAL PRODUCTION, DISPOSITION, AND INCOME

Montana's total marketing of meat animals in 1989 was 1,217 million pounds, 8 percent more than the 1,124 marketed during 1988. Cash receipts from these marketings, at $824.5 million, increased 11 percent from a year earlier.

Total **U.S.** marketings of meat animals decreased slightly during 1989 as decreased cattle marketings were only partially offset by larger hog and sheep marketings. Higher prices were received for cattle and hogs while sheep prices declined resulting in total cash receipts increasing to $46.6 billion, up 2 percent from 1988.

The percentage breakdown of contributions to total **U.S.** cash receipts from marketings of meat animals by species in 1989 were: cattle and calves, 79 percent; hogs and pigs, 20 percent; sheep and lambs, 1 percent.

Production of meat animals during 1989 totaled 62.7 billion pounds, down fractionally from the 1988 production of 63.0 billion pounds. The value of meat animal production was $37.6 billion in 1989 compared with $36.8 billion in 1988.

[1] Winter Wheat Reseeded to Spring Wheat.

MARCH RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in March 1990. This production is up 18 percent from last month and is up 16 percent from March 1989.

The number of cattle slaughtered, at 1,400 head, is up 200 head from last year. Average live weight of cattle slaughtered, at 1,093 pounds, was up 7 percent from a year ago. Hog slaughter, at 2,000 head, is down 100 head from March 1989. Average liveweight was 233 pounds, down 1 percent from last year.

Commercial red meat production for the **United States** in March 1990 totaled 3.26 billion pounds, down 2 percent from last year. January-March red meat production, at 9.58 billion pounds, was down slightly from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down fractionally; veal, down 13; pork, up fractionally; lamb and mutton, up 6. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

JANUARY-MARCH MILK PRODUCTION

Milk cows on **Montana** farms produced 81 million pounds of milk during the January-March quarter of 1990. This production is up 1 percent from the comparable period in 1989. The number of milk cows on farms for the quarter, at 24,000 head, was unchanged from a year ago. Milk production per cow was 3,390 pounds, up 1 percent from last year.

Montana dairymen fed 15.5 pounds of grain concentrates per milk cow daily for the quarter, up slightly from last year. The value per hundredweight of grain and concentrates fed to milk cows was $7.30, down a nickel from a year ago.

The quarterly production of milk for the **U.S.** was 36.9 billion pounds, 1 percent above January-March 1989. The average number of milk cows in the U.S. during the January-March quarter was 10.1 million head, 31 thousand head less than January-March 1989.

Grain and other concentrates fed to milk cows on April 1, 1990, averaged 18.1 pounds, 0.4 pounds more than on April 1, 1989. The value of grain and other concentrates fed to cows on April 1, 1990, averaged $8.00 per hundredweight, $0.36 per hundredweight less than the April 1, 1989 value.

U.S. MARCH EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.83 billion during March 1990, up 1 percent from the 5.76 billion produced a year ago. Production included 5.05 billion for table eggs, 707 million for broiler-type hatching eggs, and 75.0 million for egg-type hatching eggs. The total number of layers during March averaged 272 million, up 1 percent from a year ago. March egg production per 100 layers was 2,146 eggs, compared with 2,137 in March 1989.

All layers in the U.S. on April 1, 1990 totaled 272 million, up 1 percent from a year ago. The 272 million layers consisted of 231 million layers producing table or commercial-type eggs, 38.0 million layers producing broiler-type hatching eggs and 3.32 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1990 averaged 69.9 eggs per 100 layers, up 1 percent from last year's 69.5 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.87 billion eggs during March, up 1 percent from the 4.81 billion produced a year ago. The number of layers during March averaged 227 million, up 1 percent from the 225 million a year ago.

Data for the 30 quarterly states were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 83 percent of the U.S. egg production during the 3-month period, December 1989 through February 1990.

MONTANA POTATO STOCKS DOWN 8 PERCENT

There were 1.1 million cwt of potatoes stored in **Montana** on April 1, down from 1.2 million cwt on April 1, 1989. April 1 stocks represent 49 percent of 1989 production.

U.S. potato stocks on April 1, 1990 totaled 83.5 million cwt, down 10 percent from last year and 21 percent below two years ago. Current stocks account for 26 percent of fall production in the 15 storage States compared with 30 percent a year ago. Seasonal disappearance from harvest to April 1 is a record high 233 million cwt this year, up 9 percent from last year. Major processors (except chips) used a record 109 million cwt to date, up 14 percent from a year ago.

Six Western States held 63.9 million cwt of potatoes in storage on April 1, 1990, down 13 percent from last year and 19 percent below two years ago. Idaho stocks of 35.0 million cwt are off 14 percent from last year, and made up over half the Western total. Washington stocks are down 19 percent and Oregon is 6 percent short of last year. California storages are off 22 percent from a year ago. Of the Western States, only Colorado shows more potatoes in storage than last year, but only by 1 percent.

CATTLE ON FEED UP 1 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed April 1, 1990, for slaughter market in the 13 quarterly States totaled 10.1 million head, up 1 percent from April 1, 1989 and 4 percent above 1988. This is the highest April cattle on feed number since 1978.

The cattle on feed inventory included 6.44 million steers and steer calves, 2 percent above last year and 2 percent above 1988. This group represented 64 percent of the total April number on feed, compared to 64 percent last year and 65 percent in 1988. Heifers and heifer calves accounted for 3.56 million, 1 percent above last year and 6 percent above 1988.

Placements of cattle and calves on feed during the January-March 1990 quarter totaled 6.09 million, down 2 percent from 1989 but 5 percent above 1988. **Other disappearance** of 385 thousand head leaves **net placements** at 5.70 million.

Marketings of fed cattle for slaughter during January-March totaled 5.58 million, 1 percent below 1989 and 5 percent below the same period in 1988.

Cattle feeders **expect to market** 6.09 million head during the April-June quarter of 1990. This would be up 1 percent above the second quarter marketings in 1989 and 4 percent above 1988.

MONTANA FARMLAND UP 16 PERCENT

The latest information on farmland values has just been released by the Department of Agriculture. The report held some good news for Montana farmers and ranchers. The value of all farmland and buildings rose a sharp 16 percent from 1989 to 1990. The average land value was $243 per acre, up from $209 a year ago, but still below the $276 recorded on sales in 1984. Land values in Montana dropped sharply from 1984 to 1987 then bottomed out and started to recover.

U.S. farmland prices increased a modest 4 percent average $693 per acre. This was the third straight year land prices have increased, but prices are still 16 percent below the record high of $823 per acre set in 1982.

There was also good news about farm debt. Total farm debt at the end of 1989 was 29 percent below the high level recorded in 1983. Interest rates held steady.

Prospective Plantings
Manufactured Dairy Products
Grain Stocks
Ag Prices
Hogs & Pigs

PROSPECTIVE PLANTINGS FOR 1990

Montana farmers, intend to plant 7.9 million acres in 1990, about 6 percent less than last year. Although last year's total planted acreage was greater, considerable winter wheat was abandoned and later reseeded to spring wheat. Farmers were surveyed on March 1 for their planting intentions. Their plans are preliminary, depending on changes in weather, market conditions, etc.

The state's all wheat acreage is expected to be 5.85 million acres. Winter wheat seeded last fall is up 8 percent from a year ago, at 2.7 million acres. Hard spring wheat, at 2.9 million acres, is expected to be down 17 percent. Durum is down 26 percent with 250,000 acres planted.

Barley planted acreage will be holding steady at 1.7 million acres. Oats planting intentions are down 20 percent, at 200,000 acres, and they expect to harvest 120,000 acres for grain compared with 145,000 acres in 1989. Sugar beet intended plantings, at 56,000 acres, are up 6 percent; dry beans, at 8,500 acres, are up 42 percent, and corn, at 82,000 acres, is up 3 percent. Farmers expect to harvest 2.4 million acres of all hay which reflects an increase of 2 percent.

U.S. all wheat area planted for 1990 is expected to total 77.6 million acres, a 1 percent increase from 1989. Winter wheat seeded area for 1990 is now placed at 57.2 million acres, up 4 percent from last season. This current estimate is nearly the same as the seedings published January 11, 1990.

Durum wheat seeded area for 1990 is expected to total 3.35 million acres, down 12 percent from last year. Other spring wheat acreage planted is expected to total 17.0 million acres this year, down 4 percent from 1989. Intentions are for increased acreage in Minnesota and the Dakotas, however, reduced planting intentions in Montana and Washington are more than off-setting. Producers intend to plant 8.89 million acres of barley in 1990, down 3 percent from the 9.18 million acres planted last year.

Planting intentions, grain stocks, and hog estimates in this issue of the Reporter are the result of surveying approximately 1,600 Montana farmers and ranchers during March. Names were selected on a statistical probability basis. For those operators who responded to the survey a SPECIAL THANKS. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

WHEAT SPROUT DAMAGE REPORT

The National Agricultural Statistics Service conducted a special survey in Idaho, Montana, Oregon, and Washington to determine the extent of sprout damage in wheat stocks held on farms March 1. The survey was conducted at the request of producer organizations in these four states.

For the four states combined, 6.9 percent of the wheat stocks held on farms March 1 was reported by producers to have sprout damage. The reported percentages of March 1 wheat stocks on farms with sprout damage by state were as follows: Idaho, 1 percent; Montana, 8 percent; Oregon, 2 percent, and Washington, 10 percent.

Since the percentage of sprout damage is a small portion of all wheat stored, relative sampling variations can be quite large. Therefore, data users are cautioned to use these percentages as only a general indication of the quantity of sprout damaged wheat on farms March 1.

MARCH AG PRICES RECEIVED

The March 1990 index of prices received by Montana farmers and ranchers was down 1 point from the February index and down 7 points from the same month a year ago.

The all crops index fell off 5 points and is 31 points below last year's March index. The livestock and products index moved up 1 point from February to March and is 15 points above the previous year. Individual commodity prices changed from February to March as follows: Winter wheat, down 20 cents; spring wheat, down 12 cents; oats, down 12 cents; durum, up 1 cent; and barley, up 3 cents per bushel. Alfalfa hay was down $3 per ton and all other hay was down $6 per ton.

On the livestock side, prices were higher for all categories except sheep. Milk was down $1.05 per cwt, and wool was down 17 cents per pound.

The March all farm products index of prices received by U.S. farmers increased 2 points from February to 154 percent of its January-December 1977 average. Increases in the prices of hogs, eggs, cattle, and potatoes were partially offset by lower prices for tomatoes, milk, and wheat. The index was 4 points above a year ago. Higher hog, tomato, cattle, and milk prices were the major contributors to the increase over a year ago. Decreases in the prices of corn, soybeans, and wheat were partially offsetting.

Hog and cattle prices moved up sharply from February while the all milk price declined for the second consecutive month. Tomatoes declined sharply from February but continuing short supplies kept prices well above normal for this time of year. Prices of feed grains, food grains, and oilseeds were mixed. Corn and soybean prices increased slightly while the wheat price was down. Hay prices showed a moderate increase from February.

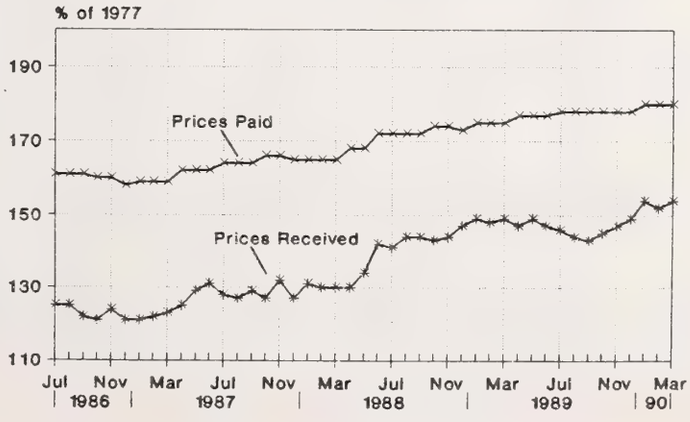
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



U.S. HOG INVENTORY DOWN 2 PERCENT

U.S. Inventory of all hogs and pigs was estimated at 51.7 million head on March 1, 1990.

-- Breeding hog inventory, at 6.81 million, was 4 percent below last year.
-- Market hog inventory, at 44.9 million, was 2 percent below a year ago.

The U.S. pig crop for December 1989-February 1990 totaled 20.3 million head, 4 percent below the comparable period in both 1989 and 1988. A total of 2.59 million sows farrowed during December 1989-February 1990, 4 percent below a year earlier and 5 percent below the same period two years ago. The litter size during this period averaged 7.83, a new record high, compared to the last two years of 7.77 and 7.73.

U.S. hog producers intend to have 3.19 million sows farrow during the March-May 1990 period, 3 percent below the actual farrowings for the same period a year ago. Farrowing intentions for the June-August 1990 period of 2.91 million sows, are 3 percent below the actual farrowings a year earlier.

FEBRUARY U.S. MANUFACTURED DAIRY

Butter production was 116 million pounds in February, 7 percent below February 1989 and 9 percent below January 1990. Total cheese output (excluding cottage cheese) was 472 million pounds, 12 percent above February 1989 but 2 percent below January 1990.

Creamed cottage cheese production was 43.9 million pounds 6 percent below February 1989 but virtually unchanged from January 1990. Lowfat cottage cheese production was 24.4 million pounds, 1 percent above February 1989 and 2 percent above January 1990.

Frozen desserts: (comparisons with February 1989) Ice cream (hard)--56.3 million gallons, down 5 percent. Ice milk--25.8 million gallons, up 7 percent. Sherbet (hard)--3.28 million gallons, down 5 percent.

CATTLE ON FEED IN 7 STATES UP 5 PERCENT FROM LAST YEAR

Cattle and calves on feed March 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 8.32 million head, up 5 percent from a year ago and 5 percent above March 1, 1988. This is the largest March on feed total in the 7 States since 1974.

Marketings of fed cattle during February totaled 1.52 million, down 1 percent from last year and 2 percent below two years ago.

Placements of cattle and calves on feed in the 7 States during February totaled 1.40 million, down 13 percent from last year but 2 percent above February 1988. Net placements of 1.31 million for February are 13 percent below last year but 4 percent above 1988.

Other disappearance totaled 95 thousand head compared to 115 thousand in February 1989 and 126 thousand in February 1988.

1989 WOOL and MOHAIR PRODUCTION

Montana 1989 wool production amounted to 5.690 million pounds, slightly above the 1988 output. Wool growers sheared 569,000 sheep in 1989, only 2,000 more than in the previous year. Fleece weight averaged 10 pounds per head both years. Value of wool produced was $7.7 million, down 8 percent from 1988.

Shorn wool production in the United States during 1989 was 89.2 million pounds, down slightly from last year. Sheep and lambs shorn during 1989 totaled 11.3 million head, a decrease of 2 percent from 1988. Average fleece weight of shorn wool was 7.89 pounds per head, up 0.13 pounds from 1988. Total value of shorn wool was $109 million, down 13 percent from $125 million in 1988.

Mohair production in the five major producing states during 1989 was 17.3 million pounds nearly the same as 1988. Goats and kids clipped, at 2.47 million head were up 6 percent from 1988. Average weight per head clipped was 7.0 pounds compared with 7.5 pounds a year earlier. Value of mohair production was $27.2 million, down 17 percent from 1988.

1989 RED MEAT PRODUCTION

Montana's 1989 red meat production totaled 13.9 million pounds, down 14 percent from 1988. There were 16,200 head of cattle slaughtered, down 11 percent from last year. Hog slaughter for 1989, at 27,400 head, was down 10 percent from a year ago. There were 2,500 head of sheep and lambs slaughtered, down 4 percent from 1988.

Red meat production for the United States during 1989 totaled 39.6 billion pounds, down 1 percent from 1988. Production included beef, veal, pork, lamb and mutton slaughter in commercial establishments and on farms.

Beef production was 23.1 billion pounds, down 2 percent from 1988. Veal production was 355 million pounds, down 10 percent from 1988. Pork production was 15.8 billion pounds, up 1 percent from 1988. Lamb and mutton production totaled 348 million, pounds up 4 percent from 1988.

TOTAL	16,200	27,400	2,500	13,945

Commercial cattle slaughter during 1989 totaled 33.9 million head, down 3 percent from 1988, with federal inspection comprising 97.3 percent of the total. Calf slaughter, at 2.17 million head, was down 13 percent from the previous year with 96.6 percent under federal inspection. Hog kill totaled 88.7 million head, up 1 percent from 1988 with federal inspection comprising 97.3 percent. Commercial sheep and lamb slaughter at 5.46 million head, was up 3 percent from 1988 with federal inspection comprising 96.9 percent.

Average live weight of cattle slaughtered commercially in 1989 was 1,134 pounds, up 14 pounds from 1988. The calf average live weight was 265 pounds for 1988, an increase of 7 pounds from the previous year. Average live weight for hogs decreased 1 pound to 248. Sheep and lambs averaged 124 pounds live weight, the same as 1988.

1/ Months may not add to totals due to rounding. 2/ Based on packers dress weight and excludes farm slaughter. 3/ Excludes lard and rendered pork fat. 4/ Includes rendered pork fat. 5/ Includes January through June only. Lard production estimates were discontinued in July 1989.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.0 million pounds of red meat in February 1990. This production is down 20 percent from last month, but is up 17 percent from February 1989.

The number of cattle slaughtered, at 1,200 head, is up 200 from last year. Average liveweight of cattle slaughtered was 1,065 pounds, up 7 percent from a year ago. Hog slaughter, at 1,800 head, is down 100 from last year. Average liveweight for hogs was 236 pounds, down 1 percent from February 1989.

Commercial red meat production for the United States in February 1990 totaled 2.97 billion pounds, down 1 percent from last year. January-February red meat production, at 6.32 billion pounds was up 1 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, virtually unchanged; veal, down 15; pork, up 2; lamb and mutton, up 13. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

MONTANA EGG PRODUCTION

Montana laying flocks produced 44 million eggs in the December through February quarter, 5 percent more than the same quarter last year. Layers for the 1990 quarter averaged 670,000 compared with 700,000 in 1989.

The rate of lay in the 1990 quarter was 73.6 eggs per 100 layers compared with 66.8 eggs per 100 layers in the 1989 quarter.

The **Nation's** laying flocks produced 16.6 billion eggs during the December through February quarter, down 1 percent from the corresponding quarter a year ago. Production included 14.5 billion for table eggs, 1.93 billion for broiler-type hatching eggs and 226 million for egg-type hatching eggs. Layers for the quarter averaged 271 million, down fractionally from the 272 million a year ago.

All layers in the U.S. on March 1, 1990 totaled 271 million, virtually unchanged from a year ago. The 271 million layers consisted of 230 million layers producing table or commercial type eggs, 37.6 million layers producing broiler-type hatching eggs and 3.37 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1990 averaged 68.2 eggs per 100 layers compared with 68.3 for March 1, 1989 and 66.9 on February 1, 1990.

FEBRUARY MILK PRODUCTION

Milk production in the 21 major States during February totaled 9.81 billion pounds, 1 percent above production in these same states in February 1989. January revised production, at 10.5 billion pounds, was virtually unchanged from January 1989.

Production per cow in the 21 major States averaged 1,150 pounds for February, 17 pounds more than February 1989.

The number of cows on farms in the 21 major States was 8.53 million head, 8 thousand head less than January 1990 and 35 thousand head less than February 1989.

During the October-December period, the 21 major States produced 29.6 billion pounds of milk, 84.7 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 11.6 billion pounds for February 1990.

PROFIT-WISE, 1990 LOOKS LIKE A GOOD YEAR FOR AGRICULTURE

The good news for American farmers in 1990 is that record commodity receipts are expected this year, along with continued strong livestock profits.

Stockpiles of crops are expected to be lower and export demand should be higher--it already is--so the end result is stable farm expenses and income.

Farmers will rely less on Uncle Sam with higher total receipts and less government payments.

Net cash income is now expected to be more than $50 billion for the 4th consecutive year.

A combination of record-high crop sales and record-tying livestock sales might just raise total farm receipts to $160 billion or more this year.

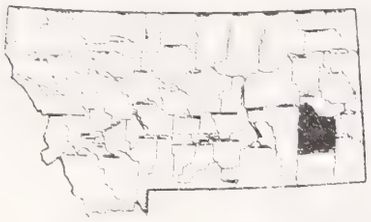
Another banner year is in sight for livestock producers nationwide. Both cattle and hog sales in the U.S. could grow by $250-$500 million, resulting in record high red meat cash receipts. Poultry and dairy farmers aren't expected to fare as well, though.

One of the most positive trends in this year's financial outlook is the leveling off of farm expenses. Right now, it looks like a 15% decline in feed costs.

The combination of slightly higher meat prices and lower feed expenses will make the red meat industry the major "profit center" in this year's ag economy.

And the good news is that direct government payments to farmers will contribute less to the profitability of farming and supply/demand will contribute more--which pencils out as a plus in farming.

featuring...*CUSTER COUNTY*



Custer, one of the original counties of Montana, lies in the southeastern corner of the state. The county consist mainly of rolling country with pronounced breaks along the Yellowstone and Tongue Rivers. The Yellowstone River cuts through the northwestern corner of Custer county, while the Tongue River cuts the southwetern corner to join the Yellowstone near Miles City. The Powder River ruins the length of the county in the eastern half.

Livestock production is the main agricultural interest in Custer County. In the January 1, 1988 cattle inventory, Custer County ranked 9th for cattle and 13th for sheep numbers. The county came in 42nd in the December 1, 1987 hog count.

The major crop grown in the area is winter wheat. The county ranked 32nd in production of that crop in 1988. Custer County ranked 29th for all hay production, and 29th for oats production in 1988. Other crops grown include spring and durum wheat, barley and corn.

The abundant livestock production brought in $34,873,000 in cash receipts in 1987. Crops returned $5,148,000, while government payments added $2,972,000 for a total cash return of $42,993,000 for Custer County in 1987.

MONTANA WHEAT and BARLEY MOVEMENT

Montana **wheat** shipped to out-of-state destinations in June-November 1989 was 38 percent above shipments from the drought reduced harvest a year earlier. Rail movement amounted to 41.3 million bushels, up from 27.4 million shipped by rail in 1988. Trucks carried 5.8 million bushels compared with 6.8 million the previous June-November period. Shipments to western destinations (primarily export facilities of Washington and Oregon) were 38 percent above the previous period. Wheat movement to eastern destinations was up 16 percent. Shipments to other destinations were up 7 percent.

Montana **barley** shipped to out-of-state destinations in June-November 1989 was 11.7 million bushels, only 57 percent of the previous years relatively large movement. Most of the reduction resulted from reduced shipments to eastern destinations. Rail and truck movement to the east amounted to 1.2 million compared with 10.7 million the previous year. Barley shipped west amounted to 10.3 million bushels--up 12 percent from the 9.2 million bushels in the June-November 1988 period. Movement to other destinations was down 72 percent from the previous year.

JANUARY U.S. DAIRY PRODUCTS

Butter production was 127 million pounds in January, 1 percent below January 1989 but 18 percent above December 1989. Total cheese output (excluding cottage cheese) was 484 million pounds, 6 percent above January 1989 but virtually unchanged from December 1989. Creamed cottage cheese production was 44.0 million pounds, 8 percent below January 1989 but 10 percent above December 1989. Lowfat cottage cheese production was 23.8 million pounds, 1 percent below January 1989 but 14 percent above December 1989. Frozen desserts: (comparisons with January 1989) Ice cream (hard)--52.0 million gallons, down 7 percent. Ice milk--24.4 million gallons, up 14 percent. Sherbet (hard)--3.16 million gallons, down 1 percent.

POTATO STOCKS DOWN 7 PERCENT

Potato stocks on hand March 1 in **Montana** totaled 1.8 million cwt, the same as storages held a year earlier. Stocks in storage represent 81 percent of production. For the **Nation**, March 1, 1990 potato stocks totaled 116 million cwt, down 7 percent from last year, and 17 percent below 1988. Stocks accounted for 37 percent of production in the 15 storage States this year compared with 41 percent last year. Seasonal disappearance to March 1 was 200 million cwt this year, up 11 percent from last year. Processing at 93.7 million cwt is up 16 percent. Shrink and loss of 19.8 million cwt is down 3 percent.

The six Western States stored 85.9 million cwt of potatoes this March 1, down 10 percent from last year and 13 percent below two years ago. Idaho stocks at 44.5 million cwt were off 12 percent; Washington with 20.0 million cwt was down 11 percent; and Oregon's 7.80 million cwt was down 10 percent from last year. California stocks were off 10 percent. Among the Western States only Colorado with 9.85 million cwt of potatoes, showed an increase from last year. Disappearance during the season topped 200 million cwt to March 1 up 11 percent from last year and 2 percent above the 1987 crop movement. Shrink and loss at 19.8 million cwt this crop year was 3 percent below last year's 20.5 million cwt and 11 percent below the 22.2 million cwt lost two years ago. February disappearance of 27.4 million cwt was 3 percent above last year.

FEBRUARY PRICES RECEIVED

The **Montana** farm price index for all products in February was 178 percent of its 1977 base, down 1 point from January, and down 12 points from February 1989. Contributing most to the decline was lower prices received for wheat and barley. The February all wheat price, at $3.59 per bushel, is down 15 cents from January and 44 cents lower than a year ago. Barley, at $2.10 per bushel, was 7 cents under January and 88 cents below a year ago. Hay prices also declined during February, to $70 per ton, down $1.00 from January and down $22.00 from last year.

Livestock prices received by Montana farmers and ranchers were mostly higher, except for sheep and lambs. The February index for livestock prices at 205 percent of the 1977 base, was up 4 points from January, and unchanged from a year ago.

For the **nation**, the February all farm products index of prices received decreased 1 point from January to 153 percent of its January-December 1977 average. Decreases in the prices of milk, eggs, lettuce, and wheat were partially offset by higher prices for cattle, broilers, and tomatoes. The index was 4 points above a year ago.

At 145, the February index for food grains was 4 percent below the previous month and 10 percent below a year earlier. Wheat averaged $3.57 per bushel, down 14 cents from January. Rice was $7.29 per cwt, down 11 cents from the previous month.

featuring...*CHOUTEAU COUNTY*

Chouteau County derives its name from a Frenchman by the name of Pierre Chouteau, who was President of the American Fur Company headquarters at Fort Benton. The landscape in Chouteau County is characterized by gently rolling plain, divided into benches by the Missouri, Marias, and Teton Rivers. The Missouri River traverses the county from west to east, and the Marias and Teton Rivers join the Missouri near Loma, Montana. A northeastern portion of the county is occupied by the Bear Paw Mountains, while the Highwood Mountains and a section of the Lewis & Clark National Forest cover a small area in the south.

Chouteau County ranked 1st for winter wheat production, 4th for barley , 11th for spring wheat, 8th for durum wheat, and 10th for oats production in 1988. The abundant grain crops brought in $36,664,000 in cash receipts in 1987.

While crops are the major agricultural interest, livestock raising is also an important industry in the county. Chouteau County ranked 3rd in the December 1, 1987 hog inventory, and 26th in the January 1, 1988 cattle count. Receipts from livestock totaled $14,555,000 in 1987. Government payments came to $33,518,000 in 1987 and combined with the crop and livestock receipts brings the total cash return for Chouteau County to $84,737,000 in 1987.

DECEMBER RED MEAT PRODUCTION

Montana slaughter plants produces 1.1 million pounds of red meat in December 1989. This production is down 14 percent from last month and down 11 percent from December 1988.

The number of cattle slaughtered, at 1,400 head is unchanged from last year, while average liveweight of cattle slaughtered at 892 pounds is down 14 percent from last December.

Hog slaughter, at 1900 head, is 500 head below last December, and average liveweight at 228 pounds, is down 4 percent from a year ago.

Commercial red meat production for the United States in December 1989 totaled 3.17 billion pounds, down 6 percent from last year. January-December red meat production, at 39.4 billion pounds, was down 1 percent from the previous year.

Percentage changes for 1989 accumulated production by individual components were: beef, down 2; veal, down 11; pork, up 1; lamb and mutton, up 4. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

CATTLE ON FEED IN 7 STATES UP 7 PERCENT FROM LAST YEAR

Cattle and calves on feed February 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 8.53 million head, up 7 percent from a year ago and 4 percent above February 1, 1988. This is the largest February on feed total since 1979.

Marketings of fed cattle during January totaled 1.63 million, down 3 percent from last year and 7 percent below two years ago.

Placements of cattle and calves on feed in the 7 States during January totaled 1.90 million, up 11 percent from last year and 14 percent above January 1988. This is the second largest placement total in January for the 7 States. Net placements of 1.78 million for January is 11 percent above last year and 14 percent above 1988.

Other disappearance totaled 114 thousand head compared to 104 thousand in January 1989 and 106 thousand in January 1988.

U.S. FARM WAGES AVERAGED $5.70 PER HOUR

There were 2.59 million people working on the Nation's farms and ranches during the week of January 7-13, 1990. Self-employed farm operators accounted for 1.43 million of the total, along with 322,000 unpaid workers, and 690,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 143,000 workers.

Farm operators paid their hired workers an average wage of $5.70 per hour during the January 1990 survey week. This rate was up 19 cents from a year earlier. Workers paid on an hourly basis earned $5.30 per hour compared with $5.14 last January. Field workers received an average of $5.34 per hour, up 1 cent from the January 1989 week. Livestock workers earned $4.99 compared with $4.83 per hour a year earlier.

Self-employed farm operators worked an average of 30.6 hours, 2.2 hours less than the comparable week in 1989. Unpaid workers averaged 32.3 hours, 0.5 hours below last year. Hired employees worked 37.9 hours, the same number of hours as last January.

Benefits, such as housing and meals, were provided to 46 percent of the hired workers during the survey week. This compares with 53 percent during the January 1989 survey week. Seven percent of the workers received both housing and meals, and another 16 percent received housing, but no meals.

JANUARY 21 STATE MILK PRODUCTION

Milk production in the 21 major States during January totaled 10.4 billion pounds, virtually unchanged from the production in these same states in January 1989. December revised production, at 10.0 billion pounds, was 2 percent below December 1988.

Production per cow in the 21 major States averaged 1,222 pounds for January, 5 pounds above January 1989. The number of cows on farms in the 21 major States was 8.54 million head, 54 thousand head below January 1989 and 9 thousand head below December 1989.

During the October-December 1989 period the 21 major States produced 84.7 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.3 billion pounds for January 1990.

FEBRUARY 1 POTATO STOCKS

Montana potato producers had 1.9 million cwt of potatoes on hand February 1, the same as a year ago. Most of the potatoes will be utilized as seed for the 1990 potato crop. The stocks held represent 85 percent of Montana's 1989 production.

Western States storages held 104 million cwt of potatoes on February 1, 1990, down 7 percent from last year and 11 percent below two years ago. Idaho and Washington were each off 9 percent from last year and Oregon was off 10 percent. California stocks were 6 percent below a year ago; while Colorado holdings were up 4 percent.

Disappearance from harvest to February 1 for the **U.S.** was a record high 173 million cwt, up 12 percent from last year and 3 percent above two years ago. Shrinkage and loss so far this season was 18.1 million cwt, down 5 percent from last year's 19.0 million cwt and 12 percent below 20.5 million cwt two years ago. Disappearance during January totaled 30.2 million cwt compared with 26.7 million cwt in 1989 and 29.4 million cwt in January 1988.

Processing usage this season totaled 80.7 million cwt, up 18 percent from last year and 12 percent above two years ago. January usage was 14.0 million cwt compared with 11.2 million cwt last year and 12.7 million cwt processed in January 1988.

JANUARY EGG PRODUCTION DOWN 1 PERCENT

U.S. egg production totaled 5.67 billion during January 1990, down 1 percent from the 5.74 billion produced a year ago. Production included 4.93 billion for table eggs, 662 million for broiler-type hatching eggs, and 78 million for egg-type hatching eggs. The total number of layers during January averaged 271 million, virtually unchanged from a year ago. January egg production per 100 layers was 2,090 eggs, compared with 2,111 in January 1989.

All layers in the U.S. on February 1, 1990 totaled 272 million, up slightly from a year ago. The 272 million layers consisted of 230 million layers producing table or commercial type eggs, 38.7 million layers producing broiler-type hatching eggs and 3.20 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1990 averaged 66.9 eggs per 100 layers, down 1 percent from last year's 67.4 eggs per 100 layers.

Laying flocks in the 20 major egg producing states produced 4.74 billion eggs during January, down 1 percent from the 4.79 billion produced a year ago. The number of layers during January averaged 226 million, down fractionally from the 227 million a year ago. Data for the 30 quarterly states were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 83 percent of the U.S. egg production during the 3-month period, September through November 1989.

MONTANA 1989 HONEY PRODUCTION UP, U.S. DOWN

Montana beekeepers produced 6.3 million pounds of honey in 1989, up 25 percent from 1988's production. There were 100,000 colonies in production during the year, down 5,000 from the previous year. Yield per colony averaged 63 pounds, up 31 percent from 1988. Honey stocks not under loan as of December 15, 1989, totaled 819,000 pounds, compared with 151,000 pounds on hand in 1988. The estimated price of honey, excluding government payments, was 45 cents per pound--down 2 cents from 1988. The value of Montana honey production for 1989 was $2.8 million, up 20 percent from 1988's level.

Nationally, honey production totaled 169 million pounds, down 21 percent from 1988. There were 3.3 million colonies producing honey, up 3 percent from 1988. Yield per colony averaged 51.1 pounds, down from 66.3 pounds in 1988. Colonies that produced in more than one state were counted in each state, and yields may be understated. Producer honey stocks were 31.1 million pounds on December 15. Adverse conditions were encountered in most states and included wet weather, restrictions on movement early in the year, dry weather, disease, and mite infestations throughout the year.

Prices for the 1989 crop averaged 48.4 cents per pound, down 1.6 cents from the 1988 price of 50.0 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops.

At the U.S. level, prices for each color are derived by weighing state average prices by the state quantities sold. Prices declined for most types of honey in 1989 except for the extra light amber honey retailed by producers and amber honeys sold to private processors and co-ops.

CONCERN FOR WATER AVAILABILITY ON THE RISE

Back in the 1800's, government policies encouraged water supply development, especially in the arid West. Those policies resulted in exploitation of rivers, streams, and groundwater aquifers for irrigated agriculture. The result was the successful settlement of arid and semi-arid western lands.

Now, however, irrigation takes the largest share of the nation's water resources. On the plus side, irrigated agriculture contributes a big amount to the total value of ag products sold. Of the nation's harvested cropland acres, irrigated lands account for 13%, but contribute about 30% to the value of cropland production.

The concern now is about the competition for water resources. Water demands for traditional uses--agriculture, energy, domestic, and industrial--are expected to increase as population grows.

But other concerns have come into play. A higher value is now placed on water remaining in rivers and streams because of environmental interests. There is growing recognition that water, itself, has value for water-quality improvement, fish propagation, and recreational use.

Another concern is arising from outstanding Indian claims to reserved water rights. When Indian reservations were created, the U.S. implicitly established those rights. While uncertain, the amount of water associated with the rights is potentially large.

It all adds up to more concern about the availability of water and its quality--an issue sure to play a big part of agriculture in the 1990's.

Manufactured Dairy
U.S. All Cattle & Calves Map

A SPECIAL THANKS goes out to all livestock producers responding to our January 1 cattle and sheep inventory survey. Field and telephone enumerators contacted nearly 1,700 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

CATTLE INVENTORY -- JANUARY 1, 1990

Montana's January 1, 1990 cattle and calf inventory, at 2.35 million head, is down 4 percent from a year earlier. The inventory included fewer beef cows compared with last January, 1.368 million head -- down 1 percent, and more beef cow replacement heifers, 335,000 head -- up 14 percent.

Milk cows numbers declined to 24,000 head, down from 25,000 last year and milk cow replacement heifers remained unchanged at 7,000 head. Other heifers weighing 500 pounds or more, at 167,000 head were up 11 percent from 1989; steers weighing 500 pounds or more showed a large decline from last January with 181,000 on hand, down a sharp 27 percent. There were 193,000 calves on hand weighing less than 500 pounds, down a significant 29 percent from the 270,000 on hand January 1, 1989. The 1989 calf crop was 1,350,000 head equaling the number born during 1988. The average value per head in the 1990 inventory was $680 compared with $645 a year earlier.

All cattle and calves in the United States as of January 1, 1990, totaled 99.3 million head, up slightly from the 99.2 million on January 1, 1989, but down fractionally from the 99.6 million two years ago. This reversed the recent downward trend in cattle inventories and shows the first January 1 yearly increase since 1982.

All cows and heifers that have calved, at 43.9 million, were up fractionally from 43.7 million a year ago, and up 1 percent from 43.5 million two years ago. This was the second consecutive increase in all cows and heifers that have calved following 6 consecutive years of decline.

- Beef cows, at 33.7 million, were 1 percent above January 1, 1989 and two percent above 2 years ago.

- Milk cows, at 10.1 million, were 1 percent below January 1, 1989 and 2 percent below 1988. This is the fourth consecutive year of decline.

Other class estimates on January 1, 1990, and the changes from January 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 17.9 million, up 3 percent and up 4 percent.

- Beef replacement heifers, 5.47 million, down slightly but up 4 percent.

- Milk replacement heifers, 4.29 million, up 2 percent and up 4 percent.

- Other heifers, 8.09 million, up 5 percent and up 3 percent.

- Steers weighing 500 pounds and over, 16.1 million, up 2 percent and up 2 percent.

- Bulls weighing 500 pounds and over, 2.21 million, down fractionally but up 2 percent.

- Calves under 500 pounds, 19.3 million, down 4 percent and down 8 percent.

- All cattle and calves on feed for slaughter, 11.6 million, up 2 percent but down 2 percent.

See map on back page.

SHEEP and LAMB INVENTORY -- JANUARY 1, 1990

There were 663,000 sheep and lambs on **Montana** farms and ranches on January 1, 1990. This inventory is up 11 percent from last January 1, and is the largest number since 675,000 were on hand January 1, 1975. Ewes one year old and over, at 490,000 head were up 13 percent from a year ago, and had the largest percentage increase across all sheep classes. Ewe lambs 3 months old and older jumped 12 percent from last year to 124,000 head. The 1989 lamb crop was 500,000 lambs, 9 percent larger than a year earlier. There were 23,0000 sheep and lambs on feed at the beginning of the year down 23 percent from last year. The average value of sheep and lambs was $87.00 per head, down $3.00 from last year.

All sheep and lamb inventory in the **United States** on January 1, 1990 totaled 11.4 million head, up 5 percent from a year earlier. The value of sheep and lambs on hand totaled $998 million, up 11 percent from a year earlier. The average value per head was $87.80, up 6 percent from a year earlier. Stock sheep inventory increased to 9.65 million head on January 1, 1990, up 5 percent from 9.21 million last year. Ewes one year old and older, at 7.65 million head, were up 6 percent. Ewe lamb inventory totaled 1.34 million head, nearly the same as a year earlier. Sheep and lambs on feed January 1, 1990 for the slaughter market in the 25 major feeding states totaled 1.72 million head, up 4 percent from a year earlier. The 1989 lamb crop of 7.74 million head increased 7 percent from 1988. The 1989 lambing rate was 108 per 100 ewes one year old and older on hand January 1, 1989, compared with 98 in 1988.

JANUARY AG PRICES RECEIVED

Montana farm prices increased in January over December for cattle, hay, and milk. Most crop prices were steady with last month while hog prices went down. However, compared with year ago levels, crop prices are down while most livestock prices are up.

Hay is sharply lower in price compared with a year earlier. All wheat this January was $3.78 per bushel compared with $4.01 a year ago. Barley, at $2.27, is down from $2.95 and all hay, at $71.00 per ton, is down from $93.00 a year ago. All beef cattle in January were $71.60 per cwt compared with $68.20 last year. Steers and heifers, at $85.00 per cwt, are up from $81.20.

The January all farm products index for prices received by Montana farmers, at 182 (1977=100), compares with 173 in December and 186 a year ago in January. The all crops index, at 156, is up from 154 in December, but down from 173 last year. The January livestock and products index, at 205, compares with 190 in December and 197 for January 1989.

The **U.S.** all farm products index of prices received by farmers for January increased 4 points from the previous month to 153 percent of its 1977 average. Compared with a year earlier, the index was up 4 points.

The all crops index for January was 135, up 6.3 percent from December but 4.3 percent below a year earlier. A sharp increase in the price of commercial vegetables caused most of the increase in the index.

The livestock and poultry index was 170, unchanged from last month but 7.6 percent above January a year ago. Compared with December, prices for cattle, broilers, and eggs were higher while prices for hogs and turkeys decreased. The all milk price was unchanged from the previous month.

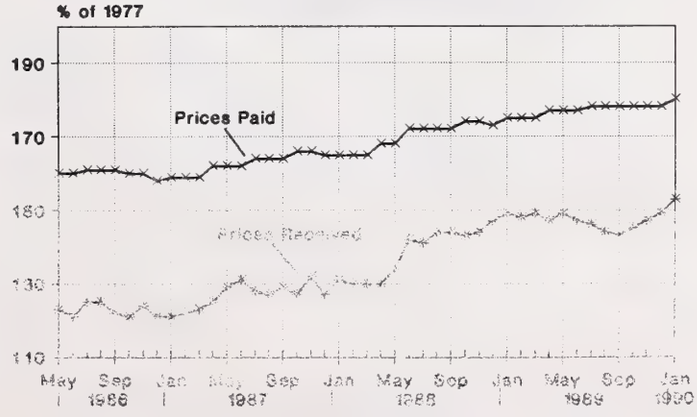
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



DECEMBER U.S. MANUFACTURED DAIRY

Butter production was 108 million pounds in December, 4 percent below December 1988 but 15 percent above November 1989. Total cheese output (excluding cottage cheese) was 483 million pounds, 1 percent below December 1988 and 6 percent above November 1989. Creamed cottage cheese production was 40.0 million pounds, 14 percent below December 1988 and 8 percent below November 1989. Lowfat cottage cheese production was 21.0 million pounds, virtually unchanged from December 1988 and 7 percent below November 1989. Frozen desserts: (comparisons with December 1988) Ice cream (hard)--51.0 million gallons, down 5 percent. Ice milk--25.3 million gallons, up 14 percent. Sherbet (hard)--2.92 million gallons, down 5 percent.

MONTANA 1989 CROP PRODUCTION HIGHLIGHTS

Crop production in Montana in 1989 was above the average of the 1980s--which included 2 major drought years. All wheat production, at 145 million bushels, was 15 percent above the decade average; barley production, at 68.8 million bushels, was 11 percent above; and all hay production, at 4.5 million tons, was 10 percent above. The value of Montana's crop production, at $1.1 billion, was topped only by the crops of 1981 and 1982.

Planting Montana's 1989 crops was delayed because of cool and wet weather. However, nearly 40 percent of the winter wheat had to be reseeded due to extensive winter kill. Considerable alfalfa acreage also did not survive the winter.

Yet, by the end of June, prospects were mostly improved over 1988's major drought. Hot and dry weather the first half of July diminished prospects somewhat, and the eastern third of Montana continued dry throughout the major part of the growing season.

Harvest was delayed because of the slow seeding start and late August rains. Considerable barley acreage was damaged by sprouting in the head. Spring wheat was also adversely affected. By October 1, harvest was virtually complete for small grains. The state's sugar beet crop suffered from curly top and corn intended for grain was severely frosted in early September.

SEE ANNUAL CROP SUMMARY TABLE ON BACK PAGE

CATTLE ON FEED UP 3 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed January 1, 1990, for slaughter market in the 13 quarterly States totaled 9.94 million head, up 3 percent from January 1, 1989, but down 2 percent from 1988.

The cattle on feed inventory included 6.46 million steers and steer calves, 4 percent above last year but 2 percent below 1988. This group represented 65 percent of the total January number on feed, compared to 64 percent last year and 65 percent in 1988. Heifers and heifer calves accounted for 3.44 million, fractionally above a year ago but 1 percent below 1988.

PLACEMENTS of cattle and calves on feed during the October-December 1989 quarter totaled 7.32 million, up 10 percent from 1988 and 7 percent above 1987. OTHER DISAPPEARANCE of 293 thousand head leaves NET PLACEMENTS at 7.03 million, compared with 6.30 million in 1988.

MARKETINGS of fed cattle for slaughter during October-December totaled 5.36 million 2 percent below 1988 and 5 percent below the same period in 1987.

Cattle feeders expect to market 5.69 million head during the January-March quarter of 1990. This would be up fractionally from the first quarter marketings in 1989 but 3 percent below 1988.

1/ Imports and exports include flour and other products expressed in wheat equivalent. 2/ Residual, approximates feed use and includes negligible quantities used for distilled spirits. 3/ Excludes an abnormally large volume of grain in transit. 4/ Preliminary. SOURCE: World Agricultural Supply & Demand Estimates--ERS. Totals may not add due to independent rounding.

JANUARY 1, 1990 POTATO STOCKS

Montana producers have 2.0 million cwt. of potatoes in storage as of January 1, compared with 1.95 million a year ago. The January 1 stocks represent 90 percent of 1989 production.

January 1, 1990 **U.S.** potato stocks are estimated at 173 million cwt. This is down 2 percent from a year ago and 12 percent short of 2 years ago. Remaining storage was 55 percent of the 1989 crop compared with 58 percent a year ago. Storage types are 81 percent russet, 16 percent white, and 3 percent red.

Western states were holding 123 million cwt. of potatoes on January 1, 1990, down 4 percent from a year ago and 8 percent below 2 years ago. Idaho cellars held 61.5 million cwt. the first of this year, down 6 percent from last year. Washington stocks of 30.4 million cwt. were off 5 percent; while Oregon stocks of 12,100 million cwt. were down 8 percent from last year.

Colorado storages held 13.8 million cwt. this year, up 6 percent from last year, and California at 3.30 million cwt. was up 3 percent.

DECEMBER RED MEAT PRODUCTION

Montana slaughter plants produces 1.1 million pounds of red meat in December 1989. This production is down 14 percent from last month and down 11 percent from December 1988.

The number of cattle slaughtered, at 1,400 head is unchanged from last year, while average liveweight of cattle slaughtered at 892 pounds is down 14 percent from last December.

Hog slaughter, at 1900 head, is 500 head below last December, and average liveweight at 228 pounds, is down 4 percent from a year ago.

Commercial red meat production for the United States in December 1989 totaled 3.17 billion pounds, down 6 percent from last year. January-December red meat production, at 39.4 billion pounds, was down 1 percent from the previous year. Percentage changes for 1989 accumulated production by individual components were: beef, down 2; veal, down 11; pork, up 1; lamb and mutton, up 4. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

OCTOBER-DECEMBER MILK PRODUCTION

Milk cows on **Montana** farms produced 83 million pounds of milk during the October-December quarter of 1989. This production is down 5 percent from the comparable period in 1988. The number of milk cows on farms for the quarter, at 24,000 head, was down 1,000 head from a year ago.

Total milk production and the number of milk cows on farms were at the lowest levels since the January-March quarter of 1987 when milk production averaged 76 million pounds, and milk cows numbered 24,000 head. Milk production per cow was 3,470 pounds, down 2 percent from last year.

Montana dairymen fed 15 pounds of grain concentrates per milk cow daily for the quarter, unchanged from last year. The value per hundredweight of grain and concentrates fed to milk cows was $7.50, also unchanged from last year.

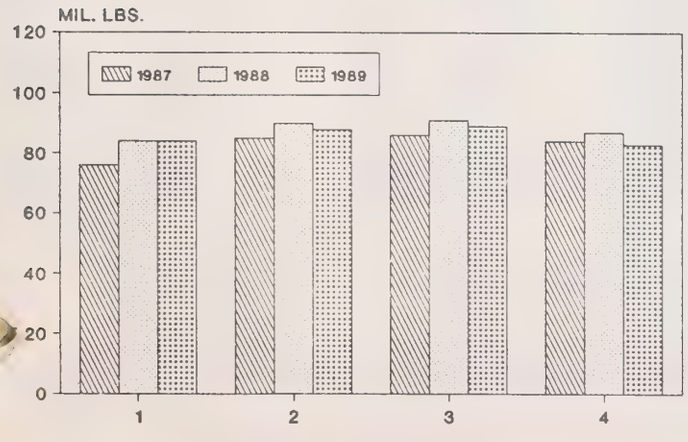
The quarterly production of milk for the **U.S.** was 35.2 billion pounds, 1 percent below October-December 1988.

The average number of milk cows in the U.S. during the October-December quarter was 10.1 million head, virtually unchanged from July-September 1989 but 1 percent less than October-December 1988.

Grain and other concentrates fed to milk cows on January 1, 1990 averaged 17.9 pounds, 0.8 pounds less than January 1, 1989.

The value of grain and other concentrates fed to cows on January 1, 1990, averaged $8.02 per hundredweight, $0.38 per hundredweight less than the January 1, 1989 value.

QUARTERLY MILK PRODUCTION
MONTANA, 1987-1989



1989 EGG PRODUCTION

There were 180 million eggs produced in **Montana** during the year ending November 30, 1989, down 7 percent from last year's production. Layer numbers during 1989 averaged 703,000 compared with 773,000 a year earlier. The annual average production per layer on hand in 1989 was 256 eggs, up from 251 eggs per layer in 1988.

There were 890,000 chickens on Montana farms December 1, 1989 compared with 910,000 on hand last year. The inventory value was $2,270,000, up from $2,093,000 on December 1, 1988.

U.S. egg production during 1989 totaled 67.1 billion eggs, down 4 percent from last year's total of 69.7 billion eggs. Layer numbers during 1989 averaged 269 million layers, down 3 percent from 1988. The annual average production per layer on hand in 1989 was 250 eggs, down from the previous year's average of 251 eggs per layer.

The total number of chickens on hand December 1, 1988 (excluding broilers) was 356 million head, virtually unchanged from last year. The total value was $770 million, up from $726 million on December 1, 1988.

CEREAL BILL SPELLS BIG BUCKS TO RETAILERS, NOT FARMERS

Go to your local supermarket and chances are you'll run into a passel of new cereals--"Captain Beebleberries" or the latest in "new, improved oat bran."

The Consumer Price Index (CPI) for cereals and bakery products rose a sharp 8.5% from 1988 to 1989 with cereals accounting for a good share of that. With increasing concern about high fiber and other nutritional benefits in cereals, manufacturers are scrambling to keep up the pace and their share of the market.

Most of the new breakfast cereals claim high fiber and added nutrition. Many have added ingredients such as dried fruits and nuts. These added ingredients hike up total manufacturing costs.

Currently, 90% of the price consumers pay for cereal and bakery products goes for manufacturing and distribution. Input prices for packaging, labor, energy, and advertising have risen this year.

With input prices up and more inputs being used (particularly advertising and promotion), basic costs are pushed higher and this shows up at the retail level.

WINTER WHEAT SEEDED ACRES INCREASE

Montana farmers seeded 2.7 million acres of winter wheat last fall for harvest in 1990. This is up 8 percent from last year, and is 9 percent above the 10-year average. Winter wheat crop condition is rated mostly fair to good with snow cover protection generally good but diminishing statewide. Soil moisture has improved during December in most areas with eastern Montana needing a lot of precipitation to replenish depleted subsoil supplies.

Nationally, area seeded for 1990 is expected to total 57.0 million acres, up 3 percent from 1989. This would be the largest winter wheat area since the 1985 crop. Seeding of the 1990 crop started last August in a few states, including Colorado, Texas, and Washington. By September 1, about 3 percent of the intended acreage was seeded. Planting progressed to 98 percent completion as of December 1, 1989. At that time, most of the remaining intended acreage was in California, Georgia, North Carolina, and Texas.

The Montana crop production, grain stocks, and hog estimates in this issue of the Reporter are the result of surveying approximately 1,700 Montana farmers and ranchers during December. Names were selected on a statistical probability basis. For those operators that were called and responded to the survey a SPECIAL THANKS. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

PLEASE RETURN

DECEMBER 1 HAY STOCKS

Montana farmers and ranchers had 3.8 million tons of hay on hand December 1, 1989, 40 percent more than a year ago. Stocks are up significantly because of open fall grazing and the drought reduced stocks on hand December 1, 1988. Producers harvested 4.47 millions tons of all hay from 2.35 million acres in 1989, up sharply from the 2.79 million tons produced last year. There were 2.97 million tons of alfalfa hay and 1.50 million tons of other hay produced in 1989.

Nationally, hay stocks on farms totaled 101 million tons on December 1, 1989. This is 12 percent more than on hand a year earlier but 14 percent below the holdings on December 1, 1987. The low stocks of a year ago reflected the drought reduced crop of 1988 while the current hay crop is of a more normal size.

[1] Preliminary. [2] Planted for all purposes.

DECEMBER AG PRICES RECEIVED

Montana farmers received slightly less for the products they sold in December compared with both last month, and a year ago. The December 1989 prices received index for all farm products at 176 (1977=100) was 2 points below November and 4 points below a year ago. Prices for most farm commodities were higher in December than November, but the mix of products sold contained more lower priced items. Contributing most to the decline in the index was the shift to more cow marketings compared to steer, heifer, and calf sales.

The all crops index in December, at 155, was 2 points above November, but 18 points below December 1988. Spring wheat, durum, and hay prices were mainly responsible for the decline from December 1988. The all wheat price, at $3.79, is up 8 cents from November, but is down 25 cents from last December. Barley, at $2.17, is down 1 cent from November and 75 cents from last December.

The livestock and products index, at 194, compares with 201 in November and 187 a year ago. Steers and heifers, at $83.70, equal last month but are up $4.60 from a year ago. Cows, at $47.00, are up $1.60 from November and $2.70 from December 1988. Calves, at $86.80, are down 80 cents from last month and down $2.20 from last December.

Nationally, the December all farm products index of prices received increased 1 point from November to 148 percent of its January-December 1977 average. Increases in the prices of hogs, cattle, milk, and eggs were partially offset by lower prices for lettuce, oranges, cotton, and broilers. The index was 3 points above a year ago. Higher prices for milk, hogs, cattle, and eggs were also the major contributors to the increases over a year earlier, but lower prices for soybeans, lettuce, corn, and broilers were partially offsetting.

The December 1989 all milk price is at a record high. The all hog price is at the highest level since October of 1987. Cattle and calves were up slightly from a month earlier. Wheat and corn prices increased while cotton, soybeans, barley, and sorghum were lower.

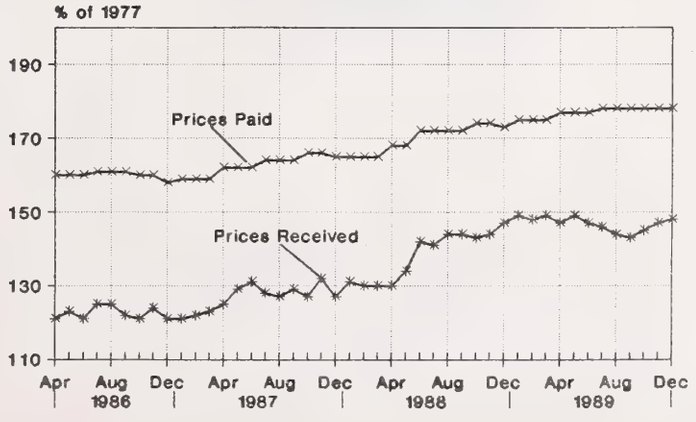
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



DECEMBER HOG & PIG INVENTORY DOWN 2 PERCENT

Montana's hog inventory on December 1, 1989 totaled 220,000 head, down 2 percent from last year. Hogs on hand for breeding, at 30,000, were up 3 percent from last year and market class hogs, at 190,000, were down 3 percent.

There were 29,000 sows that farrowed from December 1988 through May 1989, producing a pig crop of 216,000 head. Sows farrowing from June through November, at 25,000 head, produced a pig crop of 190,000 head. The total pig crop for the year, at 406,000, was up 9 percent from last year. There are approximately 1,900 farms with hogs, down 100 from 1988. The value of Montana's hog inventory is estimated at $17.6 million compared with $16.2 million a year ago.

Final estimates are made on all hog numbers shortly after each Census of Agriculture. Data are compared with available check data, Census levels, and survey indications to provide the best estimate of hog numbers. Inventory numbers were lowered slightly. The revised estimates are: 1986, 180,000 head; 1987, 210,000 head; and 1988, 225,000 head. Pig crops were similarly reduced to: 1986, 300,000 pigs; 1987, 344,000 pigs; and 1988, 373,000 pigs born.

U.S. inventory of all hogs and pigs is estimated at 53.9 million head on December 1, 1989. This is 3 percent below a year ago and 1 percent below December 1, 1987.
-- Breeding hog inventory, at 6.87 million, is 3 percent below last year and 3 percent below two years ago.
-- Market hog inventory, at 47.0 million, is 3 percent below a year ago and 1 percent below two years ago.

U.S. **pig crop** for 1989 totaled 91.9 million head, 1 percent below 1988 and 4 percent above the 1987 pig crop.
-- December 1988-May 1989 pig crop, estimated at 47.0 million head, was slightly down from a year earlier and 8 percent above the comparable period in 1987.
-- June-November 1989 pig crop, estimated at 44.9 million head, was 2 percent below last year, and slightly below the June-November 1987 pig crop.

A total of 5.78 million sows farrowed during June-November 1989, 4 percent less than a year earlier and 1 percent below the June-November 1987 period. The litter size during this period averaged a record high 7.76, compared to 7.62 in 1988 and 7.73 in 1987.

U.S. hog producers intend to have 5.77 million sows farrow during the December 1989-May 1990 period, 4 percent below the actual farrowings during the same period a year ago.

survey results summary issued twice monthly by the
USDA, NASS, Montana Field Office
Issue: 05-23 Released: December 13, 2005

"Happy Holidays from All of Us at Montana's Agricultural Statistics Office"

May your holiday season be filled with joyfulness and snow! Spring rains in 2005 improved Montana's agricultural production outlook by putting a dent in the state's six-year drought. In fact, 70% of Montana's counties are currently in a no drought designation. Because of the unusually high spring precipitation, pastures and ranges across most of Montana were excellent. Harvested hay acres hit a new record high in 2005, along with hay yield and production. With a normal snow pack this winter, Montana's agricultural production outlook will also improve for 2006.

Montana's 2005 wheat production grew 17 million bushels, due to increases in winter wheat production. Winter wheat production went up 38% from 2004, setting a new record yield of 45 bushels per acre. Spring wheat production dropped 8% from 2004. Durum wheat production was 12% lower than in 2004. Barley production was also down 19% from 2004. In 2005, value-added agricultural opportunities improved with more producers planting oilseeds and pulse crops.

Montanans have a lot to be thankful for, but Montana's people are what is truly remarkable about Montana. Montana's farmers and ranchers continue to be stewards of the land, working tirelessly to provide for future generations. Because of the remarkable people who make a living from the land, Montana's Agricultural Statistics Office is also hopeful about the future of Montana agriculture.

To everyone involved in Montana's agricultural industry, thank you for your continued support. With your help, we can provide sound statistical facts that you can use to chart the future course of **Montana's Number One Industry--Agriculture**.

We sincerely hope that you and your family have a joyous and safe holiday season.

Sincerely,
Peggy Stringer, Director

2005 Dry Edible Bean Production

Production for Montana's **dry edible bean** crop was estimated at 309,000 cwt., up 8 percent from the 2004 crop. Planted acreage for 2005 is estimated to be 18,000 acres, a 38 percent increase from last year. Harvested area for 2005 is 15,900 acres, a 25 percent increase from 2004. The yield is forecast at 1,940 pounds per acre, 300 pounds less than last year.

Pinto bean production for Montana is estimated at 239,000 cwt, which is 5 percent less than last year. Acres planted, at 12,000, are up 11 percent from 2004. Harvested acres, at 10,000, are 6 percent less than the previous year. The yield is forecast at 2,390 pounds per acre, 10 pounds more than last year.

All chickpea (garbanzo beans) production is forecast at 70,000 cwt for 2005, up 112 percent from 2004. Planted acreage was 6,000 acres, up 172 percent from 2004. Harvested area is estimated at 5,900 acres, up 181 percent from 2004. The yield is forecast at 1,190 pounds per acre, 380 pounds below 2004. **Small Chickpea** (smaller than 20/64 in.) production is forecast at 15,000 cwt. for 2005. Planted acreage was 1,400 acres. Harvested area is estimated at 1,300 acres. The yield is forecast at 1,150 pounds per acre. **Large Chickpea** (larger than 20/64 in.) production is forecast at 55,000 cwt. for 2005. Planted acreage was 4,600 acres. Harvested area is estimated at 4,600 acres. The yield is forecast at 1,200 pounds per acre .

U.S. **dry edible bean** production is forecast at 27.2 million cwt for 2005, up 4 percent from theOctober forecast and 53 percent above last year. Harvested acreage is forecast at 1.57 million acres, 3 percent above the last forecast and up 29 percent from 2004. The average U.S. yield is forecast at 1,731 pounds per acre, an increase of 16 pounds from the October forecast and 272 pounds above a year ago. Production is above a year ago in 16 of the 17 producing States. Most notable production increases from last year are Minnesota up 111 percent, Colorado 91 percent higher, and North Dakota increasing 82 percent. Production is up from a year ago for large lima, baby lima, navy, great northern, pinto, light red kidney, dark red kidney, pink, small red, blackeye, and small and large chickpeas. Production decreased from last year for small white, cranberry, and black.

Production in North Dakota is forecast at 8.66 million cwt, 82 percent above 2004. Harvested acres increased 6 percent, while the average yield, at 1,520 pounds per acre, is up 520 pounds from last year. Harvest was essentially complete by mid-October, slightly ahead of average and over two weeks ahead of last year.

Cow-Calf-Feeder Sectors Strong

The cow-calf-yearling sector continues to be the strongest sector of the beef industry. While down from spring 2005 record highs, calf prices remain historically high, about 4 percent above year-earlier levels and almost 20 percent above October-November 2003 levels. Stocker-feeder cattle supplies outside feedlots, although slightly above year-earlier levels, remain cyclically low with strong demand for the tight supplies from both the stocker cattle and cattle feeding sectors. Fall and over-wintering forage conditions appear adequate in most areas for the reduced cattle inventory. (continued on back page.)

SOURCE: Livestock, Dairy and Poultry Situation and Outlook, ERS, November 17, 2005.

October 2005 Ag Prices Received

October full month crop prices were mixed compared with October 2004 and higher than September 2005. The average price for Montana's winter wheat, at $3.39 per bushel, was the same as a year ago but up $0.13 from September 2005; spring wheat moved down $0.12 from last year but up $0.15 from last month to $3.65 per bushel; durum wheat prices were $0.45 below October 2004, but $0.04 higher than September 2005 to $3.58 per bushel. Feed barley prices were $0.07 above the previous year and $0.09 above the previous month to $1.64, malt barley prices increased $0.11 from a year ago, and were $0.04 above September 2005 to $3.10 per bushel.

The mid-November price for alfalfa hay was $3.00 below October 2005 at $72.00 per ton, but all other hay increased $7.00 from October to $74.00 per ton. The mid-November grain prices were mostly higher than the previous month with the winter wheat price at $3.38 per bushel; spring wheat was $3.95; durum wheat was $3.43; all barley was $2.74; feed barley was $1.52; and malt barley was $3.15 per bushel.

Livestock prices for the full month of October were mostly lower compared with September 2005. Steer and heifer prices increased $12.00 to a new record high price of $119.00 per cwt, but cows dropped $4.00 to $47.70 per cwt. The price for calves decreased $6.00 to $138.00 per cwt. Sheep prices dropped $2.30 to $42.60 per cwt, and lamb prices dropped $5.00 to $119.00 per cwt. The all milk price, at $15.40 per cwt, was down $0.40 from September. Steer and heifer prices for mid-November were $120.00 per cwt; cows were $49.10 per cwt; calves were $143.00 per cwt; and milk prices were $15.50 per cwt.

Nationally, October prices and changes from October 2004 and September 2005 were as follows: winter wheat was $3.33, down $0.01 from last year, but up $0.05 from September; spring wheat was $3.62, up $0.12 from last year and last month; durum wheat was $3.40, down $0.47 from last year and unchanged from last month; the all barley price was $2.41, up $0.12 from last year and $0.05 from September; and steer and heifer prices were $96.60, up $5.50 from last year and up $4.30 from September.

The U.S. mid-November winter wheat price was $3.25 per bushel; spring wheat was $3.64 per bushel; durum wheat was $3.23 per bushel; all wheat was $3.36 per bushel, malt barley was $2.86 per bushel; feed barley was $1.88 per bushel; and all barley was $2.49 per bushel. Steer and heifer prices were $97.40 per cwt; cow prices were $45.80 per cwt, calves were $132.00 per cwt; all hog prices were $44.70 per cwt; and all egg price was $0.653 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in November, at 113, based on 1990-92=100, increased 2 points (1.8 percent) from October.

The Food Commodities Index, at 119, increased 3 points (2.6 percent) from last month but decreased 3 points (2.5 percent) from November 2004.

ERS Economist Says Cow-Calf Feeder Sectors Strong
(continued from page two)

Wheat pasture conditions in mid-November in the High Plains winter grazing area appear near to somewhat above the favorable conditions of last year, although conditions in Texas are less favorable. Unfortunately, the grazing potential appears poor. The percentage of the wheat crop emerged in Kansas and Oklahoma was well above a year earlier and the 5-year average in mid- November, although conditions in Texas were below average. The Kansas crop was rated 94 percent fair or better, while the Oklahoma crop was rated 88 percent. The Texas crop was only rated 70 percent fair or better. Unfortunately, the overall grazing prospects on the winter wheat crop is marginal at best with dry conditions over the past 6 weeks sharply reducing crop growth and grazing prospects. Stocker/feeder cattle prices continue strong as feed prices remain very favorable. Feeder cattle prices for Oklahoma City, 750- to 800-pound, medium number 1 and 2 steers, are about $2 to $4 per cwt higher than a year earlier, while 500 to 550 pound calves are averaging $8 to $10 per cwt higher.

Cattle slaughter is running slightly behind year-earlier levels, just under 2 percent below 2004, but beef production is only fractionally behind year-earlier levels. Average weights for October 2005 are about 8 pounds higher than October 2004, in part due to the lower proportion of heifers in the slaughter mix. Both steer and heifer weights are averaging well above year-earlier levels. Cow slaughter has begun to rise seasonally, but remains well below year-earlier levels, particularly for beef cow slaughter. Although U.S. imports of slaughter cattle from Canada continue to increase, a slower pace of fed cattle imports and a somewhat slower marketing pace from U.S. feedlots have resulted in a pullback in fourth-quarter beef production estimates, even as slaughter weights remain near record levels.

October 2005 Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during October 2005, unchanged from last year, but down 6 percent from September's production. Cattle slaughter totaled 1,800 head, 100 head above a year ago. The average live weight decreased 1 pound to 1,139 from the previous year.

During October there were 1,100 hogs slaughtered, 100 more than a year ago. The average live weight, at 231 pounds, increased 3 pounds from last year. October sheep slaughter totaled 500 head, unchanged from October 2004. The average live weight decreased 9 pounds to 116 pounds.

Commercial red meat production for the United States totaled 3.93 billion pounds in October, up slightly from the 3.92 billion pounds produced in October 2004.

Beef production, at 2.08 billion pounds, was 23 percent below the previous year. Cattle slaughter totaled 2.68 million head, down 2 percent from October 2004. The average live weight was up 13 pounds from the previous year, at 1,280 pounds.

Veal production totaled 12.6 million pounds, 2 percent above October a year ago. Calf slaughter totaled 56,400 head, down 10 percent from October 2004. The average live weight was 41 pounds above last year, at 371 pounds.

Pork production totaled 1.82 billion pounds, up 2 percent from the previous year. Hog kill totaled 9.12 million head, 2 percent above October 2004. The average live weight was 2 pounds above the previous year, at 269 pounds.

Lamb and mutton production, at 15.8 million pounds, was down 3 percent from October 2004. Sheep slaughter totaled 229,500 head, 5 percent below last year. The average live weight was 138 pounds, up 3 pounds from October a year ago.

January to October 2005 commercial red meat production was 37.8 billion pounds, up slightly from 2004. Accumulated beef production was virtually unchanged from last year, veal was down 6 percent, pork was up 1 percent from last year, and lamb and mutton production was down 4 percent.

October Milk Production Up 4.1 Percent

Milk production in the 23 major States during October totaled 13.4 billion pounds, up 4.1 percent from October 2004. September revised production, at 13.0 billion pounds, was up 4.7 percent from September 2004. The September revision represented a decrease of 27 million pounds or 0.2 percent from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,636 pounds for October, 53 pounds above October 2004. The number of milk cows on farms in the 23 major States was 8.16 million head, 58,000 head more than October 2004, and 4,000 head more than September 2005.

U.S. November 1 Cattle on Feed Up 1 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.5 million head on November 1, 2005. The inventory was 1 percent above November 1, 2004 and 4 percent above November 1, 2003.

Placements in feedlots during October totaled 2.80 million, 3 percent above 2004 and 1 percent above 2003. Net placements were 2.74 million head. During October, placements of cattle and calves weighing less than 600 pounds were 880,000, 600-699 pounds were 790,000, 700-799 pounds were 600,000, and 800 pounds and greater were 525,000.

Marketings of fed cattle during October totaled 1.74 million, 3 percent below 2004 and 6 percent below 2003. This is the second lowest fed cattle marketings for the month of October since the series began in 1996. Other disappearance totaled 58,000 during October, 12 percent below 2004 and 43 percent below 2003.

October Egg Production Up 1 Percent

U.S. egg production totaled 7.70 billion during October 2005, up one percent from last year. Production included 6.60 billion table eggs, and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 60 million were egg-type. The number of layers during October 2005 averaged 344 million, down slightly from a year earlier. October egg production per 100 layers was 2,239 eggs, up 1 percent from October 2004.

All layers in the U.S. on November 1, 2005, totaled 345 million, down slightly from a year ago. The 345 million layers consisted of 287 million layers producing table or market type eggs, 55.3 million layers producing broiler-type hatching eggs, and 2.46 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 2005, averaged 72.4 eggs per 100 layers, up 1 percent from November 1, 2004.

Egg-type chicks hatched during October 2005 totaled 35.4 million, up 1 percent from October 2004. Eggs in incubators totaled 33.1 million on November 1, 2005, down 11 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 189,000 during October 2005, down 29 percent from October 2004.

Broiler-type chicks hatched during October 2005 totaled 776 million, up 3 percent from October 2004. Eggs in incubators totaled 624 million on November 1, 2005, up 3 percent from a year earlier.

Leading breeders placed 6.94 million broiler-type pullet chicks for future domestic hatchery supply flocks during October 2005, up 8 percent from October 2004.

October Farm Labor

There were 1,129,000 hired workers on the Nation's farms and ranches during the week of October 9-15, 2005, down 4 percent from a year ago. Of these hired workers, 840,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 289,000 workers.

Farm operators paid their hired workers an average wage of $9.61 per hour during the October 2005 reference week, up 29 cents from a year earlier. Field workers received an average of $8.90 per hour, up 28 cents from last October, while livestock workers earned $9.14 per hour compared with $8.91 a year earlier. The field and livestock worker combined wage rate, at $8.96 per hour, was up 27 cents from last year.

The number of hours worked averaged 42.0 hours for hired workers during the survey week, up 4 percent from a year ago.

The largest decreases in the number of hired farm workers from last year occurred in California, Florida, and in the Appalachian II (Kentucky, Tennessee, and West Virginia), Northern Plains (Kansas, Nebraska, North Dakota, and South Dakota), and Northeast I (New England and New York) regions. In California, tightened security at the Mexican border and increased competition from the higher paying construction industry caused farm worker shortages. Fruit and vegetable growers had to leave some acreage unharvested due to the shortage. Thus, fewer workers were hired during the reference week. Declining tobacco acreage in the Appalachian II region continues to greatly decrease the demand for hired workers. In Florida, tropical storms throughout much of the growing season caused significant damage to vegetable and citrus crops and delayed harvest, lessening the need for hired workers. In the Northern Plains and Northeast I regions, rain before and during the reference week delayed field crop harvest and reduced the demand for hired workers.

The largest increases in the number of hired farm workers from a year ago were in the Southern Plains (Oklahoma and Texas), Pacific (Oregon and Washington), Corn Belt II (Iowa and Missouri), Southeast (Alabama, Georgia, and South Carolina), and Northeast II (Delaware, Maryland, New Jersey, and Pennsylvania) regions. In the Southern Plains region, despite rain in south Texas, the reference week was mainly warm and dry, in sharp contrast to the widespread rain before and during last year's reference week. Therefore, more hired workers were needed. Apple harvest in the Pacific region was virtually complete prior to last year's reference week but was still in full swing during the reference week this year. More workers were required to handle the continuation of the harvest. In the Corn Belt II and Southeast regions, the weather was virtually ideal compared to last year's rain and muddy conditions, increasing the demand for hired workers. Continued strong demand from the nursery and greenhouse industries in the Northeast II region kept hired worker levels above last year, despite heavy rains across the region.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Corn Belt II, California, Appalachian II, Lake (Michigan, Minnesota, and Wisconsin), and Mountain III (Arizona and New Mexico) regions. The higher wages in the Corn Belt II region were due to the accelerated corn and soybean harvests which required highly skilled workers for combining and hauling. In California and in the Appalachian II region, wages were up due to a lower percentage of part-time workers. Sugar beet harvest in the Lake region progressed rapidly, necessitating more highly paid machine operators. Wages in the Mountain III region were higher because of more salaried workers putting in fewer hours, which pushed their hourly wage higher.

The 2005 U.S. all hired worker annual average wage rate was $9.51, up 3 percent from the 2004 annual average wage rate of $9.23. The U.S. field worker annual average wage rate was $8.70, up 25 cents from last year's annual average. The field and livestock worker combined annual average wage rate at the U.S. level was $8.84, up 3 percent from last year's annual average wage rate of $8.56.

Hired Workers: Annual Average Wage Rates By State, 2004-05 1/ 2/

1/ Excludes Agricultural Service Workers. 2/ Annual rates are averages of the published wage rates for each survey week weighted by the number of hours worked during the week. The annual average for all States, Regions, and the U.S. is based on data collected for January, April, July, and October. 3/ Excludes AK.

World Ag Supply and Demand Estimates

Wheat: No changes are made to U.S. 2005/06 supply and demand forecasts, leaving ending stocks at 530 million bushels, which is down just 10 million from the previous year. Relative to last month, Hard Red Winter (HRW) exports are up 10 million bushels, while Soft Red Winter (SRW) and Durum exports are each down 5 million. Ending stocks of HRW fall to 175 million bushels, the smallest since 1996/97, and SRW and Durum stocks each rise 5 million. This month, the projected 2005/06 price range is narrowed 5 cents on each end to $3.25 to $3.55 per bushel, compared with $3.40 for 2004/05.

Global wheat production in 2005/06 is up nearly 3 million tons from last month; consumption, exports, and imports are little changed, but ending stocks are up 2 million tons. Foreign production is larger due primarily to bigger crops in EU-25, Saudi Arabia, Australia, Turkey, and Argentina; partially offset by smaller crops in Russia and Brazil. Projected global imports are down fractionally due to lower imports by Turkey, Saudi Arabia, and Norway. Imports by Brazil and South Korea are up. Forecast exports decline for Ukraine and Iran, but increase for Turkey and Argentina.

Global consumption is little changed from last month. The largest month-to-month consumption increases occur in feed use in Brazil, Australia, and South Korea partially offset by lower consumption in Russia and Argentina. Global 2005/06 wheat ending stocks rise 2.1 million tons, from last month, to 139.5 million, but are down nearly 10 million from the previous year. Compared to last month, the largest increases in foreign stocks are in EU-25, Ukraine, Iran, Saudi Arabia, and Australia. The largest reductions occur in Russia and Brazil.

Coarse Grains: This month's outlook for 2005/06 U.S. corn is for increased production, higher domestic consumption, larger stocks, and lower prices. Forecast 2005 corn production is up 175 million bushels from last month to 11.032 billion bushels (the second largest crop on record). A 75-million-bushel increase in corn used to produce ethanol boosts food, seed, and industrial use by an equal amount. Exports and feed and residual use are unchanged. Corn ending stocks are up 99 million bushels from last month and are 207 million higher than the previous year. The projected 2005/06 price range for corn is $1.60 to $2.00 per bushel, down 5 cents on each end from last month, compared with $2.06 for 2004/05.

Forecast U.S. grain sorghum production is up 13 million bushels. Except for a 10-million- bushel increase in grain sorghum feed and residual, no other changes are made in projected use. Grain sorghum ending stocks are up 3 million bushels from last month. The projected 2005/06 price range for grain sorghum is $1.45 to $1.85, down 5 cents on each end from last month, compared with $1.79 for 2004/05.

The global outlook for coarse grains in 2005/06 is for increased production, higher consumption, little change in trade, and larger stocks relative to last month. Foreign production is down less than 1 million tons with the largest declines projected in Brazil, Argentina, and Romania. These losses are partially offset by larger crops in EU-25, Ukraine, and Russia. Foreign 2005/06 coarse grain consumption is little changed with declines in South Korea, Turkey, China, and Japan, mostly offset by increases in EU-25. Global 2005/06 imports and exports are little changed from last month. Imports are down for Japan and South Korea, but up for Brazil. Exports are up for Ukraine, Russia, and Turkey, but down for Argentina, EU-25, and Romania. Global 2005/06 ending stocks rise 2.4 million tons from last month but foreign stocks are down fractionally.

Oilseeds: U.S. oilseed ending stocks for 2005/06 are projected at 11.1 million tons, up 2.4 million tons from last month. Total U.S. oilseed production is projected at 94.9 million tons, up 2.1 million tons from last month mainly due to increased soybean production. Soybean production is forecast at 3,043 million bushels, up 76 million bushels due to increased yields. Soybean crush is raised 25 million bushels due to larger available supplies and higher-than-expected soybean meal use in recent months. Soybean exports are reduced 40 million bushels to 1,075 million bushels based on lower-than-expected sales and shipments, particularly to EU-25 and China. Soybean ending stocks are projected at 350 million bushels, up 90 million from last month. Other oilseed production is forecast higher this month with increases for cottonseed more than offsetting reduced peanut production.

Soybean oil production, consumption, exports, and stocks are all raised this month. Increased soybean oil use for the 2005/06 marketing year primarily reflects expected increases in biodiesel production.

U.S. season-average soybean prices for 2005/06 are projected at $4.95 to $5.75, down 5 cents on both ends of the range. Soybean meal prices are also lower at $155 to $180 per short ton compared with $155 to $185 last month. Soybean oil prices are unchanged at 22 to 25 cents per pound.

Global oilseed production for 2005/06 is projected at 385.3 million tons, up 0.5 million tons from last month. Foreign oilseed production is reduced 1.6 million tons primarily due to lower soybean production. Brazil soybean production is projected at 58.5 million tons, down 1.5 million tons from the previous estimate based on reduced area. Recent Brazilian government surveys indicate lower area as producers face declining prices, stronger local currency, limited access to credit, and higher transportation costs, especially from the center-west region. Russian sunflower seed production is increased 0.5 million tons to 5.8 million tons this month reflecting record harvested area and good yields. Other changes include lower sunflower seed production for Argentina, and reduced cottonseed production for Brazil based on sharply lower cotton planted area. China peanut production is also reduced.

Global oilseed ending stocks for 2005/06 are reduced this month as lower soybean stocks in South America more than offset increased stocks in the United States.

Sugar: Projected U.S. sugar supply for 2005/06 is decreased 397,000 short tons, raw value, from last month. Reduced beginning stocks of 160,000 tons and production of 352,000 tons more than offset increased imports. Production projections are based on processors' reports compiled by the Farm Service Agency. Processor reports from Florida and Louisiana are updated to account for hurricane damage. Imports are increased 115,000 tons to account for 25,000 from Nicaragua following ratification of the Central American-Dominican Republic Free Trade Agreement and 90,000 tons of high-tier imports from Mexico. Use is increased 25,000 tons due to higher deliveries for domestic food use more than offsetting lower exports. Ending stocks are decreased to 667,000 tons, or 6.4 percent of use.
(continued on back page)

World Ag Supply and Demand Estimates (continued from page three)

For 2004/05, preliminary year-end data from processors result in supply decreasing 25,000 tons and use increasing 135,000 tons. Ending stocks are decreased to 1.36 million tons, or 12.9 percent of use.

Livestock, Poultry, and Dairy: Note: Due to uncertainties as to the length of the bans on trade in ruminants and ruminant products because of the discovery of BSE in the United States and Canada, forecasts for 2005 and 2006 assume a continuation of policies currently in place among U.S. trading partners. Subsequent forecasts will reflect any announced changes.

The total U.S. meat production forecasts for 2005 and 2006 are reduced from last month mainly because of lower beef output. Beef output in the fourth quarter of 2005 is lowered because the marketing pace has slowed and fewer steers and heifers are expected to be slaughtered. The reduced pace of cattle marketings and lower slaughter is likely to carry through most of 2006, and beef production is lowered in the middle quarters. Forecast pork production for 2005 is slightly lower because pork output was lower than expected in third quarter 2005 due to lighter average carcass weights. Forecast pork production in 2006 is unchanged. Forecast broiler production is also unchanged. Turkey output is expected to be slightly higher at the end of 2005 and the first half of 2006.

Beef imports are reduced slightly in 2005 and 2006. Broiler exports are raised for the third quarter 2005 because of strong shipments through August. Both broiler and pork exports are increased in 2006 as foreign demand is expected to remain firm through the year.

Forecast cattle and hog prices for 2005 are raised as prices have remained relatively strong at the start of the fourth quarter. Cattle prices are also raised for the first three quarters of 2006 reflecting expectations for strong demand for high quality beef and relatively tight supplies of Choice grade cattle. Broiler prices in 2005 and 2006 are reduced slightly. The turkey price forecast for 2005 is raised slightly.

Forecast milk production in 2005 and 2006 is increased from last month. Although recent milk cow numbers and dairy herd replacement prices point to slightly slower growth in milk cow herds, output per cow continues to advance as producer returns are expected to remain favorable. Cheese and butter price forecasts for 2005 and 2006 are lowered from last month to clear increased supplies of those products. Strong domestic and international demand likely will support nonfat dry milk (NDM) and whey prices, thus NDM and whey price forecasts are slightly higher. Class price forecasts are lowered for both 2005 and 2006. The all milk price for 2005 is forecast lower at $15.15 to $15.25 per cwt, and the 2006 forecast is reduced to $13.15 to $14.05 per cwt.

November 1 Crop Production Forecast

Montana **dry edible pea** production is forecast at 2.01 million cwt, up 58 percent from the 2004 estimate. Planted acreage for 2005 is estimated at 135,000 acres, 67,000 acres more than 2004. Harvested acreage is estimated at 118,000 acres, up 55,000 acres from last year. The yield is forecast at 1,700 pounds per acre, 310 pounds per acre below 2004.

Austrian winter pea production in Montana is forecast at 176,000 cwt, up 78 percent from last year. Harvested acreage, at 16,000 acres, is expected to be up 5,000 acres from last year. Planted acreage for 2005 is estimated at 21,000 acres, up 7,000 acres from last year. The average yield is forecast at 1,100 lbs per acre, up 200 lbs per acre from 2004.

Montana's **lentil** production is forecast at 1.81 million cwt for 2005, up 79 percent from last year. Planted acreage, at 150,000 acres, is up 72,000 acres from 2004. Harvested acres, at 139,000, are up 67,000 acres from last year. Average yield is expected to be 1,300 lbs per acre, down 100 lbs from last year.

Montana **sugar beet** production is expected to be 1.14 million tons, up 1 percent from last year. Forecasted yield, of 22.8 tons per acre, is up 1.1 tons per acre from 2004. Harvested acreage is down 2,100 acres from last year to 50,000 acres.

Fall potato production in Montana is forecast at 3.43 million cwt, down 3 percent from last year. Harvested acres are estimated at 10,900 acres, up 300 acres from last year. The yield is forecast at 315 cwt per acre, down 20 cwt per acre from 2004.

The U.S. **dry edible pea** production is estimated at 13.8 million cwt, up 21 percent from the 2004 estimate. Area for harvest, at 761,900 acres, is 50 percent above a year ago. Average yield is forecast at 1,813 pounds per acre, down 436 pounds from last season.

Austrian winter pea production in the United States for Idaho, Montana, and Oregon is forecast at 324,000 cwt, up 11 percent from 2004. Area harvested is forecast at 27,500 acres, up 12 percent from last year. Average yield is expected to be 1,178 pounds per acre, down 10 pounds per acre from last season.

U.S. **lentils** production is forecast at 5.10 million cwt, up 22 percent from last year. Area for harvest is forecast at 432,000 acres, up 31 percent from the previous year. Average yield is expected to be 1,181 pounds per acre, down 90 pounds per acre from 2004.

Sugar beet production in the U.S. for 2005 is forecast at 27.3 million tons, 2 percent above the October forecast but 9 percent below last year's production. The yield is forecast at 22.0 tons per acre, up 0.5 ton from October but 0.9 ton below 2004. Growers in the 12 sugar beet-producing States expect to harvest 1.24 million acres, fractionally below last month and 5 percent below last year.

U.S. **fall potatoes** production for 2005 is forecast at 382 million cwt, down 7 percent from last year. Area harvested, at 951,800 acres, is virtually unchanged from the July forecast but 7 percent below last year. The average yield is forecast at a record high 402 cwt per acre, 1 cwt above the previous high set last year.

Western States production is forecast at 268 million cwt, down 5 percent from last year. Acreage harvested, at 600,900 acres, decreased 6 percent from last year but the average yield of 445 cwt per acre is up 7 cwt from 2004.

Montana 2005 Crop Year Summary

Seeding of the 2005 winter wheat crop was complete by the end of October and 90 percent had emerged. An estimated 2.10 million acres were seeded, 200,000 acres above 2004. Favorable moisture and growing conditions occurred during the fall. As a result, crop condition was rated 1% very poor, 3% poor, 22% fair, 49% good, and 25% excellent. These ratings were much better than the 2004 crop, which was rated 6% very poor, 20% poor, 55% fair, 18% good, and 1% excellent at that time.

November 2004 temperatures were above normal with limited precipitation throughout the state. By the end of the month, 98% of the winter wheat crop was emerged and 78% was rated good to excellent. Topsoil moisture conditions at the end of the month were rated 17% very short, 44% short, 39% adequate, and 0% surplus. Subsoil moisture was rated 36% very short, 38% short, 26% adequate, and 0% surplus.

Montana had above normal temperatures until the last week of December when colder temperatures and snow arrived in the state. At month's end, the winter wheat crop had very little freeze or wind damage and 65% of the crop was rated in good to excellent condition.

Temperatures during January 2005 were cold and snow fell in most areas of the state during the first half of the month. Above normal temperatures and limited precipitation prevailed the last half of the month. Winter wheat conditions were better than the previous year because of less wind, freeze, and drought damage and were rated 5% very poor, 13% poor, 46% fair, 33% good, and 3% excellent.

The month of February was unseasonably mild with below average precipitation, which caused producers concern about both summer water shortages and wild fires. Winter wheat was greening earlier than normal because of the warm weather and was reported in mostly good to fair condition at month's end. In March, Montana had near normal temperatures and above average precipitation. Topsoil moisture conditions improved, compared to the previous month and was rated 22% very short, 33% short, 41% adequate and 4% surplus. Subsoil moisture was rated 55% very short, 31% short, 13% adequate, and 1% surplus, better than February, but below 2004. Winter wheat was reported in mostly fair to good condition at month's end. Small grains seeding had just started in some locations. (continued on next page)

1/ Preliminary. 2/ Planted for all purposes. 3/ Forecast available January 12, 2006. -- Not published.

Crop Year Summary
(continued from front page)

Small grains seeding began in April. By the end of the month, fieldwork was 57% well underway, behind last year's 82%. Most areas of the state received precipitation in April. Topsoil moisture conditions were 64% adequate to surplus compared with 2004 ratings of 32% adequate to surplus. By the end of the month, barley was 54% seeded, with 10% of the crop emerged. The spring wheat crop was 58% seeded, with 10% emerged. Durum wheat was 36% planted with 4% emerged. The corn crop was 8% planted. Oats were 46% seeded with 10% emerged. Potatoes and sugar beet planting had not started. At month's end, winter wheat condition was 21% excellent, 44% good, 29% fair, 5% poor, and 1% very poor.

May brought much needed rain throughout state. Freezing temperatures in some areas caused some damage to winter wheat, cherries, and sugar beets. Spring wheat and barley seeding was nearly complete at month's end, while durum wheat, oats, and corn seeding were above 90% complete. By the end of June, all crop conditions were rated better than 2004 and crop progress was mostly ahead of the previous year. Haying had begun with alfalfa hay harvest at 21% complete and other hay at 17% complete.

Montana received moderate to light precipitation during July. Hot temperatures prevailed the entire month. Winter wheat harvest was 45% complete at month's end, compared to 10% last year and the five-year average of 35%. Harvest had begun for spring wheat, barley, and oats. First cutting of hay was nearly complete and second cutting had begun. (continued on back page)

September Ag Prices Received

September full month crop prices were mostly higher compared to August 2005. Montana's winter wheat price was $3.26 per bushel, up $0.27 from the previous month; spring wheat moved up $0.23 to $3.50 per bushel; and durum wheat prices gained $0.16 to reach $3.54 per bushel. Feed barley prices increased $0.08 from the previous month to $1.55; and malt barley prices were down $0.21 to $3.06 per bushel.

The mid-October price for alfalfa hay dropped $10.00 from September to $75.00 per ton and all other hay also was down $3.00 to $67.00 per ton. The mid-October grain prices were mixed with winter wheat price averaging $3.42 per bushel; spring wheat was $3.94; durum wheat $3.28; feed barley was $1.42; and malt barley $3.03.

Livestock prices for the full month of September were mostly higher compared to August 2005. Steer and heifer prices increased $1.00 to $107.00 per cwt, but cows decreased $0.70 to $51.70. The price for calves jumped $8.00 to $144.00 per cwt, a new record high. Sheep prices increased $3.30 to $44.90 per cwt, while lamb prices rose $3.00 to $124.00 per cwt. Full month September milk prices increased $0.50 per cwt from August to $15.80. Steer and heifer prices for mid-October were $116.00 per cwt, a new record high; cows $52.40 per cwt; calves $135.00 per cwt; and mid-month October milk prices $15.40 per cwt, down $0.40 from September.

Nationally, prices for September and changes from August were as follows: winter wheat was $3.26, up $0.12; spring wheat was $3.50, up $0.07; durum wheat was $3.40, up $0.01; the all barley price was $2.36, down $0.13, and steer and heifer prices were $92.30, up $4.50 per cwt.

The U.S. mid-October winter wheat price was $3.42 per bushel; spring wheat was $3.79 per bushel; durum wheat was $3.25 per bushel; all wheat was $3.54 per bushel; malt barley was $2.83 per bushel; feed barley was $1.86 per bushel; and all barley was $2.43. Steer and heifer prices were $96.00 per cwt; cow prices were $47.70, calves were $132.00 per cwt; all hog prices were $48.80 per cwt; and all egg prices were $0.51 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in October, at 110, based on 1990-92=100, decreased 7 points (6.0 percent) from September. The Crop Index is down 11 points (9.8 percent) while the Livestock Index is unchanged. Producers received lower commodity prices for broilers, corn, eggs, and soybeans. Higher prices were received for cattle, sweet corn, wheat, and turkeys. The overall index is also affected by the seasonal change based on a 3-year average mix of commodities a producer sells. Decreased average marketings of dairy, sweet corn, grapes, and wheat offset increased marketings of soybeans, corn, cotton, and cottonseed.

United States Index Summary

INDEX (1990-92=100)	September 2004	October 2004	September 2005	October 2005

Crop Year Summary (continued)

Hot weather continued and lasted the entire month of August. Most areas received moderate precipitation during the month. Hail storms in the eastern part of the state caused some damage to crops in a few areas. By month's end, winter wheat harvest was complete and spring grains harvest was well ahead of last year. The second cutting of alfalfa hay was 70% complete, the same as 2004.

Montana's 2005 **winter wheat** production was 92.3 million bushels, 38 percent higher than last year's production of 66.8 million bushels. This is the fourth largest crop on record and the highest since 1993 when 102.9 million bushels were produced. Producers seeded 2.10 million acres, 11 percent higher than the 2004 acreage. Producers harvested 2.05 million acres, up 420,000 acres from last year's acreage of 1.63 million acres. The 2005 average yield, at 45.0 bushels per acre, is 4 bushels higher than last year and unchanged from the previous forecast. Yield set a new record high, surpassing the previous high by 3 bushels per acre.

Spring wheat production in Montana was 81.6 million bushels, down 8 percent from 2004 because fewer acres were seeded and harvested in 2005. The final seeded acreage was 2.6 million acres, down 400,000 acres from last year's acreage of 3.0 million acres. Producers harvested 2.6 million acres, down 300,000 acres from the previous year's acreage of 2.9 million acres. Yields averaged 32.0 bushels per acre, down 1 bushel from the August forecast, but up 1 bushel from the previous year.

Montana **durum wheat** growers seeded 570,000 acres, unchanged from last year. Producers harvested 565,000 acres, up 4 percent from 2004. The average yield was 28.0 bushels per acre, down 5 bushels per acre from last year, and down 2 bushel from the previous forecast. Total production for 2005 was estimated at 15.8 million bushels, down 12 percent from last year. For the week ending September 25, durum wheat harvest was 96 percent complete compared to 59 percent last year.

In 2005, Montana producers seeded 950 thousand acres of **barley**, 50,000 acres fewer than the 2004 acreage of 1.0 million acres. This is the lowest acreage seeded since 1953, when 582 thousand acres were seeded. Producers harvested 710,000 acres, 120,000 fewer than the 2004 harvested acreage of 830,000. The final yield for 2005 averaged 56.0 bushels per acre, down 3 bushels from last year, and down 4 bushels from the August forecast. Production was estimated at 39.8 million bushels, 8 percent below last year.

Oat production in Montana was estimated at 1.7 million bushels, down 27 percent from last year. Planted acreage was estimated at 85,000 acres, down 20,000 acres from 2004. Harvested acreage was set at 33,000 acres, down 7,000 acres from last year. Average yield at 53.0 bushels per acre, was 7 bushels below 2004, but unchanged from the previous forecast.

Total production of **alfalfa hay** in Montana is estimated to be 4.59 million tons, up 43 percent from the previous year **Alfalfa hay** yield rose 0.20 ton from the August forecast to 2.70 tons per acre. This would be a new record high for alfalfa yield with the previous record of 2.60 tons per acre set in 1981. Harvested area, at 1.70 million acres, remained unchanged from August, but is 300,000 acres more than 2004. **Other hay** yield was unchanged from August's forecast of 1.60 tons per acre, up 0.20 ton per acre from last year. Other hay production is expected to be 2.00 million tons, up 30 percent from 2004. Other hay harvested area is unchanged from August at 1.25 million acres, but is up 150,000 acres from 2004. **All hay** production is estimated at 6.59 million tons, up 38 percent from last year. **All hay** yield is estimated to be 2.23 tons per acre, up 0.33 ton per acre from last year. This would tie the previous record high all hay yield set in 1995.

October 1, 2005 Montana All Hay, Sugar Beets, and Canola Production Forecast

Total production of **alfalfa hay** in Montana is estimated to be 4.59 million tons, up 43 percent from the previous year. Alfalfa hay yield rose 0.20 ton from the August forecast to 2.70 tons per acre. This would be a new record high for alfalfa yield with the previous record of 2.60 tons per acre set in 1981. Harvested area, at 1.70 million acres, remained unchanged from August, but is 300,000 acres more than 2004. **Other hay** yield was unchanged from August's forecast of 1.60 tons per acre, up 0.20 ton per acre from last year. Other hay production is expected to be 2.00 million tons, up 30 percent from 2004. Other hay harvested area is unchanged from August at 1.25 million acres, but is up 150,000 acres from 2004. **All hay** production is estimated at 6.59 million tons, up 38 percent from last year. All hay yield is estimated to be 2.23 tons per acre, up 0.33 ton per acre from last year. This would tie the previous record high all hay yield set in 1995.

Montana's **sugar beet** production is forecast at 1.05 million tons for 2005, the same as September's forecast, but down 7 percent from 2004. Forecasted yield, at 21.0 tons per acre, is unchanged from last month, but down 0.7 ton per acre from last year. Harvested acreage, at 50,000 acres, is unchanged from September, but down 2,100 acres from last year.

Montana **canola** producers expect to harvest 18,000 acres in 2005, compared with 15,000 in 2004. Yield is expected to be 1,400 pounds per acre, down 12 percent from last year. Production is expected to total 25.2 million pounds, compared with 23.9 million pounds last year.

For the **United States**, **alfalfa** and alfalfa mixtures production is forecast at 75.9 million tons, up 3 percent from the August forecast and up 1 percent from last year. Yields are expected to average 3.43 tons per acre, up 0.09 ton from August but down 0.04 ton from 2004. Harvested area is forecast at 22.1 million acres, unchanged from August but up 2 percent from last year. U.S. **other hay** production is forecast at 76.9 million tons, up 1 percent from August but down 7 percent from 2004. Based on October 1 conditions, yields are expected to average 1.94 tons, up 0.02 ton from August but down 0.11 ton from last year. Harvested area, at 39.6 million acres, is unchanged from August but down 2 percent from the previous year.

Sugar beet production in the U.S. for 2005 is forecast at 26.7 million tons, 2 percent above the September forecast but 11 percent below last year's production. The yield is forecast at 21.5 tons per acre, up 0.3 ton from September but 1.4 tons below 2004. Growers in the 12 sugarbeet-producing States expect to harvest 1.24 million acres, virtually the same as last month but 5 percent below last year.

The first U.S. **canola** production forecast for 2005 is 1.50 billion pounds, up 12 percent from 2004. Area planted, at 1.15 million acres, is up 6 percent from the June estimate and up 33 percent from last year. Canola farmers expect to harvest 1.13 million acres, up 5 percent from June and up 36 percent from 2004. The October yield forecast, at 1,333 pounds per acre, is 285 pounds below last year's record high yield.

U.S. September Egg Production Up Slightly

U.S. egg production totaled 7.38 billion during September 2005, up slightly from last year. Production included 6.31 billion table eggs, and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 59 million were egg-type. The total number of layers during September 2005 averaged 342 million, down 1 percent from a year earlier. September egg production per 100 layers was 2,155 eggs, up 1 percent from September 2004.

All layers in the U.S. on October 1, 2005, totaled 343 million, down slightly from a year ago. The 343 million layers consisted of 286 million layers producing table or market type eggs, 55.1 million layers producing broiler-type hatching eggs, and 2.46 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 2005, averaged 71.9 eggs per 100 layers, up 1 percent from October 1, 2004.

Egg-type chicks hatched during September 2005 totaled 33.8 million, down 8 percent from September 2004. Eggs in incubators totaled 31.8 million on October 1, 2005, down 5 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 375,000 during September 2005, up 83 percent from September 2004.

Broiler-type chicks hatched during September 2005 totaled 770 million, down slightly from September 2004. Eggs in incubators totaled 632 million on October 1, 2005, up 2 percent from a year earlier.

Leading breeders placed 7.13 million broiler-type pullet chicks for future domestic hatchery supply flocks during September 2005, down 8 percent from September 2004.

Montana Agricultural Statistics 2005 Book Available Soon

The annual report contains state and county crop and livestock estimates, farm income, prices, farm numbers, Montana's rank among states, and other statistical data.

The Montana Agricultural Statistics 2005 book will be available in December in printed form or on our website at www.nass.usda.gov/mt/. The price for the printed book is $10.00. Those who supply survey information are not charged.

U.S. Cattle on Feed Down Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.5 million head on October 1, 2005. The inventory was slightly below October 1, 2004 but up 3 percent from October 1, 2003.

The inventory included 6.87 million steers and steer calves, up 6 percent from the previous year. This group accounted for 66 percent of the total inventory. Heifers and heifer calves accounted for 3.55 million head, down 11 percent from 2004.

Placements in feedlots during September totaled 2.36 million, 1percent below 2004 and 5 percent below 2003. Net placements were 2.30 million head. During September, placements of cattle and calves weighing less than 600 pounds were 565,000, 600-699 pounds were 505,000, 700-799 pounds were 550,000, and 800 pounds and greater were 735,000. Marketings of fed cattle during September totaled 1.82 million, 1 percent above 2004 but 11 percent below 2003. Other disappearance totaled 57,000 during September, 7 percent below 2004 and 10 percent below 2003.

September U.S. Milk Production Up 4.9 Percent

Milk production in the 23 major States during September 2005 totaled 13.0 billion pounds, up 4.9 percent from September 2004. August revised production, at 13.6 billion pounds, was up 4.8 percent from August 2004. The August revision represented an increase of 22 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,597 pounds for September, 64 pounds above September 2004. The number of milk cows on farms in the 23 major States was 8.16 million head, 54,000 head more than September 2004, and 1,000 head more than August 2005.

Milk production in the U.S. during the July-September quarter totaled 44.0 billion pounds, up 4.2 percent from the July-September quarter last year. The average number of milk cows in the U.S. during the quarter was 9.05 million head, 27,000 head more than the same period last year.

Wheat Utilization

The June 2004 - May 2005 total wheat supply was 213.6 million bushels, 16 percent more than the previous year. Total supply is calculated by adding 2004 all wheat production to June 2004 all wheat stocks. Total disposition during June 2004 - May 2005 was 162.3 million bushels, 13 percent more than the quantity marketed during the previous year. Ending stocks of 51.3 million bushels on June 1, 2005 was 27 percent higher than the previous year. Wheat utilization reports are assembled from Grain Movement Reports and Grain Market News data by the USDA, NASS, Montana Field Office. Funding was provided by the Montana Wheat and Barley Committee

Montana shipped 133.3 million bushels out of state during June 2004 - May 2005, 3 percent more than moved during the same period the prior year. Shipments to the Pacific Northwest totaled 90.8 million bushels, 8 percent more than the 2003 - 2004 season, and accounted for 73 percent of the wheat shipped out of state. Pacific Northwest destinations accounted for 78.2 million bushels, while Pacific Northwest processing destinations accounted for 12.6 million bushels.

Inspected exports of hard red winter, hard red spring, hard white, and durum wheat from Pacific ports were 239.3 million bushels, up 16 percent from the previous year. Montana's recorded share of those exports was 33 percent, the same as the previous year

September 2005 Red Meat Production

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during September 2005, up 5 percent from last year, but down 11 percent from the previous month's production. Cattle slaughter totaled 1,700 head, up 100 head from a year ago. The average live weight increased 3 pounds to 1,164 from the previous year.

During September there were 1,600 hogs slaughtered, unchanged from a year ago. The average live weight, at 230 pounds, rose 8 pounds from last year. September sheep slaughter in the state totaled 500 head, 100 head fewer than September 2004. The average live weight increased 9 pounds to 125 pounds.

Commercial red meat production for the United States totaled 3.93 billion pounds in September, up 1 percent from the 3.91 billion pounds produced in September 2004. Beef production, at 2.16 billion pounds, was 3 percent above the previous year. Cattle slaughter totaled 2.78 million head, up 1 percent from September 2004. The average live weight was up 11 pounds from the previous year, at 1,276 pounds.

Veal production totaled 13.2 million pounds, 2 percent above September a year ago. Calf slaughter totaled 60,700 head, down 10 percent from September 2004. The average live weight was 43 pounds above last year, at 363 pounds.

Pork production totaled 1.74 billion pounds, down 2 percent from the previous year. Hog kill totaled 8.87 million head, 1 percent below September 2004. The average live weight was unchanged from the previous year, at 265 pounds.

Lamb and mutton production, at 15.6 million pounds, was down 4 percent from September 2004. Sheep slaughter totaled 231,300 head, 5 percent below last year. The average live weight was 135 pounds, up 2 pounds from September a year ago.

January to September 2005 commercial red meat production was 33.9 billion pounds, up slightly from 2004. Accumulated beef production was up slightly from last year, veal was down 7 percent, pork was up 1 percent from last year, and lamb and mutton production was down 4 percent.

2004 Barley for Malt Production

Maltsters and brewers purchased 19.7 million bushels of Montana's 2004 barley crop to make malt, up 33 percent from 2003. The average protein of the 2004 malting crop was 12.0 percent, which is 0.2 points lower than the average protein of the 2003 crop.

Montana growers seeded 1.00 million acres of barley in 2004, down 150,000 acres from 2003. Of the total, over 700,000 acres were seeded to malting-type varieties. If the yield of malting varieties equaled the state average yield per planted acre for all barley, then approximately 34.3 million bushels of malting barley would have been produced. Because only 19.7 million bushels were used for malt, the remaining 14.6 million bushels did not make malting grade or exceeded demand for malting barley. The barley utilized for malt represented approximately 40 percent of the 2004 total barley crop, compared with 43 and 24 percent in 2003 and 2002, respectively.

Harrington was the most frequently purchased variety by maltsters and brewers and represented 35 percent of the total purchases. Anheuser-Busch varieties, at 27 percent of total, were the second most commonly purchased. Fifty-two percent of all malt barley purchased was grown in North Central Montana, compared to 60 percent last year. South Central Montana growers produced 18 percent of the total.

The survey was requested and funded by the Montana Wheat and Barley Committee

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.0 million head on September 1, 2005. The inventory was slightly above September 1, 2004 and 2 percent above September 1, 2003.

Placements in feedlots during August totaled 1.99 million, 5 percent below 2004 and 16 percent below 2003. This is the lowest placements for the month of August since the series began in 1996. Net placements were 1.94 million. During August, placements of cattle and calves weighing less than 600 pounds were 418,000; 600-699 pounds were 385,000; 700-799 pounds were 540,000; and 800 pounds and greater were 650,000.

Marketings of fed cattle during August totaled 2.03 million, 6 percent above 2004, but 2 percent below 2003. Other disappearance totaled 53,000 during August, 5 percent below 2004 and 12 percent below 2003.

2004 Potato Production

Montana's 2004 potato production totaled 3,551,000 cwt, 6 percent above last year and 10 percent above 2002's production. Producers harvested 10,600 acres, unchanged from last year, but 200 acres more than two years ago. Potato yields averaged 335 cwt per acre compared with 315 cwt in 2003 and 310 cwt in 2002.

Value of production from the 2004 crop was $26.6 million, up 5 percent from 2003. The average price was $7.50 per cwt, a decrease of $0.10 from the previous year's crop. Sales of Montana's 2004 potato crop totaled $23.4 million, which is 6 percent above last year's crop. Producers sold 3,119,000 cwt from the 2004 crop compared with 2,909,000 cwt a year ago.

U.S. total 2004 potato production is estimated at 456 million cwt, down fractionally from the estimate made in the January Annual Crop Summary and less than 1 percent below the 2003 crop. Harvested area, at 1.17 million acres, decreased 7 percent from a year ago. The average yield of 391 cwt per acre is up 24 cwt from 2003 and 29 cwt above the average yield from the 2002 crop. This is a record high yield, 10 cwt above the previous record set in 2000.

Winter potato production in 2004 is 4.82 million cwt, an increase of 20 percent from 2003. Harvested area, at 18,500 acres, is up 29 percent from the previous year. The average yield of 260 cwt per acre is down 22 cwt from 2003. Spring potatoes final estimate for 2004, at 22.7 million cwt, decreased 7 percent from the previous year. Harvested acres, at 72,200, are down 15 percent from 2003. The average yield of 314 cwt per acre is 26 cwt above 2003 and a record high, 14 cwt above the previous record high set in 1999. Summer potato production is 18.3 million cwt for 2004, down 2 percent from 2003. Harvested area, at 53,900 acres, is down 8 percent from the previous year. The average yield of 340 cwt per acre is a record high, 20 cwt above the previous record high set in 2003. Fall potatoes are finalized at 410 million cwt for 2004, virtually unchanged from the 2003 crop. Area harvested in 2004 is estimated at 1.02 million acres, down 6 percent from a year earlier. The average yield, at 401 cwt per acre, is up 25 cwt from a year earlier and a record high, 9 cwt above the previous record high set in 2000.

The value of all potatoes sold in 2004 is estimated at $2.34 billion, down 5 percent from the previous year. The average price, at $5.67 per cwt, is down $0.22 from a year earlier. Sales from the 2004 potato crop totaled 414 million cwt, down 1 percent from 2003. Sales account for 91 percent of 2004 production. Non-sales account for 42.2 million cwt, 3 percent above the previous year. Over the past 5 years, 91 percent of the potatoes grown have been sold. The other nine percent were either lost (shrinkage and loss) or used on farms where grown (seed, home use, and livestock feed).

Processors used 259 million cwt of raw potatoes from the 2004 crop, up 1 percent from a year earlier. Table stock sales totaled 130 million cwt, 2 percent below the previous year. Seed sales of 22.9 million cwt are down 7 percent from 2003. Sales for livestock feed, at 1.94 million cwt, are down 3 percent from a year earlier.

Potatoes used for chips and shoestrings totaled 50.1 million cwt in 2004, down 5 percent from the previous year. Frozen french fries and other frozen products utilized 155 million cwt of raw potatoes, up 3 percent. Potatoes used for dehydrating totaled 48.5 million cwt, virtually unchanged from 2003. Canning use, at 3.84 million cwt, fell 10 percent. Starch, flour, and other products were made from 1.53 million cwt of potatoes, 11 percent above the previous year.

Shrinkage and loss is estimated at 37.4 million cwt for 2004, up 6 percent from 2003. Potatoes used for livestock feed on farms where grown and home use totaled 1.18 million cwt, 23 percent below the previous season. Growers kept 3.61 million cwt for seed on their own farms, down 10 percent from a year earlier.

August Milk Production Up 4.6 Percent

Milk production in the 23 major States during August totaled 13.6 billion pounds, up 4.6 percent from August 2004. July revised production, at 13.7 billion pounds, was up 4.2 percent from July 2004. The July revision represented a decrease of 6 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,665 pounds for August, 64 pounds above August 2004. The number of milk cows on farms in the 23 major States was 8.15 million head, 52,000 head more than August 2004, and 9,000 head more than July 2005.

August 2005 Red Meat Production

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during August 2005, down 1 percent from last year, but 17 percent higher than July 2005. Cattle slaughter totaled 1,900 head, unchanged from one year ago. The average live weight rose 14 pounds to 1,143 pounds.

During August there were 2,000 hogs slaughtered, compared with 2,100 one year ago. The average live weight, at 230 pounds, was up 7 pounds from last year. August sheep slaughter in the state totaled 500 head, unchanged from August 2004. The average live weight increased four pounds to 130 pounds.

Commercial red meat production for the United States totaled 4.10 billion pounds in August, up 6 percent from the 3.88 billion pounds produced in August 2004. Beef production, at 2.32 billion pounds, was 8 percent above the previous year. Cattle slaughter totaled 2.99 million head, up 6 percent from August 2004. The average live weight was up 15 pounds from the previous year, at 1,267 pounds.

Veal production totaled 13.7 million pounds, 2 percent below August a year ago. Calf slaughter totaled 65,600 head, down 10 percent from August 2004. The average live weight was 25 pounds above last year, at 347 pounds.

Pork production totaled 1.75 billion pounds, up 3 percent from the previous year. Hog kill totaled 8.98 million head, 3 percent above August 2004. The average live weight was 1 pound above the previous year, at 263 pounds.

Lamb and mutton production, at 15.4 million pounds, was up 1 percent from August 2004. Sheep slaughter totaled 229,300 head, 2 percent below last year. The average live weight was 134 pounds, up 4 pounds from August a year ago.

January to August 2005 commercial red meat production was 30.0 billion pounds, up slightly from 2004. Accumulated beef production was down slightly from last year, veal was down 8 percent, pork was up 1 percent from last year, and lamb and mutton production was down 3 percent.

August Egg Production Up Slightly

U.S. egg production totaled 7.56 billion during August 2005, up slightly from last year. Production included 6.46 billion table eggs, and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 62 million were egg-type. The total number of layers during August 2005 averaged 341 million, down 1 percent from a year earlier. August egg production per 100 layers was 2,219 eggs, up 1 percent from August 2004.

All layers in the U.S. on September 1, 2005, totaled 341 million, down 1 percent from a year ago. The 341 million layers consisted of 283 million layers producing table or market type eggs, 55.5 million layers producing broiler-type hatching eggs, and 2.68 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 2005, averaged 71.6 eggs per 100 layers, up 1 percent from August 2004.

Egg-type chicks hatched during August 2005 totaled 39.0 million, up 6 percent from August 2004. Eggs in incubators totaled 32.5 million on September 1, 2005, down 1 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 261,000 during August 2005, down 18 percent from August 2004.

Broiler-type chicks hatched during August 2005 totaled 812 million, up slightly from August 2004. Eggs in incubators totaled 652 million on August 1, 2005, down slightly from a year earlier.

Leading breeders placed 7.48 million broiler-type pullet chicks for future domestic hatchery supply flocks during August 2005, up 3 percent from August 2004.

Wheat and Barley Movement

Montana **wheat** shipped to out-of-state destinations during January 2005 through June 2005 was 59.3 million bushels, which was down 5% from the previous year.

Over 83% of wheat shipped during this period headed west, totaling 49.1 million bushels, down 2% from a year earlier. Movements to eastern destinations during this period totaled 4.3 million bushels, down 4% from a year ago. Other and unknown destinations totaled 5.9 million bushels, down from 7.6 million bushels a year ago.

Wheat shipped by rail amounted to 56.4 million bushels, 95% of total shipments. Wheat trucked during this period was 2.9 million bushels compared with 2.8 million bushels last year. The percentage of wheat shipped by truck was 5% of the total, which was up slightly from the previous year.

Montana **barley** shipped to out-of-state destinations during the January 2005 to June 2005 period was 11.8 million bushels, up 22% from the same period last year. Shipments of barley out of Montana headed for western destinations were up 40% from the same period last year, at 3.2 million bushels. Shipments to eastern destinations rose from 6.5 million bushels last year to 7.3 million bushels this year. Shipments to other destinations went up from 0.8 million bushels last year to 1.2 million bushels this year.

Barley shipped by rail amounted to 10.8 million bushels, up 1.9 million bushels from last year. Barley hauled by rail was 92% of total movement, down slightly from the same period last year.

U.S. and World Wheat Supply and Demand

Projected U.S. 2005/06 ending stocks of **wheat** are down 10 million bushels from last month due to higher food use, partially offset by larger imports. No changes were made to total exports, though hard red winter wheat exports are up, durum is unchanged, and exports are down for other classes. Imports are 10 million bushels larger than last month. Food use rises 20 million bushels due to recently revised mill grind estimates released by the Bureau of the Census for calendar year 2004. The projected 2005/06 price range is $3.00 to $3.40 per bushel, up 15 cents on the low end and up 25 cents on the high end from last month.

Global wheat production in 2005/06 is nearly unchanged from last month, consumption and trade up slightly, but ending stocks are down. Smaller crops are projected for the EU-25 (down 2 million tons) and Argentina (down 1 million), offset by larger crops in Russia (up 1.5 million) as well as bigger crops in Canada, Ukraine, Syria, and Belarus. Projected global imports are up slightly with the largest change a 0.4 million ton increase in Nigeria's imports. Forecast exports rise for Russia (up 1 million tons), Ukraine (up 0.5 million), and Turkey (up 0.4 million) in contrast to a 1 million ton decline in Argentina's exports.

Global consumption increases fractionally. The largest month-to-month consumption changes occur in Nigeria (up 0.4 million tons), Turkey (down 0.3 million), and Canada (up 0.2 million). Global 2005/06 wheat ending stocks fall 1.8 million tons with the largest declines forecast for the EU-25 (down 2 million tons), partially offset by increased stocks in Russia, Syria, Canada, and several other countries.

Wheat and Barley Shipments out of Montana from January 2005 through June 2005 1/

1/ Counties with less than 500 head or individual operators with 60 percent or more of the total are combined into "other" counties to avoid disclosure of individual information.

July Agricultural Prices Received

Montana's July full month crop prices were mostly lower compared to June 2005. Montana's winter wheat price was $3.21 per bushel, down $0.13 from June; spring wheat dropped $0.26 to $3.43 per bushel; and durum wheat prices decreased $0.25 to $3.53 per bushel. Feed barley prices were down $0.06 from the previous month to $1.54 and malt barley decreased $0.05 to $3.27 per bushel.

The mid-August price for alfalfa hay in Montana was up $1.00 from July 2005 to $76.00 per ton and all other hay was up $1.00 to $68.00 per ton. The mid-August grain prices were lower with winter wheat price at $2.96 per bushel; spring wheat was $3.45; durum wheat was $3.43; feed barley was $1.43; and malt barley was $3.27 per bushel.

Montana's livestock prices for the full month of July were mostly lower compared with the previous month. Steer and heifer prices decreased $4.00 to $102.00 per cwt and cows were down $3.40 to $56.20. The price for calves dropped $2.00 to $129.00 per cwt. Sheep prices dropped $3.90 to $35.70 per cwt, and lamb prices fell $11.00 to $126.00 per cwt. Milk prices decreased $0.60 per cwt from June to $14.20 per cwt in July. Steer and heifer prices for mid-August were $104.00 per cwt; cows were $52.50 per cwt; calves were $135.00 per cwt; and the mid-August milk price was $15.00 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $3.15, unchanged; spring wheat was $3.45, down $0.08; durum wheat was $3.71, up $0.04; the all barley price was $2.38, down $0.19; steer and heifer prices were $88.40, down $3.50 per cwt; cows were $53.80, down $3.20; calves were $132.00, down $6.00; sheep were 40.30, down $0.60; lambs were 109.00, down $5.00 and the all milk price was $14.80, down $0.30.

The U.S. mid-August winter wheat price was $3.11 per bushel; spring wheat was $3.33 per bushel; durum wheat was $3.41 per bushel; all wheat was $3.21 per bushel; malt barley was $3.03 per bushel; feed barley was $1.90 per bushel; all barley was $2.75 per bushel; and oats were $1.53 per bushel. Steer and heifer prices were $88.00 per cwt; cow prices were $51.90 per cwt; calves were $131.00 per cwt; all hogs were $50.00 per cwt; and all egg prices were $0.47 per dozen. The mid-August all milk price was $14.70 cwt.

The preliminary All Farm Products Index of Prices Received by Farmers in August, at 117, based on 1990-92=100, decreased 1 point (0.8 percent) from July. The Crop Index is down 2 points (1.7 percent) while the Livestock Index decreased 1 point (0.8 percent). Producers received lower commodity prices for corn, soybeans, eggs, and sweet corn. Higher prices were received for lettuce, peaches, strawberries, and turkeys. The overall index is also affected by the seasonal change based on a 3-year average mix of commodities a producer sells. Increased average marketings of cattle, grapes, sweet corn, and calves offset decreased marketings of wheat, hay, milk, and broilers.

United States Index Summary

INDEX (1990-92=100)	July 2004	August 2004	July 2005	August 2005
Prices Received	124	120	118	117
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	135	135	141	141
Ratio 2/	92	89	84	83

1/ Prices paid indexes (1990-92=100) published monthly. 2/ Ratio of index of prices received by farmers to index of prices paid.

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued.

U.S. and World Ag Supply and Demand (continued)

This month's outlook for 2005/06 U.S. **corn** is for increased production, higher domestic consumption, larger stocks, and lower prices. Forecast 2005 corn production is up 289 million bushels from last month to 10.639 billion bushels. Projected beginning stocks of 2005/06 corn rise 15 million bushels due to a reduction in 2004/05 exports. Projected 2005/06 exports are up 50 million bushels due to increased imports by Mexico and Egypt. Feed and residual use rises 75 million bushels but other domestic consumption is unchanged. Corn ending stocks are up 179 million bushels from last month but are 46 million lower than the previous year. Corn prices in 2005/06 are projected to average $1.70 to $2.10, down 10 cents on each end from last month compared with $2.06 for 2004/05.

U.S. **oilseed** ending stocks for 2005/06 are projected at 7.1 million tons, up 0.8 million tons from last month as larger production more than offsets increased use. Oilseed production is projected at 89.5 million tons, up 2.0 million tons from last month. Soybean production is forecast at 2,856 million bushels, up 65 million bushels from last month based on improved yield prospects. Other oilseed production is also higher, with an increase for cottonseed more than offsetting lower peanut production. Soybean exports are raised this month due to lower prices and reduced competitor supplies. Crush is raised based on improved demand prospects for soybean meal. Soybean ending stocks are projected at 205 million bushels, up 25 million from last month.

U.S. prices are projected lower this month. Season-average soybean prices for 2005/06 are projected at $5.15 to $6.05 compared with $5.50 - $6.50 per bushel last month. Soybean meal prices are projected at $165 to $195 per short ton, down $10 on both ends of the range. Soybean oil prices are projected lower at 21.5 to 24.5 cents per pound. Global oilseed production for 2005/06 is projected at 379.3 million tons, up 2.0 million tons from last month but down 0.7 million tons from 2004/05. Foreign oilseed production is little changed as reduced soybean production is offset by increased rapeseed, sunflowerseed, cottonseed, and palm kernel production. Brazilian soybean production is projected at 60 million tons, down 2 million tons from the previous estimate based on reduced area. Steadily declining soybean prices this summer and higher costs for inputs and transportation are expected to result in lower area for the first time in 7 years. Foreign rapeseed production is raised 2 percent this month based on increases for Canada, EU-25, and Bulgaria. Other changes include increased sunflowerseed production for Bulgaria, and higher cottonseed production for India. Indonesian palm oil production is raised this month for both 2004/05 and 2005/06.

Global oilseed stocks for 2005/06 are reduced this month as lower beginning stocks and increased crush more than offset larger oilseed production.

U.S. Mushroom Sales for 2004-05

Sales of the 2004-05 U.S. mushroom crop are 853 million pounds, virtually unchanged from the 2003-04 season but 1 percent above the 2002-03 season. Value of sales for the 2004-05 U.S. mushroom crop is $908 million, down 1 percent from the previous season but 2 percent above the 2002-03 season. The number of growers, at 275, is down 3 from last season. The average price is $1.06 per pound, down 2 cents from 2003-04.

Agaricus mushroom sales totaled 838 million pounds, virtually unchanged from both the 2003-04 and 2002-03 seasons. **Fresh market** sales were 696 million pounds, down 1 percent from last season. Processing sales were 142 million pounds, 3 percent above last season. Value of sales for all Agaricus mushrooms totaled $862 million, down 2 percent from the previous season but 1 percent higher than 2002-03. Pennsylvania accounted for 59 percent of the total volume of sales and California contributed 14 percent. **Brown mushrooms**, including Portabello and Crimini varieties, accounted for 101 million pounds, up 4 percent from last season but 9 percent below the 2002-03 crop year. Brown mushrooms accounted for 12 percent of the total Agaricus volume sold. The brown mushroom crop value of sales for the 2004-05 season is $130 million, 15 percent of the total Agaricus value.

Value of sales for commercially grown **specialty** mushrooms in 2004-05 is $46.1 million, up 14 percent from the 2003-04 season. A specialty grower is defined as having at least 200 natural wood logs in production or some commercial indoor growing area. The average price per pound received by growers, at $3.06, is up 3 cents from the previous season.

Sales of **Shiitake** mushrooms totaled 8.61 million pounds for the 2004-05 season, up 15 percent from the previous season. Price per pound received by growers, at $3.21, is down 3 cents from 2003-04. Sales volume of Oyster mushrooms, at 5.11 million pounds, is up 22 percent from the previous season. Price per pound received by growers, at $2.33, is up 25 cents from the previous season. Sales of exotic mushrooms, other than Shiitake or Oyster, are 1.33 million pounds, down 20 percent from last season. Price per pound received by growers, at $4.90, is up 41 cents from 2003-04.

Growers sold 35.0 million pounds of mushrooms that were **certified organic** during the 2004-05 growing season, down 1 percent from 2003-04. Out of the 35.0 million pounds, 6.01 million pounds, or 17 percent of the total were sold as certified organic mushrooms, while the rest were sold without the certified organic label. This compares to 8.31 million pounds, or 23 percent sold as certified organic during the 2003-04 crop year. Agaricus mushrooms accounted for 74 percent of the mushrooms sold as certified organic, while all specialty mushrooms made up the remainder. These certified organic sales represent 1 percent of the 2004-05 total mushroom sales. The number of certified organic mushroom growers totaled 35, up 4 from the previous season. These growers represent 13 percent of the 275 total mushroom producers.

U.S. July Milk Production

Milk production in the 23 major States during July totaled 13.7 billion pounds, up 4.2 percent from July 2004. June revised production, at 13.7 billion pounds, was up 5.6 percent from June 2004. The June revision represented an increase of 0.2 percent or 28 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,682 pounds for July, 59 pounds above July 2004. The number of milk cows on farms in the 23 major States was 8.14 million head, 48,000 head more than July 2004, and 12,000 head more than June 2005.

U.S. Cattle on Feed Up 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.1 million head on August 1, 2005. The inventory was 2 percent above August 1, 2004 and 5 percent above August 1, 2003.

Placements in feedlots during July totaled 1.68 million, 2 percent below 2004 and 16 percent below 2003. This is the lowest placements for the month of July since the series began in 1996. Net placements were 1.62 million. During July, placements of cattle and calves weighing less than 600 pounds were 400,000, 600-699 pounds were 338,000, 700-799 pounds were 465,000, and 800 pounds and greater were 475,000.

Marketings of fed cattle during July totaled 1.92 million, slightly below 2004 and 16 percent below 2003. This is the lowest fed cattle marketings for the month of July since the series began in 1996. Other disappearance totaled 60,000 during July, 3 percent above 2004 but unchanged from 2003.

July 2005 Red Meat Production

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during July 2005, unchanged from July 2004, but up 23 percent from June 2005. Cattle slaughter totaled 1,700 head, unchanged from one year ago. The average live weight increased 3 pounds to 1,152 pounds.

There were 1,500 hogs slaughtered in Montana during July, down 100 head from a year ago. The average live weight, at 236 pounds, increased 13 pounds from last year. July sheep slaughter totaled 300 head, unchanged from July 2004. The average live weight increased 13 pounds to 124 pounds.

Commercial red meat production for the United States totaled 3.62 billion pounds in July, down 2 percent from the 3.71 billion pounds produced in July 2004. U.S. beef production, at 2.08 billion pounds, was 1 percent below the previous year. Cattle slaughter totaled 2.72 million head, down 2 percent from July 2004. The average live weight was up 15 pounds from the previous year, at 1,254 pounds. Veal production totaled 12.4 million pounds, 7 percent below July a year ago. Calf slaughter totaled 58,600 head, down 15 percent from July 2004. The average live weight was 26 pounds above last year, at 350 pounds.

U.S. pork production totaled 1.51 billion pounds, down 5 percent from the previous year. Hog kill totaled 7.66 million head, 5 percent below July 2004. The average live weight was 2 pounds above the previous year, at 264 pounds. Lamb and mutton production, at 13.5 million pounds, was down 5 percent from July 2004. Sheep slaughter totaled 200,800 head, 9 percent below last year. The average live weight was 134 pounds, up 6 pounds from July a year ago.

Hired Workers Up 2 Percent, Wage Rates Up 4 Percent From a Year Ago

There were 1,332,000 hired workers on the Nation's farms and ranches during the week of July 10-16, 2005, up 2 percent from a year ago. Of these hired workers, 930,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 402,000 workers.

Farm operators paid their hired workers an average wage of $9.39 per hour during the July 2005 reference week, up 35 cents from a year earlier. Field workers received an average of $8.62 per hour, up 28 cents from last July, while livestock workers earned $9.25 per hour compared with $8.74 a year earlier. The field and livestock worker combined wage rate, at $8.78 per hour, was up 35 cents from last year.

The number of hours worked averaged 40.6 hours for hired workers during the survey week, up 4 percent from a year ago.

The largest decreases in the number of hired farm workers from last year occurred in California, and in the Appalachian I (North Carolina and Virginia), Appalachian II (Kentucky, Tennessee, and West Virginia), Delta (Arkansas, Louisiana, and Mississippi), Southern Plains (Oklahoma and Texas), and Mountain I (Idaho, Montana, and Wyoming) regions. In California, the cool, wet spring caused considerable delays in planting and slowed development of most field and vegetable crops. The slow start to the growing season continued to keep crop progress behind normal through early July, reducing the need for hired workers. Moderate to heavy rainfall from Hurricane Dennis hampered fieldwork in both Appalachian regions, greatly decreasing the demand for hired workers. In the Delta region, the hot, dry weather in Arkansas was more than offset by the rain and wet conditions in Louisiana and Mississippi, causing the overall demand for workers in the region to decline. In the Southern Plains region, season-long dry conditions over much of Texas severely curtailed hay growth and production. With less hay acreage for harvest, fewer workers were needed. The cool, wet spring in the Mountain I region delayed crop development. Field activities that normally would have been ongoing during the reference week were pushed back due to the slow growth. Therefore, hired worker demand was lower.

The largest increases in the number of hired farm workers from a year ago were in the Corn Belt II (Iowa and Missouri), Lake (Michigan, Minnesota, and Wisconsin), Northern Plains (Kansas, Nebraska, North Dakota, and South Dakota), and Corn Belt I (Illinois, Indiana, and Ohio) regions. Persistent dryness in the Corn Belt II region caused pasture condition to deteriorate, necessitating more supplemental feeding and increasing the need for livestock workers. The dry conditions led to greater insect pressure on developing crops, resulting in more pesticide applications, which also raised the demand for hired workers. Warm, dry weather in the Lake and Northern Plains regions allowed field activities to progress rapidly, causing more hired workers to be needed. Despite hurricane moisture in the eastern half of the Corn Belt I region, dry conditions quickly returned, causing increased insect pressure in corn and soybeans. Therefore, more workers were needed for pesticide spraying.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Northeast II (Delaware, Maryland, New Jersey, and Pennsylvania), Corn Belt II, Southern Plains, Mountain I, and Appalachian II regions. The higher wages in the Northeast II region were due to a smaller percentage of part time workers in the work force. In the Corn Belt II region, wages were up due to a higher percentage of skilled workers needed for crop spraying. Wages in the Southern Plains, Mountain I, and Appalachian II regions were higher because of more salaried workers putting in fewer hours, which pushed their hourly wage higher. Also, the Southern Plains and Appalachian II regions had fewer part time workers as a percent of the total.

July Egg Production Up Slightly

U.S. egg production totaled 7.56 billion during July 2005, up slightly from last year. Production included 6.44 billion table eggs, and 1.12 billion hatching eggs, of which 1.06 billion were broiler-type and 62 million were egg-type. The total number of layers during July 2005 averaged 340 million, down 1 percent from a year earlier. July egg production per 100 layers was 2,222 eggs, up 1 percent from July 2004.

All layers in the U.S. on August 1, 2005, totaled 340 million, down 1 percent from a year ago. The 340 million layers consisted of 282 million layers producing table or market type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 2005, averaged 71.0 eggs per 100 layers, same as a year ago.

Egg-type chicks hatched during July 2005 totaled 35.3 million, up 1 percent from July 2004. Eggs in incubators totaled 35.3 million on August 1, 2005, up 12 percent from a year ago. Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 242,000 during July 2005, up 9 percent from July 2004.

Broiler-type chicks hatched during July 2005 totaled 808 million, up slightly from July 2004. Eggs in incubators totaled 663 million on July 1, 2005, down slightly from a year earlier. Leading breeders placed 6.66 million broiler-type pullet chicks for future domestic hatchery supply flocks during July 2005, down slightly from July 2004.

July 1, 2005, U.S. and Canadian Cattle Inventory Up 1 Percent

All cattle and calves in the U.S. and Canada combined totaled 121.8 million head on July 1, 2005, up1 percent from a year ago. All cows and heifers that have calved, at 49.4 million head, was up 1 percent from a year ago.

All cattle and calves in the United States as of July 1, 2005 totaled 104.5 million head, 1 percent above the 103.6 million on July 1, 2004 and 1 percent above the 103.9 million two years ago.

All cattle and calves in Canada as of July 1, 2005, totaled 17.3 million head, up 3 percent from the 16.8 million on July 1, 2004, and 10 percent above the 15.7 million two years ago. All cows and heifers that have calved, at 6.6 million, was up 2 percent from the 6.4 million on July 1, 2004, and 10 percent above the 6.0 million from two years ago.

August 1 Crop Production

Montana's **all wheat production** is expected to be 1 percent lower than last month's forecast, but 11 percent higher than last year's crop. Based on August 1 conditions, producers expect to harvest 191.6 million bushels of all wheat, up from the 173.2 million bushels harvested last year, but 2.0 million bushels below July's forecast. The area for harvest is expected to be 5.1 million acres, unchanged from last month, but 2 percent above last year. This is the last forecast until the final small grains summary is published on September 30, 2005.

The forecasted **winter wheat** yield, at 45.0 bushels per acre, is up 2 bushels from July, and is 4 bushels per acre higher than last year, and if realized, would be a record harvested yield surpassing the previous record of 42.0 bushels per acre in 1993. Production is forecast to be 92.3 million bushels, up from 66.8 million bushels last year, and up 4.1 million bushels from July. Acreage expected to be harvested is unchanged from the July forecast, but is up 420,000 acres from last year to 2,050,000 acres. For the week ending August 7, winter wheat was 74 percent harvested compared with 34 percent last year and the five-year average of 60 percent.

Spring wheat production forecast is 82.5 million bushels, down 7 percent from last year's production. The expected yield of 33.0 bushels per acre is down 2 bushels from last month, but up 2 bushels from last year. Dry and hot conditions during July ripened the spring wheat crop quickly. Acres for harvest are unchanged from July at 2.5 million, but down 350,000 from last year. The crop was rated better than this time last year at 1 percent very poor, 4 percent poor, 16 percent fair, 61 percent good, and 18 percent excellent. Ninety-two percent of the crop was turning for the week ending August 7, compared with 71 percent last year and the 5-year average of 83 percent. Harvest is underway with 15 percent complete compared with 2 percent last year and 13 percent for the five-year average. **Durum wheat** production is forecast to be 16.8 million bushels, down 7 percent from last year, and down 6 percent from July. The expected yield of 30.0 bushels per acre is 2 bushels below last month, and 3 bushels fewer than the 2004 yield. Harvested acres are up 3 percent from 2004 to 560,000.

Barley yields are expected to average 60.0 bushels per acre in 2005, 1 bushel better than last year, but unchanged from July. If realized this would be a record high yield surpassing the previous record of 59.0 bushels per acre last year. Barley production is forecast to be 45.0 million bushels compared with 49.0 million produced last year. Growers expect to harvest 750,000 acres, down 80,000 from 2004. For the week ending August 7, barley condition was reported to be 1 percent very poor, 8 percent poor, 26 percent fair, 47 percent good, and 18 percent excellent. Harvest for the week ending August 7 was reported to be 14 percent complete compared with 8 percent last year and 18 percent for the five-year average.

Oat producers expect to harvest 2.1 million bushels of grain, 12 percent lower than last year. The 2005 area for harvest is expected to be 40,000 acres, unchanged from 2004. The expected yield of 53.0 bushels is 7 bushels fewer than last year's yield, but unchanged from July. As of August 7, the condition of the oat crop was reported to be 2 percent very poor, 4 percent poor, 17 percent fair, 62 percent good, and 15 percent excellent. Harvest was reported to be 22 percent complete compared with 5 percent last year and 14 percent for the five-year average.

Sugar beet production is forecast to be 1.0 million tons, down 8 percent from last year. The expected yield, at 20.7 tons per acre, is down 5 percent from the 21.7 tons per acre last year. Producers are expecting to harvest 50,000 acres, down 2,100 acres from last year. **All dry edible bean** growers expect to harvest 16,500 acres this year, up 30 percent from last year's figure, and up 22 percent from July. Yield is estimated at 24.0 cwt, 1.6 cwt per acre better than the previous year. All dry bean production is expected to be 396,000 cwt, up 39 percent from last year's figure.

Alfalfa hay is expected to yield 2.5 tons per acre in 2005, up 0.2 tons per acre from the previous year. Growers plan to harvest 1.7 million acres, up 300,000 acres from last year. Production is expected to reach 4.3 million tons, a 32 percent increase from the 2004 production figure and a new record production if realized. As of August 7, 100 percent of first cutting and 19 percent of second cutting had been completed for alfalfa hay. The average yield for **other hay** is forecast to be 1.6 tons per acre, up 0.2 tons per acre from last year. Production of other hay is forecast at 2.0 million tons, a 30 percent increase from 2004, and, if realized, will be a new record production. As of August 7, 98 percent of first cutting and 15 percent of second cutting of other hay had been completed.

U.S. **all wheat** production, at 2.17 billion bushels, is down 2 percent from the July forecast but up slightly from 2004. Based on August 1 conditions, the U.S. yield is forecast at 43.0 bushels per acre, down 0.8 bushel from last month and 0.2 bushel below last year.

In the United States, the final **winter wheat** production forecast is 1.52 billion bushels. This is down slightly from last month but 1 percent above 2004. Area harvested for grain totals 34.3 million acres, unchanged from last month but down 1 percent from last year. The U.S. yield is forecast at 44.4 bushels per acre, down 0.1 bushel from last month. Hard Red production is down 1 percent from a month ago to 913 million bushels. Soft Red is up 2 percent from last month and now totals 320 million bushels. White production totals 288 million bushels, up slightly from last month. Of the White production total, 26.4 million bushels are Hard White and 261 million bushels are Soft White. This is the first year that production levels for Hard White and Soft White are available.

U.S. **durum wheat** production is forecast at 93.0 million bushels, down 1 percent from last month but up 3 percent from 2004. The U.S. yield is forecast at 37.9 bushels per acre, 0.5 bushel less than last month. Area harvested for grain is forecast at 2.45 million acres, unchanged from last month but 4 percent more than last year.

For the U.S., **other spring wheat** production is forecast at 553 million bushels, down 6 percent from last month and 3 percent below 2004. Acreage intended for harvest is unchanged from last month. The U.S. yield is forecast at 40.6 bushels per acre, 2.6 bushels less than on July 1. Of the production total, 516 million is Hard Red Spring wheat, down 6 percent from last month.

U.S. **barley** production for 2005 is forecast at 237 million bushels, down 3 percent from the July forecast and 15 percent below 2004. Based on August 1 conditions, producers expect to harvest an average of 68.2 bushels per acre, down 1.8 bushels from July and down 1.2 bushels from last year. Area harvested, at 3.47 million acres, is unchanged from last month but down 14 percent from 2004. (Continued on back page)

2005 Cash Rents

The average cash rent for Montana cropland rose slightly from last year to $25.00 per acre. The average cash rent for irrigated cropland, at $53.00, increased by $4.00 per acre from a year ago. The non-irrigated cropland average increased slightly from 2004 to $19.50 per acre. Average pasture rents increased from $5.00 in 2004 to $5.90 per acre in 2005.

Nationally, cash rents per acre paid to landlords for cropland rose 2.0 percent while pasture rents increased 7.3 percent for the 2005 crop and grazing year. Cropland cash rents paid in 2005 averaged $78.00 per acre, compared with $76.50 per acre for 2004. Pasture cash rents averaged $10.30 per acre, 70 cents higher than the $9.60 per acre in 2004. The increases in cropland and pasture rental rates continue to reflect producers' optimism following the combination of high production and price levels of major U.S. agricultural commodities in 2004.

Cropland cash rents reported in 2005 increased in all regions except the Mountain region, where rental rates declined 50 cents to $62.00 per acre. The Southern Plains region, at $30.50 per acre, was unchanged. In the remaining regions, increases in cropland cash rents varied from 2.4 percent in the Lake States to 7.9 percent in the Southeast region. The Corn Belt and Northern Plains regions, which together accounted for slightly more than one half of cash-rented cropland acreage, increased 2.6 and 6.0 percent, respectively, from 2004. Cropland cash rents increased $3.00 per acre, to $117.00, in the Corn Belt and $3.00 per acre, to $53.00, in the Northern Plains.

Pasture cash rents declined 10 cents to $19.00 per acre in the Southeast while the Northeast and Pacific regions were unchanged from a year earlier. In the Northern Plains and Southern Plains regions, which account for two-thirds of the cash-rented pasture acreage, rental rates were up 1.7 percent and 3.7 percent, respectively. Wisconsin, at $38.00 per acre, continues to lead the Nation with the highest per acre pasture rent.

Farm Real Estate Values Up

The average value of farm real estate in Montana on January 1, 2005 was $445 per acre, up $35.00 from 2004 The average value of cropland rose $50.00 to $609 per acre, compared with a year ago. The average value of irrigated cropland was $1,800, $120.00 more than a year ago, while non-irrigated cropland gained $40.00 per acre to $440 per acre on January 1, 2005. Pasture values increased $35.00 to $320.00 per acre. Montana farm real estate values have been steadily increasing over the past six years.

Farm real estate values in the United States, a measurement of the value of all land and buildings on farms, averaged $1,510 per acre on January 1, 2005, up 11.0 percent from 2004. This is the largest percentage increase since 1981, when farm real estate values rose 11.1 percent from the previous year. The $150 per acre increase is the largest dollar increase on record. The previous record was 1980, when values climbed $109 per acre above the 1979 value.

U.S. cropland and pasture values rose by 11.3 and 9.5 percent, respectively, from January 1, 2004. Cropland values averaged $1,970 per acre and pasture values averaged $694 per acre on January 1, 2005, compared with $1,770 and $634 per acre, respectively, a year earlier. The value of other land and buildings increased 11.9 percent.

The increase in farm real estate values was driven by a combination of factors, including low interest rates, high commodity production and prices, and strong demand for nonagricultural land uses. (Continued)

Farm Real Estate Values (continued)

Nationally, survey data indicated that agricultural land with potential for immediate development (expected land use if sold) was valued at more than $6,050 per acre. The survey also indicated that agricultural land with potential for future development was valued at nearly $5,400 per acre, about $1,400 higher than the 2004 indication. Demand for farm real estate as an investment continued to be strong.

Regional increases in the average value of farm real estate ranged from 8.2 percent in the Delta and Southern Plains regions to 13.2 percent in the Northeast and Southeast Regions. The highest farm real estate values were in the Northeast region, where urban influences have pushed the average value to $4,020 per acre. In the Corn Belt region, farm real estate values rose 10.9 percent, to $2,550 per acre. The Mountain region, with its expanse of pasture and rangeland, had the lowest farm real estate value, at $599 per acre.

Cropland values in the Southeast region, at $2,960, had the highest average increase in cropland value, up $500 per acre. In the Corn Belt region cropland values rose 12.2 percent, to $2,750 per acre and the Lake States increased 9.4 percent, to $2,220 per acre. Together, the Corn Belt and Lake States regions account for nearly one-third of the U.S. total cropland acres. Pasture values in the Northeast and Appalachian regions had the highest average increase in pasture value, up $300 per acre. In the Northern Plains, Southern Plains, Mountain, and Pacific regions (17 western states) pasture values per acre respectively increased 16.5 percent, 11.4 percent, 14.6 percent, and 9.8 percent. Together, the 17 western states account for about 87 percent of the total pasture acres on farms in the 48 States.

June 2005 Ag Prices Received

June full month crop prices were higher when compared with May 2005. Montana's winter wheat average price was $3.34 per bushel, unchanged from the previous month; spring wheat rose $0.39 to $3.69 per bushel; and durum wheat prices increased $0.13 to $3.78 per bushel. Feed barley prices dropped $0.11 from the previous month to $1.60, but malt barley prices were up $0.12 to $3.32 per bushel.

The mid-July price for alfalfa hay decreased $2.00 to $75.00 per ton, and all other hay was unchanged at $67.00 per ton. Mid-July grain prices were mixed with winter wheat averaging $3.09 per bushel, spring wheat was $3.89 per bushel, durum wheat was $3.77 per bushel, and feed barley was $1.39 per bushel.

Livestock prices for the full month of June were mostly lower than the the previous month. Steer and heifer prices dropped $7.00 to $106.00 per cwt, cows decreased $1.80 to $59.60, and calves fell $9.00 to $131.00 per cwt. Sheep prices dropped $4.70 to $39.60 per cwt, but lamb prices jumped $12.00 to a new record high of $137.00 per cwt. Milk prices decreased $0.20 per cwt from last month to $14.80 per cwt. Steer and heifer prices for mid-July were $103.00 per cwt; cows, $57.90 per cwt; calves, $134.00 per cwt; and milk prices, $14.90 per cwt.

Nationally, prices for June and changes from May were as follows: winter wheat was down $0.08 to $3.15; spring wheat was $3.53, up $0.16; durum wheat was unchanged at $3.67; the all barley price was $2.57, up $0.11, and steer and heifer prices were $91.90, down $4.50 per cwt.

The U.S. mid-July winter wheat price was $3.20 per bushel; spring wheat was $3.51 per bushel; durum wheat was $3.52 per bushel; all wheat was $3.25 per bushel; malt barley was $2.60 per bushel; feed barley was $1.80 per bushel; and all barley was $2.27. Steer and heifer prices were $89.60 per cwt; cow prices were $55.60; calves were $133.00 per cwt; all hog prices were $49.30 per cwt; and all egg prices were $0.53 per dozen.

August 1 Crop Production
(continued from front page)

Oats production in the U.S.is forecast at 128 million bushels, 3% below the July 1 forecast but 10% above last year's 116 million bushels. The forecasted yield is 64.7 bushels per acre, down 1.8 bushels from July 1 but unchanged from 2004. Growers expect to harvest 1.98 million acres for grain, unchanged from last month but up 10% from last year.

U.S. **dry edible bean** production is forecast at 25.8 million cwt in 2005, up 45% from last year and 15% above 2 years ago. Production is expected to be above last year in 16 of the 17 producing States. These increases are mostly the result of higher acreage. Eleven of the 17 States also have higher yields than last year.

Alfalfa and alfalfa mixtures production for the U.S. is forecast at 73.8 million tons, down 2% from last year. Yields are expected to average 3.34 tons per acre, a decrease of 0.13 ton from last year. Harvested area is forecast at 22.1 million acres, unchanged from June but up 2% from 2004. Yields are the same or below last year's level in 19 States. Across most of the Corn Belt and southern Great Plains, weather conditions throughout the growing season have been less than favorable.

U.S. **other hay** production is forecast at 76.1 million tons, down 8% from 2004. Based on August 1 conditions, yields are expected to average 1.92 tons, down 0.13 ton from last year. Harvested area, at 39.6 million acres, is unchanged from June but down 2% from the previous year. Yields are at or below last year's level in 18 States. Dry conditions across much of the Corn Belt and southern Great Plains have contributed to decreased yield expectations.

U.S. **sugar beets** production for 2005 is forecast to be 26.6 million tons. If realized, this would be 11% below last year's production. Growers in the 12 sugar beet producing states expect to harvest 1.25 million acres, down 1% from the June estimate and down 5% from last year. The yield is forecast at 21.3 tons per acre, 1.6 tons below 2004.

Farm Production Expenditures

In 2004, farm production expenditures totaled $210.7 billion in the U.S., up 5.1% from the revised 2003 total of $200.5 billion. The largest contributors to the increase were tractors and self-propelled farm machinery up 24.3%; fuels, up 19.4%; fertilizer, up 14.0%; feed, up 9.1% and labor up, 5.5%. Farm services and interest were the only expenditure categories to show a decrease being down 2.2 and 4.3%, respectively. The rent expenditure was unchanged from the previous year. The largest two expenditure categories were feed, which accounted for 14.2% of the U.S. total production expenses and farm services which accounted for 12.5% of the U.S. total production expenses. The farm services category includes expense items such as custom work, utilities, marketing charges, veterinary services, transportation costs, and miscellaneous business expenses.

The average expenditures per U.S. farm in 2004 were $99,983 compared to $94,542 as revised for 2003. On the average, U.S. farm operations in 2004 spent $14,236 on feed; $12,480 on farm services; $10,914 on labor; $9,016 on livestock and poultry purchases; and $7,782 on rent. Revised estimates for 2003 indicated U.S. farms spent an average of $12,967 on feed; $12,684 on farm services; $10,279 on labor; $8,723 on livestock and poultry purchases; and $7,733 on rent.

Expenditures by farm production region in 2004 reveal that total expenditures were up in each region except the West. Expenditures also reveal that taxes, labor, fuels, and tractors and self-propelled farm machinery expenditure categories showed increases in each region, while the other expenditure categories show more variation across regions. The farm production region contributing most to the total 2004 U.S. farm production expenditures was the Midwest, with expenses of $59.9 billion, 28.4% of the U.S. total. Expenditures in the Midwest were up 6.8% from the 2003 level of $56.1 billion. In total expenditures, the Midwest was followed by the West, at $47.7 billion (2003 - $48.4 billion); Plains, at $47.5 billion (2003 - $43.5 billion); Atlantic, at $32.1 billion (2003 - $29.6 billion); and South, at $23.6 billion (2003 - $23.0 billion).

The U.S. economic class contributing most to the 2004 U.S. farm production expenditures was the $1,000,000 and Over class, with expenses of $73.2 billion, 34.7% of the U.S. total. Expenditures in the $1,000,000 and Over class were up 11.1% from the 2003 level of $65.9 billion. In total expenditures, the $1,000,000 and Over class was followed by the $250,000 - $499,999 class, at $31.3 billion (2003 - $30.1 billion); and $500,000 - $999,999 class, at $29.7 billion (2003 - $29.4 billion).

Expenditure estimates by type of farm reveal that crop farms, with expenses of $105.8 billion, contributed 50.2% of the 2004 U.S. farm production expenditures. Expenditures for crop farms were up 2.8% from the revised 2003 level of $103.0 billion. Livestock Farm expenses of $104.9 billion were up 7.5% from the revised 2003 level of $97.6 billion.

Farm Computer Use

Montana farms and ranches that have Internet access reached 70% in 2005, the second highest percentage in the Nation. The 70% with Internet access in 2005 compares with 63% in 2003, 57% in 2001 and 38% in 1999. Seventy-five percent of farms and ranches had access to a computer in 2005, third highest nationally, compared with 72% two years ago and 71% in 2001. Seventy-three percent of all Montana farms and ranches own or lease a computer, up from 70% in 2003. Farms and ranches using computers for their agricultural business dropped from 44% in 2003 to 40% in 2005.

Farm computer usage numbers are also published by regions. Montana is included with Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. In 2005, 69% of the farms and ranches in this region have access to a computer, 66% own or lease a computer; 36% are using a computer for their agricultural business; and 62% have Internet access. Computer access for crop farms in the region decreased two points to 67%. The percentage of crop farms having Internet access rose 1% to 60%. The percentage of livestock producers in the region that had access to computers increased to 71%, compared with 70% two years ago. Sixty-four percent of the livestock producers in the region have Internet access, compared with 60% in 2003.

A total of 51% of U.S. farms now have Internet access, compared to 48% with Internet access in 2003. Fifty-eight percent of farms have access to a computer in 2005, the same level as 2003. Fifty-five percent of all U.S. farms own or lease a computer, up slightly from 54% in 2003. Farms using computers for their farm business increased 1% from 2003 to 31% in 2005.

In 2005, seventy-nine percent of U.S. farms with sales and government payments of $250,000 or more have access to a computer, 77% own or lease a computer, 66% are using a computer for their farm business, and 72% have Internet access. For farms with sales and government payments between $100,000 and $249,999, the figures are: 69% have access to a computer, 67% own or lease a computer, 51% are using a computer for their farm business, and 59% have Internet access. For farms with sales and government payments between $10,000 and $99,999, there were 54% that reported having computer access, 51% own or lease a computer, 33% use a computer for their farm business, and 46% have Internet access.

For crop farms, 60% have computer access and 33% use a computer for their farm business in 2005, the same as 2003. Internet access for crop farms has increased to 52% in 2005 compared to 49% in 2003. For livestock farms, 57% have computer access and 50% have Internet access. The use of a computer for farm business has increased to 29% for livestock farms, up 2% from 2003.

In 2005, twelve percent of the U.S. farms access Federal Government Web sites other than USDA, compared with 11% in 2003. Four percent of farms conduct business with a USDA Web site, up from 3% in 2003. Farms conducting business with any other Federal Government Web site dropped from 5% in 2003 to 3% in 2005. Also, 5% of the farms used a toll-free customer service number during the July 2004 to June 2005 period.

Egg Production

U.S. July 1 Cattle Inventory

All cattle and calves in the United States as of July 1, 2005, totaled 104.5 million head, 1 percent above the 103.6 million on July 1, 2004 and 1 percent above the 103.9 million two years ago. All cows and heifers that have calved, at 42.8 million, were 1 percent above the 42.5 million on July 1, 2004 and slightly above the 42.7 million two years ago.

Beef cows, at 33.8 million, were up 1 percent from July 1, 2004 and up slightly from two years ago. Milk cows, at 9.05 million, were up 1 percent from July 1, 2004 but down 1 percent from two years ago. Other class estimates on July 1, 2005 and the changes from July 1, 2004, are as follows:

- All heifers 500 pounds and over, 16.2 million, up 2 percent.
- Beef replacement heifers, 5.0 million, up 4 percent.
- Milk replacement heifers, 3.7 million, up 3 percent.
- Other heifers, 7.5 million, down 1 percent.
- Steers weighing 500 pounds and over, 14.4 million, up 1 percent.
- Bulls weighing 500 pounds and over, 2.1 million, up 2 percent.
- Calves under 500 pounds, 29.0 million, up slightly.
- All cattle and calves on feed for slaughter, 12.0 million, up 2 percent.

The 2005 calf crop is expected to be 37.8 million, up slightly from 2004 but down slightly from 2003. Calves born during the first half of the year are estimated at 27.5 million, up slightly from 2004 but down 1 percent from 2003.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.4 million head on July 1, 2005. The inventory was 3 percent above July 1, 2004 and 5 percent above July 1, 2003. The inventory included 6.81 million steers and steer calves, up 7 percent from the previous year. This group accounted for 65 percent of the total inventory. Heifers and heifer calves accounted for 3.53 million head, down 5 percent from 2004.

Placements in feedlots during June totaled 1.77 million, 7 percent above 2004 and 6 percent above 2003. Net placements were 1.71 million. During June, placements of cattle and calves weighing less than 600 pounds were 412,000, 600-699 pounds were 347,000, 700-799 pounds were 480,000, and 800 pounds and greater were 530,000. Marketings of fed cattle during June totaled 2.07million, 1 percent below 2004 and 7 percent below 2003. Other disappearance totaled 63,000 during June, 10 percent below 2004 but 3 percent above 2003.

Cattle on feed July 1, 2005, from all feedlots in the United States, totaled 12.0 million, up 2 percent from the 11.8 million on July 1, 2004 and up 2 percent from July 1, 2003. Cattle on feed in feedlots with 1,000 or more head accounted for 87 percent of the total cattle on feed on July 1, 2005, up from 86 percent on July 1, 2004.

U.S. July 1 All Sheep and Lamb Inventory

All sheep and lamb inventory in the United States on July 1, 2005, totaled 7.80 million head, 2 percent above July 1, 2004. Breeding sheep inventory at 4.66 million head on July 1, 2005 was 2 percent above July 1, 2004. Market sheep and lambs (including newborn lambs) at 3.14 million head, were 1 percent above last July.

The breeding herd consists of 3.79 million ewes one year old and older, 185,000 rams one year old and older, and 680,000 replacement lambs (including newborn lambs). Market lamb inventory at 3.06 million head was comprised of 1.81 million lambs under 65 pounds, 635,000 lambs 65-84 pounds, 350,000 lambs 85-105 pounds, and 260,000 lambs over 105 pounds. Market sheep inventory was 90,000.

The 2005 lamb crop in the United States is expected to total 4.12 million head, up 1 percent from the 2004 lamb crop of 4.10 million head. Lambs born during January through June 2005 totaled 3.65 million head or 89 percent of the yearly total. An additional 470,000 head are expected to be born during the period July through December 2005.

Region 3 (CO, MT, SD, UT, & WY) accounted for 34.0 percent of all sheep and lambs. Region 2 (NM & TX) accounted for 19.2 percent, Region 1 (AZ, CA, ID, NV, OR, & WA) for 16.7 percent, Region 4 (IA, KS, MN, MO, NE, ND, & OK) for 15.4 percent, and Region 5 (all other States) for 14.7 percent.

U.S. Pelt Production Up 1 Percent

Mink pelt production in the United States in 2004 totaled 2.56 million pelts, up 1 percent from 2003. Wisconsin, the largest mink producing State, produced 768,000 pelts. Utah the second largest producing state, produced 580,000 pelts.

By color class, the number of pelts as a percent of the total U.S. production in 2004 follows: Black at 45.1 percent, Mahogany at 22.2 percent, Blue Iris at 11.7 percent, Demi/Wild at 6.1 percent, Sapphire at 5.3 percent, and White at 4.1 percent. The remaining color classes accounted for 5.5 percent.

Mink pelts produced during the 2004 crop year were valued at 124 million dollars, up 21 percent from $102 million a year ago. The average price per pelt for the 2004 crop year was $48.40, up from $40.10 in 2003. Female mink bred to produce kits in 2005 totaled 642,100, up 6 percent from the previous year.

Percent of total females bred to produce kits in 2005 by color class are: Black at 46.8 percent, Mahogany at 20.0 percent, Blue Iris at 10.7 percent, Demi/Wild at 5.9 percent, Sapphire at 5.9 percent and white at 4.2 percent. The remaining color classes accounted for 6.5 percent. (Continued on next page.)

Mink Production (Continued from front page)

There were 296 mink farms producing pelts in 2004, down 3 percent from a year ago. Leading States were Utah with 80 farms, Wisconsin with 67 farms and Minnesota with 28. There were 17 mink farms which also raised fox in 2004, down from 18 the previous year.

U.S. June 2005 Red Meat Production

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during June 2005, up 4 percent from June 2004, and 13 percent higher than the previous month's production. Cattle slaughter totaled 1,400 head, unchanged from one year ago. The average live weight decreased 16 pounds to 1,175 pounds.

During June there were 1,000 hogs slaughtered up 100 head from a year ago. The average live weight, at 246 pounds, was up 14 pounds from last year. June sheep slaughter in the state totaled 100 head, unchanged from June 2004. The average live weight increased 4 pounds to 124 pounds.

Commercial red meat production for the United States totaled 3.96 billion pounds in June, up 1 percent from the 3.93 billion pounds produced in June 2004. Beef production, at 2.23 billion pounds, was slightly above the previous year. Cattle slaughter totaled 2.94 million head, down 2 percent from June 2004. The average live weight was up 21 pounds from the previous year, at 1,246 pounds. Veal production totaled 13.2 million pounds, 1 percent below June a year ago. Calf slaughter totaled 58,900 head, down 11 percent from June 2004. The average live weight was 31 pounds above last year, at 368 pounds.

Pork production totaled 1.71 billion pounds, up 2 percent from the previous year. Hog kill totaled 8.55 million head, 1 percent above June 2004. The average live weight was 4 pounds above the previous year, at 268 pounds. Lamb and mutton production, at 15.3 million pounds, was down 1 percent from June 2004. Sheep slaughter totaled 222,900 head, 4 percent below last year. The average live weight was 138 pounds, up 4 pounds from June a year ago.

January to June 2005 commercial red meat production was 22.2 billion pounds, down slightly from 2004. Accumulated beef production was down 1 percent from last year, veal was down 9 percent, pork was up 1 percent from last year, and lamb and mutton production was down 4 percent.

Montana 2005 Wheat and Barley Varieties

The top four **winter wheat** varieties account for 54.7 percent of the acreage seeded for harvest in 2005. The top four varieties seeded for 2004 accounted for 60.9 percent of the total winter wheat acreage for the state. **Rampart** remains the most popular winter wheat variety with 503,200 acres seeded this year, compared to last year's acreage of 543,400. **Neeley** stays in second place this year with 261,400 acres seeded, which accounts for 12.2 percent of the total winter wheat acreage in the state. **Tiber** remains in third place with 253,200 acres seeded, which is up from last year's acreage of 176,400. **Morgan** is the fourth leading variety in the state this year. A total of 159,300 acres were seeded, which is up from 144,100 acres seeded in 2004. This acreage accounts for 7.4 percent of the total acres seeded.

The top four **spring wheat** varieties account for 71.9 percent of the acreage seeded for harvest in 2005. The top four varieties seeded for 2004 accounted for 71.6 percent of the total spring wheat acreage for the state. **McNeal** is the leading spring wheat variety seeded for the eigth consecutive year, accounting for 28.8 percent of the acreage, or 748,200 acres, which is down more than 200,000 acres from 2004. **Reeder** remains in second place with 613,200 acres seeded this year, which is down from last year's acreage of 681,800. This acreage accounts for 23.6 percent of the total acres seeded. **Ernest** stays in third place this year with 298,600 acres seeded, which accounts for 11.5 percent of the spring wheat acres seeded in Montana. **Conan** is the fourth leading variety for the second year in a row with 208,200 acres seeded, or 8.0 percent of the state's spring wheat acreage.

The top four **durum wheat** varieties account for 82.6 percent of the total acreage in the state for 2005. The top four varieties in 2004 accounted for 86.3 percent of the total durum wheat acreage. **Mountrail** remains the top durum wheat variety in the state for the second year in a row with 288,900 acres seeded, or 50.6 percent of the durum wheat acreage. This year's acreage is up from the 240,200 acres that were planted in 2004. **Kyle** is in second place again this year, after spending seven consecutive years at the top from 1997 to 2003. There were 121,300 acres seeded in the state, accounting for 21.3 percent of the total acres. **AC Avonlea** stays the third most popular variety this year with 30,800 acres seeded or 5.4 percent of the state's durum wheat. **Lebsock** joins the top four list this year, with 29,700 acres seeded, or 5.2 percent of the state's durum wheat acreage.

Montana farmers seeded 950,000 acres of **barley** in 2005, down from 1.0 million acres in 2004. Fifty percent of the acres seeded to barley were malting and brewing varieties recommended by the American Malting Barley Association Inc. for use in Montana. **Harrington** remains the top malting variety planted in the state for the twelfth year in a row. It was seeded on 268.7 thousand acres or 28.3 percent of Montana's barley acreage. **AC Metcalfe** stays in second place this year, with 83.0 thousand acres planted, which accounts for 8.7 percent of Montana's barley acreage. **B 1202** moves into third place this year, after being ranked fourth in 2004. It accounts for 47.7 thousand of the barley acres seeded this year, or 5.0 percent of the acreage. **B Merit** drops to the fourth most popular malting variety, with 43.4 thousand acres seeded, or 4.6 percent of Montana's barley acreage.

Haybet remains the most popular **forage** barley for the sixth year in a row, with 163.4 thousand acres seeded, which accounts for 17.2 percent of the total barley acres seeded in Montana for 2005. **Westford** is the second most popular forage barley for the third year in a row, with 20.1 thousand acres or 2.1 percent of the state barley acres seeded in 2005. **Baronesse** is the most popular **feed** barley again in 2005. It represents 3.7 percent of the total acreage or 35.3 thousand acres seeded in Montana for 2005. **Bowman** is the second leading feed variety this year with 24.0 thousand acres or 2.5 percent of the barley acres seeded in 2005. This report was made possible through funds provided by the Montana Wheat & Barley Committee.

June Milk Production Up 5.4 Percent in 23 Major States

Milk production in the 23 major States during June totaled 13.7 billion pounds, up 5.4 percent from June 2004. May revised production, at 14.3 billion pounds, was up 4.6 percent from May 2004. The May revision represented an increase of 26 million pounds or 0.2 percent from last month's preliminary production estimate. Production per cow in the 23 major States averaged 1,683 pounds for June, 76 pounds above June 2004.

The number of milk cows on farms in the 23 major States was 8.13 million head, 47,000 head more than June 2004, and 9,000 head more than May 2005.

Milk production in the U.S. during the April-June quarter totaled 45.6 billion pounds, up 4.1 percent from the April-June quarter last year. The average number of milk cows in the U.S. during the quarter was 9.04 million head, 34,000 head more than the same period last year.

U.S. June Egg Production Up 1 Percent

U.S. egg production totaled 7.34 billion during June 2005, up 1 percent from last year. Production included 6.25 billion table eggs, and 1.10 billion hatching eggs, of which 1.03 billion were broiler-type and 61 million were egg-type. The total number of layers during June 2005 averaged 341 million, down slightly from a year earlier. June egg production per 100 layers was 2,151 eggs, up 1 percent from June 2004.

All layers in the U.S. on July 1, 2005, totaled 340 million, down 1 percent from a year ago. The 340 million layers consisted of 281 million layers producing table or market type eggs, 56.0 million layers producing broiler-type hatching eggs, and 2.59 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 2005, averaged 72.3 eggs per 100 layers, up 1 percent from a year ago.

Egg-type chicks hatched during June 2005 totaled 34.5 million, down 8 percent from June 2004. Eggs in incubators totaled 33.0 million on July 1, 2005, down 7 percent from a year ago. Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 184,000 during June 2005, down 13 percent from June 2004.

Broiler-type chicks hatched during June 2005 totaled 796 million, up 1 percent from June 2004. Eggs in incubators totaled 658 million on July 1, 2005, down slightly from a year earlier. Leading breeders placed 7.11 million broiler-type pullet chicks for future domestic hatchery supply flocks during June 2005, up 3 percent from June 2004.

July 1, 2005 Crop Production

Based on July 1 conditions, Montana's **all wheat production** is expected to be 193.6 million bushels, up 12% from last year. The area for harvest is expected to be 5.11 million acres, unchanged from the June Acreage report, but up 2% from last year.

The forecasted **winter wheat** yield, at 43.0 bushels per acre, is up 2 bushels from last month's forecast and up 2 bushels from last year. If realized, this would be a record high yield surpassing the previous record of 42.0 bushels per acre in 1993. Production is forecast at 88.2 million bushels, up 32% from last year. The rainfall received during the past month improved conditions and yield. Crop development is ahead of normal as the crop was 69% turning color for the week ending July 10, compared with 39% last year and 62% for the 5-year average.

The first **spring wheat** production forecast is 87.5 million bushels, down 1% from last year's production due to less harvested acreage. The harvested acres are expected to be 2.5 million acres, down 350,000 acres from last year. The expected yield of 35.0 bushels per acre is up 4.0 bushels per acre from last year. Crop progress is ahead of last year and the five year average at 88% boot and 63% headed for week ending July 10. **Durum wheat** production is forecast at 17.9 million bushels, down slightly from last year due to lower expected yield. Harvested acreage is expected to be 560,000 acres, up 3% from 2004. The expected yield of 32.0 bushels per acre is down 1 bushel from last year

Barley yields are expected to average 60.0 bushels per acre in 2005, 1 bushel better than last year. If realized, this would be a record high yield surpassing the previous record of 59.0 bushels per acre last year. Barley production is forecast at 45.0 million bushels compared with 49.0 million bushels produced last year due to fewer acres harvested. Growers expect to harvest 750,000 acres, down 80,000 acres from 2004. Crop development is about the same progress as last year, with 94% reaching boot stage by July 10, and 66% of the crop is headed. **Oats** producers expect to harvest 2.1 million bushels of grain, 12% fewer than was produced last year. The 2005 area for harvest is expected to be 40,000 acres, unchanged from 2004. The expected yield of 53.0 bushels is 7 bushels below last year's yield.

Montana **potato** producers planted 11,000 acres during 2005, up 3% from last year. The first forecast of potato production will be on November 10, 2005. Pulse crop growers increased their acreage this year. **Dry edible pea** planted acreage is 135,000, with producers expecting to harvest 125,000 of those acres. Last year, growers planted 68,000 acres of dry edible peas and harvested 63,000 acres. **Lentil** growers planted 170,000 acres this year, up 92,000 acres from last year. Producers are expecting to harvest 155,000 of those acres. Last year 78,000 acres of lentils were planted, while 72,000 acres were harvested. **Austrian winter pea** planted acreage is up 7,000 acres from last year to 19,000 acres. Producers expect to harvest 13,000 acres of this year's crop as peas, with the remaining acreage being hayed or grazed.

U.S. **winter wheat** production is forecast at 1.53 billion bushels. This is down 1 percent from last month but 2 percent above 2004. The U.S. yield is forecast at 44.5 bushels per acre, up 0.4 bushel from last month. Hard red winter, at 924 million bushels, is down 4 percent from a month ago. Soft red winter, at 315 million bushels, is up 5 percent from the last forecast. White winter is up 1 percent from last month and now totals 287 million bushels. Of this total, 27.0 million bushels are hard white and 260 million bushels are soft white. **Durum wheat** production is forecast at 94.1 million bushels, up 5 percent from 2004. The U.S. yield is forecast at 38.4 bushels per acre, 0.4 bushel more than last year. **Other spring wheat** production is forecast at 589 million bushels, up 3 percent from 2004. The U.S. yield is forecast at 43.2 bushels per acre, unchanged from last year's record high. Of the total production, 552 million bushels are hard red spring wheat, up 5 percent from last season.

Nationally, **barley** production for 2005 is forecast at 243 million bushels, 13 percent below 2004. Based on conditions as of July 1, the average yield is forecast at 70.0 bushels per acre, up 0.6 bushel from last year. If realized, this would be the highest yield on record. Area for harvest, at 3.47 million acres, is down 14 percent from 2004 and the lowest since 1890.

Dry edible peas planted acreage for the United States in 2005 is estimated at 804,000 acres, up 52 percent from last year. Harvested area is forecast at 772,000 acres, also up 52 percent from 2004. U.S. planted acreage of **Austrian winter peas** in Idaho, Montana, and Oregon is estimated at 37,500 acres up 23 percent from 2004. Harvested area is forecast at 26,500 acres, up 23 percent from last year. U.S. **lentils** planted acreage in Idaho, Montana, North Dakota, and Washington is estimated at 450,000 acres, up 30 percent from 2004. Harvested acreage is estimated at 430,000, up 31 percent from last year. Area planted to fall **potatoes** in the United States for 2005 is estimated at 970,400 acres, down 7 percent from last year and 12 percent below 2003. Harvested acres are forecast at 955,700, down 7 percent from 2004 and 12 percent below two years ago. This is the lowest planted and harvested acres since 1957. (See table on page 2)

U.S. Wheat Supply and Demand

Projected U.S. 2005/06 ending stocks of wheat are up 81 million bushels from last month due to larger beginning stocks and higher production. Forecast winter wheat production is 20 million bushels less than last month because of lower harvested area. The first survey-based spring wheat (including durum) production forecast is up 89 million bushels from last month's projection due to higher yields. Total wheat supplies are up because of increases in production and reported carry-in stocks. Projected 2005/06 use is unchanged from last month but is down 118 million bushels from last year. The first wheat supply and demand projections by class for 2005/06 indicate a large increase in the year-to-year stocks for hard red winter, with smaller increases in the stocks of other classes. The 2005/06 projected price range is $2.60 to $3.10 per bushel, down 5 cents on each end from last month compared with an estimated $3.40 for 2004/05.

Projected 2005/06 global wheat production is down fractionally from last month, use is nearly unchanged, trade is up, and stocks are down slightly. Foreign production is down 1.7 million tons due mostly to smaller crops in India (down 1.5 million) and Algeria (down 1.1 million). This is partially offset by larger crops in Ukraine, the EU-25, and Canada. (Continued on back page)

May 2005 Prices Received

May 2005 full month crop prices were mostly lower compared with April 2005. When compared with April 2005, Montana's winter wheat price was $3.34 per bushel, down $0.06; spring wheat price was down $0.16 to $3.30 per bushel; durum wheat prices decreased $0.15 to $3.65 per bushel; feed barley was up $0.05 to $1.71 per bushel; and malt barley was $3.20 per bushel, down $0.07. Oats were $1.92 per bushel for the full month of May 2005.

The mid-June price for alfalfa hay rose $1.00 to $77.00 per ton, but all other hay dropped $6.00 to $67.00 per ton. Mid-June grain prices were mixed when compared with May. The winter wheat price averaged $3.24 per bushel, spring wheat was $3.75 per bushel, durum wheat was $3.67 per bushel, malt barley was $3.07 per bushel and feed barley was $1.65 per bushel.

Livestock prices for the full month of May were mostly higher when compared with the previous month. Steer and heifer prices rose $6.00 to $113.00 per cwt; cows increased $1.90 to a record full-month high of $61.40 per cwt. The average price for calves were $6.00 higher to a new record full-month high of $140.00 per cwt. Sheep prices were up $0.90 to $44.30 per cwt and lamb prices jumped $10.00 to $125.00 per cwt. Milk prices decreased $0.40 per cwt from April to $15.00 per cwt. Mid-month June steer and heifer prices were $105.00 per cwt; cows were $58.80 per cwt; calves were $132.00 per cwt; and milk prices were $15.10 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was $3.23, down $0.04, spring wheat was $3.37, down $0.02; durum wheat was $3.67 up $0.04; the all barley price was $2.46, up $0.14; and steer and heifer prices were $96.40, down $1.90 per cwt.

The U.S. mid-June winter wheat price was $3.06 per bushel; spring wheat was $3.54 per bushel; durum wheat was $3.62 per bushel; all wheat was $3.17 per bushel; malt barley was $2.79 per bushel; feed barley was $1.66 per bushel; and all barley was $2.36. Steer and heifer prices were $93.10 per cwt; cow prices were $57.30, calves were $140.00 per cwt; all hog prices were $51.00 per cwt; and all egg prices were $0.450 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in June, at 120, based on 1990-92=100, is unchanged from May.

United States Index Summary

INDEX (1990-92=100)	May 2004	June 2004	May 2005	June 2005
Prices Received	129	128	120	120
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	135	135	139	139
Ratio 2/	96	95	86	86

1/ Prices paid indexes (1990-92=100) published monthly. 2/ Ratio of index of prices received by farmers to index of prices paid.

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued.

Wheat Supply and Demand

Projected global imports are up 1.75 million tons with the most noteworthy changes being a 1 million increase in India's imports (the first significant imports in 6 years) and 0.6 million by Algeria. Forecast exports rise for Ukraine, Canada, and Iran. Global 2005/06 wheat stocks fall slightly with the largest declines forecast for Romania, Russia, India, and Algeria, which are only partially offset by increases in the United States and the EU-25.

OILSEEDS: U.S. oilseed ending stocks for 2005/06 are projected at 7.0 million tons, down 1.1 million tons from last month. U.S. oilseed production is projected at 89.1 million tons, down 0.1 million tons. Reduced soybean, cottonseed, and sunflowerseed production are only partly offset by higher peanut and canola production. Soybean production is projected at 2,890 million bushels (78.7 million tons), down 5 million bushels from last month because planted and harvested area in the Acreage report are below the June projections.

U.S. 2005/06 soybean stocks are reduced to 210 million bushels reflecting reduced supplies and higher projected use. Supplies are reduced due to lower beginning stocks and slightly reduced production. Soybean crush is raised due to improved prospects for soybean meal use. Soybean oil production, exports, and stocks are all increased due to higher soybean crush.

Price projections for soybeans and products are all higher this month. The U.S. season average soybean price for 2005/06 is projected at $5.10 to $6.10 per bushel, up 15 cents on both ends of the range. Soybean meal prices are projected at $165 to $195 per short ton, up $5.00 on both ends of the range. Soybean oil prices are projected at 21 to 24 cents per pound, up 0.5 cents on both ends of the range

Global oilseed production for 2005/06 is increased 1.7 million tons to 378.7 million tons. Foreign production is projected up 1.8 million tons, more than offsetting a small
reduction for the United States. Rapeseed production is increased for Canada based on higher harvested area. Other changes include reduced sunflowerseed production for the EU-25 and increased cottonseed production for China, India, and Pakistan.

Global oilseed production for 2004/05 is reduced this month mainly reflecting a 2-million ton reduction in the Brazil soybean crop. The crop is estimated at 51 million
tons based on survey results recently released by the Brazilian Government.

U.S. soybean crush for 2004/05 is projected at 1,690 million bushels, up 15 million bushels from last month. The increase reflects stronger-than-expected growth in domestic soybean meal use through the third quarter of the marketing year. Residual use is raised 15 million bushels this month. Supply estimates and reported use through May coupled with the June 1 stocks estimate indicate a higher residual for 2004/05. Ending stocks for 2004/05 are projected at 290 million bushels, down 30 million bushels.

Wheat: Supply, Disappearance, and Price, United States, 1988-2005

June 1, 2005 Crop Acreages

Small Grain Acreage

All wheat seeded acreage in Montana is estimated to be 5.32 million acres, down 3% from last year. **Spring wheat** producers seeded an estimated 2.60 million acres, down 13% from last year. Planted acreage is the lowest since 1991 when 2.6 million acres were also planted. Acres intended to be harvested, at 2.5 million, are down 12% from the previous year. Due to the rainfall this spring, the condition of the spring wheat crop for the week ending June 26 is better than a year ago and was rated mostly good with 10% excellent, 66% good, 20% fair, 3% poor, and 1% very poor. Currently, 61% of the spring wheat crop is in the boot stage, with 20% of the crop headed which is ahead of last year and the 5-year average. **Winter wheat** acreage seeded remained unchanged from the March 1 estimate at 2.15 million acres, but up 13 percent from last year. Producers are expecting to harvest 2.05 million acres, unchanged from the previous forecast, but up 420,000 acres from last year's acreage. The winter wheat crop condition is rated 14% excellent, 38% good, 34% fair, 11% poor and 3% very poor for the week ending June 26. The winter wheat crop development is slightly ahead of last year for the boot stage and headed at 99% and 81%, respectively. **Durum wheat** acreage, at 570,000 acres, is unchanged from a year ago, but up 10,000 acres from the March intentions. Acreage of durum wheat intended to be harvested is estimated at 560,000 acres, up 3 percent from last year.

Montana **barley** growers seeded an estimated 950,000 acres, which is down 5% from last year's final estimate. This would be the lowest barley planted acreage since 1953 when 582,000 acres were planted. The State's barley growers intend to harvest 750,000 acres for grain this year, which is 10% below the previous year's final estimate. Planted acreage for **oats**, at 95,000 acres, is down 10,000 acres from the previous year, but 5,000 acres more than intended plantings on March 1, 2005. This would be the lowest planted acres on record. Growers intend to harvest 40,000 acres of the oat crop for grain, unchanged from a year ago.

U.S. **all wheat** planted area is estimated at 58.1 million acres, down 3 percent from 2004. Harvested area is expected to total 50.4 million acres, up 1 percent from last year. The 2005 **winter** wheat planted area, at 41.4 million acres, is 4 percent below last year and down less than 1 percent from the previous estimate. Of this total, about 30.3 million acres are Hard Red Winter, 6.5 million acres Soft Red Winter, 0.8 million acres Hard White Winter, and 3.7 million acres Soft White Winter. Acreage planted to **other spring** wheat for 2005 is estimated at 14.1 million, up 2 percent from 2004. Of this total, about 13.5 million acres are Hard Red Spring wheat. The **durum** planted area for 2005 is estimated at 2.57 million acres, up fractionally from last year.

Barley growers in the U.S. seeded 3.97 million acres for 2005, down 12 percent from the 4.53 million acres seeded a year ago, and the lowest since barley planted acreage estimates began in 1926. Acres for harvest, at 3.47 million, are down 14 percent from the 2004 level, and the lowest since 1890.

Nationally, **oats** acres seeded for the 2005 crop year totaled 4.34 million acres, up 6 percent from last year's planted area. Growers expect to harvest 1.98 million acres for grain, up 10 percent from the 2004 harvested acreage of 1.79 million.

Row Crop, Hay and Oilseed Acreages

Montana hay producers expect to harvest an estimated 2.95 million acres of **all hay**, 450,000 acres above last year, and 450,000 acres more than the March 1, 2005 intentions. This is a new record high for all hay harvested. The previous record was set in 2001 at 2.65 million acres. Of the total hay expected for harvest, 1.70 million acres are expected to be **alfalfa hay**, which is up 300,000 acres from last year's figure. Alfalfa hay harvested ties the previous high set in 1999, 1998, and 1996. Producers expect to harvest 1.25 million acres of **other hay**, which is up 150,000 acres from a year ago.

Montana **corn** growers planted 65,000 acres, down 5,000 acres from a year ago, and 6,000 acres fewer than the March 1 intentions. Acreage intended for harvest as grain, at 16,000 acres, is up 1,000 acres from a year ago. **Sugar beet** producers planted an estimated 51,200 acres, down 5 percent from 2004. Producers intend to harvest 49,800 of those acres, down 2 percent from 2004.

Farmers in Montana planted 14,000 acres of **dry beans** in 2005, up 8 percent from last year. Producers are looking to harvest 13,500 acres of dry beans this season, 6 percent more than last year.

Flaxseed growers in Montana planted an estimated 55,000 acres this year, up 35,000 from last year's acreage and up 20,000 acres from March 1 intentions. This would be the largest flaxseed acreage since 1957 when 74,000 acres were planted. Producers intend to harvest 53,000 acres of flaxseed this year, up from 19,000 acres during the 2004 crop year. **Canola** producers planted 23,000 acres for 2005 and expect to harvest 22,000 acres. **Safflower** producers planted 39,000 acres and expect to harvest 37,000 acres in 2005. This is the first time canola and safflower estimates were published at the state level since the National program began.

U.S. **corn** planted area for all purposes is estimated at 81.6 million acres, up 1 percent from 2004 and 4 percent above 2003. Farmers increased corn plantings 179,000 acres from their March intentions.

Sugar beets area planted for the U.S. totaled 1.28 million acres, down 1 percent from the March intentions and down 5 percent from 2004. The area for harvest is forecast at 1.26 million acres, down 4 percent from 2004. Planted area decreased from 2004 in all States, except Wyoming.

U.S. **hay** producers expect to harvest 61.7 million acres of all hay in 2005, down fractionally from 2004. Harvested area of **alfalfa** and alfalfa mixtures is forecast at 22.1 million acres, up 2 percent from last year. **All other hay** harvested area is expected to total 39.6 million acres, down 2 percent. (Continued on next page)

Crop Acres (continued fro front page)

Declines in alfalfa hay acres are expected in States along the Pacific coast and in the central Great Plains.

U.S. **dry bean** growers planted 1.67 million acres for 2005, up 24 percent from last year and 19 percent above two years ago. The June planted acres estimate is 1 percent above growers' plans in March. Acres to be harvested are forecast at 1.57 million, up 29 percent from last year and 16 percent above 2003. High prices for the 2004 crop and low inventories contributed to the increase in planted and harvested acres. Thirteen of the 17 dry bean States have increased planted acreage from a year ago, 3 are unchanged, while Texas growers planted less than 2004.

Flaxseed area planted in 2005, at 945,000 acres, is up 81 percent from last year's total of 523,000 acres. Area for harvest, forecast at 931,000 acres, is 80 percent above the harvested area in 2004. **Canola** producers planted 1.09 million acres in 2005, up 26 percent from 2004, and the first increase in U.S. acreage since 2000. U.S. **safflower** planted area increased 6 percent from 2004, to 185,000 acres in 2005. Area for harvest is forecast at 173,000 acres, up 9 percent from last year. This is the first time State-level estimates have been published in the June Acreage report.

Sweet Cherry Production Forecast

The Montana sweet cherry crop is forecast at 1,300 tons, 45 percent below last year and would be the lowest since 2000 when 1,100 tons were produced. Production is down due to late April freezing temperatures which hurt most orchards in the Flathead growing area during late flowering. While freeze damage was spotty, orchards that were closer to the lake survived the frost better than orchards farther away or at higher elevations. Rainfall during pollination did result in weak pollination in some orchards. While production will be significantly hurt by the frost, production will not be as bad as 1989 and 1991 when the entire crop was lost due to frost damage.

U.S. sweet cherry production is forecast at 226,550 tons, down 20 percent from 2004 and 8 percent below 2003. Beginning with this 2005 forecast, Pennsylvania is no longer in the sweet cherry estimating program. The Washington crop forecast of 120,000 tons is unchanged from the June Crop Production report. The crop is 10 percent below the record high production of 2004 but 2 percent above the crop of 2003. Washington's crop experienced poor weather during bloom that hindered bee activity and pollination. Frost during April was also a problem. Fruit set is reported to be lighter than last year as many growers are reporting smaller fruit clusters.

Oregon production is forecast at 29,000 tons, down 17 percent from the previous forecast and 33 percent below 2004. Oregon sweet cherries experienced an early spring in February until bloom in March, when rain, wind, and frost killed off many blooms. Some orchards in the Willamette Valley were hit hard and those growers may declare a crop failure.

Idaho is expecting a sweet cherry crop of 2,200 tons, down 29 percent from last year and 24 percent below 2003. Production is forecast to be down from recent years due to a cool spring which hampered pollination but high quality fruit is reported.

Utah is forecasting production to be 1,100 tons, down 31 percent from 2004 and a 50 percent decrease from the 2003 crop. Frost during bloom, combined with hail at the beginning of fruit maturity, reduced crop potential.

June 2005 Crop Production Forecast, Montana and U.S.

May U.S. Milk Production

Milk production in the 23 major States during May totaled 14.2 billion pounds, up 4.4 percent from May 2004. April revised production, at 13.6 billion pounds, was up 3.4 percent from April 2004. The April revision represented an increase of 0.3 percent or 35 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,754 pounds for May, 62 pounds above May 2004. The number of milk cows on farms in the 23 major States was 8.12 million head, 54,000 head more than May 2004, and 9,000 head more than April 2005.

May U.S. Egg Production Up 1 Percent

U.S. egg production totaled 7.56 billion during May 2005, up one percent from last year. Production included 6.43 billion table eggs, and 1.13 billion hatching eggs, of which 1.07 billion were broiler-type and 65 million were egg-type. The total number of layers during May 2005 averaged 342 million, down slightly from a year earlier. May egg production per 100 layers was 2,210 eggs, up one percent from May 2004.

All layers in the U.S. on June 1, 2005, totaled 342 million, down one percent from a year ago. The 342 million layers consisted of 282 million layers producing table or market type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.70 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 2005, averaged 71.3 eggs per 100 layers, up 1 percent from a year ago.

June 1, 2005 Grain Stocks

Stocks of all wheat in Montana on June 1, 2005 were 51.3 million bushels, up 27 percent from a year ago. All wheat stocks stored on the farm amounted to 40.0 million bushels, up 43 percent from a year ago. All wheat stored off-farm amounted to 11.3 million bushels, down 9 percent from a year ago. All wheat disappearance for the March - May 2005 quarter was up 14 percent from the same quarter last year to 37.3 million bushels. Last year, disappearance during the quarter was 32.8 million bushels.

Barley stocks in all positions on June 1, 2005 were 14.8 million bushels, up 64 percent from a year ago. Barley stored on-farm jumped from 4.0 million bushels a year ago to 9.0 million bushels this year. Off-farm storage of barley, at 5.8 million bushels, increased 16 percent from 2004. Disappearance of barley for the March - May 2005 quarter was up 62 percent from the same quarter last year to 11.3 million bushels. Disappearance last year during this quarter was 7.0 million bushels. Oats stocks in all positions were 865,000 bushels, up 13 percent from last year. On-farm stocks of oats were 800,000 bushels, up 14 percent from a year ago. Oats stored off-farm were unchanged from last year at 65,000 bushels.

Nationally, all wheat stored in all positions on June 1, 2005 totaled 540 million bushels, down 1 percent from a year ago. On-farm stocks are estimated at 161 million bushels, up 22 percent from last year. Off-farm stocks, at 379 million bushels, are down 9 percent from a year ago. The March - May 2005 indicated disappearance is 445 million bushels, down 6 percent from the same period a year earlier.

U.S. durum wheat stocks in all positions on June 1, 2005 totaled 37.2 million bushels, up 41 percent from a year ago. On-farm stocks, at 24.1 million bushels, are up 77 percent from June 1, 2004. Off-farm stocks totaled 13.1 million bushels, up 3 percent from a year ago. The March - May 2005 indicated disappearance of 18.5 million bushels is up 3 percent from the same period a year earlier.

Barley stocks for the United States in all positions on June 1, 2005 totaled 129 million bushels, up 7 percent from June 1, 2004. On-farm stocks are estimated at 41.1 million bushels, 45 percent above a year ago. Off-farm stocks, at 87.6 million bushels, are 5 percent below June 1, 2004. The March - May 2005 indicated disappearance is 62.0 million bushels, 90 percent above the same period a year earlier.

U.S. oats stored in all positions on June 1, 2005 totaled 58.0 million bushels, 11 percent below the stocks on June 1, 2004. Of the total stocks on hand, 25.4 million bushels are stored on farms, 8 percent lower than a year ago. Off-farm stocks totaled 32.6 million bushels, 13 percent below the previous year. Indicated disappearance during March - May 2005 totaled 24.5 million bushels, compared with 30.2 million bushels from the same period a year ago.

Nationally, corn stocks in all positions on June 1, 2005 totaled 4.32 billion bushels, up 45 percent from June 1, 2004. This is the highest June 1 stocks level since 1988. Of the total stocks, 2.46 billion bushels are stored on farms, up 60 percent from a year earlier. Off-farm stocks, at 1.86 billion bushels, are up 30 percent from a year ago. The March - May 2005 indicated disappearance is 2.44 billion bushels, compared with 2.30 billion bushels during the same period last year.

June 1 Potato Stocks for Major States

The 15 major potato States held 51.0 million cwt of potatoes in storage June 1, 2005, up 11 percent from both last year and June 1, 2003. Potatoes in storage account for 13 percent of the 2004 fall storage States' production, 2 percentage points above last year. Disappearance of 352 million cwt of potatoes is down 1 percent from last year and 2 percent below two years ago. Shrink and loss, at 31.1 million cwt so far this season, is up 4 percent from last year and 14 percent above the same date in 2003. Processors in the 9 major States have used 173 million cwt of potatoes this season, down 1 percent from a year ago and 4 percent below two years ago. Dehydrating usage accounts for 36.0 million cwt of the total processing, down 8 percent from last year and 11 percent below the same date in 2003.

May 2005 Red Meat Production

Montana slaughter plants produced 1.0 million pounds, dressed weight, of red meat during May 2005, up 7 percent from May 2004 and up 1 percent from April 2005. Cattle slaughter totaled 1,300 head, 100 head above one year ago. The average live weight, at 1,175 pounds, increased 6 pounds from last year.

During May there were 800 hogs slaughtered, unchanged from a year ago. The average live weight, at 244 pounds, was up 1 pound from last year. May sheep slaughter in the State totaled 100 head, unchanged from May 2004. The average live weight increased 5 pounds to 126 pounds.

Commercial red meat production for the United States totaled 3.71 billion pounds in May, up 3 percent from the 3.60 billion pounds produced in May 2004. Beef production, at 2.07 billion pounds, was slightly above the previous year. Cattle slaughter totaled 2.79 million head, down 2 percent from May 2004. The average live weight was up 20 pounds from the previous year, at 1,224 pounds. Veal production totaled 13.2 million pounds, 4 percent below May a year ago. Calf slaughter totaled 58,500 head, down 10 percent from May 2004. The average live weight was 22 pounds above last year, at 376 pounds.

Pork production totaled 1.61 billion pounds, up 7 percent from the previous year. Hog kill totaled 8.03 million head, 6 percent above May 2004. The average live weight was 4 pounds above the previous year, at 270 pounds. Lamb and mutton production, at 14.8 million pounds, was up 14 percent from May 2004. Sheep slaughter totaled 208,000 head, 10 percent above last year. The average live weight was 143 pounds, up 5 pounds from May a year ago.

January to May 2005 commercial red meat production was 18.3 billion pounds, down slightly from 2004. Accumulated beef production was down 2 percent from last year, veal was down 10 percent, pork was up 1 percent from last year, and lamb and mutton production was down 4 percent.

June 1 U.S. Cattle on Feed

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.77 million head on June 1, 2005. The inventory was 1 percent above June 1, 2004 and 2 percent above June 1, 2003.

Placements in feedlots during May totaled 2.22 million, 6 percent below 2004 and 4 percent below 2003. Net placements were 2.13 million. During May, placements of cattle and calves weighing less than 600 pounds were 435,000, 600-699 pounds were 390,000, 700-799 pounds were 663,000, and 800 pounds and greater were 735,000. Marketings of fed cattle during May totaled 2.0 million, 1 percent below 2004 and 11 percent below 2003. Other disappearance totaled 96,000 during May, 22 percent above 2004 and 48 percent above 2003.

U.S. June 1, 2005Hog Inventory Up Slightly

U.S. inventory of all hogs and pigs on June 1, 2005 was 60.8 million head. This was up slightly from June 1, 2004, and up 2 percent from March 1, 2005.

Breeding inventory, at 5.98 million head, was up 1 percent from both June 1, 2004 and last quarter. Market hog inventory, at 54.8 million head, was up slightly from last year, and up 2 percent from last quarter.

The March - May 2005 U.S. pig crop, at 25.9 million head, was up 1 percent from both 2004 and 2003. Sows farrowing during this period totaled 2.87 million head, unchanged from last year. The sows farrowed during this quarter represented 48 percent of the breeding herd. The average pigs saved per litter was 9.02 for the March - May 2005 period, compared to 8.93 last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 9.10 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.90 million sows farrow during the June-August 2005 quarter, virtually unchanged from the actual farrowings during the same period in 2004, but down one-half of one percent from 2003. Intended farrowings for September-November 2005, at 2.88 million sows, are unchanged from the same period in 2004, but up 1 percent from 2003.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 40 percent of the total U.S. hog inventory, up from 38 percent last year.

HIGHLIGHTS:

Winter Wheat Production Forecast
Wheat Supply & Demand Estimates
Barley County Estimates
Ag Prices Received

June 1 Crop Production

Based on June 1 conditions, Montana **winter wheat** producers are expecting a yield of 41 bushels per acre, unchanged from last year's final yield and unchanged from the May 1 forecast. If realized, the total production of 84.05 million bushels would be up 26 percent from last year's 66.8 million bushels due to higher harvested acreage. In the fall of 2004, Montana producers seeded 2.15 million acres of winter wheat, up 250,000 acres from the previous year. Producers expect to harvest 2.05 million acres, up 420,000 acres from last year.

As of June 5th, Montana's winter wheat crop was rated much better than a year ago at this time with 3% very poor, 10% poor, 35% fair, 37% good, and 15% excellent compared with 6% very poor, 15% poor, 46% fair, 28% good, and 5% excellent a year ago. The moisture received during May has helped fields hurt by frost damage earlier in the month as well as crop conditions. However, the cool weather is beginning to hinder crop progress as 3 percent of the crop has headed as of June 5th which is behind last year's 13 percent and the five year average of 17 percent.

U.S. winter wheat production is forecast at 1.55 billion bushels, down 3 percent from the May 1 forecast but up 3 percent from 2004. Based on June 1 conditions, the U.S. yield is forecast at 44.1 bushels per acre, down 1.3 bushels from the previous forecast. Grain area totals 35.1 million acres, unchanged from last month. As of May 29, heading had reached 81 percent in the 18 major States, equal to the 5-year average. Progress trailed the average during most of May due primarily to below average temperatures. Harvest was underway in the southern-most portions of the winter wheat growing areas.

Forecasted head counts from the objective yield surveys in the 6 Hard Red Winter States (Colorado, Kansas, Montana, Nebraska, Oklahoma, and Texas) are above last year's final counts, except in Oklahoma. The greatest impact on yield since May 1 was seen in Colorado, Kansas, and Nebraska where yields declined 3, 4, and 2 bushels, respectively. Expectations improved in South Dakota where growers now anticipate a record high crop for both yield and production.

Forecasted head counts from the objective yield surveys in the 3 Soft Red Winter States (Illinois, Missouri, and Ohio) are above last year's final counts in Illinois and Ohio, but lower in Missouri. Indicated head weights are above last year in Missouri and Ohio, but below in Illinois. Cooler than normal temperatures during May slowed crop development across the SRW growing area. Overall, yield expectations remain good, with mostly minor changes from last month.

The Pacific Northwest States (Idaho, Oregon, and Washington) received much needed rainfall during May, improving yield prospects. Forecasted head counts from the objective yield survey in Washington are well above average and last year's final counts. The Idaho yield is now forecast at a record high level.

On May 1, thirty percent of the winter wheat crop was headed in the United States, 6 points behind last year and 1 point behind normal. By month's end, however, progress had reached the normal pace of 81 percent complete but still trailed last year's pace by 5 points. Heading was well ahead of normal in the Pacific Northwest, where warm, moist weather favored development. In the eastern Corn Belt, however, heading lagged behind normal due to cool weather. In the Great Plains, heading progressed at a near-normal pace. Condition of the crop declined throughout the month as freezes, dry weather, and hailstorms took their toll on the crop.

World Ag Supply and Demand Estimates

Projected U.S. 2005/06 ending stocks of wheat are down 59 million bushels from last month due to smaller beginning stocks and lower production. Beginning stocks are down 14 million bushels with higher projected food use and exports for 2004/05. Forecast winter wheat production is 45 million bushels less than last month because of lower yields. Projected use is unchanged from last month but is down 131 million bushels from last year. The 2005/06 projected price range is $2.65 to $3.15 per bushel, up 10 cents on each end from last month compared with an estimated $3.39 for 2004/05.

The 2005/06 global wheat outlook has shifted modestly from last month with projected production falling, imports increasing, and stocks declining. Foreign production is down 1.6 million tons due mostly to smaller crops in Australia (down 1.5 million), the EU-25, Argentina, India, and Morocco. These declines are partially offset by larger crops in Russia (up 2 million tons) and Turkey. Projected global imports are up fractionally, mostly due to larger imports by Morocco, Tunisia, and Nigeria. The pattern of global exports has shifted from last month with larger exports projected for Russia and Turkey and smaller exports for Australia, Argentina, and India. Global consumption rises fractionally due largely to increased wheat feeding in Russia. Global wheat stocks fall with the largest declines in the United States and Australia.

Except for small increases to U.S. barley exports and oat imports, no other changes are projected for 2004/05 feedgrains relative to last month. Similarly, the outlook for 2005/06 is unchanged from last month for production, use, and prices. The 2005/06 projected price range for corn is $1.55 to $1.95, compared with $2.00 to $2.10 for 2004/05.

The most noteworthy change in the global outlook for 2004/05 is in Brazil with a 2-million-ton reduction in the corn crop, lower imports, smaller feed use and exports, and a 0.4-million-ton drop in ending stocks. The global outlook for 2005/06 is for decreased coarse grains production, lower use, and a moderate drop in stocks relative to last month. Smaller crops are projected in Ukraine (down 1.5 million tons), Russia (down 1 million), Argentina and Australia (each down 0.5 million), and several other countries. (continued on back page)

1/ Counties with less than 500 acres planted are combined into "other" counties to avoid disclosure of individual information.

April 2005 Prices Received

April 2005 full month crop prices were mixed compared with March 2005. When compared with March 2005, Montana's winter wheat price was $3.40 per bushel, up $0.06; spring wheat price was down $0.26 to $3.46 per bushel; durum wheat prices decreased $0.14 to $3.80 per bushel; feed barley was unchanged at $1.66 per bushel; and malt barley was $3.27 per bushel, up $0.07. Oats were $1.74 per bushel for the full month of April 2005.

The mid-May price for alfalfa hay rose $1.00 to $76.00 per ton, but all other hay jumped $6.00 to $73.00 per ton. Mid-May grain prices were mixed when compared with April. The winter wheat price averaging $3.39 per bushel, spring wheat was $3.83 per bushel, durum wheat was $3.66 per bushel, malt barley was $3.37 per bushel and feed barley was $1.67 per bushel.

Livestock prices for the full month of April were mixed when compared with the previous month. Steer and heifer prices were unchanged at $107.00 per cwt, while cows increased $2.00 to a record full-month high $59.50. The average price for calves was $3.00 higher to $134.00 per cwt. Sheep prices dropped $9.00 to $43.40 per cwt and lamb prices fell $10.00 to $115.00 per cwt. Milk prices increased $0.70 per cwt from March to $15.40 per cwt. Mid-month May steer and heifer prices were $109.00 per cwt; cows were a new record high at $62.00 per cwt; calves were also a new record high at $140.00 per cwt; and milk prices were $14.70 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $3.27, down $0.05, spring wheat was $3.39, down $0.12; durum wheat was $3.63 down $0.04; the all barley price was $2.32, down $0.14; and steer and heifer prices were $98.30, up $2.80 per cwt.

The U.S. mid-May winter wheat price was $3.13 per bushel; spring wheat was $3.52 per bushel; durum wheat was $3.57 per bushel; all wheat was $3.28 per bushel; malt barley was $3.02 per bushel; feed barley was $1.91 per bushel; and all barley was $2.53. Steer and heifer prices were $96.90 per cwt; cow prices were $58.70, calves were $141.00 per cwt; all hog prices were $55.40 per cwt; and all egg prices were $0.469 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in May, at 122, based on 1990-92=100, is unchanged from April.

United States Index Summary

World Ag Supply & Demand (continued from front page)

Global coarse grain use in 2005/06 is down fractionally with the largest declines occurring in Russia, Ukraine, and Australia. Consumption is up in Egypt, Iran, and Tunisia. Global imports are down slightly as smaller imports by Turkey, Russia, Indonesia, and Chile are only partially offset by larger imports by Egypt, Morocco, Brazil, and Iran. Exports from Argentina, Brazil, Ukraine, and Kazakstan are lower while exports by the EU-25 and South Africa rise. Global ending stocks drop just over 2 million tons with the largest declines occurring in Russia, Ukraine, and Australia. Stocks are up in Iran, Egypt, Tunisia, and several other countries.

U.S. oilseed production for 2005/06 is projected at 89.2 million tons, unchanged from last month. Soybean production is forecast at 2,895 million bushels, or 78.8 million tons. A projected decrease in 2004/05 soybean ending stocks this month for South America is expected to provide increased U.S. export opportunities. As a result, 2005/06 U.S. soybean exports are increased 10 million bushels to 1,135 million bushels. Prospects for increased exports and reduced soybean supplies result in a slight decrease in soybean crush from last month. U.S. soybean ending stocks are projected at 255 million bushels, down 25 million bushels from last month.

The U.S. season-average soybean price for 2005/06 is projected at $4.95 to $5.95 per bushel, up 25 cents on both ends of the range. Soybean meal prices are projected at $160 to $190 per short ton, up $10.00 on both ends of the range. Soybean oil prices are projected at 20.5 to 23.5 cents per pound, up 0.5 cents on both ends of the range.

Global oilseed production for 2005/06 is projected at 377.0 million tons, down 4.1 million tons (1 percent) from 2004/05. Foreign oilseed production is projected at 287.8 million tons, up 3.2 million tons from 2004/05. Global soybean production is projected to increase 3.4 million tons to a record 219.7 million tons. Although U.S. soybean production is expected to decline from last year's record level, a rebound in yields and production in Brazil will push South American soybean production to a record 108 million tons, accounting for just below half of 2005/06 global production. The Brazilian soybean crop is projected at a record 62 million tons, up 17 percent from the drought-reduced 2004/05 crop. Global production of high-oil content seed is down 5 percent as lower rapeseed production is only partly offset by increased sunflower seed production. Rapeseed production is projected lower for China, the EU-25, Canada, and India. Sunflower seed production is higher for Ukraine as producers expand plantings from 2004/05.

Global protein meal consumption is projected to increase 3 percent in 2005/06, primarily due to gains for soybean meal. Protein meal consumption in China is projected to increase 8 percent, with a 15 percent increase in soybean meal more than offsetting decreased consumption of rapeseed and cottonseed meal. World soybean trade increases 7 percent to 65.6 million tons, nearly all of which is due to higher imports for China to a record 27.0 million tons. Global vegetable oil consumption is projected to increase 5 percent for 2005/06 led by gains for China, India, and the EU-25. Global oilseed crush is projected to increase 3 percent, and oilseed stocks are projected to increase 3.5 million tons to a record 58.2 million tons.

Changes for 2004/05 for the U.S. include increased soybean crush and exports and reduced ending stocks. Global soybean ending stocks are also reduced, reflecting the effect of reduced Brazil soybean production for 2003/04. The crop is reduced from 52.6 million tons to 50.5 million tons based on analysis of crush and trade statistics for the marketing year.

April 2005 Red Meat Production

Montana slaughter plants produced 1.0 million pounds, dressed weight, of red meat during April 2005, down 1 percent from April 2004 and down 9 percent from March 2005. Cattle slaughter totaled 1,200 head, 100 head below one year ago. The average live weight, at 1,174 pounds, decreased 7 pounds from last year.

During April there were 900 hogs slaughtered, up 100 head from a year ago. The average live weight, at 247 pounds, was down 3 pounds from last year. April sheep slaughter in the State totaled 200 head, up from 100 head in April 2004. The average live weight decreased 2 pounds to 120 pounds.

Commercial red meat production for the United States totaled 3.62 billion pounds in April, down 2 percent from the 3.71 billion pounds produced in April 2004. Beef production, at 1.89 billion pounds, was 3 percent below the previous year. Cattle slaughter totaled 2.56 million head, down 5 percent from April 2004. The average live weight was up 20 pounds from the previous year, at 1,220 pounds. Veal production totaled 13.0 million pounds, 7 percent below April a year ago. Calf slaughter totaled 61,600 head, down 13 percent from April 2004. The average live weight was 23 pounds above last year, at 353 pounds.

Pork production totaled 1.70 billion pounds, down 1 percent from the previous year. Hog kill totaled 8.44 million head, 2 percent below April 2004. The average live weight was 3 pounds above the previous year, at 271 pounds. Lamb and mutton production, at 15.5 million pounds, was down 11 percent from April 2004. Sheep slaughter totaled 220,800 head, 14 percent below last year. The average live weight was 141 pounds, up 5 pounds from April a year ago.

January to April 2005 commercial red meat production was 14.6 billion pounds, down 1 percent from 2004. Accumulated beef production was down 2 percent from last year, veal was down 12 percent, pork was down slightly from last year, and lamb and mutton production was down 8 percent.

Livestock County Estimates Available

The January 1, 2005 livestock inventory county estimates for all cattle and calves, beef cows, milk cows, sheep and lambs, and December 1, 2004 county estimates for hogs and pigs, and district estimates for chickens are now completed. These estimates are available on our website at http://www.nass.usda.gov/mt/.

Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. The county estimates are based on livestock surveys conducted at the end of 2004 and beginning of 2005. Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on the livestock inventories. About 6,900 questionnaires were tabulated and summarized. Thank you to all the farmers and ranchers who participated in the survey!

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.6 million head on May 1, 2005. The inventory was 3 percent above May 1, 2004 and 1 percent above May 1, 2003.

Placements in feedlots during April totaled 1.66 million, 4 percent above 2004 but 11 percent below 2003. Net placements were 1.57 million. During April, placements of cattle and calves weighing less than 600 pounds were 340,000, 600-699 pounds were 225,000, 700-799 pounds were 500,000, and 800 pounds and greater were 595,000.

Marketings of fed cattle during April totaled 1.80 million, 5 percent below 2004 and 9 percent below 2003. This is the lowest fed cattle marketings for the month of April since the series began in 1996. Other disappearance totaled 90,000 during April, 7 percent below 2004 but 43 percent above 2003.

April Milk Production

Milk production in the 23 major States during April totaled 13.6 billion pounds, up 3.2 percent from April 2004. March revised production, at 13.8 billion pounds, was up 2.9 percent from March 2004. The March revision represented a decrease of 0.1 percent or 20 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,679 pounds for April, 43 pounds above April 2004. The number of milk cows on farms in the 23 major States was 8.11 million head, 44,000 head more than April 2004, and 12,000 head more than March 2005.

Wheat 2004 Agricultural Chemical Use

Durum wheat producers in Montana applied a total of 32.5 million pounds of nitrogen fertilizer to 96 percent of the 570,000 acres planted for the 2004 crop. Eighty-four percent of the planted acreage received a total of 11.8 million pounds of phosphate fertilizer, while 0.6 million pounds of potash were used on 10 percent of the acres. Durum wheat producers applied 508 million pounds of herbicides to 99 percent of the 2004 durum wheat planted acres. The top three herbicides applied were dicamba with 56 percent, followed by glyphosate with 46 percent, and MCPA with 30 percent of the acreage sprayed.

Montana other spring wheat producers applied nitrogen fertilizer to 79 percent of the acreage planted for the 2004 crop. A total of 134.6 million pounds of nitrogen fertilizer were applied to the 3.0 million acres of other spring wheat planted in Montana during 2004. Of the planted acreage, 69 percent received phosphate fertilizer, while potash was used on 13 percent of the acres. Total phosphate application was 72.6 million pounds and potash totaled 9.0 million pounds. Other spring wheat producers applied 1,652 million pounds of herbicides to 95 percent of the 2004 other spring wheat acres planted. The most common herbicides applied were glyphosate with 40 percent of the acreage sprayed, followed by 2,4-D with 33 percent, and dicamba with 28 percent. (continued on next page)

Wheat 2004 Ag Chemical Use
(continued from front page)

Winter wheat producers in the State applied 83.0 million pounds of nitrogen fertilizer to 92 percent of the 1.9 million acres planted for the 2004 crop. Of the planted acreage, 83 percent received 47.3 million pounds of phosphate fertilizer, while 3.9 million pounds of potash was applied to 21 percent of the acres. Winter wheat producers used 2,533 million pounds of herbicides on 95 percent of the winter wheat acres planted. The top three herbicides applied were glyphosate with 75 percent of the acreage sprayed, 2,4-D with 67 percent, and metsulphuron-methyl with 22 percent.

Nationally, two Program States, Montana and North Dakota, were surveyed for durum wheat in the 2004 ARMS phase II survey. Nitrogen was the most commonly used fertilizer for producers of durum wheat. At the Program State level, 36 pounds of nitrogen were applied per acre per application; 147.8 million total pounds of nitrogen were applied to the fields in 2004. The rate per application in the Program States was 24 pounds of phosphate per acre, with a total of 46.9 million pounds applied. Potash had the lowest coverage and smallest rate per application of all fertilizers reported. The rate per application of potash for the Program States was 9 pounds per acre, with 1.7 million total pounds applied to the fields.

None of the durum wheat growers reported any insecticides in this survey. Herbicides were applied to 99 percent of the durum wheat planted. Fenoxaprop was the most widely applied herbicide with 48 percent of the planted acreage being treated. It was applied at a rate of 0.05 pounds per acre per application; 67,000 total pounds were applied in the Program States. The next three most widely applied herbicides to durum wheat were glyphosate, MCPA, and 2,4-D. They were applied to 46, 45, and 36 percent, respectively, of the planted acreage. There were not enough reports available to publish any fungicide data.

States surveyed for other spring wheat included Idaho, Minnesota, Montana, North Dakota, Oregon, South Dakota, and Washington. Nitrogen fertilizer was applied to 93 percent of the 2004 spring wheat planted acreage in the Program States. Spring wheat growers in the Program States applied nitrogen on average 2.0 times per acre, putting down 48 pounds of nitrogen per acre per treatment. Fertilizers with phosphate were applied to 79 percent of the planted acreage and 25 percent of the planted acreage received potash applications.

Spring wheat producers in the States surveyed treated 96 percent of their planted acreage with herbicides. MCPA was the most widely applied herbicide with 46 percent of the planted acreage being treated in the Program States. It was applied at a rate of 0.29 pounds per acre per application; a total of 1.845 million pounds of the active ingredient were applied in the Program States. The next four active ingredients that round off the top five used active ingredients were also herbicides. They were fenoxaprop, glyphosate, 2,4-D, and bromoxynil octanoate. The percentages of acres treated were 31, 23, 20, and 19 percent, respectively.

Insecticides were applied to only 2 percent of the other spring wheat acres planted in the Program States. No active ingredient was applied on more than 1 percent of the acres planted. Fungicides were applied to 20 percent of acres planted in the Program States. The most commonly used fungicide was tebuconazole, which was only applied to 12 percent of the acres planted in the Program States.

Winter wheat producers in the Program States (Colorado, Idaho, Illinois, Kansas, Michigan, Missouri, Montana, Nebraska, Ohio, Oklahoma, Oregon, South Dakota, Texas, and Washington) applied nitrogen fertilizer to 84 percent of the winter wheat planted acreage. The average number of nitrogen applications per acre was 2.0 with an average application rate of 44 pounds per acre; 2,733 million total pounds were applied. Phosphate was applied on 55 percent of the winter wheat planted acreage in the Program States; 934 million total pounds were applied. Potash was applied to 16 percent of the planted winter wheat acreage in the Program States.

In the Program States, 45 percent of the winter wheat planted acreage was treated with herbicides. The most widely used herbicides were metsulfuron-methyl, applied to 15 percent of the winter wheat acreage, followed by glyphosate and 2,4-D, both applied to 13 percent of the planted acreage in the States surveyed.

Insecticide applications were made to 7 percent of the winter wheat planted acres in 2004. Chlorpyrifos, the most widely used insecticide, was only applied to 3 percent of Program State acres planted. Fungicides were applied to 2 percent of Program State acreage. No active ingredients were applied to more than 1 percent of the total Program State acreage.

May Potato Stocks

Montana potato producers held 400,000 cwt of potatoes in storage on May 1, 2005, down 60 percent from the previous year. Eleven percent of the 2005 Montana potato crop is still in storage, compared with 30 percent last year at this time.

The 15 major potato States held 87.0 million cwt of potatoes in storage May 1, 2005, up 2 percent from last year and 5 percent above May 1, 2003. Potatoes in storage account for 22 percent of the 2004 fall storage States' production, 1 percentage point above last year.

Disappearance of 316 million cwt from the start of harvest to May 1, is down 1 percent from last year and 2 percent below two years ago. Shrink and loss, at 29.0 million cwt, is up 5 percent from last year and 12 percent above the same date in 2003.

Processors have used 154 million cwt of 2004 crop potatoes so far this season, down 1 percent from a year ago and 4 percent below two years ago. April usage, at 17.8 million cwt, is 7 percent above last year and up 8 percent from two years ago. Idaho and Malheur County, Oregon, total processing increased 3 percent from a year ago, while Washington and the rest of Oregon total processing decreased less than 1 percent from last season. Dehydrating usage accounts for 31.4 million cwt of the total processing, down 9 percent from last year and 13 percent below the same date in 2003.

Western States held 62.9 million cwt of potatoes in storage on May 1, up 6 percent from last year but less than 1 percent below two years ago. Idaho's potato stocks are up 17 percent from last year, Colorado's potato sheds stored 7 percent more, and Washington's stocks increased 3 percent from last year. Montana's potato stocks are down 60 percent, Oregon's sheds hold 38 percent less than last year, and California's stocks decreased 29 percent from a year ago.

Central States accounted for 18.6 million cwt of potato stocks on May 1, down 12 percent from last year but 19 percent above two years ago. Michigan's potato stocks are down 27 percent, North Dakota's potato sheds stored 13 percent less than last year, and Minnesota's and Wisconsin's stocks both decreased 7 percent. Nebraska and Ohio's potato stocks combined decreased 24 percent from last year.

Eastern States stored 5.49 million cwt of potatoes on May 1, up 28 percent from last year and 29 percent above two years ago. Maine's potato sheds hold 24 percent more than last year. Pennsylvania and New York's stocks combined increased 95 percent from a year ago.

Hired Workers Down 10 Percent, Wage Rates Up 1 Percent From a Year Ago

There were 978,000 hired workers on the Nation's farms and ranches during the week of April 10-16, 2005, down 10 percent from a year ago. Of these hired workers, 746,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 232,000 workers.

Farm operators paid their hired workers an average wage of $9.34 per hour during the April 2005 reference week, up 11 cents from a year earlier. Field workers received an average of $8.55 per hour, up 8 cents from last April, while livestock workers earned $9.23 per hour compared with $8.95 a year earlier. The field and livestock worker combined wage rate, at $8.73 per hour, was up 14 cents from last year. The number of hours worked averaged 39.8 hours for hired workers during the survey week, down 2 percent from a year ago.

The largest decreases in the number of hired farm workers from last year occurred in California, Florida, and in the Mountain II (Colorado, Nevada, and Utah), Northeast II (Delaware, Maryland, New Jersey, and Pennsylvania), and Northern Plains (Kansas, Nebraska, North Dakota, and South Dakota) regions. In California, a weak El Nino weather pattern brought unseasonably cool temperatures and record rainfall to the southern half of the State from January through March, affecting quality and interrupting planting, harvesting, and crop development. The wet weather had the largest impact on vegetable crops and nursery and floriculture production, which kept the demand for hired workers well behind the previous year. Field work in Florida was hampered by wet soils in northern areas, and estimated citrus production was down considerably from 2004. These factors combined to reduce the need for hired workers. In the Mountain II region, heavy snowfall and rains in Colorado slowed field activities, so fewer workers were required. The cool, wet spring and below normal soil temperatures in the Northeast II region delayed planting of field and vegetable crops and slowed the development of hay and pastures. Thus, the demand for hired workers was lower. In the Northern Plains region, wet conditions limited field activities and lessened the need for hired workers.

The largest increases in the number of hired farm workers from a year ago were in the Southern Plains (Oklahoma and Texas), Delta (Arkansas, Louisiana, and Mississippi), Mountain III (Arizona and New Mexico), and Appalachian I (North Carolina and Virginia) regions. Ideal weather conditions in the Southern Plains region allowed land preparation and planting to progress rapidly, increasing the need for field workers. In the Delta region, Louisiana's warm, dry weather more than offset the wet conditions experienced in Arkansas and Mississippi, which led to greater demand for hired workers. In the Mountain III region, continued expansion in the dairy, vegetable, nursery, and greenhouse industries necessitated more hired workers. Strong demand from vegetable, tobacco, and Christmas tree operations in the Appalachian I region kept worker numbers above last year.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Southern Plains, Mountain III, Northern Plains, and Florida regions. The higher wages in the Southern Plains were due to a larger concentration of full time workers. In the Mountain III and Florida regions, wages were up due to a higher percentage of skilled vegetable, nursery, and greenhouse workers. Wages in the Northern Plains region were higher because of more salaried workers putting in fewer hours, which pushed their hourly wage higher.

April Egg Production Up Slightly

U.S. egg production totaled 7.39 billion during April 2005, up slightly from last year. Production included 6.29 billion table eggs, and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 63 million were egg-type. The total number of layers during April 2005 averaged 344 million, up slightly from a year earlier. April egg production per 100 layers was 2,148 eggs, unchanged from April 2004.

All layers in the U.S. on May 1, 2005, totaled 343 million, up slightly from a year ago. The 343 million layers consisted of 283 million layers producing table or market type eggs, 57.4 million layers producing broiler-type hatching eggs, and 2.68 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 2005, averaged 71.4 eggs per 100 layers, up 1 percent from a year ago.

Egg-Type Chicks Hatched Up 2 Percent

Egg-type chicks hatched during April 2005 totaled 38.3 million, up 2 percent from April 2004. Eggs in incubators totaled 35.9 million on May 1, 2005, up 8 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 308,000 during April 2005, down 10 percent from April 2004.

Broiler Hatch Up 2 Percent

Broiler-type chicks hatched during April 2005 totaled 790 million, up 2 percent from April 2004. Eggs in incubators totaled 663 million on May 1, 2005, up slightly from a year earlier. Leading breeders placed 6.80 million broiler-type pullet chicks for future domestic hatchery supply flocks during April 2005, up 6 percent from April 2004.

Issue: 05-09 Released: May 12, 2005

HIGHLIGHTS:

- Winter Wheat Production
- Hay Stocks
- Meat Animals PDI
- Milk PDI
- Poultry PDI
- Ag Prices

May 1 Crop Production and Hay Stocks

Based on May 1 conditions, **Montana winter wheat** producers are expecting a yield of 41 bushels per acre, unchanged from last year's final yield. If realized, the total production of 84.1 million bushels would be up 26 percent from last year's 66.8 million bushels due to higher harvested acreage. In the fall of 2004, Montana producers seeded 2.15 million acres of winter wheat, up 250,000 acres from the previous year. Producers expect to harvest 2.05 million acres, up 420,000 acres from last year.

As of May 8th, Montana's winter wheat crop was rated significantly better than a year ago with 1% very poor, 5% poor, 27% fair, 58% good, and 9% excellent compared with 15% very poor, 26% poor, 39% fair, 17% good, and 3% excellent a year ago. The mild spring conditions in April helped the winter wheat break dormancy ahead of normal. The moisture received this spring has been beneficial for crop development as 3 percent of the acreage has reached the boot stage compared with the normal of 1 percent. Concerns over low temperatures at the end of April into May as well as reports of infestations of Russian wheat aphids, brown mites, and army cutworms could impact yield potential and harvested acreage.

On May 1, Montana **hay** producers had an estimated 860,000 tons of hay on hand, 70,000 tons more than they had on hand a year ago. Hay production for 2004 was 4.8 million tons, 3 percent larger than the 2003 crop. Disappearance from December 2004 to May 1, 2005 totaled 3.57 million tons, up 12 percent from the same period a year earlier.

United States winter wheat production is forecast at 1.59 billion bushels, up 6 percent from 2004. Based on May 1 conditions, the U.S. yield is forecast at 45.4 bushels per acre, 1.9 bushels more than last year. Grain area totals 35.1 million acres, up 2 percent from last season.

Hard Red production is up 18 percent from a year ago to 1.01 billion bushels. Soft Red is down 21 percent and totals 302 million bushels. White production totals 283 million bushels, up 7 percent from a year ago. Of the White production total, 31.2 million bushels are Hard White and 251 million bushels are Soft White. This is the first year that production levels for Hard White and Soft White are available; therefore, there are no previous year comparisons.

All hay stored in the United States on farms May 1, 2005 totaled 27.7 million tons, up 7 percent from the previous year. Disappearance of hay from December 1, 2004 - May 1, 2005, totaled 86.6 million tons, 2 percent greater than the disappearance of 85.1 million tons for the same period a year earlier.

Twenty-six of the 48 reporting States had higher hay stocks than a year ago. Many of the States reporting an increase in stocks were located in the northern Great Plains and the central Corn Belt. The increase in hay stocks from May 2004 in some areas can be attributed to higher hay production during 2004, mild winter conditions, and sufficient early season pasture growth, reducing the need for supplemental feeding.

Winter Wheat: Acreage, Yield, & Production, by Selected States & U.S. 2004 & Forecast May 1, 2005

2004 Meat Animals Production Disposition and Income

Cash receipts from the 2004 marketings of cattle, hogs, and sheep in Montana totaled $1.2 billion, up 15 percent from 2003. This is the second straight year that the cash receipts from the marketing of cattle, sheep, and hogs has exceeded one billion dollars for the State. Cash receipts for all three livestock classes were up from the previous year due to higher prices received.

Cash receipts from the sales of cattle and calves during 2004 were up 15 percent from 2003 to a new record high of $1.1 billion. This is the first time that cattle and calf cash receipts have exceeded one billion dollars. The previous record high was in 2000 when cash receipts totaled $967.5 million. Marketings of cattle weighing 500 lbs or more, at 1.32 million head, were down 1 percent from 2003. Marketings of calves weighing less than 500 lbs decreased 7 percent from the previous year to 285,000 head. The average price received in 2004 for cattle weighing over 500 lbs increased $8.80 per cwt to $91.00 per cwt. Season average prices for calves weighing less than 500 lbs increased $19.00 per cwt to $125.00 per cwt. The January 1, 2005 value of cattle and calf inventory was $2.5 billion, up 11 percent from 2004.

Cash receipts from the sale of hogs in Montana jumped 29 percent from 2003 to $38.8 million. Marketings of hogs and pigs dropped 8 percent from the previous year to 317,500 head. The average prices received for hogs increased $12.60 from 2003 to $52.30 per cwt. The value of the hog and pig inventory on December 1, 2004 was $18.2 million, up 55 percent from last year.

Sheep and lamb cash receipts in Montana were up 4 percent from the previous year to $23.3 million. Marketings of sheep and lambs in 2004 were 48,000 and 194,000 head, respectively. Sheep marketings were up 6,000 head from last year, but lamb marketings were down 24,000 head. The average price for lambs rose $9.00 to $112.00 per cwt and sheep were $4.70 above last year at $39.50 per cwt. The January 1, 2005 sheep and lamb inventory value was $39.7 million, up 10 percent from 2004.

In the U.S., the 2004 gross income from cattle and calves, hogs and pigs, and sheep and lambs totaled $62.6 billion, up 11 percent from 2003. Gross income increased for cattle and calves, hogs and pigs, and sheep and lambs. Cattle and calves increased 5 percent, hogs and pigs increased 35 percent, and sheep and lambs increased 3 percent.

Total 2004 cash receipts from marketings of meat animals increased 11 percent to $62.2 billion. Cattle and calves accounted for 76 percent of this total, hogs and pigs 23 percent, and sheep and lambs 1 percent. Production decreased for all cattle and calves and sheep and lambs, but increased for hogs and pigs. Average prices were up for all three species.

Cash receipts in the United States from the marketings of cattle and calves increased from $45.1 billion in 2003 to $47.3 billion in 2004, a 5 percent increase. All cattle and calf marketings totaled 53.8 billion pounds in 2004, down 5 percent from 2003. The U.S. annual average price per 100 pounds live weight for cattle was $85.90, an increase of $6.20 from 2003. For calves, the annual average price increased $17.00 to $119.00.

U.S. cash receipts from hogs and pigs totaled $14.3 billion during 2004, up 35 percent from 2003. Marketings totaled 27.8 billion pounds in 2004, up 2 percent from 2003. The U.S. annual average price per 100 pounds live weight increased from $37.20 in 2003 to $49.30 in 2004.

Cash receipts in the United States from the marketings of sheep and lambs in 2004 were $521 million, up 3 percent from 2003. Marketings decreased 6 percent to 572 million pounds. The U.S. annual average price per 100 pounds live weight for sheep increased from $34.90 in 2003 to $38.80 in 2004, while for lambs, the annual average price increased from $94.40 to $101.00.

2004 Milk Production, Disposition and Income

Montana's dairies produced 347 million pounds of milk in 2004, up slightly from 2003. There was an average of 18,000 milk cows on farms and ranches during the year, unchanged from the previous year. The average number of pounds produced per cow in 2004 was 19,278 pounds, 111 pounds more than 2003.

Cash receipts from marketings of milk during the year in Montana were $53.2 million dollars, up 26 percent from 2003. Producers received an average of $15.50 per cwt, an increase of $3.10 per cwt from last year. Total marketings of milk, at 343 million pounds, were up 1 percent from a year ago. A total of 4 million pounds of milk were used on farms and ranches where produced, 2 million pounds of which were fed to calves and 2 million pounds consumed as milk, cream, and butter.

Nationally, milk production increased 0.2 percent in 2004 to 170.8 billion pounds. The rate per cow, at 18,957 pounds, was 197 pounds above 2003. The annual average number of milk cows on farms, at 9.01 million head, was 73,000 head less than 2003.

U.S. cash receipts from marketings of milk during 2004 totaled $27.4 billion, 29 percent above 2003. Producer returns averaged $16.13 per cwt, 29 percent above 2003. Marketings totaled 170 billion pounds, 0.2 percent above 2003. Marketings include whole milk sold to plants and dealers and milk sold directly to consumers.

An estimated 1.11 billion pounds of milk were used on farms where produced, 1.3 percent less than 2003. Calves were fed 87 percent of this milk, with the remainder consumed in producer households.

2004 Poultry Production and Value

Montana's value of egg production in 2004 was $5.9 million, up 1 percent from last year. Egg production in 2004 totaled 107 million eggs, unchanged from the previous year. The average price for eggs was $0.657 per dozen, up slightly from 2003.

For the United States, the combined value of production from broilers, eggs, turkeys, and the value of sales from chickens in 2004, was $28.9 billion, up 24 percent from the $23.3 billion in 2003. Of the combined total, 71 percent was from broilers, 18 percent from eggs, 11 percent from turkeys, and less than 1 percent from chickens.

The value of broilers produced during 2004 was $20.4 billion, up 34 percent from 2003. The total number of broilers produced in 2004 was 8.74 billion, up 3 percent from 2003. The total amount of live weight broilers produced in 2004 was 45.8 billion pounds, up 4 percent from 2003. The 2004 average price per pound on a live weight equivalent basis was 44.6 cents per pound, compared with 34.6 cents in 2003.

The value of sales from chickens (excluding broilers) in 2004 was $58.0 million, up 21 percent from the $47.8 million a year ago. Prices averaged 5.8 cents per pound, compared with 4.9 cents in 2003. The number of chickens sold in 2004 totaled 192 million, up 1 percent from the total sold during the previous year.

Value of all egg production in 2004 was $5.30 billion, down 1 percent from the $5.33 billion in 2003. Egg production totaled 89.1 billion eggs, up 2 percent from the 87.5 billion eggs produced in 2003. In 2004, all eggs averaged 71.4 cents per dozen, compared with 73.2 cents in 2003.

Agricultural Prices Received for March 2005

March 2005 full month crop prices were mixed when compared with the previous month. When comparing March 2005 prices with February 2005, winter wheat was $3.34 per bushel, down $0.05; the spring wheat price decreased $0.05 to $3.72 per bushel; but the durum wheat price increased $0.18 to $3.94 per bushel. Feed barley prices rose $0.05 to $1.66 per bushel, and malt barley prices increased $0.07 to $3.20 per bushel.

The mid-April price for alfalfa hay dropped $1.00 to $75.00 per ton and all other hay decreased $2.00 to $67.00 per ton. Mid-April grain prices were mostly higher than the previous month with winter wheat at $3.43 per bushel; spring wheat was $3.54 per bushel; durum wheat was $4.00 per bushel; feed barley was $1.65 per bushel; and malt barley was $3.30 per bushel.

Livestock prices for the full month of March were mixed when compared with the previous month. March 2005 price comparisons with February 2005 are as follows: the steer and heifer price increased $1.00 to $107.00 per cwt; cows increased $3.10 per cwt to $57.50; calves were up $4.00 to $131.00 per cwt; sheep prices were down $0.50 to $52.40 per cwt; lamb prices dropped $7.00 to $125.00 per cwt; and milk decreased $1.30 to $14.70 per cwt. The mid-April steer and heifer price was $106.00 per cwt; cows were $58.60 per cwt; calves were $132.00 per cwt; and milk prices were $15.70 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $3.32, up $0.05; spring wheat was $3.51, up $0.01; durum wheat was $3.67, down $0.04; the all barley price was $2.46, up $0.09; steer and heifer prices were $95.50, up $2.20 per cwt; beef cattle were $91.30, up $2.30 per cwt; calves were $135.00, up $7.00 per cwt; sheep were $48.20, down $3.10; lambs were $114.00, unchanged from February and all milk was $15.60, up $0.10 per cwt.

The U.S. mid-April winter wheat price was $3.12 per bushel; spring wheat was $3.41 per bushel; durum wheat was $3.66 per bushel; all wheat was $3.27 per bushel; malt barley was $2.80 per bushel; and feed barley was $1.76 per bushel. The steer and heifer price was $95.60 per cwt; cow prices were $57.10 per cwt; all beef cattle were $91.60 per cwt; calves were $139.00 per cwt; all hog prices were $50.20 per cwt; and all egg prices were $0.469 per dozen.

The preliminary April All Farm Products Index of Prices Received by Farmers, at 120, based on 1990-92=100, is 1 point (0.8 percent) above the March Index, but down 5 points (4.0 percent) from April 2004.

United States Index Summary

INDEX (1990-92=100)	March 2004	April 2004	March 2005	April 2005
Prices Received	121	125	119	120
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	132	133	139	140
Ratio 2/	92	94	86	86

1/ Prices paid indexes (1990-92=100) published monthly. 2/ Ratio of index of prices received by farmers to index of prices paid.

Specialty Crop County Estimates for 2004

The Montana Agricultural Statistics Service released county estimates for the 2004 pulse crops and oilseeds. This is the sixth year of the data series. County-level data are not always published because of established disclosure rules. Funding for these county estimates was provided by the Montana Department of Agriculture.

All dry bean production for 2004 totaled 285,000 cwt. The South Central district produced the greatest at 107,000 cwt, followed by the Northeast district with 80,000 cwt and the Southeast district at 71,000 cwt. **Pinto bean** production during 2004 was 252,000 cwt for the State. Carbon County had the highest pinto bean production with 60,000 cwt. The second and third leading counties were Yellowstone and Prairie with 38,000 cwt. and 36,000 cwt, respectively. The South Central district produced the largest crop of pinto beans at 107,000 cwt, followed by the Southeast district with 71,000 cwt. As for **garbanzo beans**, county-level data was not published to avoid disclosure of individual information. Total garbanzo bean production totaled 33,000 cwt, of which the Northeast district produced 26,000 cwt.

Sheridan was the number one **lentil** producing county again in 2004, with 505,000 cwt harvested. The number two county was Daniels with total production of 177,000 cwt., and third was Roosevelt County with 123,000 cwt. Growers from the Northeast district produced 91 percent of the State's lentils. **Dry edible pea** estimates indicate that Valley County was the largest producer in 2004 with 314,000 cwt grown, followed by Sheridan County at 220,000 cwt, and Roosevelt County at 217,000 cwt. Northeast district farmers produced 76 percent of the State's dry peas. Liberty was the leading county in **Austrian winter pea** production during 2004 with 17,000 cwt and Richland County was second with 3,200 cwt. produced. The North Central district produced 54 percent of the State's Austrian winter peas in 2004.

Daniels was by far the largest **canola** producing county in 2004 with 7.6 million pounds, or 32 percent of the State's canola harvest. The second largest county was Pondera with 4.5 million pounds produced, followed by Sheridan County with 2.1 million pounds. The Northeast district produced 57 percent of the crop. Richland was the number one **safflower** producing county with 5.5 million pounds. The next leading county was Dawson at 3.2 million pounds, followed by Roosevelt's production of 2.6 million pounds. Seventy-five percent of the State's safflower was produced in the Northeast district.

Sheridan led the State in **flaxseed** production for 2004 with 148,000 bushels. The next largest county was Valley with 104,000 bushels, followed by Roosevelt County at 15,000 bushels. Ninety-six percent of the State's flaxseed was produced in the Northeast district. Montana's total **sunflower** production was 4.4 million pounds in 2004. The Northeast district accounted for 4.0 million pounds. Data for the other districts was combined to avoid disclosing individual information. Valley County led the State in **mustard seed** production with 2.6 million pounds. Ninety-four percent of Montana's mustard seed was produced in the Northeast district.

All of the preceding information, plus yield, planted and harvested acres by county, district, and State levels are now available from the Montana Agricultural Statistics Service. They are available in printed form or can be accessed by visiting our website at www.nass.usda.gov/mt/. The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county statistics are based on an acreage and production survey of Montana farmers and ranchers conducted in the fall of 2004. Thanks to those who participated!

April 1, 2005 Potato Stocks

Montana potato producers held 2.0 million cwt of potatoes in storage on April 1, 2005, down 13 percent from the previous year. Fifty-six percent of the 2004 Montana potato crop is still in storage, compared with 69 percent in 2004.

The 15 major potato States held 130 million cwt of potatoes in storage April 1, 2005, up 3 percent from both last year and April 1, 2003. Potatoes in storage account for 32 percent of the 2004 fall storage States' production, 1 percentage point above last year.

Disappearance of 274 million cwt from the start of harvest to April 1, is down 1 percent from last year and 3 percent below two years ago. Shrink and loss, at 26.8 million cwt, is up 6 percent from last year and 11 percent above the same date in 2003.

(continued on page two)

April 1, 2005 Potato Stocks

(continued from front page)

Processors have used 136 million cwt of 2004 crop potatoes so far this season, down 1 percent from a year ago and 6 percent below two years ago. March usage, at 16.6 million cwt, is 3 percent below last year and down 8 percent from two years ago. Idaho and Malheur County, Oregon, processing increased 3 percent from a year ago, while Washington and the rest of Oregon processing decreased 2 percent from last season. Dehydrating usage accounts for 27.8 million cwt of the total processing, down 8 percent from last year and 13 percent below the same date in 2003.

Western States held 91.6 million cwt of potatoes in storage on April 1, up 6 percent from last year but 1 percent below two years ago. Idaho's and Colorado's potato stocks are both up 13 percent from last year and Washington's potato sheds stored 2 percent more than last year. Oregon's potato stocks are down 26 percent, Montana's sheds hold 13 percent less than last year, and California's stocks decreased 10 percent from a year ago.

March 2005 Red Meat Production

Montana slaughter plants produced 1.1 million pounds, dressed weight, of red meat during March 2005, down 8 percent from March 2004 and 4 percent below February 2005. Cattle slaughter totaled 1,400 head, down 100 head from a year ago. The average live weight, at 1,147 pounds, increased 8 pounds from last year.

During March there were 1,100 hogs slaughtered, unchanged from a year ago. The average live weight, at 239 pounds, dropped 11 pounds from last year. March sheep slaughter in the state totaled 300 head, up 100 head from March 2004. The average live weight dropped 12 pounds to 124 pounds from last year.

Commercial red meat production for the United States totaled 3.88 billion pounds in March, down 2 percent from the 3.95 billion pounds produced in March 2004.

Beef production, at 2.04 billion pounds, was 3 percent below the previous year. Cattle slaughter totaled 2.72 million head, down 5 percent from March 2004. The average live weight was up 21 pounds from the previous year, at 1,238 pounds.

Veal production totaled 13.3 million pounds, 6 percent below March a year ago. Calf slaughter totaled 67,900 head, down 11 percent from March 2004. The average live weight was 20 pounds above last year, at 328 pounds.

Pork production totaled 1.80 billion pounds, up slightly from the previous year. Hog kill totaled 8.95 million head, 1 percent below March 2004. The average live weight was 3 pounds above the previous year, at 271 pounds.

Lamb and mutton production, at 19.5 million pounds, was down 12 percent from March 2004. Sheep slaughter totaled 280,300 head, 9 percent below last year. The average live weight was 139 pounds, down 5 pounds from March a year ago.

January to March 2005 commercial red meat production was 11.0 billion pounds, down 1 percent from 2004. Accumulated beef production was down 2 percent from last year, veal was down 13 percent, pork was up slightly from last year, and lamb and mutton production was down 7 percent.

U.S. Cattle on Feed Up 1 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.9 million head on April 1, 2005. The inventory was 1 percent above April 1, 2004 and 1 percent above April 1, 2003. The inventory included 6.99 million steers and steer calves, up 5 percent from the previous year. This group accounted for 64 percent of the total inventory. Heifers and heifer calves accounted for 3.80 million head, down 6 percent from 2004.

Placements in feedlots during March totaled 1.76 million, 3 percent below 2004 and 13 percent below 2003. This is the second lowest placements for the month of March since the series began in 1996. Net placements were 1.69 million. During March, placements of cattle and calves weighing less than 600 pounds were 299,000, 600-699 pounds were 320,000, 700-799 pounds were 614,000, and 800 pounds and greater were 527,000. Marketings of fed cattle during March totaled 1.97 million, up slightly from 2004 and 9 percent above 2003. Other disappearance totaled 69,000 during March, 3 percent above 2004 and 11 percent above 2003.

March Egg Production

U.S. egg production totaled 7.73 billion during March 2005, up 2 percent from last year. Production included 6.60 billion table eggs, and 1.13 billion hatching eggs, of which 1.07 billion were broiler-type and 63 million were egg-type. The total number of layers during March 2005 averaged 347 million, up 2 percent from a year earlier. March egg production per 100 layers was 2,225 eggs, up 1 percent from March 2004.

All layers in the U.S. on April 1, 2005, totaled 345 million, up 1 percent from a year ago. The 345 million layers consisted of 286 million layers producing table or market type eggs, 56.9 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2005, averaged 71.8 eggs per 100 layers, down slightly from a year ago.

Egg-type chicks hatched during March totaled 40.0 million, up 6 percent from March 2004. Eggs in incubators totaled 34.1 million on April 1, 2005, up 2 percent from a year ago. Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 314,000 during March 2005, down 22 percent from March 2004.

The March 2005 hatch of broiler-type chicks, at 816 million, was up 3 percent from March of the previous year. There were 658 million eggs in incubators on April 1, 2005, up 1 percent from a year earlier.

Leading breeders placed 7.08 million broiler-type pullet chicks for future domestic hatchery supply flocks during March 2005, up 4 percent from March 2004.

March U.S. Milk Production Up 3.1 Percent

Milk production in the 23 major States during March totaled 13.8 billion pounds, up 3.1 percent from March 2004. February revised production, at 12.3 billion pounds, was down 0.5 percent from February 2004. However, production was up 3.1 percent on a per day basis after adjusting for the leap year. The February revision represented an increase of 30 million pounds or 0.2 percent from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,704 pounds for March, 43 pounds above March 2004. The number of milk cows on farms in the 23 major States was 8.10 million head, 38,000 head more than March 2004, and 21,000 head more than February 2005.

Milk production in the U.S. during the January-March quarter totaled 43.2 billion pounds, up 1.1 percent from the January-March quarter last year. The average number of milk cows in the U.S. during the quarter was 9.00 million head, 2,000 head more than the same period last year.

Montana Grain Movement

Montana **wheat** shipped to out-of-state destinations during June 2004 through November 2004 was 55.8 million bushels, which was up 7% from the previous year.

Over 84% of wheat shipped during this period headed west, totaling 47 million bushels, up 14% from a year earlier. Movements to eastern destinations during this period have totaled 4.6 million bushels, up 4% from a year ago. Other and unknown destinations totaled 4.3 million bushels, down from 6.8 million bushels a year ago.

Wheat shipped by rail, amounted to 53.4 million bushels, 96% of total shipments. Wheat trucked during this period was 2.4 million bushels compared with 3.3 million bushels last year. The percentage of wheat shipped by truck was 4% of the total, which was down 2 percentage points from the previous year.

Montana **barley** shipped to out-of-state destinations during the June 2004 to November 2004 period was 7.2 million bushels, up 14% from the same period last year.

Shipments of barley out of Montana headed for western destinations were down 53% from the same period last year, at 1.3 million bushels. Shipments to eastern destinations rose from 3.3 million bushels last year to 5.2 million bushels this year. While shipments to other destinations went up from 0.3 million bushels last year to 0.7 million bushels this year.

2004 Red Meat Production

Montana slaughter plants produced 15.5 million pounds, dressed weight, of red meat during 2004, compared with 16.0 million pounds in 2003, according to the Montana Agricultural Statistics Service. There were 18,600 cattle slaughtered during 2004, down 2 percent from the previous year. The total live weight of 21.3 million pounds was down 4 percent from a year earlier. The average live weight was down 9 pounds to 1,150 pounds.

There were 14,600 hogs slaughtered in Montana, down 3 percent from 2003. Total live weight at 3.4 million pounds was down 3 percent from last year. The average live weight was 235 pounds per head compared with 234 the previous year. Sheep slaughter amounted to 3,700 head, unchanged from 2003. The average live weight at 122 pounds was 4 pounds lighter than the previous year. Total live weight of all sheep and lambs slaughtered in 2004 decreased 1 percent from 2003 to 456,000 pounds.

The number of federally inspected slaughter plants in Montana on January 1, 2005 was 9, down 1 plant from 2004. There were 141 non-federally inspected plants on January 1, 2005, down 1 from the same date a year ago. (Continued on next page.)

2004 Red Meat Production
(continued from front page)

Red meat production for the United States totaled 45.6 billion pounds in 2004, 2 percent below last year. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 45.4 billion pounds. On farm production totaled 136 million pounds. Beef production, at 24.7 billion pounds, was 6 percent below the previous year. Veal production totaled 176 million pounds, down 13 percent from last year, and set a new record low. Pork production, at 20.5 billion pounds, was 3 percent above last year, setting a new record high. Lamb and mutton production totaled 199 million pounds, falling 3 percent below the previous record low set a year ago.

Commercial cattle slaughter during 2004 totaled 32.7 million head, down 8 percent from 2003, with federal inspection comprising 98.2 percent of the total. The average live weight was 1,240 pounds, up 9 pounds from a year ago. Steers comprised 50.4 percent of the total federally inspected slaughter, heifers 32.2 percent, dairy cows 7.3 percent, other cows 8.4 percent, and bulls 1.7 percent.

Commercial calf slaughter totaled 842,400 head, down 16 percent from a year ago with 97.7 percent under federal inspection. The average live weight was 330 pounds, up 12 pounds from a year earlier.

Commercial hog slaughter totaled 103 million head, up 3 percent from 2003 with 98.9 percent of the hogs slaughtered under federal inspection. The average live weight was up 1 pound from last year, at 267 pounds. Barrows and gilts comprised 96.6 percent of the total federally inspected slaughter. Commercial sheep and lamb slaughter, at 2.84 million head, was down 5 percent from 2003 with 94.3 percent federally inspected. The average live weight was up 2 pounds from 2003 to 136 pounds.

There were 825 slaughtering plants under federal inspection on January 1, 2005 compared with 855 last year. Of these, 689 slaughtered at least one head of cattle during 2004 with 13 slaughtering almost 52 percent of the total cattle killed. Hogs were slaughtered at 664 plants, with 13 accounting for slightly over 58 percent of the total. Likewise, 13 of the 234 plants that slaughtered calves accounted for 83 percent of the total and 4 of the 500 plants that slaughtered sheep or lambs in 2004 comprised about 60 percent of the total head.

Iowa, Kansas, Nebraska, and Texas accounted for almost 52 percent of the United States commercial red meat production in 2004, similar to 2003.

2004 Sweet Cherry Production

Montana sweet cherry producers harvested a total of 2,360 tons in 2004, 15 percent more than the 2003 production of 2,060 tons and slightly higher than the 2,350 tons produced in 2002, according to the Montana Agricultural Statistics Service. Utilization of the 2004 crop was 2,220 tons, 20 percent higher than the 1,850 tons utilized in 2003 and equal to the 2002 utilization. The value of production for 2004 was $4.5 million compared with the 2003 value of $3.2 million. The average price received for cherries during 2004 was $2,020 per ton compared with $1,710 in 2003.

Sweet cherry producers in the United States harvested 282,060 tons in 2004, up 15 percent from the 2003 total of 245,700 tons and 56 percent higher than the 2002 crop of 181,355 tons. Producers utilized 278,160 tons in 2004, 14 percent higher than the 243,580 tons utilized in 2003 and 57 percent more than the 2002 total of 177,305 tons utilized. Value of production for the 2004 crop totaled $435.7 million, which is 27 percent higher than the 2003 total of $342.1 million. The price per ton averaged $1,570 in 2004 compared with $1,410 in 2003.

February Red Meat Production

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during February 2005, up 3 percent from last month, but down 2 percent from February of 2004. Cattle slaughter totaled 1,400 head, down 7 percent from a year ago. The average live weight of 1,143 pounds decreased 7 pounds from last year.

During February 1,100 hogs were slaughtered, down from 1,200 head a year ago. The average live weight of 240 pounds was down 1 pound from last year. February sheep slaughter in the state totaled 200 head, down 100 head from February 2004. The average live weight dropped 7 pounds from last year to 123 pounds.

Commercial red meat production for the United States totaled 3.42 billion pounds in February, up 1 percent from the 3.40 billion pounds produced in February 2004.

Beef production, at 1.77 billion pounds, was 2 percent below the previous year. Cattle slaughter totaled 2.34 million head, down 4 percent from February 2004. The average live weight was up 21 pounds from the previous year, at 1,254 pounds.

Veal production totaled 12.1 million pounds, 16 percent below February a year ago. Calf slaughter totaled 61,900 head, down 13 percent from February 2004. The average live weight was 8 pounds below last year, at 328 pounds.

Pork production totaled 1.63 billion pounds, up 4 percent from the previous year. Hog kill totaled 8.10 million head, 3 percent above February 2004. The average live weight was 2 pounds above the previous year, at 270 pounds.

Lamb and mutton production, at 15.2 million pounds, was up 3 percent from February 2004. Sheep slaughter totaled 215,000 head, 1 percent above last year. The average live weight was 140 pounds, up 1 pound from February a year ago.

January to February 2005 commercial red meat production was 7.1 billion pounds, down 1 percent from 2004. Accumulated beef production was down 1 percent from last year, veal was down 17 percent, pork was up slightly from last year, and lamb and mutton production was down 2 percent.

February Milk Production

Milk production in the 23 major States during February totaled 12.2 billion pounds, down 0.7 percent from February 2004. However, production was 2.8 percent above last year after adjusting for the leap year. January revised production, at 13.3 billion pounds, was up 1.5 percent from January 2004. The January revision represented an increase of 0.2 percent or 29 million pounds from last month's preliminary production estimate.

Production per cow in the 23 major States averaged 1,516 pounds for February, 15 pounds below February 2004. The number of milk cows on farms in the 23 major States was 8.07 million head, 23,000 head more than February 2004, but 9,000 head less than January 2005.

U.S. Cattle on Feed

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.2 million head on March 1, 2005. The inventory was 2 percent above March 1, 2004 and 6 percent above March 1, 2003.

Placements in feedlots during February totaled 1.52 million, 6 percent below 2004 and 8 percent below 2003. This is the second lowest placements for the month of February since the series began in 1996. Net placements were 1.45 million. During February, placements of cattle and calves weighing less than 600 pounds were 277,000, 600-699 pounds were 308,000, 700-799 pounds were 526,000, and 800 pounds and greater were 412,000.

Marketings of fed cattle during February totaled 1.63 million, 4 percent below 2004 and 6 percent below 2003. This is the lowest fed cattle marketings for the month of February since the series began in 1996. Other disappearance totaled 76,000 during February, 10 percent above 2004 and 7 percent above 2003.

March Potato Stocks

Montana potato producers held 3.2 million cwt. of potatoes in storage on March 1, 2005, up 14 percent from the previous year. Ninety percent of the 2004 Montana potato crop is still in storage.

The 15 major potato States held 168 million cwt of potatoes in storage March 1, 2005, up 1 percent from last year and 2 percent above 2003. Potatoes in storage account for 42 percent of the 2004 fall storage States' production, 1 percentage point above last year.

Disappearance of 235 million cwt from the start of harvest to March 1, is down 1 percent from last year and 3 percent below two years ago. Shrink and loss, at 24.6 million cwt, is up 9 percent from last year and 10 percent above the same date in 2003.

Processors used 119 million cwt of 2004 crop potatoes so far this season, down 1 percent from a year ago and 5 percent below two years ago. February usage, at 18.4 million cwt, is 2 percent below both last year and two years ago. Idaho and Malheur County, Oregon, processing increased 2 percent from a year ago, while Washington and the rest of Oregon processing decreased 1 percent from last season. Dehydrating usage accounts for 23.7 million cwt of the total processing, down 9 percent from last year and 15 percent below the same date in 2003.

Western States held 118 million cwt of potatoes in storage on March 1, up 4 percent from last year but 2 percent below two years ago. Montana's potato stocks are up 14 percent from last year, Idaho's storages hold 10 percent more, and Colorado's potato sheds stored 4 percent more than last year. Oregon's potato stocks are down 18 percent and Washington's sheds hold 2 percent less than last year. California's stocks are unchanged from a year ago.

February Egg Production

U.S. egg production totaled 6.91 billion during February 2005, up slightly from last year. Production included 5.90 billion table eggs, and 1.01 billion hatching eggs, of which 956 million were broiler-type and 58 million were egg-type. The total number of layers during February 2005 averaged 349 million, up 3 percent from a year earlier. February egg production per 100 layers was 1,980 eggs, down 3 percent from February 2004.

All layers in the U.S. on March 1, 2005, totaled 349 million, up 3 percent from a year ago. The 349 million layers consisted of 289 million layers producing table or market type eggs, 57.1 million layers producing broiler-type hatching eggs, and 2.64 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2005, averaged 71.4 eggs per 100 layers, up 1 percent from a year ago.

Egg-type chicks hatched during February totaled 32.9 million, up 3 percent from February 2004. Eggs in incubators totaled 34.7 million on March 1, 2005, up 1 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 208,000 during February 2005, down 27 percent from February 2004.

The February 2005 hatch of broiler-type chicks, at 731 million, was up slightly from February of the previous year. There were 659 million eggs in incubators on March 1, 2005, up 2 percent from a year earlier.

Leading breeders placed 7.21 million broiler-type pullet chicks for future domestic hatchery supply flocks during February 2005, down 2 percent from February 2004.

Structure and Financial Characteristics of U.S. Farms - ERS

Most farms in the U.S. are family farms (97 percent in 2001). Even the largest farms tend to be family farms. For example, 86 percent of the farms with sales of $1 million or more in 2001 were family farms.

Small family farms (sales less than $250,000) accounted for 90 percent of the farms in the U.S. but produced a modest share (28 percent) of farm output in 2001. Large (sales of $250,000 to $499,999) and very large family farms (sales of $500,000 or more) accounted for only 7 percent of farms but 58 percent of the value of production in 2001. Nonfamily farms accounted for another 3 percent of farms and 14 percent of the value of production.

Small farms made higher proportionate contributions to the production of specific commodities, including oats, tobacco, hay, wheat, soybeans, corn and beef cattle. Small farms also held about 68 percent of all farm assets, including 60 percent of the land owned by farms. As custodians of the bulk of farm assets—including land—small farms have a large role in natural resource and environmental policy.

In 2001, three-fourths of commodity-related payments went to high-sales small farms (sales of $100,000 to $250,000), large family farms, and very large family farms. In contrast, over 50 percent of payments from the Conservation Reserve and Wetlands Reserve Programs went to retirement and residential/lifestyle farms.

In general, farm households are not a low-income group. Farm household income has been at or above the average for all U.S. households in recent years but varies substantially across households. Household income averaged $64,500 for farm operators in 2001, 11 percent higher than the average for all U.S. households. Even though farm household income averages more than all U.S. households, farm households received most of their income (91 percent) from off-farm sources.

Operators of residential/lifestyle farms, large family farms, and very large family farms had average incomes well above the average for all U.S. households. Operators in the limited-resource, retirement, and low-sales groups had average incomes that were below the national average.

The report relies extensively on data from the Agricultural Resource Management Survey (ARMS) conducted by the Montana Agricultural Statistics Service. The full report, "Structural and Financial Characteristics of U.S. Farms: 2004 Family Farm Report," can be found can be found under the Economic Research Service website at www.ers.usda.gov/Publications/AIB797/.

2004 Sheep & Lamb Losses

Montana sheep and lamb producers lost 44,000 animals to weather, predators, disease and other causes during 2004, representing a total value of $3.8 million. The total number of sheep and lambs lost decreased 14,000 head from last year and the total value of inventory lost was almost 17 percent lower than a year ago. The January 1, 2004 inventory is 3 percent lower than the previous year. Sheep and lamb deaths amounted to 7.5 percent of the January 1 inventory and lambs born, down 2 percentage points from last year.

The number of sheep and lambs lost to all predators totaled 13,700 head, down 4,000 head from last year. Lamb losses by all predators amounted to 10,800 head, down 22 percent from last year. The number of sheep lost to all predators totaled 2,900, down 1,000 head from a year ago. Predators caused an estimated $1.1 million in losses in 2004, down from the previous year. Losses due to predators amounted to 2.3 percent of the January 1 inventory and lambs born and 31 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 67 percent of the predator caused losses and 21 percent of all death losses in the state. The value of losses attributed to coyotes was $0.7 million.

The total value of non-predatory losses was $2.3 million in 2004, compared with $2.6 million in 2003. Non-predatory losses accounted for 59 percent of all losses. The largest non-predatory cause of losses were diseases at 9,800 head. Sheep lost to non-predatory factors totaled 8,900 head, 14 percent lower than 2003. Non-predatory lamb losses came in at 17,100 head, 5,600 head lower than a year ago.

Producers reported less sheep and lambs lost to unknown causes this past year. This resulted in a 41 percent decrease in the number of sheep and lambs lost to unknown causes from last year. Lambs lost to unknown causes totaled 3,100 head, compared with 4,500 head last year. Unknown causes claimed 1,200 sheep, 1,600 head less than last year. The value of sheep and lambs lost to unknown causes decreased to $0.4 million.

1/ Counties with less than 500 acres planted are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

January 2005 Ag Prices Received

January 2005 full-month crop prices were mostly lower compared with December 2004. Montana's winter wheat average price was $3.52 per bushel, down $0.04 from the previous month; spring wheat dropped $0.22 to $3.85 per bushel; and durum wheat prices dropped $0.12 to $3.68 per bushel. Feed barley prices rose $0.06 from the previous month to $1.67, but malt barley prices decreased $0.04 to $3.06 per bushel.

The mid-February price for alfalfa hay dropped $4.00 to $74.00 per ton from January and all other hay decreased $2.00 to $66.00 per ton. Mid-February grain prices were mostly lower than the previous month with winter wheat price averaging $3.35 per bushel, spring wheat was $3.79 per bushel, durum wheat was $3.75 per bushel, malt barley was $2.99 per bushel and feed barley averaged $1.66 per bushel.

Livestock prices for the full month of January were mostly higher than the previous month. Beef cattle jumped $8.40 to 95.90 per cwt. Steer and heifer prices decreased $2.00 to $107.00 per cwt. Cows rose $2.20 to $51.50. The average price for calves was unchanged at $127 per cwt. Sheep prices jumped $8.40 to a record high $59.50 per cwt and lamb increased $9.00 to a record high $126.00 per cwt. Milk prices rose $1.00 from last month to $15.70 per cwt. Steer and heifer prices for mid-February averaged $104.00 per cwt.; cows averaged $53.90 per cwt.; calves averaged $124.00 per cwt.; and milk prices averaged $16.60 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $3.66, up $0.03; spring wheat was $3.66, down $0.09; durum wheat was $3.97, up $0.01; the all barley price was $2.71, down $0.14, and steer and heifer prices were $85.40, down $10.30 per cwt.

The U.S. mid-February winter wheat price was $3.60 per bushel, spring wheat was $3.75 per bushel, durum wheat was $4.03 per bushel, all wheat was $3.68 per bushel, malt barley was $2.88 per bushel, feed barley was $2.13 per bushel, and all barley was $2.62. Steer and heifer prices were $81.60 per cwt, cow prices were $46.20, calves were $110 per cwt., all hog prices were $43.20 per cwt., and market egg prices were $0.75 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in February at 113, based on 1990-92=100, is 2 points (1.8 percent) above the January Index. The Livestock Products Index increased 1 point (0.9 percent) from January while the All Crops Index increased 2 points (1.8 percent). Producers received higher commodity prices for soybeans, broilers, corn, and hogs. Lower prices were received for cattle, lettuce, eggs, and broccoli. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of milk, cattle, broilers, and eggs offset decreased marketings of soybeans, corn, tobacco, and wheat. This preliminary All Farm Products Index is up 14 points (14 percent) from February 2003. The Food Commodities Index increased 2 points (1.8 percent) from last month to 114, and is 18 points (19 percent) above February 2003.

2004 Honey Production

Montana honey producers with five or more colonies during 2004 produced 10.8 million pounds of honey, up 13 percent from 2003. The estimate of honey production includes production by colonies that were in the state for part of the year. There were 140,000 colonies producing honey in 2004, compared with 145,000 colonies in 2003. The honey yield per colony was 77 pounds, up 11 pounds from a year ago. Stocks on hand on December 15, 2004 was estimated at 3.8 million pounds, up from 1.9 million pounds in 2003.

Prices for Montana honey dropped 38 cents per pound from last year to $1.06 per pound in 2004. The value of 2004 honey production was $11.4 million dollars, down 17 percent from last year.

Honey production in 2004 from producers with five or more colonies totaled 184 million pounds, up 1 percent from 2003. There were 2.56 million colonies producing honey in 2004, down 2 percent from 2003. Yield per colony averaged 71.8 pounds, up 3 percent from the 69.9 pounds in 2003. Colonies which produced honey in more than one State were counted in each State where the honey was produced, therefore yields per colony may be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 61.2 million pounds on December 15, 2004, up 50 percent from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

Honey prices decreased during 2004 to 108.5 cents, down 22 percent from 138.7 cents in 2003. Prices are based on retail sales by producers and sales to private processors and cooperatives. State level honey prices reflect the portions of honey sold through retail, co-op and private channels. U.S. honey prices for each color class are derived by weighing quantities sold for each marketing channel at the U.S. level. Honey prices for 2004 were lower than the previous year for all color classes except the all other honey, area specialties class. Honey prices for 2003 crop honey reflect honey sold in 2003 and 2004.

2004 Chicken Inventory and Egg Production

There were 480,000 total chickens on **Montana** farms and ranches on December 1, 2004, down 1 percent from a year ago. The December 1, 2004 inventory included 350,000 layers 20 weeks old and older and 129,000 total pullets. The total value of all chickens on December 1, 2004 was $1.6 million, up 5 percent from last year. The average value per bird, at $3.30, was up $0.20 per bird from 2003.

Montana chickens produced 107 million eggs during the year ending November 30, 2004, unchanged from last year. The state had an average of 355,000 layers in 2004, unchanged from a year ago. The average production per layer on hand was 302 eggs, up from 301 in 2003.

Layer numbers in the United States during 2004 averaged 342 million, up 1 percent from the year earlier. The annual average production per layer on hand in 2004 was 260 eggs, up slightly from the 2003 average of 259. U.S. egg production during the year ending November 30, 2004 totaled a record high 89.1 billion eggs, up 2 percent from 2003. Table egg production, at 76.2 billion eggs, was up 2 percent from the previous year. Hatching egg production, at 12.9 billion eggs, up slightly from 2003.

The U.S. total number of chickens on hand on December 1, 2004 (excluding commercial broilers) was 454 million birds, up 1 percent from last year. U.S. total value of all chickens on December 1, 2004 was $1.12 billion, up slightly from December 1, 2003. The average value decreased from $2.48 per bird on December 1, 2003, to $2.47 per bird on December 1, 2004.

Annual Oilseeds Production Table

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.3 million head on January 1, 2005. The inventory was slightly above January 1, 2004 and 6 percent above January 1, 2003. The inventory included 7.19 million steers and steer calves, up 5 percent from the previous year. This group accounted for 64 percent of the total inventory. Heifers and heifer calves accounted for 4.05 million head, down 7 percent from January 1, 2004.

Placements in feedlots during December totaled 1.83 million, 5 percent above 2003 and 14 percent above 2002. This is the highest placements for the month of December since the series began in 1996. Net placements were 1.74 million. During December, placements of cattle and calves weighing less than 600 pounds were 465,000, 600-699 pounds were 558,000, 700-799 pounds were 489,000, and 800 pounds and greater were 322,000.

Marketings of fed cattle during December totaled 1.78 million, 2 percent above 2003 but 1 percent below 2002. Other disappearance totaled 92,000 during December, 2 percent above 2003 but 7 percent below 2002.

U.S. Potato Stocks Up 3 Percent

Montana potato producers held 3.3 million cwt. of potatoes in storage on January 1, 2005, down slightly from the previous year. Ninety-three percent of the 2004 Montana potato crop is still in storage.

The 15 major potato states held 238 million cwt of potatoes in storage January 1, 2005, up 2 percent from last year and 3 percent above 2003. Potatoes in storage account for 59 percent of the 2004 fall storage states' production, 1 percentage point above last year. Stocks by type were 2 percent red, 11 percent round white, 4 percent long white (Shepody), and 83 percent russets, with a smaller percentage of reds and round whites but a larger percentage of long whites and russets than a year ago.

Disappearance of 165 million cwt from the start of harvest to January 1, is down 3 percent from last year and 6 percent below two years ago. Shrink and loss, at 20.0 million cwt, is up 15 percent from last year and 10 percent above the same date in 2003.

Processors used 86.0 million cwt of 2004 crop potatoes so far this season, down 2 percent from a year ago and 7 percent below two years ago. Idaho and Malheur County, Oregon, processing increased less than 1 percent from a year ago, while Washington and the rest of Oregon processed 1 percent less than last season. December usage, at 15.2 million cwt, is 1 percent below last year and down 2 percent from two years ago. Dehydrating usage accounts for 17.0 million cwt of the total processing, down 8 percent from last year and 13 percent below the same date in 2003.

December Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during December 2004, up 10 percent from the previous December, and up 3 percent from November 2004. Cattle slaughter totaled 1,500 head, up 100 head from a year ago. The average live weight, at 1,147 pounds, decreased 13 pounds from 2003.

During December there were 1,400 hogs slaughtered, up 8 percent from a year ago. The average live weight, at 241 pounds, rose 4 pounds from last year. December sheep slaughter in the state totaled 400 head, 100 head above December 2003. The average live weight decreased 10 pounds from last year to 119 pounds.

Commercial red meat production for the United States totaled 3.93 billion pounds in December, up 1 percent from the 3.88 billion pounds produced in December 2003.

Beef production, at 2.04 billion pounds, was 3 percent above the previous year. Cattle slaughter totaled 2.69 million head, up 1 percent from December 2003. The average live weight was up 24 pounds from the previous year, at 1,268 pounds. Veal production totaled 14.9 million pounds, 22 percent below December a year ago. Calf slaughter totaled 74,700 head, down 23 percent from December 2003. The average live weight was 12 pounds above last year, at 334 pounds.

Pork production totaled 1.86 billion pounds, down 1 percent from the previous year. Hog kill totaled 9.25 million head, 1 percent below December 2003. The average live weight was 1 pound above the previous year, at 270 pounds.

Lamb and mutton production, at 17.0 million pounds, was down 6 percent from December 2003. Sheep slaughter totaled 242,400 head, 7 percent below last year. The average live weight was 140 pounds, up 3 pounds from December a year ago.

January to December 2004 commercial red meat production was 45.4 billion pounds, down 2 percent from 2003. Accumulated beef production was down 6 percent from last year, veal was down 13 percent, pork was up 3 percent from last year, and lamb and mutton production was down 3 percent.

Milk Production

Milk production in Montana during the October-December 2004 quarter totaled 86 million pounds, unchanged from the same quarter a year ago, but down 2 million pounds from the July - September 2004 quarter. Montana milk producers have 18,000 milk cows on farms, unchanged from a year ago.

Milk production in the U.S. during the October-December quarter totaled 41.9 billion pounds, up 0.9 percent from the October-December quarter last year. The average number of milk cows in the U.S. during the quarter was 9.02 million head, 7,000 head more than the same period last year.

Milk production in the 20 major states during December totaled 12.4 billion pounds, up 1.0 percent from December 2003. November revised production, at 11.9 billion pounds, was up 1.2 percent from November 2003. The November revision represented an increase of 5 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major states averaged 1,602 pounds for December, 6 pounds above December 2003. The number of milk cows on farms in the 20 major states was 7.76 million head, 47,000 head more than December 2003, but 4,000 head less than November 2004.

World Ag Supply and Demand Estimates

Projected U.S. 2004/05 ending stocks of wheat are 583 million bushels, 30 million bushels more than last month. Projected feed and residual use is down 25 million bushels because December 1 wheat stocks imply less use in the September-November quarter than expected. Seed use falls 5 million bushels because winter wheat seedings were lowered than expected. All wheat food use and exports are unchanged from last month but offsetting changes are made in HRS and SRW exports. The projected price range is narrowed 5 cents on each end to $3.25 to $3.45 per bushel.

Winter wheat seedings are projected at 41.57 million acres, 4 percent less than last year. Compared with the previous year, seeded acreage of Hard Red Winter is 1 percent lower, Soft Red Winter is 19 percent lower, and White Wheat is 4 percent higher.

Projected 2004/05 global wheat production, use, and stocks are up slightly from last month. Global wheat production is raised 2.6 million tons to a record 621 million tons, up 12 percent from last year. Larger crops are projected for the EU-25 (up 1.4 million tons) and Argentina (up 1 million tons), with a smaller increase for Uruguay. In addition, Australia's 2003/04 crop increases 1.34 million tons based on an official estimate by the Australian government. Australia's 2004/05 crop is unchanged from last month. Global consumption is raised fractionally from last month. Global imports and exports are up slightly from last month. Egypt's imports are up 0.5 million tons. Projected exports of Argentina increase 1 million tons while the EU-25's decrease by 0.5 million tons. Global ending stocks are 2.5 million tons larger than last month's projection with the largest changes occurring in the EU-25 (up 1.4 million tons), and the United States (up 0.8 million tons).

U.S. oilseed production for 2004/05 is estimated at 96.6 million tons, down 0.3 million tons from last month, but up 20.0 million tons from last year. Increased canola, cottonseed, and peanut production are more than offset by decreases for soybeans and sunflowerseed. Soybean production is estimated at a record 3,141 million bushels, down 9 million bushels from the previous estimate, based on slightly reduced yield and harvested area.

The U.S. season-average soybean price range for 2004/05 is projected at $4.75 to $5.45 per bushel, up 15 cents on both ends of the range. Soybean meal prices are projected at $150 to $165 per short ton compared with $145 to $170 in December.

Global oilseed production for 2004/05 is projected at a record 391.4 million tons, up 0.9 million tons from last month. Foreign production is projected at 294.8 million tons, up 1.2 million tons. Global sunflowerseed production is projected at 25.4 million tons, up 0.3 million tons from last month. Russia's sunflowerseed crop is raised 400,000 tons to 4.8 million tons, reflecting increased harvested area. Other oilseed production changes include a 0.6-million-ton increase in cottonseed production for Pakistan and reduced cottonseed production for China. Indonesia's palm oil production is raised 0.3 million tons to a record 11.8 million tons.

Projected total U.S. meat production for 2005 is raised this month. Beef production is raised as USDA's regulations on meat and ruminant imports from minimal-risk countries are expected to allow for the resumption of imports of under-30-month-old cattle from Canada effective March 7. As a result of the rule, imports of slaughter cattle under 30 months of age and feeder cattle are expected to lead to higher levels of slaughter and beef production. Beef production for 2005 is projected at 26 billion pounds, 6 percent above last year and about 1.25 billion pounds above last month. The December Quarterly Hogs and Pigs report indicated that despite relatively strong hog prices and prospects for moderating feed costs, producers are taking a cautious approach toward expansion. Based on slight increases in recent and intended farrowings, projected growth in 2005 pork production is slowed from last month.

Meat trade forecasts are little changed from last month. Beef imports for 2004 are raised based on higher imports from Oceania. Pork and broiler export estimates for 2004 are raised from last month. Trade forecasts for 2005 are little changed.

Cattle price forecasts for 2005 are lowered from last month, reflecting larger supplies of cattle following resumption of imports from Canada. Price forecasts are reduced as a result of expected large imports of under-30- month-old steers and heifers for immediate slaughter and later-year marketings of Canadian feeder cattle placed in U.S. feedlots after trade is resumed. Hog price forecasts are lowered slightly from last month as large beef supplies are expected to pressure hog prices.

HIGHLIGHTS:

Milk Production
Cattle on Feed
Red Meat Production
Potato Stocks
Hogs and Pigs Inventory
Egg Production

November Milk Production Up 1.2 Percent

Milk production in the 20 major States during November totaled 11.8 billion pounds, up 1.2 percent from November 2003. October revised production, at 12.3 billion pounds, was up 1.4 percent from October 2003. The October revision represented an increase of 0.1 percent or 9 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,526 pounds for November, 9 pounds above November 2003.

The number of milk cows on farms in the 20 major States was 7.77 million head, 44,000 head more than November 2003, but unchanged from October 2004.

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.3 million head on December 1, 2004. The inventory was slightly above December 1, 2003 and 4 percent above December 1, 2002.

Placements in feedlots during November totaled 1.74 million, 10 percent below 2003 and 12 percent below 2002. This is the lowest placements for the month of November since the series began in 1996. Net placements were 1.64 million. During November, placements of cattle and calves weighing less than 600 pounds were 590,000, 600-699 pounds were 557,000, 700-799 pounds were 326,000, and 800 pounds and greater were 270,000.

Marketings of fed cattle during November totaled 1.63 million, 6 percent above 2003 but 6 percent below 2002. This is the second lowest fed cattle marketings for the month of November since the series began in 1996. Other disappearance totaled 108,000 during November, 11 percent above 2003 and 20 percent above 2002.

November Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during November 2004. Red meat production was down 7 percent from the previous month, but 12 percent above the previous year.

Cattle slaughtered statewide totaled 1,500 head, which is 200 head above a year ago. The average live weight, at 1,132 pounds, was down 1 pound from 2003. During November there were 1,300 hogs slaughtered in Montana, 100 head more than a year ago. The average live weight, at 250 pounds, increased 2 pounds from 2003. The number of sheep slaughtered, at 300 head, is unchanged from the previous year. The average live weight was down 3 pounds from last year to 124 pounds.

Commercial red meat production for the United States totaled 3.77 billion pounds in November, up 7 percent from the 3.53 billion pounds produced in November 2003.

Beef production, at 1.94 billion pounds, was 9 percent above the previous year. Cattle slaughter totaled 2.54 million head, up 4 percent from November 2003. The average live weight was up 35 pounds from the previous year, at 1,271 pounds.

Veal production totaled 13.8 million pounds, 9 percent below November a year ago. Calf slaughter totaled 68,000 head, down 13 percent from November 2003. The average live weight was 14 pounds above last year, at 336 pounds.

Pork production totaled 1.80 billion pounds, a new monthly record, and was up 5 percent from the previous year. Hog kill totaled 8.96 million head, 4 percent above November 2003. The average live weight was 1 pound above the previous year, at 270 pounds.

Lamb and mutton production, at 16.5 million pounds, was up 1 percent from November 2003. Sheep slaughter totaled 242,100 head, 3 percent above last year. The average live weight was 136 pounds, down 2 pounds from November a year ago.

January to November 2004 commercial red meat production was 41.5 billion pounds, down 3 percent from 2003. Accumulated beef production was down 7 percent from last year, veal was down 12 percent, pork was up 3 percent from last year, and lamb and mutton production was down 3 percent.

Potato Stocks Up 1 Percent

Montana potato producers held 3.2 million cwt or 83 percent of 2004 production on December 1, 2004, compared with 2.7 million cwt or 77 percent held in 2003. Potato production totalled 3,876,000 cwt in 2004 and 3,528,000 cwt in 2003.

The 15 major potato States held 272 million cwt of potatoes in storage December 1, 2004, up 1 percent from last year and 3 percent above 2002. Potatoes in storage account for 67 percent of the 2004 fall storage States' production, 1 percentage point above last year. Disappearance of 132 million cwt from the start of harvest to December 1, is down 3 percent from last year and 8 percent below two years ago. Shrink and loss, at 16.8 million cwt, is up 12 percent from last year and 8 percent above the same date in 2002.

Processors used 70.7 million cwt of 2004 crop potatoes so far this season, down 2 percent from a year ago and 8 percent below two years ago. Dehydrating usage accounts for 13.4 million cwt of the total processing, down 6 percent from last year and 15 percent below the same date in 2002.

Western States held 184 million cwt of potatoes in storage on December 1, up 3 percent from last year but 1 percent below two years ago.

Production of fall potatoes for 2004 is forecast at 410 million cwt, up less than 1 percent from last month but virtually unchanged from last year for comparable States. South Dakota and Utah were dropped from the program starting in 2004. Area harvested, at 1.03 million acres, is up less than 1 percent from November but 6 percent below last year. The average yield is forecast at 399 cwt per acre, 14 cwt above last month and 23 cwt above last year. If realized, this will be a record high yield, 7 cwt above the previous record set in 2000.

Western States production is forecast at 281 million cwt, virtually unchanged from the November forecast but up 3 percent from last year for comparable States. Acreage harvested, at 642,200 acres, decreased 3 percent from last year, but the average yield of 437 cwt per acre is up 23 cwt from 2003. Record high yields in Idaho increased production 7 percent from the previous year. Favorable growing conditions during the season contributed to the good size and quality of the tubers. Production in Washington went up 1 percent from last year. Colorado's production decreased 2 percent as more acres were abandoned due to higher disease rates and water management issues. Oregon growers expect to harvest 19.8 million cwt of potatoes, down 6 percent from last year. This decrease is due to a 13 percent reduction in harvested acres but yields are forecast at 41 cwt above last season. California's production is up 10 percent from last year. Ideal weather and excellent soil conditions increased yields 85 cwt from 2003 to 510 cwt per acre, more than offsetting the decrease in harvested acres.

Central States production is forecast at 101 million cwt, up 1 percent from the November forecast but down 7 percent from last year for comparable States. Harvested area, estimated at 289,600 acres, is up 1 percent from November but 11 percent below a year ago. Average yields, at 349 cwt per acre, are up 2 cwt from last month and 14 cwt above a year ago. Production in Michigan is 9 percent below 2003 and Minnesota's production is down 15 percent from last year. A record high yield of 430 cwt per acre in Minnesota does not make up for the 24 percent decrease in harvested acres. Due to very wet spring conditions producers planted less potato acreage and reported higher rates of abandonment in Minnesota and Michigan. North Dakota growers expect a record high yield of 265 cwt per acre, 20 cwt above the pervious record set in 2003.

Eastern States production is forecast at 27.9 million cwt, up 2 percent from the November forecast and up less than 1 percent from last year. Area for harvest totaled 95,200 acres, up 1 percent from last month but 8 percent below last year. Average yield, at 293 cwt per acre, is up 4 cwt from November and 23 cwt above last season.

1/ Stocks include processor holdings and most of the seed to plant following year's crop. Seed usage for all seasons in 2004 totaled 26.4 million cwt.

Montana Hog Inventory Down 3 Percent from 2003, U.S. Inventory Up Slightly

The inventory of all hogs and pigs in Montana on December 1, 2004 was 165,000 head, 3 percent below a year ago. Breeding stock was down 6 percent from last December to 17,000 head. Market hog numbers decreased to 148,000 head, down 3 percent from last year.

There were 32,500 sows farrowed in Montana during the December 2003 through November 2004 season, down 12 percent from a year ago. The number of pigs saved per litter increased slightly to 9.54 and resulted in an annual pig crop of 310,000 head, a 8 percent decrease from last year.

U.S. inventory of all hogs and pigs on December 1, 2004 was 60.5 million head. This was up slightly from December 1, 2003, but down 1 percent from September 1, 2004. U.S. Breeding inventory, at 5.97 million head, was down 1 percent from December 1, 2003, but up slightly from last quarter. Market hog inventory, at 54.5 million head, was up slightly from last year, but 2 percent below last quarter.

The September-November 2004 U.S. pig crop for the United States, at 25.6 million head, was up slightly from 2003 and up 2 percent from 2002. Sows farrowing during this period totaled 2.85 million head, down slightly from last year. The sows farrowed during this quarter represented 48 percent of the breeding herd. The average pigs saved per litter was 8.96 for the September-November period, compared to 8.93 last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 9.10 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.86 million sows farrow during the December 2004-February 2005 quarter, 1 percent above the actual farrows during the same period in 2004, and 3 percent above 2003. Intended farrowings for March-May 2005, at 2.87 million sows, are down slightly from the same period in 2004, and down 1 percent from the same period in 2003.

November Egg Production Up 2 Percent

U.S. egg production totaled 7.46 billion during November 2004, up 2 percent from last year. Production included 6.42 billion table eggs, and 1.04 billion hatching eggs, of which 980 million were broiler-type and 59 million were egg-type. The total number of layers during November 2004 averaged 343 million, up 2 percent from a year earlier. November egg production per 100 layers was 2,170 eggs, up slightly from November 2003.

All layers in the U.S. on December 1, 2004, totaled 343 million, up 1 percent from a year ago. The 343 million layers consisted of 285 million layers producing table or market type eggs, 54.9 million layers producing broiler-type hatching eggs, and 2.51 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 2004, averaged 72.8 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg-producing States produced 6.98 billion eggs during November 2004, up 2 percent from a year ago. The average number of layers during November, at 321 million, was up 2 percent from a year ago.

Issue: 04-23 (0279-0394) Released: December 10, 2004

"Happy Holidays from All of Us at Montana Agricultural Statistics Service"

May your holiday season be filled with joyfulness and precipitation! Timely rains throughout 2004 have improved Montana's agricultural production outlook by putting a dent in the persistent drought Montana has suffered for more than five years. Wheat production in Montana grew by 31 million bushels due to increases in spring and durum wheat production. Montana's 2004 spring wheat production went up 22 percent from the 2003 crop; durum wheat production rose 24 percent; and barley production jumped 44 percent. In 2004, value-added agricultural opportunities improved with the scheduled spring 2005 completion of the malt barley plant in Great Falls. The plant will require 16 million bushels of malt grade barley annually, which is 1.2 million bushels more malt barley than Montana producers sold in 2003.

Montanans have a lot to be thankful for, but Montana's people are what is truly remarkable about Montana. Montana's farmers and ranchers continue to be stewards of the land, working tirelessly to provide for future generations. Because of the remarkable people who make a living from the land, Montana Agricultural Statistics Service is also hopeful about the future of Montana agriculture.

To everyone involved in Montana's agricultural industry, thank you for your continued support. With your help, we can provide sound statistical facts that you can use to chart the future course of **Montana's Number One Industry--Agriculture**.

Curt Lund, the deputy director for Montana Agricultural Statistics Service, has decided to retire after 37 years of service - of which 17 years were spent in Montana. Curt's devoted service to agriculture shone in the outstanding job he did for Montana's agricultural industry. He will truly be missed in our office.

We sincerely hope that you and your family have a joyous and safe holiday season.

2004 Dry Edible Bean Production

Production for Montana's **dry edible bean** crop was estimated at 272,000 cwt., up 17 percent from the 2003 crop. Planted acreage for 2004 is estimated to be 13,000 acres, unchanged from last year. Harvested area for 2004 is 12,800 acres, unchanged from 2003. The yield is forecast, at 2,130 pounds per acre, 310 pounds better than last year.

Pinto bean production for Montana is estimated at 244,000 cwt, which is 17 percent more than last year. Acres planted, at 10,800, are up 11 percent from 2003. Harvested acres, at 10,600, are 9 percent higher than the previous year. The yield is forecast at 2,300 pounds per acre, 150 pounds more than last year.

All chickpea (garbanzo beans) production is forecast at 28,000 cwt for 2004, up 27 percent from 2003. Planted acreage was set at 2,200 acres, down 31 percent from 2003. Harvested area is estimated, at 2,200 acres, down 27 percent from 2003. The yield is forecast, at 1,270 pounds per acre, 540 pounds above 2003. **Small Chickpea** (smaller than 20/64 in.) production is forecast at 4,000 cwt. for 2004. Planted acreage was set at 500 acres. Harvested area is estimated at 500 acres. The yield is forecast at 800 pounds per acre. **Large Chickpea** (larger than 20/64 in.) production is forecast at 24,000 cwt. for 2004. Planted acreage was set at 1,700 acres. Harvested area is estimated at 1,700 acres. The yield is forecast at 1,410 pounds per acre .

U.S. **dry edible bean** production is forecast at 18.1 million cwt for 2004, down 3 percent from the October forecast and 19 percent below last year. Harvested acreage is forecast at 1.23 million acres, 2 percent below the last forecast and down 9 percent from 2003. The average U.S. yield is forecast at 1,479 pounds per acre, a decrease of 16 pounds from the October forecast and 191 pounds below a year ago. Production is below a year ago in 12 of the 18 producing States. Most notable is a 39 percent production decrease from last year in both Minnesota and North Dakota where an early frost in mid-August severely damaged the crop. Production is down from a year ago for large lima, baby lima, navy, great northern, pinto, light red kidney, dark red kidney, pink, and blackeye. Production increased from last year for small white, small red, cranberry, black, and small and large chickpeas.

Idaho production is expected to be 9 percent above the previous year at 1.64 million cwt. Wet weather this fall delayed harvest for some farmers. Colorado production, at 1.27 million cwt, is an increase of 9 percent from 2003. Growing conditions in Colorado were good for irrigated acreages but dryland beans were stressed by lack of moisture. Production in South Dakota increased 23 percent, Montana 17 percent, and Washington 16 percent.

ERS Economist Says Beef Production Pushed Up By Weights

Sharply reduced fed cattle slaughter from a year earlier and prospects for the best wheat grazing in years have resulted in a gain in stocker/feeder cattle supplies outside feedlots. Through the first three-quarters of this year net feedlot placements were nearly 9 percent below a year earlier. Cattle Feedlot breakevens moved up to the low $90s per cwt and are expected to remain in this range through the winter quarter. Yearling feeder cattle prices for marketings in October through February are ranging from $113 to $117 per cwt, even with lower feed costs, breakevens have continued to rise since mid summer. Packer spreads also remain lower, with the third quarter spread averaging 31.2 cents a pound, down from 43.4 cents a year earlier. Retail prices for Choice beef peaked at midyear at $4.17 a pound, and have been declining through early fall. The wholesale-retail spread remains wide, averaging $2 a pound in the third quarter, up from $1.50 a year earlier when beef supplies were very tight. The slow fed cattle marketing pace is resulting in heavier steer/heifer slaughter weights adding to already large total meat supplies. Beef production this fall through the first half of 2005 is expected to average above a year earlier, even with sharply reduced cow slaughter. Larger supplies of beef and competing meats are expected to result in per capita meat consumption near to above year-earlier levels through 2005.

Stocker/feeder cattle supplies outside feedlots on October 1 were up from a year ago, with most weight groups remaining at or near record prices. Many of these cattle will be grazed this winter and begin to come off pasture in early February through March, bolstering feedlot placements and 2005 beef production.

October Ag Prices Received

October full month crop prices were mixed compared with October 2003 and September 2004. The average price for Montana's winter wheat, at $3.39 per bushel, was down $0.16 from a year ago, but up $0.17 from September 2004; spring wheat moved up $0.17 from last year and $0.13 from last month to $3.77 per bushel; durum wheat prices were $0.03 higher than October 2003, but $0.05 lower than September 2004 to $4.03 per bushel. Feed barley prices fell $0.50 from the previous year and $0.04 from the previous month to $1.57, malt barley prices also dropped $0.23 from a year ago and $0.28 from September 2004 to average $2.99 per bushel.

The mid-November price for alfalfa hay was unchanged from October 2004 at $78.00 per ton, but all other hay dropped $1.00 from October to $69.00 per ton. The mid-November grain prices were mostly higher from the previous month with the winter wheat price averaging $3.47 per bushel; spring wheat was $4.01; durum wheat was $3.77; all barley was $2.64; feed barley averaged $1.70; and malt barley averaged $2.97 per bushel.

Livestock prices for the full month of October were mostly lower compared with September 2004. Steer and heifer prices jumped $6.00 to $115.00 per cwt., but cows dropped $3.80 to $51.20. The average price for calves decreased $1.00 to $127.00 per cwt. Sheep prices dropped $1.00 to $40.70 per cwt, and lamb prices also dropped $1.00 to $109.00 per cwt. The all milk price, at $14.90 per cwt., was down $0.30 per cwt. from September. Steer and heifer prices for mid-November averaged $112.00 per cwt.; cows averaged $49.10 per cwt.; calves averaged $126.00 per cwt.; and milk prices averaged $15.70 per cwt.

Nationally, October prices and changes from October 2003 and September 2004 were as follows: winter wheat was $3.34, down $0.03 from last year, but up $0.08 from September; spring wheat averaged $3.51, down $0.02 from last year, but up $0.03 from last month; durum wheat was $3.89, unchanged from last year, but down $0.01 from September; the all barley price was $2.29, down $0.45 from last year and down $0.14 from September; and steer and heifer prices averaged $91.00, down $6.80 from last year, but up $1.70 per cwt. from September.

The U.S. mid-November winter wheat price was $3.39 per bushel; spring wheat was $3.62 per bushel; durum wheat was $3.75 per bushel; all wheat was $3.51 per bushel, malt barley was $2.78 per bushel; feed barley was $1.75 per bushel; and all barley was $2.42. Steer and heifer prices were $89.10 per cwt.; cow prices were $48.60, calves were $124.00 per cwt.; all hog prices were $55.30 per cwt; and all egg price was $0.612 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in November, at 114, based on 1990-92=100, is 1 point above October. The Crop Index remained unchanged from October while the Livestock Index increased 1 point (0.9 percent). Producers received higher commodity prices for tomatoes, eggs, hogs, strawberries, and grapes. Lower prices were received for lettuce, oranges, soybeans, corn, and cattle. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of dairy, cattle, and cotton offset decreased marketings of soybeans, peanuts, and potatoes. The preliminary All Farm Products Index is down 2 points (1.7 percent) from November 2003. The Food Commodities Index increased 3 points (2.6 percent) from last month to 120. The index is unchanged from November 2003.

October Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during October 2004, unchanged from last year, but up 10 percent from September's production. Cattle slaughter totaled 1,600 head, down 100 head from a year ago. The average live weight decreased 16 pounds to 1,133 from the previous year.

During October there were 1,300 hogs slaughtered, 200 more than a year ago. The average live weight, at 243 pounds, dropped 8 pounds from last year. October sheep slaughter totaled 500 head, 100 head more than October 2003. The average live weight increased 2 pounds to 124 pounds.

Commercial red meat production for the United States totaled 3.92 billion pounds in October, down 6 percent from the 4.16 billion pounds produced in October 2003.

U.S. beef production, at 2.11 billion pounds, was 4 percent below the previous year. Cattle slaughter totaled 2.75 million head, down 9 percent from October 2003. The average live weight was up 36 pounds from the previous year, at 1,267 pounds.

Veal production in the U.S. totaled 12.4 million pounds, 24 percent below October a year ago. Calf slaughter totaled 62,500 head, down 28 percent from October 2003. The average live weight was 22 pounds above last year, at 330 pounds.

U.S. pork production totaled 1.78 billion pounds, down 7 percent from the previous year. Hog kill totaled 8.97 million head, 7 percent below October 2003. The average live weight was unchanged the previous year, at 267 pounds.

Lamb and mutton production in the U.S., at 16.3 million pounds, was down 9 percent from October 2003. Sheep slaughter totaled 241,400 head, 9 percent below last year. The average live weight was 134 pounds, unchanged from October a year ago.

January to October 2004 commercial red meat production for the U.S. was 37.7 billion pounds, down 4 percent from 2003. Accumulated beef production was down 9 percent from last year, veal was down 12 percent, pork was up 3 percent from last year, and lamb and mutton production was down 3 percent.

October Milk Production

Milk production in the 20 major States during October totaled 12.2 billion pounds, up 1.3 percent from October 2003. September revised production, at 11.9 billion pounds, was up 1.3 percent from September 2003. The September revision represented a decrease of 1 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,576 pounds for October, 15 pounds above October 2003. The number of milk cows on farms in the 20 major States was 7.77 million head, 26,000 head more than October 2003, but unchanged from September 2004.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.3 million head on November 1, 2004. The inventory was 3 percent above November 1, 2003 and 5 percent above November 1, 2002.

Placements in feedlots during October totaled 2.70 million, 3 percent below 2003 but 13 percent above 2002. This is the second lowest placements for the month of October since the series began in 1996. Net placements were 2.64 million head. During October, placements of cattle and calves weighing less than 600 pounds were 912,000, 600-699 pounds were 764,000, 700-799 pounds were 529,000, and 800 pounds and greater were 496,000.

Marketings of fed cattle during October totaled 1.80 million, 3 percent below 2003 and 9 percent below 2002. Other disappearance totaled 66,000 during October, 35 percent below 2003 and 21 percent below 2002.

October Egg Production

U.S. egg production totaled 7.64 billion during October 2004, up 3 percent from last year. Production included 6.56 billion table eggs, and 1.08 billion hatching eggs, of which 1.02 billion were broiler-type and 62 million were egg-type. The total number of layers during October 2004 averaged 344 million, up 3 percent from a year earlier. October egg production per 100 layers was 2,221 eggs, up slightly from October 2003.

All layers in the U.S. on November 1, 2004, totaled 344 million, up 2 percent from a year ago. The 344 million layers consisted of 287 million layers producing table or market type eggs, 55.5 million layers producing broiler-type hatching eggs, and 2.50 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 2004, averaged 71.8 eggs per 100 layers, down slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 7.15 billion eggs during October 2004, up 3 percent from a year ago. The average number of layers during October, at 322 million, was up 3 percent from a year ago.

Egg-type chicks hatched during October totaled 36.0 million, up 3 percent from October 2003. Eggs in incubators totaled 37.0 million on November 1, 2004, up 27 percent from a year ago. Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 268,000 during October 2004, down 14 percent from October 2003.

The October 2004 hatch of broiler-type chicks, at 758 million, was up 3 percent from October of the previous year. There were 608 million eggs in incubators on November 1, 2004, up 3 percent from a year earlier.

Leading breeders placed 6.59 million broiler-type pullet chicks for future domestic hatchery supply flocks during October 2004, up 4 percent from October 2003.

Hired Workers Down 2 Percent, Wage Rates Up 3 Percent From a Year Ago

There were 1,173,000 hired workers on the Nation's farms and ranches during the week of October 10-16, 2004, down 2 percent from a year ago. Of these hired workers, 851,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 322,000 workers.

Farm operators paid their hired workers an average wage of $9.30 per hour during the October 2004 reference week, up 25 cents from a year earlier. Field workers received an average of $8.60 per hour, up 18 cents from last October, while livestock workers earned $8.91 per hour compared with $8.64 a year earlier. The field and livestock worker combined wage rate, at $8.67 per hour, was up 20 cents from last year. The number of hours worked averaged 40.5 hours for hired workers during the survey week, up 1 percent from a year ago.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Southern Plains, Delta (Arkansas, Louisiana and Mississippi), Corn Belt I (Illinois, Indiana and Ohio), and Mountain I regions. The higher wages in the Southern Plains and Delta regions were due to a larger concentration of salaried workers putting in fewer hours and a lower percentage of part-time seasonal workers in the work force. Corn Belt I wages were up due to a higher percentage of nursery and greenhouse workers in the work force. In the Mountain I region, wages were higher because of more salaried livestock workers working fewer hours which pushed their hourly wage higher.

The 2004 U.S. all hired worker annual average wage rate was $9.22, up 2 percent from the 2003 annual average wage rate of $9.08. The U.S. field worker annual average wage rate was $8.45, up 14 cents from last year's annual average. The field and livestock worker combined annual average wage rate at the U.S. level was $8.55, up 2 percent from last year's annual average wage rate of $8.42.

Hired Workers: Annual Average Wage Rates By State, 2003-04 1/ 2/

1/ Excludes Agricultural Service Workers. 2/ Annual rates are averages of the published wage rates for each survey week weighted by the number of hours worked during the week. The annual average for all States, Regions, and the U.S. is based on data collected for January, April, July, and October. 3/ Excludes AK.

World Ag Supply and Depmand Estimates

The WASDE report incorporates information from a number of statistical reports published by USDA and other government agencies. In turn, the WASDE report provides a framework for more detailed reports issued by USDA Economic Research Service and Foreign Agricultural Service.

WHEAT: Projected U.S. 2004/05 ending stocks of wheat are 568 million bushels, 1 million bushels less than last month. Production is down 6 million bushels (mostly in Hard Red Spring wheat) but that is nearly offset by a 5-million-bushel increase in Soft Red Winter (SRW) wheat imports. Seed use rises 1 million bushels. Food use, feed and residual, and exports of wheat are unchanged, but changes are made in the by-class allocation of domestic use and exports. The projected price range is raised 10 cents on the lower end of the range to $3.20 to $3.50 per bushel because of stronger-than-expected prices during the past month.

Projected 2004/05 global wheat production, use, and stocks are up slightly from last month. Global wheat production is raised 1.1 million tons to a record 617 million tons because of larger foreign production. Larger crops are projected for the EU-25 (up 1.2 million tons) and Russia (up 1 million tons), with smaller increases for Argentina and Brazil. Australia's crop is down 1 million tons; Canada's is down 0.5 million tons; and smaller reductions are projected for Algeria and South Africa. Global consumption is raised fractionally from last month. Global imports and exports are up slightly from last month due to changes in a number of countries. The largest change in imports is a 0.3-million-ton increase for Algeria. Relative to last month's projections, Russia's exports are up 1 million tons, Argentina's are up 0.5 million tons, while the exports of Kazakhstan are down 0.5 million tons. Small changes in exports and imports are projected for several other countries. Global ending stocks are 0.7 million tons larger than last month's projection with the largest changes occurring in the EU-25 (up 1.2 million tons), Argentina (down 0.7 million tons), Canada (down 0.5 million tons), and Kazakhstan (up 0.5 million tons).

COARSE GRAINS: Further increases are projected this month for 2004/05 U.S. feed grain production and ending stocks. Forecast corn production, a record 11.741 billion bushels, is up 128 million bushels from last month. Also, grain sorghum production is up 10 million bushels. Due to revisions in harvested area, barley and oat production are both down 1 million bushels Projected feed and residual use of corn, sorghum, and barley are up from last month. Corn and grain sorghum exports are each reduced 25 million bushels due to the slow pace of export sales to date and lower projected imports by Mexico, South Korea, and several other major markets. No change is made to industrial use of corn. (Continued on next page)

World Ag Supply and Depmand Estimates (continued)

Relative to last month, projected ending stocks of corn are up 128 million bushels and sorghum stocks are up 20 million bushels. The projected price range is down 5 cents on each end from last month for corn to $1.70 to $2.10 per bushel. The price range of sorghum is down 15 cents on each end to $1.55 to $1.95 per bushel.

Global 2004/05 coarse grain supply, use, and stocks projections are up from last month. Global production is raised to a record 985 million tons, up 8 million tons from last month and 9 percent larger than 2003/04. Relative to last month, larger crops are projected for China (up 4 million tons), the United States (up 3.5 million tons), and the EU-25 (up nearly 1 million tons). Crop reductions are noted for Brazil (down 0.5 million tons), Australia (down 0.4 million tons), and Bolivia (down 0.3 million tons). Production changes are projected for a number of other countries. Global consumption is raised slightly but global trade is down slightly from last month. Reduced imports are projected for Mexico, South Korea, Egypt, Turkey, the Philippines, Japan, and Brazil. Larger imports by Peru, Iran, Indonesia, and other countries are partially offsetting. Smaller exports are projected for the United States, Australia, and Indonesia but larger exports are projected for the EU-25. Global coarse grain stocks rise 8 million tons from last month and are up 21 million tons from last year. China's stocks increase 4.1 million tons due primarily to the larger corn crop. Ending stocks also rise for the United States, with smaller increases projected for South Africa, South Korea, Russia, Ukraine, and other countries. Notable declines in stocks are projected for Mexico, Brazil, and Australia, with smaller reductions forecast for other countries.

OILSEEDS: U.S. oilseed ending stocks for 2004/05 are projected at 13.8 million tons, up 1.6 million tons from last month due to increased soybean and cottonseed production. U.S. total oilseed production is projected at 96.8 million tons, up 1.6 million tons from last month. Soybean production is forecast at a record 3,150 million bushels, up 43 million bushels from last month based on a record soybean yield of 42.6 bushels per acre. Cottonseed production is forecast up 366,000 short tons from last month.

Projected soybean exports are reduced 15 million bushels, mainly reflecting lower import demand in China. Higher freight rates are expected to moderate stock accumulation by crushers in China. Soybean ending stocks are projected at 460 million bushels, which would be the highest level since 1985/86. Soybean oil use is increased this month reflecting the impact of new tax incentives for biodiesel production.

The U.S. season-average soybean price for 2004/05 is projected at $4.55 to $5.35 per bushel, down 15 cents on both ends of the range. The soybean meal price is projected at $145 to $175 per short ton, down 5 dollars on both ends of the range. The soybean oil price is projected at 21.5 to 24.5 cents per pound, unchanged from last month. Global oilseed production for 2004/05 is projected at a record 388.5 million tons, up 2.7 million tons from last month. Foreign oilseed production is increased 1.1 million tons, primarily due to higher rapeseed, sunflowerseed, and cottonseed production. EU-25 rapeseed production is raised 0.2 million tons to 14.5 million tons, 3.5 million tons higher than last year's drought-reduced crop. Other changes include increased rapeseed production for India and increased sunflowerseed production for Russia. Foreign vegetable oil production is raised 1 million tons to 96.6 million tons, primarily due to higher palm oil production in Malaysia and Indonesia.

SUGAR: Projected U.S. sugar supply for 2004/05 is decreased 259,000 short tons, raw value, from last month, mainly due to lower beginning stocks. Total sugar production is decreased 61,000 tons, based on processors' production projections submitted to the Farm Service Agency. Lower cane sugar production in Florida and Louisiana more than offsets higher U.S. beet sugar production.

For 2003/04, ending stocks of 1.907 million tons are down from 2.105 million tons last month, based on processor reporting of fiscal-year supply, export sales, and domestic deliveries. Total supply is reduced 138,000 tons, due mainly to lower production. Total use is increased 60,000 tons, as higher sales for export and residual statistical discrepancies more than offset lower total deliveries.

LIVESTOCK, POULTRY, AND DAIRY: Total U.S. meat production forecasts for 2004 and 2005 are raised. Meat production forecasts for 2004 are slightly higher based on actual slaughter in the third quarter and larger expected output in the fourth. Projected meat production in 2005 is raised 130 million pounds as higher beef production more than offsets lower pork production. Projected beef production is raised as feedlot marketings are expected to be higher and cattle weights heavier. Pork production for 2005 is lowered as the recent announcement of anti-dumping duties on Canadian hogs is expected to lead to some shifting from imports of slaughter hogs to imports of pork. Poultry production is changed fractionally.

Beef trade in 2005 is raised to reflect expectations of continued recovery in sales to Mexico. These forecasts do not assume a resumption of beef trade with Japan at this time. The United States and Japan have agreed to resume trade in beef once respective conditions have been met. The conditions are being determined and are subject to approval by each government. As the conditions are worked out, forecasts will be adjusted to reflect new information. Broiler exports for 2004 and 2005 are raised sharply. Forecasts in 2004 are raised based on stronger-than-expected sales to Mexico, Canada, and the Commonwealth of Independent States. The recent announcement by China allowing the import of poultry products, coupled with stronger sales to other markets, is expected to result in higher 2005 broiler exports compared to last month. Turkey export forecasts are raised from last month to reflect stronger exports to a number of markets and the expected resumption of trade with China. The pork export forecast is unchanged from last month but pork imports for 2005 are raised as the recently announced anti-dumping duties on Canadian hogs are expected to result in some shift in trade from slaughter hogs to pork.

Cattle price forecasts are reduced slightly in both 2004 and 2005 because of increased beef output. Hog price forecasts for 2004 are raised because of higher-than-expected recent prices. Hog prices are unchanged in 2005. Broiler prices in the fourth quarter of 2004 are reduced.

The milk production forecast for 2004/05 is increased because the cow herd is expected to decline more slowly than forecast last month Milk per cow is unchanged. Commercial use, both fat and skim basis, is expected to be stronger. Milk price forecasts for 2004/05 are raised from last month because of stronger demand for milkfat, especially in the first quarter of the marketing year. Class III and Class IV milk prices are higher than last month as recent cheese and butter prices have strengthened. The all milk price is raised to $13.75 to $14.45 per cwt for 2004/05.

November 1 Crop Production Forecast and Small Grain Reinterview Updates

Montana **dry edible pea** production is forecast at 915,000 cwt, more than double last year's revised estimate. Planted acreage for 2004 is estimated at 68,000 acres, 35,000 acres more than last year. Harvested acreage is estimated at 59,000 acres, up 28,000 acres from last year. The yield is forecast at 1,550 pounds per acre, 100 pounds per acre more than 2003.

Austrian winter pea production in Montana is forecast at 80,000 cwt, up 24,000 cwt from last year. Harvested acreage, at 8,000 acres, is expected to be up 1,000 acres from last year. Planted acreage for 2004 is estimated at 12,000 acres, up 2,500 acres from last year. The average yield is forecast at 1,000 lbs per acre, up 200 lbs per acre from 2003.

Lentil production in Montana is forecast at 910,000 cwt for 2004, up from 273,000 cwt last year. Planted acreage at 78,000 acres, is up 48,000 acres from last year. Harvested acres, at 65,000, is up 39,000 acres from last year. Average yield is expected to reach 1,400 lbs per acre, up 350 lbs from last year.

Montana **sugar beets** production was forecast at 1.096 million tons, down 16 percent from last year. Forecasted yield, of 21.0 tons per acre, is down 4.4 tons per acre from 2003. Harvested acreage is up 700 acres from last year at 52,200 acres.

Fall potato production in Montana is forecast at 3.498 million cwt, up 5 percent from last year. Harvested acres are estimated at 10,600 acres, unchanged from last year. The yield is forecast at 330 cwt per acre, up 15 cwt per acre from the previous year.

U.S. dry edible pea production is forecast at 10.8 million cwt, more than double the 2003 estimate. Area for harvest, at 500,800 acres, is 52 percent above a year ago. Average yield is forecast at 2,163 pounds per acre, up 579 pounds from last season.

U.S. **Austrian winter peas** production for Idaho, Montana, and Oregon in 2004 is forecast at 272,000 cwt, up 56 percent from 2003. Area harvested is forecast at 21,500 acres, up 38 percent from last year. Average yield is expected to be 1,265 pounds per acre, up 150 pounds per acre from last season.

Lentil production for the U.S. is forecast at 4.08 million cwt, up 67 percent from last year. Area for harvest is forecast at 322,000 acres, up 36 percent from the previous year. Average yield is expected to be 1,268 pounds per acre, up 238 pounds per acre from 2003.

U.S. **sugar beet** production for 2004 is forecast at 29.8 million tons, 3 percent above the October forecast but 3 percent below last year's production. The yield is forecast at 22.4 tons per acre, up 0.7 ton from October but 0.3 ton below 2003. Growers in the 12 sugar beet-producing States expect to harvest 1.33 million acres, unchanged from last month but 2 percent below last year.

U.S. **fall potatoes** production of fall potatoes for 2004 is forecast at 408 million cwt, down 1 percent from last year for comparable States. South Dakota and Utah were dropped from the program starting in 2004. Area harvested, at 1.02 million acres, is virtually unchanged from the July estimate but 6 percent below last year. The average yield is
forecast at 398 cwt per acre, 22 cwt above last year. If realized, this will be a record high yield, 6 cwt above the previous record set in 2000.

Small Grains survey respondents who reported barley, oats, Durum wheat, or other spring wheat acreage not yet harvested in Minnesota, Montana, North Dakota, and Wyoming during the surveys conducted to prepare the Small Grains 2004 Summary were re-contacted to determine how many of these acres were actually harvested and record the actual production from those acres. Based on this updated information, several changes were made to the estimates published in the Small Grains 2004 Summary. Because unharvested production is a component of on-farm stocks, changes were made to the September 1 on-farm stocks levels comparable with the production adjustments.

Durum harvested area was reduced 5,000 acres in Montana and 80,000 acres in North Dakota. Yield per acre was increased 1.0 bushel in each of these two States. No changes were made in Minnesota. Other spring wheat harvested area declined 20,000 acres in Minnesota and 50,000 acres each in Montana and North Dakota. Acreage was unchanged in Wyoming, and no changes were made to yield in any of the States. All wheat production in the United States is 2.16 billion bushels, 8 percent below last year and only fractionally below the previous estimate.

In Minnesota, oat harvested area was reduced 10,000 acres, while in North Dakota harvested area was reduced 5,000 acres. Yield per acre increased 2.0 bushels in North Dakota and remained unchanged in Minnesota. Acreage and yield estimates were unchanged in Montana and Wyoming. As a result of the changes in Minnesota and North Dakota, oat production in the United States is 116 million bushels, down 20 percent from last year and down less than 1 percent from the previous estimate.

Barley area harvested in North Dakota was revised to 1.48 million acres, down 10,000 acres from the September estimate. Yield is estimated at 68.0 bushels per acre in Minnesota, a decrease of 2.0 bushels. As a result of these changes, production is down 230,000 bushels in Minnesota and 620,000 bushels in North Dakota. Acreage, yield, and production are unchanged in Montana and Wyoming. Total U.S. production is estimated at 279 million bushels, slightly below the previous estimate but slightly higher than last year's production. See table on next page.

November 1, 2004 Crop Production Forecast, Montana and U.S. Numbers Updated

Crop	Unit	Acres Planted		Acres Harvested		Yield		Production

1/ Preliminary. 2/ Planted for all purposes. 3/ Forecast available January 12, 2005 -- Not published.

Montana Crop Year Summary 2004

November 2003 was abnormally cold and the state received snowfall in most areas. By the end of November, topsoil moisture conditions were rated 27% very short, 46% short, 26% adequate, and 1% surplus. Subsoil moisture was rated 51% very short, 38% short, 11% adequate, and 0% surplus.

Seeding of the 2004 winter wheat crop was complete by the end of November and 89 percent had emerged. An estimated 1.90 million acres were seeded, unchanged from 2003. Drier-than-last-year conditions persisted during the planting season. As a result, crop condition was rated 4% very poor, 19% poor, 38% fair, 27% good, and 2% excellent. These ratings were not as good as the 2003 crop, which was rated 2% very poor, 3% poor, 53% fair, 59% good, and 3% excellent.

December was similar to November, bringing normally cold temperatures and snowfall to the vast majority of the state. By the end of the month, the winter wheat crop was rated 8% very poor, 15% poor, 43% fair, 33% good, and 1% excellent. This was a decline from the previous month's rating.

January also brought sub-zero temperatures and snowfall to most of the state. The winter wheat crop condition rating at 5% very poor, 13% poor, 46% fair, 33% good, and 3% excellent, was better than the previous month, but behind the previous year's ratings. Wind damage to the winter wheat crop was rated 29% no damage, 14% light, 19% moderate, and 12% heavy, which was an improvement from 2003's ratings. Freeze and drought damage to the crop was rated 31% none, 37% light, 28% moderate, and 4% heavy. Snow cover for winter wheat was rated 6% very poor, 9% poor, 26% fair, 41% good, and 18% excellent, better than last year.

During the month of February, temperatures were normal, but precipitation was below normal with a few exceptions. March had warmer temperatures and below normal precipitation. By month's end, topsoil moisture condition was rated 22% very short, 28% short, 48% adequate and 2% surplus. Subsoil moisture was rated 31% very short, 38% short, 30% adequate, and 1% surplus. In addition, wind damage to the winter wheat crop was rated 48% none, 29% light, 18% moderate, and 5% heavy. Freeze and drought damage to the crop was rated 53% none, 29% light, 19% moderate, and 4% heavy. Winter wheat was beginning to break dormancy, and was rated 23% still dormant, 64% greening, and 13% green and growing. Overall, the winter wheat crop condition was rated 8% very poor, 12% poor, 33% fair, 40% good, and 7% excellent.

Small grain seeding began in April. By the end of April fieldwork was 82% well underway, ahead of the previous year. By the end of the month, barley was 85% seeded, with 45% of the crop emerged. The corn crop was 26% planted, with 0% emerged. Dry beans were 7% planted. Oats were 63% seeded with 17% emerged. Continued on back page.

September Ag Prices Received

September full month crop prices were mixed compared with August 2004. Montana's winter wheat average price was $3.22 per bushel, down $0.08 from the previous month; spring wheat moved up $0.21 to $3.64 per bushel; and durum wheat prices gained $0.16 to reach $4.08 per bushel. Feed barley prices increased $0.06 from the previous month to $1.61; malt barley prices were down $0.13 to $3.27 per bushel; but oats increased $0.20 to $1.76 per bushel.

The mid-October price for alfalfa hay was down $1.00 from September to $78.00 per ton and all other hay also dropped $1.00 to $70.00 per ton. The mid-October grain prices were mostly lower with winter wheat price averaging $3.33 per bushel; spring wheat was $3.62; durum wheat averaged $3.97; feed barley was $1.54; and malt barley averaged $3.20.

Livestock prices for the full month of September were mostly lower compared with August 2004. Steer and heifer prices increased $1.00 to $109.00 per cwt., but cows decreased $3.80 to $55.00. The average price for calves fell $11.00 to $128.00 per cwt. Sheep prices decreased $1.50 to $41.70 per cwt., while lamb prices rose $1.00 to $110.00 per cwt. Full month September milk prices decreased $2.00 per cwt. from August to $15.20. Steer and heifer prices for mid-October averaged $115.00 per cwt.; cows averaged $52.40 per cwt.; calves averaged $127.00 per cwt.; and mid-month October milk prices averaged $15.20 per cwt., unchanged from September.

Nationally, prices for September and changes from August were as follows: winter wheat was $3.26, up $0.07, spring wheat was $3.48, up $0.10; durum wheat was $3.90, up $0.05; the all barley price was $2.43, down $0.36, and steer and heifer prices were $89.30, down $3.20 per cwt.

The U.S. mid-October winter wheat price was $3.29 per bushel, spring wheat was $3.47 per bushel, durum wheat was $3.74 per bushel, all wheat was $3.38 per bushel, malt barley was $2.88 per bushel, feed barley was $1.57 per bushel, and all barley was $2.36. Steer and heifer prices were $91.10 per cwt, cow prices were $50.40, calves were $127.00 per cwt., all hog prices were $51.40 per cwt, and all egg prices were $0.50 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in October, at 111, based on 1990-92=100, is 4 points (3.5 percent) below the September Index. Declines occurred in both the Crop Price Index and the Livestock Price Index. The Crop Index declined 6 points (5.4 percent) from September while the Livestock Index decreased 1 point (0.8 percent). Producers received higher commodity prices for lettuce, tomatoes, oranges, grapes, and cucumbers. Lower prices were received for corn, soybeans, hogs, broilers, and potatoes. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of soybeans, corn, and cotton offset decreased marketings of dairy, grapes, and sweet corn. The preliminary All Farm Products Index is down 2 points (1.8 percent) from October 2003.

United States Index Summary

INDEX (1990-92=100)	September 2003	October 2003	September 2004	October 2004

Crop year Summary (coantuned)

Potato planting had not started. The spring wheat crop was 72% seeded and 29% emerged. Sugar beets were 91% planted with 17% emerged. The winter wheat crop condition was rated 18% very poor, 23% poor, 43% fair, 17% good, and 2% excellent.

May brought warmer temperatures and much needed rain and snowfall throughout the state. Precipitation and lower temperatures prevailed the rest of the month, slowing spring planting and crop progress. By the end of June, 55% of the topsoil and 32% of the subsoil in the state was rated adequate for moisture. In addition, crop progress was ahead of or close to normal levels.

Hot, dry weather prevailed across Montana in July. Winter wheat was 11% harvested at the end of the month, significantly behind 2003 and the five-year average. During August, most of the state received significant rainfall the first part of the month. Weather conditions turned mild and dry at mid-month, which helped crop development. Rain fell across the state for the rest of the month, along with cooler temperatures, slowing the harvest of spring grains. At month's end, the spring wheat, durum wheat, barley and oats harvest were well behind last year. Winter wheat was 95% harvested. The weather turned warm and dry again the first part of September, speeding up spring grain harvest, except for durum wheat which was only 68% harvested at the end of the month.

Montana's 2004 winter wheat production was 66.8 million bushels, down 1 percent from last year's crop. Producers seeded 1.90 million acres, unchanged from 2003. Producers harvested 1.63 million acres, down 190,000 acres from last year. The 2004 average yield was 41.0 bushels per acre, 4 bushels higher than 2003.

Spring wheat production in Montana was 88.4 million bushels, up 46 percent from 2003 due to more acres seeded, harvested and higher yields. The final seeded acreage was 3.0 million acres, up 100,000 acres from last year. Producers harvested 2.85 million acres, up 100,000 acres from 2003. Yields averaged 31.0 bushels per acre, up 9 bushels from last year.

Montana durum wheat growers seeded 570,000 acres, down 11 percent from last year. Producers harvested 545,000 acres, down 85,000 acres from 2003. The average yield was 33.0 bushels per acre, up 10 bushels from last year. Total production was estimated at 17.99 million bushels, up 24 percent from last year due to higher yields.

Montana growers seeded 1.0 million acres to barley, 150,000 acres fewer than the previous year. This is the lowest acreage number since 2001, when 1.10 million acres were seeded. Producers harvested 830,000 acres, 20,000 fewer than were harvested for grain in 2003. The final yield for 2004 averaged 59.0 bushels per acre, up 19 bushels from last year. Production was estimated at 48.97 million bushels, up 44 percent from last year.

Oat production was estimated at 2.4 million bushels, up 21 percent from last year. Planted acreage was estimated at 105,000 acres, down 15,000 acres from 2003. Harvested acreage was set at 40,000 acres, down 5,000 from last year. Yields averaged 60.0 bushels per acre, 16 bushels above 2003.

Alfalfa hay yield in Montana was estimated at 2.30 tons per acre. Total production of alfalfa hay is estimated at 3.68 million tons, up 10 percent from the previous year. Harvested acreage, at 1.60 million for alfalfa, remained unchanged from 2003. Other hay yield is estimated at 1.70 tons per acre, up 0.20 ton per acre from last year. Other hay production is expected to total 1.62 million tons, up 27 percent from 2003. Other hay harvested acreage is 950,000 acres, up 100,000 acres from 2003. All hay production is estimated at 5.295 million tons, up 14 percent from last year.

October 1, 2004 Montana All Hay and Sugar Beet Production Forecast

Total production of **alfalfa hay** in Montana is estimated to be 3.680 million tons, up 10 percent from the previous year. **Alfalfa hay** yield rose 0.30 ton to 2.30 tons per acre from the August forecast. Harvested acreage, at 1.60 million acres, remained unchanged from both August and 2003. **Other hay** yield increased 0.10 ton from August's forecast, and is estimated at 1.70 tons per acre, up 0.20 ton per acre from last year. Other hay production is expected to be 1.615 million tons, up 27 percent from 2003. If realized, the other hay yield of 1.70 tons per acre would match the previous record high yield which occurred in 1993 and 1995. Other hay harvested acreage is unchanged from August at 950,000 acres, but is up 100,000 acres from 2003. **All hay** production is estimated at 5.295 million tons, up 14 percent from last year. Hay yields are higher this year due to timely rainfall during the growing season and some producers being able to get three cuttings of hay this year.

Montana's **sugar beet** production is forecast at 1.096 million tons for 2004, the same as September's forecast, but down 16 percent from 2003. Sugar beet yield is expected to drop due to producers replanting beet acreage lost to frost damage and cooler temperatures during the growing season, which slowed crop development. Forecasted yield, at 21.0 tons per acre, is unchanged from last month, but down 4.4 tons per acre from last year. Harvested acreage, at 52,200 acres, is unchanged from September, but up 700 acres from last year. Harvest progress is slightly behind last year with 16 percent of the beets pulled by the week ending October 3, compared with the 5-year average of 20 percent.

U.S. **alfalfa and alfalfa mixtures** production is forecast at 77.4 million tons, virtually unchanged from the August forecast, but up 1 percent from last year. Yields are expected to average 3.48 tons per acre, unchanged from August but 0.24 ton above last year. Harvested area is 22.2 million acres, unchanged from the previous forecast, but down 6 percent from 2003. U.S. **other hay** production is forecast at 88.5 million tons, up 5 percent from August and up 10 percent from 2003. Based on October 1 conditions, yields are expected to average 2.25 tons, up 0.10 ton from August and 0.22 ton above last year. If realized, both yield and production would be the highest on record. Harvested area is 39.4 million acres, unchanged from the August forecast, but down 1 percent from the previous year.

Sugar beet production for 2004 in the United States is forecast at 28.8 million tons, 1 percent above the September forecast, but 6 percent below last year's production. The yield is forecast at 21.7 tons per acre, up 0.2 ton from September, but 1.0 ton below 2003. Growers in the 12 sugar beet producing States expect to harvest 1.33 million acres, virtually unchanged from last month, but 2 percent below last year. As of October 3, harvest progress in the 4 major producing States was behind the 5-year average.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.5 million head on October 1, 2004. The inventory was 3 percent above October 1, 2003 and up slightly from October 1, 2002. The inventory included 6.46 million steers and steer calves, up 4 percent from the previous year. This group accounted for 62 percent of the total inventory. Heifers and heifer calves accounted for 3.96 million head, up 1 percent from 2003.

Placements in feedlots during September totaled 2.37 million, 4 percent below 2003 but 8 percent above 2002. Net placements were 2.31 million head. During September, placements of cattle and calves weighing less than 600 pounds were 623,000, 600-699 pounds were 474,000, 700-799 pounds were 557,000, and 800 pounds and greater were 720,000. Marketings of fed cattle during September totaled 1.80 million, 11 percent below 2003 and 3 percent below 2002. This is the second lowest fed cattle marketings for the month of September since the series began in 1996. Other disappearance totaled 61,000 during September, 3 percent below 2003 but 15 percent above 2002.

Montana Agricultural Statistics 2004 Book Available Soon

The annual report contains state and county crop and livestock estimates, farm income, prices, farm numbers, Montana's rank among states, and other statistical data.

The Montana Agricultural Statistics 2004 book will be available in December or early January in printed form or on our website at www.nass.usda.gov/mt/. The price for the printed book is $10.00. Those who supply survey information are not charged.

1/ Preliminary. 2/ Planted for all purposes. 3/ Forecast available November 12, 2004. 4/ Forecast available January 12, 2005 -- Not published.

September Milk Production

Milk production in the 20 major States during September totaled 11.9 billion pounds, up 1.3 percent from September 2003. August revised production, at 12.4 billion pounds, was up 1.4 percent from August 2003. The August revision represented a decrease of 11 million pounds or 0.1 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,529 pounds for September, 18 pounds above September 2003.

The number of milk cows on farms in the 20 major States was 7.77 million head, 6,000 head less than September 2003, but 4,000 head more than August 2004.

July-September Milk Production Up 1.1 Percent

Milk production in the U.S. during the July-September quarter totaled 42.2 billion pounds, up 1.1 percent from the July-September quarter last year. The average number of milk cows in the U.S. during the quarter was 9.03 million head, 40,000 head less than the same period last year.

September Egg Production

U.S. egg production totaled 7.32 billion during September 2004, up 3 percent from last year. Production included 6.26 billion table eggs, and 1.06 billion hatching eggs, of which 996 million were broiler-type and 60 million were egg-type. The total number of layers during September 2004 averaged 343 million, up 3 percent from a year earlier. September egg production per 100 layers was 2,133 eggs, up slightly from September 2003.

All layers in the U.S. on October 1, 2004, totaled 344 million, up 3 percent from a year ago. The 344 million layers consisted of 285 million layers producing table or market type eggs, 55.8 million layers producing broiler-type hatching eggs, and 2.61 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 2004, averaged 71.3 eggs per 100 layers, up slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 6.84 billion eggs during September 2004, up 3 percent from a year ago. The average number of layers during September, at 321 million, was up 3 percent from a year ago.

Wheat Utilization for 1999-2003 Marketing Years

The June 2002 - May 2003 marketing year total wheat supply was 183.9 million bushels, 9 percent more than a year earlier, and 24 percent above the 2000-01 marketing year. Total supply is calculated by adding 2003 all wheat production to June 2003 all wheat stocks. Total disposition of 143.5 million bushels was 14 percent more than the quantity marketed during the 2001-2002 marketing year. Ending stocks of 40.4 million bushels were 3 percent less than last year. Wheat utilization reports are assembled from Grain Movement Reports and Grain Market News data by the Montana Agriculture Statistics Service. Funding was provided by the Montana Wheat and Barley Committee

Montana shipped 136.1 million bushels out of state during the 2002 - 2003 marketing year, 16 percent more than moved during the same period last year. Shipments to the Pacific Northwest totaled 95.7 million bushels, 16 percent more than the 2001 - 2002 season, and accounted for 70 percent of the wheat shipped out of state. Pacific Northwest export facilities accounted for 69.8 million bushels, while Pacific Northwest processing terminals accounted for 22.8 million bushels.

Inspected exports of hard red winter, hard red spring, hard white, and durum wheat from Pacific ports were 208.3 million bushels, up 4 percent from the previous year. Montana's recorded share of those exports was 35 percent, 2 points above the 2001-2002 marketing year.

September Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during September 2004, down 19 percent from last year, and down 18 percent from the previous month's production. Cattle slaughter totaled 1,400 head, down 22 percent from a year ago. The average live weight increased 3 pounds to 1,143 from the previous year.

During September there were 1,400 hogs slaughtered, 300 fewer than a year ago. The average live weight, at 237 pounds, rose 5 pounds from last year. September sheep slaughter in the state totaled 500 head, 100 head more than September 2003. The average live weight decreased 6 pounds to 120 pounds.

Commercial red meat production for the United States totaled 3.91 billion pounds in September, down 3 percent from the 4.01 billion pounds produced in September 2003. Beef production, at 2.10 billion pounds, was 9 percent below the previous year. Cattle slaughter totaled 2.74 million head, down 13 percent from September 2003. The average live weight was up 38 pounds from the previous year, at 1,266 pounds. Veal production totaled 13.0 million pounds, 15 percent below September a year ago. Calf slaughter totaled 67,300 head, down 18 percent from September 2003. The average live weight was 13 pounds above last year, at 321 pounds.

U.S. pork production totaled 1.77 billion pounds, up 6 percent from the previous year. Hog kill totaled 9.00 million head, 5 percent above September 2003. The average live weight was 2 pounds above the previous year, at 265 pounds. Lamb and mutton production, at 16.3 million pounds, was down 4 percent from September 2003. Sheep slaughter totaled 243,600 head, 5 percent below last year. The average live weight was 133 pounds, up 2 pounds from September a year ago.

January to September 2004 commercial red meat production for the United States was 33.8 billion pounds, down 3 percent from 2003. Accumulated beef production was down 9 percent from last year, veal was down 11 percent, pork was up 4 percent from last year, and lamb and mutton production was down 2 percent.

Hogs & Pigs

Small Grains Summary

All wheat production, at 174.3 million bushels, is up 22 percent from the 2003 crop of 142.3 million bushels. Montana's 2004 **winter wheat** production was 66.8 million bushels, one percent less than last year's revised production of 67.3 million bushels. Producers seeded 1.90 million acres, unchanged from the revised 2003 acreage. Producers harvested 1.63 million acres, down 190,000 acres from last years revised acreage of 1.82 million acres. The 2004 average yield, at 41.0 bushels per acre, is 4 bushels higher than 2003 and is the highest yield since 1993 when producers averaged a record 42.0 bushels per acre.

Spring wheat production in Montana was 89.9 million bushels, up 49 percent from 2003 due to higher yields and more acres seeded and harvested in 2004. The final seeded acreage was 3.0 million acres, up 100,000 acres from last year's revised acreage of 2.9 million acres. Producers harvested 2.9 million acres, up 150,000 acres from the 2003 revised acreage of 2.75 million acres. Yields averaged 31.0 bushels per acre, up 2 bushels from the August forecast, and up 9 bushels from 2003. The average yield was the highest since 1995 when it was 35 bushels per acre.

Montana **durum wheat** growers seeded 570,000 acres, down 11 percent from last year. Producers harvested 550,000 acres, down 13 percent from 2003. The average yield was 32.0 bushels per acre, up 9 bushels per acre from last year, and up 3 bushels from the previous forecast. Yields for 2004 were one bushel below the historic high yield of 33 bushels recorded in 1991 and 1992. Total production for 2004 was estimated at 17.6 million bushels, up 21 percent from last year, setting a near all-time production record for Montana's durum producers. For the week ending September 26th, durum wheat harvesting was still not completed with only 60 percent of the acreage harvested which compares with 100 percent last year.

Montana **barley** producers seeded 1.0 million acres of barley in 2004, 150,000 acres fewer than the 2003 revised acreage of 1.15 million acres. This is the lowest acreage seeded since 1953, when 0.6 million acres were seeded. Producers harvested 830,000 acres, 20,000 fewer than the 2003 revised harvested acreage of 850,000 acres. The final yield for 2004 averaged 59.0 bushels per acre, up 19 bushels from last year, and up 8 bushels from the August forecast. The average yield set a new historic high, bettering the previous record of 58.0 bushels per acre in 1993. Production was estimated to be 49.0 million bushels, up 44 percent from last year due to higher yields.

Oat production in Montana was estimated at 2.4 million bushels, up 21 percent from last year. Planted acreage was estimated at 105,000 acres, down 15,000 acres from 2003. Harvested acreage was set at 40,000 acres, down 5,000 acres from last year. Yields averaged 60.0 bushels per acre, 16 bushels above 2003 and 9 bushels higher than the previous estimate, which is the highest oat yield since 1993.

U.S. **winter wheat** production is estimated at 1.50 billion bushels. This is up nearly 1 percent from the August forecast but 13 percent below last year's crop. The U.S. yield is 43.5 bushels per acre, up 0.7 bushel from August but 3.2 bushels below last year's final yield. Acreage for grain is estimated at 34.5 million acres, 6 percent below 2003. Planted area is 43.4 million acres, down 4 percent from the previous year.

Other spring wheat production in the United States is estimated at 574 million bushels, up 5 percent from the last forecast and up 8 percent from 2003. Harvested area is 13.3 million acres, 1 percent lower than last year. The U.S. yield is a record high 43.1 bushels per acre, 3.6 bushels better than last year and 1.3 bushels higher than the previous record set in 1992. **Durum wheat** production for 2004 totaled 90.5 million bushels, up 2 percent from August 1, but 6 percent less than last year. Grain area harvested totaled 2.45 million acres, 15 percent below a year ago. The U.S. yield is estimated at 37.0 bushels per acre, up 1.7 bushels from the last forecast and 3.3 bushels per acre above 2003.

U.S. **barley** production is estimated at 280 million bushels, up 3 percent from the August 1 forecast and up 1 percent from last year. Average yield per acre, at a record high 69.5 bushels, is up 3.8 bushels from the last forecast and 10.6 bushels above 2003. The area harvested for grain is estimated at 4.03 million acres, down 3 percent from August and 15 percent below a year ago. Nationally, harvested area is the smallest since 1894 but yield is a new record high, 7.0 bushels above the previous record of 62.5 bushels set in 1992.

U.S. **oat** production is estimated at 117 million bushels, 9 percent below the August 1 forecast and 19 percent below last year's 144 million bushels. The estimated yield is 64.5 bushels per acre, down 1.5 bushels from August and down 0.5 bushel from a year ago. Harvested area is 1.81 million acres, 7 percent below the August 1 forecast and 19 percent below last year.

Due to the late harvest of small grains, the National Agricultural Statistics Service will recontact survey participants in Montana, North Dakota, Wyoming, and Minnesota that had not finished harvesting at the time of their initial integrview to collect information on final harvested acreage and yield. Any changes in acreage and production as a result of this reinterview will be published in the November Crop Production Report on November 12, 2004.

September 1, 2004 Grain Stocks

Stocks of **all wheat** in Montana on September 1, 2004 were 186.8 million bushels, up 23 percent from a year ago due to a 22 percent increase in all wheat production. All wheat stocks stored on the farm amounted to 167.0 million bushels, up 33 percent from a year ago. All wheat stored off-farm amounted to 19.8 million bushels, down 25 percent from a year ago. All wheat disappearance for the June - August 2004 quarter was down 11 percent from the same quarter last year to 27.9 million bushels, compared with 31.5 million a year ago.

Barley stocks in all positions on September 1, 2004 were 49.3 million bushels, up 40 percent from a year ago. Barley stored on-farms was 42.0 million bushels, up 50 percent from last year. Off-farm storage of barley was up 1 percent from a year ago to 7.3 million bushels. **Oats** stocks in all positions were 2.6 million bushels, up 13 percent from last year. On-farm stocks of oats were 2.5 million bushels, up 14 percent from a year ago. Oats stored off-farm were down 17 percent from last year to 50,000 bushels. (Continued on back page.)

August Ag Prices Received

August full month crop prices were mostly lower compared with July 2004. Montana's winter wheat average price was $3.30 per bushel, down $0.36 from the previous month but up $0.03 from the previous year; spring wheat dropped $0.42 to $3.43 per bushel and was $0.05 lower than August 2003; and durum wheat prices decreased $0.30 to $3.92 per bushel and were $0.09 lower than the previous year. Feed barley prices decreased $0.24 from the previous month and $0.32 from the previous year to average $1.67 per bushel. Malt barley prices were $3.40 per bushel, $0.02 lower than August 2003. The August 2004 oat price was $1.56 down $0.17 from the previous year.

The mid-September price for alfalfa hay was up $2.00 from August 2004 to $79.00 per ton, but all other hay decreased $3.00 from August to $71.00 per ton. The mid-September grain prices were mixed with winter wheat price averaging $3.32 per bushel; spring wheat was $3.93; durum wheat was $4.04; feed barley was $1.55; and malt barley averaged $3.35.

Livestock prices for the full month of August were mixed compared to July with cows and steer and heifer prices falling, but calf prices increasing. For August, steer and heifer prices tumbled $6.00 from July to $108.00 per cwt. but were $21.40 per cwt higher than August 2003. Cows held nearly steady from July, falling $0.30 to $58.80 per cwt., but were $11.30 higher than a year ago. Calf prices rocketed to $139.00 per cwt., an increase of $11.00 from July and $33.00 above a year ago, reaching an all-time record high price.

Sheep and lamb producers saw mixed prices for August. Sheep prices jumped $6.00 from July and $17.20 from August 2003 to $43.20 per cwt, but lamb prices fell $3.00 from July to $109.00 per cwt. The all milk price for August was $17.20 per cwt., falling $2.20 from July, but $5.50 higher than a year ago. Steer and heifer prices for mid-month September averaged $110.00 per cwt.; cows averaged $54.00 per cwt.; and calves averaged $133.00 per cwt. The mid-month September all milk price averaged $15.90 per cwt.

Nationally, prices for August and changes from July were as follows: winter wheat was $3.19, down $0.13 from July and down $0.09 from August 2003, spring wheat was $3.38, down $0.17 from July and $0.04 from a year ago; durum wheat was $3.85, down $0.26 from July but $0.07 above August 2003; the all barley price was $2.79, up $0.25 from July but down $0.12 from August 2003, and steer and heifer prices were $92.50, up $0.70 per cwt. from July and $9.60 above August 2003.

The U.S. mid-September winter wheat price was $3.36 per bushel, spring wheat was $3.64 per bushel, durum wheat was $3.97 per bushel, all wheat was $3.50 per bushel, malt barley was $2.98 per bushel, feed barley was $1.72 per bushel, and all barley was $2.56. Steer and heifer prices were $89.80 per cwt, cow prices were $52.80, calves were $129.00 per cwt., all hog prices were $53.70 per cwt, and all egg prices were $0.544 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in September, at 114, based on 1990-92=100, is 6 points (5.0 percent) below the August Index. Declines occurred in both the Crop Price Index and the Livestock Price Index. The Crop Index, declined 7 points (5.9 percent) from August while the Livestock Index decreased 5 points (4.1 percent).

Grain Stocks (continued)

In th United States, **all wheat** stored in all positions on September 1, 2004 totaled 1.94 billion bushels, down 5 percent from a year ago. On-farm stocks are estimated at 796 million bushels, up 16 percent from last year. Off-farm stocks, at 1.15 billion bushels, are down 15 percent from a year ago.

Durum wheat stocks in all positions in the U.S. on September 1, 2004 totaled 91.3 million bushels, up 5 percent from a year ago. On-farm stocks, at 66.6 million bushels, are up 15 percent from September 1, 2003. Off-farm stocks totaled 24.7 million bushels, down 16 percent from a year ago.

U.S. **barley** stocks in all positions on September 1, 2004 totaled 292 million bushels, up 21 percent from September 1, 2003. On-farm stocks are estimated at 177 million bushels, 24 percent above a year ago. Off-farm stocks, at 115 million bushels, are 16 percent above September 2003.

Oats stored in the United States in all positions on September 1, 2004 totaled 116.3 million bushels, 12 percent below September 1, 2003. Of the total stocks on hand, 74.8 million bushels are stored on farms, down 9 percent from a year ago. Off-farm stocks totaled 41.5 million bushels, down 16 percent from a year earlier.

U.S. Hog Inventory Up 1 Percent

U.S. inventory of all hogs and pigs on September 1, 2004 was 61.4 million head. This was 1 percent above both September 1, 2003, and June 1, 2004. Breeding inventory, at 5.98 million head, was up 1 percent from September 1, 2003, and also up 1 percent from last quarter. Market hog inventory, at 55.4 million head, was 1 percent above last year and 2 percent above last quarter.

The June-August 2004 U.S. pig crop, at 26.0 million head, was up 1 percent from both 2003 and 2002. Sows farrowing during this period totaled 2.89 million head, 1 percent below last year. The sows farrowed during this quarter represented 49 percent of the breeding herd. The average pigs saved per litter was 9.00 for the June-August 2004 period, compared to 8.90 last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 9.10 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.86 million sows farrow during the September-November 2004 quarter, 1 percent above the actual farrows during the same period in both 2003 and 2002. Intended farrowings for December 2004-February 2005, at 2.85 million sows, are up 1 percent from the same period in 2004, and up 3 percent from the same period in 2003.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 39 percent of the total U.S. hog inventory, up from 35 percent last year.

Red Meat Production

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during August 2004, down 10 percent from last year, but 17 percent higher than July 2004. Cattle slaughter totaled 1,700 head, down from 1,900 head one year ago. The average live weight rose 7 pounds to 1,126 pounds.

During August there were 1,900 hogs slaughtered, compared with 2,100 one year ago. The average live weight, at 225 pounds, was up 4 pounds from last year. August sheep slaughter in the state totaled 500 head, unchanged from August 2003. The average live weight increased one pound to 121 pounds.

Commercial red meat production for the United States totaled 3.88 billion pounds in August, down 1 percent from the 3.92 billion pounds produced in August 2003.

U.S. beef production, at 2.15 billion pounds, was 8 percent below the previous year. Cattle slaughter totaled 2.82 million head, down 10 percent from August 2003. The average live weight was up 27 pounds from the previous year, at 1,252 pounds. Veal production totaled 13.9 million pounds, 2 percent below August a year ago. Calf slaughter totaled 72,800 head, down 9 percent from August 2003. The average live weight was 26 pounds above last year, at 320 pounds.

Pork production totaled 1.70 billion pounds, up 9 percent from the previous year, and was a record monthly high. Hog kill totaled 8.72 million head, 8 percent above August 2003. The average live weight was 2 pounds above the previous year, at 262 pounds. Lamb and mutton production, at 15.1 million pounds, was down 4 percent from August 2003. Sheep slaughter totaled 232,600 head, 4 percent below last year. The average live weight was 129 pounds, unchanged from August a year ago.

January to August 2004 commercial red meat production was 29.9 billion pounds, down 4 percent from 2003. Accumulated beef production was down 9 percent from last year, veal was down 10 percent, pork was up 4 percent from last year, and lamb and mutton production was down 2 percent.

U.S. Cattle on Feed

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.97 million head on September 1, 2004. The inventory was 1 percent above September 1, 2003 but 2 percent below September 1, 2002.

Placements in feedlots during August totaled 2.10 million, 12 percent below 2003 and 6 percent below 2002. This is the second lowest placements for the month of August since the series began in 1996. Net placements were 2.04 million. During August, placements of cattle and calves weighing less than 600 pounds were 506,000, 600-699 pounds were 413,000, 700-799 pounds were 565,000, and 800 pounds and greater were 615,000.

Marketings of fed cattle during August totaled 1.92 million, 7 percent below 2003 and 10 percent below 2002. This is the lowest fed cattle marketings for the month of August since the series began in 1996. Other disappearance totaled 56,000 during August, 7 percent below 2003 but 30 percent above 2002.

Barley Utilized for Malt

Maltsters and brewers purchased 14.8 million bushels of Montana's 2003 barley crop to make malt, up 59 percent from 2002, according to a recent survey conducted by the Montana Agricultural Statistics Service. The survey was requested and funded by the Montana Wheat and Barley Committee. The average protein of the 2003 malting crop was 12.2 percent, which is 0.8 point lower than the average protein of the 2002 crop.

Montana growers seeded 1.15 million acres of barley in 2003, down 30,000 acres from 2002. Of the total, over 719,000 acres were seeded to malting type varieties. If the yield of malting varieties equaled the state average yield per planted acre for all barley, then approximately 21.3 million bushels of malting type would have been produced. Because only 14.8 million bushels were used for malt, the remaining 6.5 million bushels did not make malting grade or exceeded demand for malting barley. The barley utilized for malt represented approximately 47 percent of the 2003 total barley crop, compared with 24 and 26 percent in 2002 and 2001, respectively.

Harrington was the most frequently purchased variety by maltsters and brewers and represented 41 percent of the total purchases. Anheuser-Busch varieties, at 37 percent of total, were the second most commonly purchased. Sixty-eight percent of all malt barley purchased was grown in north central Montana, compared to 58 percent last year. South central Montana growers produced 19 percent of the total.
(See table on back page)

Montana 2003 Potato Production Up 4 Percent, U.S. Down 1 Percent

Montana's 2003 potato production totaled 3,339,000 cwt., 4 percent above last year and 1 percent above 2001's production. Producers harvested 10,600 acres, 200 more than a year ago and 300 acres more than two years ago. Potato yields averaged 315 cwt. per acre compared with 310 cwt. in 2002 and 320 cwt. in 2001.

Value of production from the 2003 crop was $25.4 million, down 5 percent from 2002. The average price was $7.60 per cwt., a decrease of $0.65 from the previous year's crop. Sales of Montana's 2003 potato crop totaled $22.1 million, which is 9 percent below last year's crop. Producers sold 2,909,000 cwt. from the 2003 crop compared with 2,937,000 cwt. a year ago.

U.S. total 2003 potato production is estimated at 458 million cwt, less than 1 percent below the estimate made in the Annual Crop Summary in January and down fractionally from the 2002 crop. Harvested area, at 1.25 million acres, decreased 1 percent from a year ago. The average yield of 367 cwt per acre is up 5 cwt from 2002 and 9 cwt above the average yield from the 2001 crop. By season, winter production decreased 4 percent, spring rose 9 percent, summer went up 5 percent, and fall fell 1 percent from the previous year.

Winter and spring seasonal estimates for the U.S. are carried forward from earlier revisions. Summer potato production is revised to 18.8 million cwt for 2003, up 5 percent from 2002. Harvested area, at 58,700 acres, is down less than 1 percent from the previous year. The average yield of 320 cwt per acre is 16 cwt above the previous year.

U.S. fall potatoes are finalized at 411 million cwt for 2003, down 1 percent from the 2002 crop. Area harvested in 2003 is estimated at 1.09 million acres, down 1 percent from a year earlier. The average yield, at 376 cwt per acre, is up 2 cwt from a year earlier. Final production of fall potatoes is virtually unchanged from the Annual Crop Summary in January.

Value of U.S. all potato sold in 2003 is estimated at $2.46 billion, down 13 percent from the previous year. The average price, at $5.89 per cwt, went down $0.78 from a year earlier. Sales from the 2003 potato crop totaled 417 million cwt, down 1 percent from 2002. Sales accounted for 91 percent of 2003 production. Non sales accounted for 40.8 million cwt, 12 percent above the previous year. Over the past five years, 91 percent of the potatoes grown have been sold. The other 9 percent were either lost (shrinkage and loss) or used on farms where grown (seed, home use, and livestock feed).

U.S. processors used 257 million cwt of raw potatoes from the 2003 crop, down 2 percent from a year earlier. Table stock sales totaled 135 million cwt, 3 percent above the previous year. Seed sales of 22.4 million cwt are down 7 percent. Sales for livestock feed, at 2.01 million cwt, are down 34 percent from a year earlier.

Potatoes used for chips and shoestrings in the U.S. totaled 52.8 million cwt in 2003, up 2 percent from the previous year. Frozen french fries and other frozen products utilized 150 million cwt of raw potatoes, down 2 percent. Potatoes used for dehydrating totaled 48.4 million cwt, a decrease of 6 percent. Canning use, at 4.81 million cwt, fell 1 percent. Starch, flour, and other products were made from 879,000 cwt of potatoes, 16 percent below the previous year.

U.S. shrinkage and loss is estimated at 35.3 million cwt for 2003, up 14 percent from 2002. Potatoes used for livestock feed on farms where grown and home use totaled 1.54 million cwt, 4 percent above the previous season. Growers kept 4.00 million cwt for seed on their own farms, down 3 percent from a year earlier.

August Milk Production Up 1.5 Percent

Milk production in the 20 major States during August totaled 12.4 billion pounds, up 1.5 percent from August 2003. July revised production, at 12.5 billion pounds, was up 1.0 percent from July 2003. The July revision represented an increase of 36 million pounds or 0.3 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,595 pounds for August, 24 pounds above August 2003. The number of milk cows on farms in the 20 major States was 7.77 million head, 5,000 head less than August 2003, but 7,000 head more than July 2004.

August Egg Production Up 2 Percent

U.S. egg production totaled 7.52 billion during August 2004, up 2 percent from last year. Production included 6.43 billion table eggs, and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 60.0 million were egg-type. The total number of layers during August 2004 averaged 342 million, up 2 percent from a year earlier. August egg production per 100 layers was 2,197 eggs, down slightly from August 2003.

All layers in the U.S. on September 1, 2004, totaled 342 million, up 2 percent from a year ago. The 342 million layers consisted of 284 million layers producing table or market type eggs, 55.8 million layers producing broiler-type hatching eggs, and 2.64 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 2004, averaged 70.8 eggs per 100 layers, up slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 7.03 billion eggs during August 2004, up 2 percent from a year ago. The average number of layers during August, at 320 million, was up 2 percent from a year ago.

Wheat Supply & Demand - ERS
Grain Movement
Milk Cow & Sheep County Estimates
Ag Prices Received

U.S. and World Wheat Supply and Demand

Projected U.S. 2004/05 ending stocks of wheat are unchanged from last month as no changes are made to supplies or usage. The projected price range is narrowed by 5 cents on either end to $3.00 to $3.50.

Projected 2004/05 global wheat production and usage are up slightly but stocks are unchanged from last month. At 610.6 million tons, this year's crop is up nearly 2 million tons from last month and exceeds the record of 610 million tons produced in 1997/98. Foreign production is up nearly 2 million tons from last month and is nearly 66 million tons above last year. Noteworthy increases in production from last month are projected for Ukraine (up 1.5 million tons), Romania (up 1.2 million tons), and the EU-25 (up nearly 1 million tons). These increases are partially offset by lower crops in Kazakhstan (down 2 million tons), Australia (down 0.5 million tons), and Uzbekistan (down 0.3 million tons). Global consumption is raised by just over 2 million tons from last month, with half the increase accounted for by higher feed use. Relative to last month, the largest increase in use is a 1-million-ton increase projected for the EU-25, followed by smaller increases in Ukraine and several other countries of the FSU-12. Global imports are nearly unchanged but exports from Kazakhstan are reduced 1 million tons while exports by Ukraine, Romania, Bulgaria, and Uzbekistan are raised. Projected global ending stocks are unchanged from last month. However, stocks are raised in Romania (up nearly 1 million tons) and Ukraine (up 0.5 million tons) while stocks are lowered by 1 million tons in Kazakhstan, Uzbekistan (down 0.7 million tons), and Australia (down 0.5 million tons).

Wheat and Barley Movement

Montana wheat shipped to out-of-state destinations during December 2003 through May 2004 was 83.6 million bushels, which was up 47% from the previous year. Over 82% of wheat shipped during this period headed west, totaling 69.1 million bushels, up 50% from a year earlier. Movements to eastern destinations during this period have totaled 4.5 million bushels, down 12% from a year ago. Other and unknown destinations totaled 10.0 million bushels, up from 5.8 million bushels a year ago. Wheat shipped by rail, amounted to 72.1 million bushels, 86% of total shipments. Wheat trucked during this period was 11.6 million bushels compared with 6.8 million bushels last year. The percentage of wheat shipped by truck was 14% of the total, which was up 2 percentage points from the previous year.

Montana barley shipped to out-of-state destinations during the December 2003 to May 2004 period was 15.5 million bushels, up 43% from the same period last year. Shipments of barley out of Montana headed for western destinations were up 68% from the same period last year, at 4.7 million bushels. Shipments to eastern destinations rose from 4.2 million bushels last year to 10.0 million bushels this year. While shipments to other destinations went down from 3.8 million bushels last year to 0.8 million bushels this year, down 79%. Barley shipped by rail amounted to 14.7 million bushels, up 6.6 million bushels from last year. Barley hauled by rail was 95% of total movement, up from 75% for the same period last year.

July 2004 Ag Prices Received

Montana's July full month crop prices were mostly lower compared to June 2004. Montana's winter wheat average price was $3.66 per bushel, up $0.16 from June; spring wheat dropped $0.07 to $3.85 per bushel; and durum wheat prices decreased $0.04 to $4.22 per bushel. Feed barley prices fell $0.13 from the previous month to $1.91.

The mid-August price for alfalfa hay in Montana was down $1.00 from July 2004 to $77.00 per ton and all other hay was unchanged at $74.00 per ton. The mid-August grain prices were lower with winter wheat price averaging $2.94 per bushel; spring wheat was $3.41; durum wheat was $3.88; feed barley was $1.77; and malt barley was $2.28.

Montana's livestock prices for the full month of July were mostly higher compared to the previous month. Steer and heifer prices increased $2.00 to $114.00 per cwt and cows rose $2.90 to $59.10. The average price for calves jumped $3.00 to $128.00 per cwt. In July, steers and heifers, beef cows, and calves reached all-time-record-high prices for any month. Sheep prices rose $3.70 to $37.20 per cwt, but lamb prices fell $5.00 to $112.00 per cwt. Milk prices increased $0.30 per cwt from last month to $19.40 per cwt in July. Steer and heifer prices for mid-August averaged $110.00 per cwt; cows averaged $57.90 per cwt; calves averaged $137.00 per cwt; and the mid-August milk price averaged $17.70 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $3.32, down $0.15; spring wheat was $3.55, down $0.32; durum wheat was $4.11, down $0.29; the all barley price was $2.54, down $0.10, and steer and heifer prices were $91.80, up $1.70 per cwt.

The U.S. mid-August winter wheat price was $3.02 per bushel; spring wheat was $3.24 per bushel; durum wheat was $3.83 per bushel; all wheat was $3.13 per bushel; malt barley was $2.87 per bushel; feed barley was $1.83 per bushel; and all barley was $2.45. Steer and heifer prices were $91.50 per cwt; cow prices were $55.50; calves were $131.00 per cwt; all hog prices were $56.00 per cwt; and all egg prices were $0.53 per dozen. The mid-August all milk price was $15.00 cwt.

The preliminary All Farm Products Index of Prices Received by Farmers in August at 120, based on 1990-92=100, is 4 points (3.2 percent) below the July Index. Declines occurred in both the Crop Price Index and the Livestock Price Index. The Crop Index, declined 2 points (1.7 percent) from July while the Livestock Index decreased 6 points (4.7 percent). Producers received higher commodity prices for lettuce, tomatoes, strawberries, and cantaloup. Lower prices were received for broilers, soybeans, dairy, and corn. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of tobacco, cattle, grapes, and sweet corn offset decreased marketings of wheat, hay, dairy, and broilers.

United States Index Summary

INDEX (1990-92=100)	July 2003	August 2003	July 2004	August 2004
Prices Received	105	109	124	120

U.S. Mushroom Sales
Farm Labor
July Milk Production
Cattle on Feed
Red Meat Production
All Cattle & Calves & Beef Cow County Estimates
All Hay County Estimates
Egg Production
U.S. & Canadian Cattle

U.S. Mushroom Sales

Sales of the 2003-04 U.S. mushroom crop was 857 million pounds, up 1 percent from both the 2002-03 and 2001-02 seasons. Value of sales for the 2003-04 U.S. mushroom crop is $920 million, up 3 percent from the previous season and 1 percent above the 2001-02 season. The number of growers, at 278, is up 13 from last season. Average price is $1.07 per pound, up 2 cents from 2002-03.

Sales reported by growers of **Agaricus** mushrooms for fresh market are 701 million pounds, up 1 percent from last season. Value of sales for commercially grown **specialty** mushrooms in 2003-04 is $40.0 million, up 16 percent from the 2002-03 season. Sales of **Shiitake** mushrooms totaled 7.54 million pounds for the 2003-04 season, up 7 percent from last season. Growers received $3.24 per pound, up 16 cents from 2002-03. Sales volume of **oyster** mushrooms, at 3.97 million pounds, is up 11 percent from the previous season. Sales of other **exotic** mushrooms, are 1.65 million pounds, up 28 percent from last season.

Growers sold 34.9 million pounds of mushrooms that were **certified organic** during the 2003-04 growing season, triple the amount certified during 2002-03. Out of the 34.9 million pounds, 7.86 million pounds, or 23 percent of the total were sold as certified organic mushrooms, while the rest were sold without the certified organic label. This compares to 3.49 million pounds, or 31 percent sold as certified organic during the 2002-03 crop year. Agaricus mushrooms accounted for 76 percent of the certified organic mushrooms sold, while all specialty mushrooms made up the remainder. These certified organic sales represent 1 percent of the 2003-04 total mushroom sales. The number of certified organic mushroom growers totaled 31, up 1 percent from the previous season. These growers represent 11 percent of the 278 total mushroom producers.

U.S. Farm Labor

There were 1,293,000 hired workers on the Nation's farms and ranches during the week of July 11-17, 2004, up 2 percent from a year ago. Of these hired workers, 953,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 340,000 workers.

Farm operators paid their hired workers an average wage of $9.10 per hour during the July 2004 reference week, up 22 cents from a year earlier. Field workers received an average of $8.42 per hour, up 25 cents from last July, while livestock workers earned $8.75 per hour compared with $8.57 a year earlier. The field and livestock worker combined wage rate, at $8.50 per hour, was up 24 cents from last year. The number of hours worked averaged 39.3 hours for hired workers during the survey week, down 1 percent from a year ago.

July U.S. Milk Production

Milk production in the 20 major States during July totaled 12.5 billion pounds, up 0.7 percent from July 2003. June revised production, at 12.4 billion pounds, was down 0.1 percent from June 2003. The June revision represented an increase of 1 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,613 pounds for July, 16 pounds above July 2003. The number of milk cows on farms in the 20 major States was 7.75 million head, 27,000 head less than July 2003, but 11,000 head more than June 2004.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.85 million head on August 1, 2004. The inventory was 3 percent above August 1, 2003 but 3 percent below August 1, 2002.

Placements in feedlots during July totaled 1.72 million, 14 percent below 2003 and 7 percent below 2002. Net placements were 1.66 million. During July, placements of cattle and calves weighing less than 600 pounds were 440,000, 600-699 pounds were 325,000, 700-799 pounds were 499,000, and 800 pounds and greater were 456,000.

Marketings of fed cattle during July totaled 1.93 million, 15 percent below 2003 and 12 percent below 2002. Other disappearance totaled 58,000 during July, 3 percent below 2003 but 29 percent above 2002.

July 2004 Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during July 2004, down 17 percent from July 2003, and down 1 percent from June 2004. Cattle slaughter totaled 1,500 head, down from 1,900 head one year ago. The average live weight increased 9 pounds to 1,136 pounds.

There were 1,400 hogs slaughtered in Montana during July, down 300 head from a year ago. The average live weight, at 232 pounds, increased 11 pounds from last year. July sheep slaughter in the state totaled 300 head, down 100 head from July 2003. The average live weight decreased 18 pounds to 110 pounds.

Commercial red meat production for the United States totaled 3.71 billion pounds in July, down 8 percent from the 4.05 billion pounds produced in July 2003. Beef production, at 2.10 billion pounds, was 14 percent below the previous year. Cattle slaughter totaled 2.79 million head, down 15 percent from July 2003. The average live weight was up 14 pounds from the previous year, at 1,239 pounds.

Veal production totaled 13.4 million pounds, 9 percent below July a year ago. Calf slaughter totaled 69,000 head, down 19 percent from July 2003. The average live weight was 36 pounds above last year, at 325 pounds.

Pork production totaled 1.58 billion pounds, down slightly from the previous year. Hog kill totaled 8.09 million head, slightly below July 2003. The average live weight was unchanged the previous year, at 262 pounds.

Lamb and mutton production, at 14.2 million pounds, was down 10 percent from July 2003. Sheep slaughter totaled 220,800 head, 8 percent below last year. The average live weight was 128 pounds, down 3 pounds from July a year ago.

1/ Counties with less than 500 acres harvested or individual operations with more than 60 percent of acres harvested are combined into "other" counties to avoid disclosure of individual information.

July Egg Production Up 2 Percent

U.S. egg production totaled 7.54 billion during July 2004, up 2 percent from last year. Production included 6.45 billion table eggs, and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 56.0 million were egg-type. The total number of layers during July 2004 averaged 342 million, up 2 percent from a year earlier. July egg production per 100 layers was 2,207 eggs, down slightly from July 2003.

All layers in the U.S. on August 1, 2004, totaled 342 million, up 2 percent from a year ago. The 342 million layers consisted of 283 million layers producing table or market type eggs, 56.2 million layers producing broiler-type hatching eggs, and 2.40 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 2004, averaged 71.0 eggs per 100 layers, down 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 7.05 billion eggs during July 2004, up 2 percent from a year ago. The average number of layers during July, at 319 million, was up 2 percent from a year ago.

Egg-type chicks hatched during July totaled 34.1 million, down 4 percent from July 2003. Eggs in incubators totaled 31.1 million on August 1, 2004, up 1 percent from a year ago. Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 243,000 during July 2004, up 6 percent from July 2003.

The July 2004 hatch of broiler-type chicks, at 807 million, was up 4 percent from July of the previous year. There were 663 million eggs in incubators on August 1, 2004, up 3 percent from a year earlier. Breeders placed 6.83 million broiler-type pullet chicks for future domestic hatchery supply flocks during July 2004, down 3 percent from July 2003.

July 1, 2004 U.S. and Canadian Cattle Inventory

All cattle and calves in the U. S. and Canada combined totaled 120.4 million head on July 1, 2004, up 1 percent from a year ago. All cows and heifers that have calved, at 48.9 million head, was up 1 percent from a year ago.

All cattle and calves in the United States as of July 1, 2004, totaled 103.6 million head, down slightly from the 103.9 million on July 1, 2003 and 1 percent below the 105.1 million two years ago.

All cattle and calves in Canada as of July 1, 2004, totaled 16.8 million head, up 6 percent from the 15.7 million on July 1, 2003, and 9 percent above the 15.4 million two years ago. All cows and heifers that have calved, at 6.4 million, was up 8 percent from the 6.0 million on July 1, 2003, and 9 percent above the 5.9 million from two years ago.

August Crop Production

Montana's **all wheat production** is expected to be 7 percent higher than last month's forecast, and 14 percent higher than last year's drought-reduced crop. Based on August 1 conditions, producers expect to harvest 157.4 million bushels of all wheat, up from the 137.5 million bushels harvested last year and 9.7 million bushels above July's forecast. The area for harvest is expected to be 4.8 million acres, unchanged from last month, but down 4 percent from last year. This is the last forecast until the final small grains summary is published on September 30, 2004.

The forecasted **winter wheat** yield, at 40.0 bushels per acre, is up 2 bushels from July, and is 3 bushels per acre higher than last year. Production is forecast to be 62.0 million bushels, down from 63.6 million bushels last year, but up 3.1 million bushels from July. Acreage expected to be harvested is unchanged from the July forecast, but is down 170,000 acres from last year to 1,550,000 acres. Harvest is underway with 38 percent complete compared with 76 percent last year and 66 percent for the five-year average.

Spring wheat production forecast is 78.3 million bushels, up 32 percent from last year's production. The expected yield of 29.0 bushels per acre is up 2 bushels from last month, and up 7 bushels from last year. Acres for harvest are unchanged from July at 2.7 million and the same as last year. Harvest is underway with 2 percent complete compared with 18 percent last year and 16 percent for the five-year average. **Durum wheat** production is forecast to be 17.1 million bushels, up 18 percent from last year, and up 7 percent from July. The expected yield of 29.0 bushels per acre is 2 bushels higher than last month, and 6 bushels more than the 2003 average. Harvested acres are down 6 percent from 2003 at 590,000.

Barley yields are expected to average 51.0 bushels per acre in 2004, 12 bushels better than last year, but unchanged from July. Barley production is forecast to be 39.8 million bushels compared with 31.6 million produced last year. Growers expect to harvest 780,000 acres, down 3,000 from 2003. Harvest was reported to be 9 percent complete compared with 20 percent last year and 21 percent for the five-year average.

Oat producers expect to harvest 2.3 million bushels of grain, 16 percent more than last year. The 2004 area for harvest is expected to be 45,000 acres, unchanged from 2003. The expected yield of 51.0 bushels is 7 bushels more than last year's yield and up 3 bushels from July. Harvest was reported to be 6 percent complete compared with 23 percent last year and 18 percent for the five-year average.

Sugar beet production is forecast to be 1.1 million tons, down 15 percent from last year. The expected yield, at 21.0 tons per acre, is down 17 percent from the 25.4 tons per acre last year. Producers are expecting to harvest 53,000 acres, up 1,500 acres from last year. **All dry edible bean** growers expect to harvest 17,000 acres this year, up 33 percent from last year's figure but are unchanged from July. Yield is estimated at 20.0 cwt., 2.0 cwt. per acre better than the previous year. All dry bean production is expected to be 340,000 cwt., up 46 percent from last year's figure.

Alfalfa hay is expected to yield 2.0 tons per acre in 2004, down 0.1 ton per acre from the previous year. Growers plan to harvest 1.6 million acres, unchanged from last year. Production is expected at 3.2 million tons, a 5 percent decrease from the 2003 production figure. As of August 8, 100 percent of first cutting and 28 percent of second cutting had been completed for alfalfa hay. The average yield for **other hay** is forecast to be 1.6 tons per acre, up 0.1 ton per acre from last year. Production of other hay is forecast at 1.5 million tons, a 19 percent increase from 2003. As of August 8, 96 percent of first cutting and 18 percent of second cutting of other hay had been completed.

In the United States, **winter wheat** production forecast is 1.49 billion bushels. This is up 1 percent from last month, but 13 percent below 2003. The U.S. yield is forecast at 42.8 bushels per acre, up 0.6 bushel from last month. Hard Red Winter, at 853 million bushels, is up 2 percent from a month ago. Soft Red Winter is down 1 percent from last forecast, at 380 million bushels. White Winter is up 3 percent from last month and totals 256 million bushels.

Nationally, **other spring wheat** production is forecast at 545 million bushels, up 9 percent from last month and 2 percent above 2003. The U.S. yield is forecast at 41.2 bushels per acres, 3.3 bushels more than on July 1. Of the production total, 502 million is Hard Red Spring wheat, up 9 percent from last month.

Durum wheat production is forecast at 89.0 million bushels, up less than 1 percent from last month but down 8 percent from 2003. The U.S. yield is forecast at 35.3 bushels per acre, 2.1 bushels more than last month.

U.S. **barley** production for 2004 is forecast at 273 million bushels, up 4 percent from the July forecast but 1 percent below 2003. Based on August 1 conditions, producers expect to harvest an average of 65.7 bushels per acre, up 2.2 bushels from July and up 6.8 bushels from last year. If realized this would be a record high yield.

Oats production is forecast in the U.S. at 128 million bushels, 5 percent above the July 1 forecast, but 12 percent below last year's 145 million bushels. The forecasted yield is 66.0 bushels per acre, 3.1 bushels above last month and up 1.0 bushel from 2003. If realized, this would be a record high yield.

U.S. **dry edible bean** production is forecast at 21.3 million cwt in 2004, down 5 percent from last year and 30 percent below two years ago. The average U.S. yield is forecast at 1,639 pounds per acre, a loss of 33 pounds from last year and 104 pounds less than two years ago.

Alfalfa hay and alfalfa mixtures production is forecast at 77.3 million tons, up 1 percent from last year. Yields are expected to average 3.48 tons per acre, 0.24 ton above last year. **Other hay** production in the U.S. is forecast at 84.5 million tons, up 5 percent from 2003. Based on August 1 conditions, yields are expected to average 2.15 tons per acre. If realized, this would be a record high yield, breaking last year's previous record of 2.03 tons.

U.S. **sugar beets** production for 2004 is forecast at 28.4 million tons. If realized, this would be 7 percent below last year's production.

August 1, 2004 Crop Production Forecast, Montana and U.S.

Farm Real Estate Values Up

The average value of farm real estate in Montana on January 1, 2004 was $410 per acre, up $20.00 from 2003. The average value of cropland rose $11.00 to $521 per acre, compared with a year ago. The average value of irrigated cropland was $1,670, $90 more than a year ago, while non-irrigated cropland gained $10.00 per acre to $380 per acre on January 1, 2004. Pasture values increased $15.00 to $285 per acre. Montana farm real estate values have been steadily increasing over the past five years.

U.S. farm real estate values, of all land and buildings on farms, averaged $1,360 per acre on January 1, 2004, up 7.1 percent from 2003. This is the largest percentage increase since 1994, when farm real estate values rose 8.0 percent from the previous year. The $90 per acre increase is the largest dollar increase since 1980, when values climbed $109 per acre above the 1979 value.

Nationally, cropland and pasture values rose by 7.2 and 6.4 percent, respectively, from January 1, 2003. Cropland values averaged $1,780 per acre and pasture values averaged $644 per acre on January 1, 2004, compared with $1,660 and $605 per acre, respectively, a year earlier. The value of other land and buildings rose 7.5 percent.

The increase in national farm real estate values was driven by a combination of factors, including low interest rates, high commodity production and prices, and strong demand for nonagricultural land uses. Nationally, summarized survey data indicated that agricultural land with potential for immediate development (expected land use if sold) was valued at more than $5,700 per acre. The survey also indicated that agricultural land with potential for future development was valued at nearly $4,000 per acre. Demand for farm real estate as an investment continued, but was limited by strong appreciation of alternative investments.

Regional increases in the average value of farm real estate ranged from 5.2 percent in the Mountain region to 10.4 percent in the Lake region. The highest farm real estate values were in the Northeast region, where urban influences drove the average value to $3,400 per acre. In the Corn Belt region, where commodity production and prices were favorable during 2003, farm real estate values rose 8.0 percent, to $2,300 per acre. The Mountain region, with its expanse of pasture and rangeland, has the lowest farm real estate value, at $550 per acre.

Cropland values rose 9.1 percent, to $2,030 per acre, in the Lake region and 8.4 percent, to $2,460 per acre, in the Corn Belt. Together these regions account for nearly one-third of the U.S. total cropland acres. The highest average cropland values, at $3,660 per acre, are in the Pacific region, where a significant portion of the cropland is irrigated.

Cash Rents for 2004

The average cash rent for Montana cropland rose slightly from last year to $24.50 per acre. The average cash rent for irrigated cropland, at $49, increased by $1 per acre from a year ago. The non-irrigated cropland average increased slightly from 2003 to $18.90 per acre. Average pasture rents increased from $4.50 in 2003 to $5 per acre in 2004.

Cash rents paid to U.S. landlords for cropland and pasture during the 2004 crop year rose sharply from 2003. Cropland cash rents paid in 2004 averaged 4.8 percent above a year earlier, advancing to $76.50 per acre, compared with $73 per acre for 2003. Pasture cash rents rose 6.7 percent, from $9 per acre in 2003 to $9.60 per acre in 2004. The increases in cropland and pasture rental rates reflected producers' optimism following the combination of high production and price levels of major U.S. agricultural commodities in 2003. (Continued on next page)

Cash Rents (Continued)

Cropland cash rents increased in all regions of the U.S. except the Pacific region, where rental rates were unchanged. In the remaining regions, increases in cropland cash rents varied from 1.1 percent in the Southeast to 8.9 percent in the Southern Plains. The Corn Belt and Northern Plains regions, which together account for nearly one half of cash-rented cropland acreage, increased 3.6 and 4.2 percent, respectively, from 2003. Cropland cash rents increased $4 per acre, to $114, in the Corn Belt and $2 per acre, to $50, in the Northern Plains.

The major corn and soybean producing States of Illinois, Indiana, and Iowa experienced increases ranging from 2.4 to 3.9 percent for cropland cash rents. Illinois and Iowa cropland cash rents both averaged $126 per acre.

Pasture cash rents rose in all regions, led by an 8.0 percent increase in the Pacific region and a 7.4 percent increase in the Corn Belt. In the Northern Plains and Southern Plains regions, which combine for about two-thirds of the cash-rented pasture acreage, rental rates were up 5.4 percent and 1.3 percent, respectively. Wisconsin continued to lead the Nation with the highest pasture rent, at $37 per acre.

June 2004 Ag Prices Received

Prices received during June by Montana producers for steers and heifers, cows, calves, beef cattle, and milk all reached historic high prices for any month. Steer and heifer prices jumped $13.00 to $112.00 per cwt. and cows rose $1.10 to $56.20. The average price for calves jumped $8.00 to $125.00 per cwt. Sheep prices dropped $6.00 to $33.50 per cwt., but lamb prices rose $6.00 to $117.00 per cwt. Milk prices increased $4.10 per cwt. from May to $19.10 per cwt. Cattle and milk prices for mid-July continued higher as steer and heifer prices for mid-July averaged $114.00 per cwt.; cows averaged $59.10 per cwt.; calves averaged $129.00 per cwt.; and milk prices averaged $19.70 per cwt.

June 2004 full month crop prices were mostly lower compared with May. Montana's winter wheat average price was $3.50 per bushel, down $0.38 from the previous month; spring wheat price was down $0.12 to $3.92 per bushel; and durum wheat prices dropped $0.10 to $4.26 per bushel. Feed barley prices rose $0.03 above the previous month to $2.04 per bushel.

The mid-July price for alfalfa hay increased $6.00 to $78.00 per ton, and all other hay increased $7.00 to $74.00 per ton. Mid-July grain prices were lower with winter wheat averaging $3.42 per bushel, spring wheat was $3.75 per bushel, durum wheat was $3.91 per bushel, and feed barley was $1.84 per bushel.

Nationally, prices for June and changes from May were as follows: winter wheat was down $0.25 to $3.47; spring wheat was $3.87, down $0.14; durum wheat was up $0.19 to $4.40; the all barley price was $2.64, down $0.14, and steer and heifer prices were $93.50, up $0.90 per cwt.

The U.S. mid-July winter wheat price was $3.31 per bushel, spring wheat was $3.60 per bushel, durum wheat was $3.99 per bushel, all wheat was $3.36 per bushel, malt barley was $2.81 per bushel, feed barley was $2.08 per bushel, and all barley was $2.50. Steer and heifer prices were $91.10 per cwt, cow prices were $55.90, calves were $128.00 per cwt., all hog prices were $56.90 per cwt, and all egg prices were $0.589 per dozen.

Sheep County Estimates

Livestock county estimates for January 1, 2004 sheep and lamb inventory and revisions for 1998-2003 are now available in printed form from the Montana Agricultural Statistics Service or you may find them on our website at http://www.nass.usda.gov/mt/ under county data.

The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. The county and district estimates are based on livestock surveys conducted at the end of 2003 and beginning of 2004.

Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on their livestock inventories. Thanks to all the farmers and ranchers who participated in the survey!

Farm Production Expenditures

U.S. farm production expenditures totaled $198.9 billion in 2003, up 3.0 percent from the revised 2002 total of $193.1 billion. The largest contributors to the increase were farm improvements and construction, up 43.8 percent; feed, up 8.4 percent; trucks and autos, up 7.1 percent and other farm machinery, up 5.4 percent. These increases were partially offset by decreases in interest, down 11.4 percent; farm supplies and repairs, down 9.8 percent; and labor, down 1.4 percent. The largest two expenditure categories were feed, which accounted for 13.6 percent of the U.S. total production expenses, and farm services which accounted for 13.5 percent of the U.S. total production expenses. The farm services category includes expense items such as custom work, utilities, marketing charges, veterinary services, transportation costs, and miscellaneous business expenses.

The average expenditures per U.S. farm in 2003 were $93,785 compared to $89,722 as revised for 2002. On the average, U.S. farm operations in 2003 spent $12,731 on feed; $12,637 on farm services; $9,996 on labor; $8,959 on livestock and poultry purchases; and $7,733 on rent. Revised estimates for 2002 indicated U.S. farms spent an average of $11,570 on feed; $12,452 on farm services; $9,990 on labor; $8,503 on livestock and poultry purchases; and $7,527 on rent.

The Farm Production Region contributing most to the total 2003 U.S. farm production expenditures was the Corn Belt, with expenses of $35.8 billion, 18.0 percent of the U.S. total. Expenditures in the Corn Belt were up 1.6 percent from the 2002 level of $35.2 billion. In total expenditures, the Corn Belt was followed by the Pacific Region at $32.3 billion (2002 - $32.0 billion); Northern Plains at $26.1 billion (2002 - $24.2 billion); Lake States at $19.3 billion (2002 - $19.1 billion); and the Southern Plains at $17.2 billion (2002 - $14.5 billion).

The U.S. Economic Class contributing most to the 2003 U.S. farm production expenditures was the $1,000,000 and Over class, with expenses of $67.6 billion, 34.0 percent of the U.S. total. Expenditures in the $1,000,000 and Over class were up 13.4 percent from the 2002 level of $59.6 billion. In total expenditures, the $1,000,000 and Over class was followed by the $500,000 - $999,999 class at $32.0 billion (2002 - $30.2 billion); $250,000 - $499,999 class at $29.9 billion (2002 - $33.1 billion).

Expenditure estimates by Type of Farm reveal that Crop Farms, with expenses of $102.6 billion, contributed 51.6 percent of the 2003 U.S. farm production expenditures. Expenditures for Crop Farms were up 2.7 percent from the revised 2002 level of $99.9 billion. Livestock Farm expenses of $96.3 billion were up 3.3 percent from the revised 2002 level of $93.2 billion.

HIGHLIGHTS:

July 1 Cattle Inventory
July 1 U.S. Sheep Inventory
Cattle on Feed
Mink Production
Red Meat Production
Wheat & Barley Varieties
Quarterly Milk Production
Egg Production

July 1 Cattle Inventory

The all cattle and calf inventory in Montana was 3.35 million head on July 1, 2004, down 1 percent from a year ago. Historic high prices for cattle and calves combined with continued drought in many areas of the State has reduced cattle inventories. Pasture and range conditions are about the same as a year ago and were rated 12% very poor, 18% poor, 38% fair, 27% good, and 5% excellent for the week ending July 18. The lack of rainfall early in the spring and continued drought in many other parts of the State have hurt pasture conditions.

The beef cow inventory in Montana dropped 1 percent from a year ago to 1.462 million head. Milk cow inventory remained unchanged from last year at 18,000 head. The 2004 calf crop is expected to be 1.52 million head, down 1 percent from a year ago.

All cattle and calves in the United States as of July 1, 2004, totaled 103.6 million head, down slightly from the 103.9 million on July 1, 2003 and 1 percent below the 105.1 million two years ago.

U.S. all cows and heifers that have calved, at 42.5 million, were slightly below the 42.7 million on July 1, 2003 and 1 percent below the 42.9 million two years ago. Beef cows, at 33.5 million, were down slightly from July 1, 2003 and 1 percent below two years ago. Milk cows, at 9.0 million, were down 1 percent from July 1, 2003 and down 2 percent from two years ago.

Other class estimates on July 1, 2004 and the changes from July 1, 2003 for the U.S., are as follows:
-- All heifers 500 pounds and over, 15.95 million, up slightly.
-- Beef replacement heifers, 4.8 million, up 4 percent.
-- Milk replacement heifers, 3.6 million, unchanged.
-- Other heifers, 7.55 million, down 2 percent.
-- Steers weighing 500 pounds and over, 14.2 million, unchanged.
-- Bulls weighing 500 pounds and over, 2.05 million, down 2 percent.
-- Calves under 500 pounds, 28.9 million, down slightly.
-- All cattle and calves on feed for slaughter, 11.8 million, down slightly.

The 2004 calf crop is expected to be 37.7 million, down 1 percent from both 2003 and 2002. Calves born during the first half of the year are estimated at 27.5 million, down 1 percent from both 2003 and 2002.

July 1 All Sheep and Lamb Inventory Down 2 Percent

All sheep and lamb inventory in the United States on July 1, 2004, totaled 7.65 million head, 2 percent below July 1, 2003. Breeding sheep inventory at 4.55 million head on July 1, 2004 was 1 percent below July 1, 2003. Market sheep and lambs (including newborn lambs) at 3.11 million head, were 3 percent below last July.

The breeding herd consists of 3.75 million ewes one year old and older, 180,000 rams one year old and older, and 620,000 replacement lambs (including newborn lambs). Market lamb inventory at 3.03 million head was comprised of 1.80 million lambs under 65 pounds, 635,000 lambs 65-84 pounds, 355,000 lambs 85-105 pounds, and 240,000 lambs over 105 pounds. Market sheep inventory was 75,000.

The 2004 Lamb Crop in the United States is expected to total 4.08 million head, down 1 percent from the 2003 lamb crop of 4.12 million head. Lambs born during January through June 2004 totaled 3.61 million head or 88 percent of the yearly total. An additional 470,000 head are expected to be born during the period July through December 2004.

Region 3 (CO, MT, SD, UT, & WY) accounted for 34.0 percent of all sheep and lambs. Region 2 (NM & TX) accounted for 20.1 percent, Region 1 (AZ, CA, ID, NV, OR, & WA) for 16.9 percent, Region 4 (IA, KS, MN, MO, NE, ND, & OK) for 15.4 percent, and Region 5 (all other States) accounted for 13.6 percent.

U.S. Cattle on Feed Up 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.12 million head on July 1, 2004. The inventory was 2 percent above July 1, 2003 but 4 percent below July 1, 2002. The inventory included 6.37 million steers and steer calves, up 4 percent from the previous year. This group accounted for 63 percent of the total inventory. Heifers and heifer calves accounted for 3.70 million head, down 1 percent from 2003.

Placements in feedlots during June totaled 1.64 million, 2 percent below 2003 and down slightly from 2002. Net placements were 1.57 million. During June, placements of cattle and calves weighing less than 600 pounds were 460,000, 600-699 pounds were 356,000, 700-799 pounds were 448,000, and 800 pounds and greater were 375,000.

Marketings of fed cattle during June totaled 2.08 million, 7 percent below 2003 but up slightly from 2002. Other disappearance totaled 70,000 during June, 15 percent above 2003 and 37 percent above 2002.

Cattle on feed July 1, 2004, from all feedlots in the United States, totaled 11.8 million, down slightly from July 1, 2003 and 6 percent below July 1, 2002. Cattle on feed in feedlots with 1,000 or more head accounted for 86 percent of the total cattle on feed on July 1, 2004, up from 84 percent on July 1, 2003.

U.S. Mink Pelt Production, Down 2 Percent, Value of Pelt Production Up 28 Percent

Mink pelt production in the United States in 2003 totaled 2.55 million pelts, down 2 percent from 2002. Wisconsin, the largest mink producing State, produced 706,000 pelts.

By color class, the number of pelts as a percent of the total U.S. production in 2003 follows: Black at 40.2 percent; Mahogany at 21.5 percent; Blue Iris at 16.1 percent; Demi/Wild at 6.4 percent; Sapphire at 5.8 percent. The remaining color classes accounted for 10.0 percent.

Mink pelts produced during the 2003 crop year were valued at $102 million dollars, up 28 percent from $79.8 million a year ago. The average price per pelt for the 2003 crop year was $40.10, up from $30.60 in 2002. Female mink bred to produce kits in 2004 totaled 604,800, up slightly from the previous year.

Percent of total females bred to produce kits in 2004 by color class are: Black at 45.9 percent; Mahogany at 21.0 percent; Blue Iris at 11.9 percent; Demi/Wild at 5.8 percent; Sapphire at 5.0 percent. The remaining color classes accounted for 10.4 percent.

There were 307 mink farms producing pelts in 2003, down 5 percent from a year ago. Leading States were Utah with 80 farms, Wisconsin with 69 farms and Minnesota with 31. There were 18 mink farms which also raised fox in 2003, down from 20 the previous year.

June 2004 Red Meat Production up 4 Percent from 2003

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during June 2004, up 4 percent from June 2003, and 15 percent higher than the previous month's production. Cattle slaughter totaled 1,600 head, unchanged from one year ago. The average live weight decreased 7 pounds to 1,164 pounds.

During June there were 1,000 hogs slaughtered down 100 head from a year ago. The average live weight, at 246 pounds, was down 1 pound from last year. June sheep slaughter in the state totaled 200 head, unchanged from June 2003. The average live weight decreased 7 pounds to 123 pounds.

Commercial red meat production for the United States totaled 3.93 billion pounds in June, down 1 percent from the 3.95 billion pounds produced in June 2003.

Beef production, at 2.23 billion pounds, was 7 percent below the previous year. Cattle slaughter totaled 2.99 million head, down 8 percent from June 2003. The average live weight was up 8 pounds from the previous year, at 1,225 pounds.

Veal production totaled 13.4 million pounds, 11 percent below June a year ago. Calf slaughter totaled 66,400 head, down 10 percent from June 2003. The average live weight was 2 pounds above last year, at 338 pounds.

Pork production totaled 1.67 billion pounds, up 9 percent from the previous year, and set records monthly high. Hog kill totaled 8.50 million head, 10 percent above June 2003. The average live weight was 2 pounds below the previous year, at 264 pounds.

Lamb and mutton production, at 15.5 million pounds, was up 2 percent from June 2003. Sheep slaughter totaled 230,900 head, 1 percent above last year. The average live weight was 134 pounds, up 2 pounds from June a year ago.

Montana 2004 Wheat and Barley Varieties

The top four **winter wheat** varieties account for 60.8 percent of the total acreage seeded for harvest in 2004. **Rampart** acreage continues to climb, with 516,100 acres seeded this year, compared to last year's acreage of 463,400. **Neeley** remains in second place this year with 295,800 acres seeded, or 16 percent of the total winter wheat acreage in Montana. **Tiber** remains in third place with 173,200 acres seeded, which is up from last year's acreage of 170,700. **Morgan** became the fourth leading variety this year, replacing Rocky. A total of 140,400 acres were seeded, which accounts for 7.6 of the total acres seeded.

The top four **spring wheat** varieties account for 71.0 percent of the total acreage seeded for harvest in 2004. **McNeal** is the leading spring wheat variety for the seventh consecutive year, accounting for 31.7 percent of the acreage, or 903,900 acres, which is down more than 100,000 acres from 2003. **Reeder** remains in second place with 622,500 acres seeded up from last year's 525,100 acres. **Ernest** stays in third place this year with 289,100 acres seeded, or 10.2 percent of the total. **Conan** joins the top four list this year with 208,300 acres seeded, or 7.3 percent of the state's total spring wheat acreage.

The top four **durum wheat** varieties account for 85.1 percent of the total durum wheat acreage in the state for 2004. **Mountrail** overtakes Kyle this year to become the top variety in the state, with 245,300 acres seeded, or 40.9 percent of the durum wheat acreage. **Kyle** falls to second place this year, after spending seven consecutive years at the top. There were 203,600 acres seeded, accounting for 33.9 percent of the total acres. **AC Avonlea** became the third most popular variety this year with 45,100 acres seeded or 7.5 percent. **Ward** joins the top four list this year, with 16,500 acres seeded, or 2.8 percent of the state's durum wheat acreage.

Montana farmers seeded 1.0 million acres of **barley** in 2004, down 9 percent from last year. Fifty-three percent of the acres seeded to barley were malting and brewing varieties recommended by the American Malting Barley Association Inc. **Harrington** remains the top malting variety planted in the state for the eleventh year in a row. It was seeded on 403.3 thousand acres or 40.3 percent of Montana's barley acreage. **AC Metcalfe** came in second place with 49.5 thousand acres planted, orr 5.0 percent. **Merit** moves up to third place this year, with 44.0 thousand acres seeded, or 4.4 percent. **B 1202** drops to fourth place this year, after eight consecutive years at number two. It accounts for 38.8 thousand acres seeded, or 3.9 percent. (Continued on next page)

Montana Wheat and Barley Varieties (continued)

Haybet remains the most popular forage barley for the fifth year in a row, with 99.0 thousand acres seeded, or 9.9 percent of the total. **Westford** is the second most popular forage barley for the second year in a row, with 23.2 thousand acres or 2.3 percent. **Baronesse** is the most popular feed barley again in 2004. It represents 3.9 percent of the total acreage or 38.9 thousand acres for 2004. **Gallatin** maintains its place as the second most popular feed barley grown for the second year in a row. Statewide, 34.3 thousand acres were seeded, which is 3.4 percent of all barley acreage.

The wheat and barley varieties data were made possible through funds provided by the Montana Wheat & Barley Committee.

June Milk Production Down 0.2 Percent in 20 Major States

Milk production in the 20 major States during June totaled 12.4 billion pounds, down 0.2 percent from June 2003. May revised production, at 13.0 billion pounds, was down 6 million pounds from May 2003. The May revision represented an increase of 13 million pounds or 0.1 percent from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,603 pounds for June, 7 pounds above June 2003. The number of milk cows on farms in the 20 major States was 7.74 million head, 44,000 head less than June 2003, but 19,000 head more than May 2004.

Milk production in the U.S. during the April-June quarter totaled 43.7 billion pounds, down 0.6 percent from the April-June quarter last year. The average number of milk cows in the U.S. during the quarter was 9.00 million head, 112,000 head less than the same period last year.

June Egg Production Up 2 Percent

U.S. egg production totaled 7.27 billion during June 2004, up 2 percent from last year. Production included 6.20 billion table eggs, and 1.07 billion hatching eggs, of which 1.02 billion were broiler-type and 54.0 million were egg-type. The total number of layers during June 2004 averaged 342 million, up 2 percent from a year earlier. June egg production per 100 layers was 2,126 eggs, up slightly from June 2003.

All layers in the U.S. on July 1, 2004, totaled 342 million, up 2 percent from a year ago. The 342 million layers consisted of 283 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.25 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 2004, averaged 71.3 eggs per 100 layers, down slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 6.79 billion eggs during June 2004, up 2 percent from a year ago. The average number of layers during June, at 319 million, was up 2 percent from a year ago.

Egg-type chicks hatched during June totaled 38.1 million, up 4 percent from June 2003. Eggs in incubators totaled 36.1 million on July 1, 2004, up 12 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 212,000 during June 2004, down 31 percent from June 2003.

The June 2004 hatch of broiler-type chicks, at 786 million, was up 1 percent from June of the previous year. There were 659 million eggs in incubators on July 1, 2004, up 4 percent from a year earlier. Leading breeders placed 6.7 million broiler-type pullet chicks for future domestic hatchery supply flocks during June 2004, down slightly from June 2003.

July Crop Production

Based on July 1 conditions, Montana's **all wheat production** is expected to be 147.7 million bushels, up 7% from last year The area for harvest is expected to be 4.84 million acres, unchanged from the June Acreage report, but down 4% from last year.

The forecasted **winter wheat** yield, at 38.0 bushels per acre, is up 4 bushels from last month's forecast and up 1 bushel from last year. Production is forecast at 58.9 million bushels, down 7% from last year due to lower harvested acres. Winter wheat conditions have improved substantially from last month and were rated 4% very poor, 11% poor, 29% fair, 48% good and 8% excellent for the week ending July 4. Crop development is behind normal as the crop was rated 20% turning color for the week ending July 4, compared with 54% last year and 38% for the 5-year average.

The first **spring wheat** production forecast is 72.9 million bushels, up 23% from last year's production due to higher expected yields. The harvested acres are expected to be 2.7 million, the same as 2003. The expected yield of 27.0 bushels per acre is up 5 bushels per acre from last year. For the week ending July 4, spring wheat conditions are rated slightly higher than 2003 at 3% very poor, 10% poor, 23% fair, 58% good, and 6% excellent. **Durum wheat** production is forecast at 15.9 million bushels, up 10% from last year due to higher expected yield. Harvested acreage is expected to be 590,000 acres, down 6% from 2003. The expected yield of 27.0 bushels per acre is up 4 bushels from last year.

Barley yields are expected to average 51.0 bushels per acre in 2004, 12 bushels better than last year. Barley production is forecast to be 39.8 million bushels compared with 31.6 million bushels produced last year. Growers expect to harvest 780,000 acres, down 30,000 acres from 2003. For the week ending July 4, barley condition was rated 1% very poor, 5% poor, 32% fair, 50% good and 12% excellent. Crop development is about the same progress as last year, with 77% reaching boot stage by July 4, and 43% of the crop is headed. The 5-year average for boot stage and headed is 71% and 45%, respectively. **Oats** producers expect to harvest 2.2 million bushels of grain, 9% more than was produced last year. The 2004 area for harvest is expected to be 45,000 acres, unchanged from 2003. The expected yield of 48.0 bushels is 4 bushels better than last year's yield.

Montana **potato** producers planted 10,700 acres during 2004, unchanged from last year. The first forecast of potato production will be on November 12, 2004. Pulse crop growers increased their acreage this year. **Dry edible pea** planted acreage is 50,000 acres with producers expecting to harvest 40,000 of those acres. Last year, growers planted 33,000 acres of dry edible peas and harvested 31,000 acres. **Lentil** growers planted 38,000 acres this year, up 27% from last year. Producers are expecting to harvest 35,000 of those acres. Last year 30,000 acres of lentils were planted, while 26,000 acres were harvested. **Austrian winter pea** planted acreage is up slightly from last year. During 2004, 10,000 acres were planted, while 9,500 were planted last year. Only 5,000 acres of this year's crop are expected to be harvested as peas, with the remaining acreage being hayed or grazed.

Winter wheat production in the United States is forecast at 1.47 billion bushels. This is down 4 percent from last month and 14 percent below 2003. The U.S. yield is forecast at 42.2 bushels per acre, down 1.4 bushels from last month. **Durum wheat** production is forecast at 88.6 million bushels, down 8 percent from 2003. The U.S. yield is forecast at 33.2 bushels per acre, 0.5 bushel less than last year. Durum wheat area for 2004 grain harvest is expected to total 2.67 million acres, down 7 percent from last year. **Other Spring wheat** production is forecast at 501 million bushels, down 6 percent from 2003. The U.S. yield is forecast at 37.9 bushels per acre, 1.8 bushels lower than last year. Of the total production, 459 million is Hard Red Spring wheat, down 8 percent from last season

U.S. **barley** production for 2004 is forecast at 264 million bushels, 5 percent below 2003. Based on conditions as of July 1, the average yield is forecast at 63.5 bushels per acre, up 4.6 bushels from last year. Area for harvest, at 4.15 million acres, is down 11 percent from 2003.

Oats production for the U.S. is forecast at 122 million bushels, 16 percent below last year's 145 million bushels. The forecasted yield is 62.9 bushels per acre, down 2.1 bushels from 2003. Expected area for harvest is 1.94 million acres, down 13 percent from last year.

Nationally, planted acreage of **lentils** in Idaho, Montana, North Dakota, and Washington is estimated at 300,000 acres, up 22 percent from last year and 33 percent above 2002. Harvested acreage is forecast at 293,000, up 24 percent from last year. U.S. planted acreage of **dry edible peas** for 2004 is estimated at 480,000 acres, up 42 percent from last year and 55 percent above 2002. Harvested area is forecast at 454,000 acres, up 38 percent from last year. **Austrian winter peas** planted area in Idaho, Montana, and Oregon is estimated at 25,500 acres, up 21 percent from 2003 and 10 percent above the 2002 season. Harvested area is forecast at 16,600 acres, up 6 percent from last year and 28 percent above two years ago.

Area planted to fall **potatoes** for 2004 in the United States is estimated at 1.04 million acres, down 6 percent from last year and 8 percent below 2002. Harvested acres are forecast at 1.02 million, down 6 percent from 2003 and 7 percent below two years ago. (See table on page 2)

July 1, 2004 Crop Production Forecast, Montana and U.S.

U.S. Wheat Supply and Demand

Projected U.S. 2004/05 ending stocks of wheat are nearly unchanged from last month. Total wheat production is forecast at 2.059 billion bushels, down slightly from last month and down 277 million bushels from last year. Forecast winter wheat production is 61 million bushels below last month due to lower yields. The first survey-based spring wheat (including durum) production forecast is up from last month's projection due to larger planted area estimates in the June 30 Acreage report and a higher yield. In addition, the harvested-to-planted ratio is higher than assumed last month. Supplies are nearly unchanged from last month with larger reported carryin stocks but imports 5 million bushels lower. Expected use is fractionally lower than last month. Ending stocks are down 1 million bushels from last month and down 52 million bushels from last year. The projected 2004/05 price range is $3.20 to $3.80 per bushel, down 5 cents on each end of the range from last month.

Projected 2004/05 world wheat production is up from last month and although use also increases, ending stocks are up nearly 6 million tons from last month and are almost 2 million tons above the previous year. This would be the first year-to-year increase in ending stocks since 1999/2000. Foreign production is up from last month with notable increases forecast for China, the EU-25, Romania, and Russia. Global trade and consumption are little changed from last month with the notable exception of a 0.5-million-ton increase forecast for Pakistan's imports. Also, Morocco's imports rise and Romania's imports fall from last month's projections. Because of a larger crop and an increase in carryin stocks, China's supplies are up 2.5 million tons from last month. The increased supply is expected to boost ending stocks from last month's projection, but stocks will be down 8 million tons year-to-year. Similarly, the nearly 1-million-ton increase in EU-25 production, although partially offset by a decline in carryin stocks, is forecast to result in an increase in ending stocks. Relative to last month, the ending stocks of Russia are up due to increased production and Kazakhstan's stocks are up due to larger beginning stocks. (See table on back page.)

2004 Sweet Cherry Production

The Montana sweet cherry crop is forecast at 2,200 tons, 15 percent above last year but 6 percent less than 2002. Montana's cherry growing region experienced a warm, early spring and adequate precipitation which contributed to a good bloom. Some growers experienced frost damage during May resulting in bloom damage and reduced production potential. Most growers in Flathead and Lake counties have seen favorable crop conditions thus far. Growers are expecting the outcome of the crop to vary by cherry variety.

U.S. sweet cherry production is forecast at 276,550 tons, up 17 percent from 2003 and 52 percent above 2002. The Washington crop, at a record high production of 130,000 tons, is down 4 percent from the June 1 forecast but is 12 percent above 2003. Washington's cherry crop experienced unusually warm conditions during the spring, which contributed to a good bloom. Most growers are reporting crop sizes equal to or greater than a year ago. Rain in early June caused some crop loss due to splitting. Production in California is forecast at 65,000 tons, 5 percent more than last year. Adequate chilling hours and ideal weather conditions during bloom and the growing season have contributed to this production increase. Harvest began in late April and continued through the second week of June. Fruit quality is reported to be excellent. The sweet cherry crop in Oregon is forecast at 43,000 tons, unchanged from the previous forecast but up 13 percent from 2003. Bing harvest began mid-June in The Dalles and the Hood River Valley. Early variety harvest began the first full week of June.

Agricultural Prices Received

May 2004 full month crop prices were mostly higher compared with April 2004. Montana's winter wheat average price was $3.88 per bushel, up $0.11 from the previous month; spring wheat price was up $0.05 to $4.04 per bushel; and durum wheat prices rose $0.21 to $4.36 per bushel. Feed barley prices dropped $0.07 from the previous month to $2.01 per bushel.

The mid-June price for alfalfa hay rose $1.00 from May 2004 to $73.00 per ton and all other hay increased $2.00 to $69.00 per ton. Mid-June grain prices were mixed with winter wheat averaging $3.68 per bushel, spring wheat was $3.93 per bushel, durum wheat was $4.30 per bushel, and feed barley was $2.09 per bushel.

Livestock prices for the full month of May were all higher from the previous month. Steer and heifer prices increased $3.80 to $99.00 per cwt., reaching an all-time high, while cows increased $2.90 to $55.10. The average price for calves increased to $117.00 per cwt. Sheep prices rose $4.70 to $39.50 per cwt. while lamb prices increased $4.00 to $111.00 per cwt. Milk prices increased $0.50 per cwt from April to $15.00 per cwt. Mid-month June steer and heifer prices averaged $105.00 per cwt.; cows averaged $56.60 per cwt.; calves averaged $118.00 per cwt.; and milk prices averaged $15.20 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was down $0.07 at $3.72; spring wheat was $4.01, up $0.07; durum wheat was $4.21, down $0.01; the all barley price was $2.78, unchanged, and steer and heifer prices were $92.60, down $3.70 per cwt. The U.S. mid-June winter wheat price was $3.49 per bushel, spring wheat was $3.82 per bushel, durum wheat was $4.17 per bushel, all wheat was $3.55 per bushel, malt barley was $3.08 per bushel, feed barley was $2.21 per bushel, and all barley was $2.68. Steer and heifer prices were $93.30 per cwt, cow prices were $52.90, calves were $124.00 per cwt., all hog prices were $56.70 per cwt, and all market egg prices were $0.496 per dozen. The preliminary All Farm Products Index of Prices Received by Farmers in June at 129, based on 1990-92=100, is unchanged from the May Index, but up 22 points (21 percent) from June 2003.

United States Index Summary

INDEX (1990-92=100)	May 2003	June 2003	May 2004	June 2004

June Crop Acreages

Small Grain Acreage:

All wheat seeded acreage in Montana is estimated to be 5.30 million acres, up slightly from last year. **Spring wheat** producers seeded an estimated 2.85 million acres, unchanged from last year, but up 50,000 acres from what they intended to seed on March 1, 2004. Acres intended to be harvested , at 2.7 million acres, is unchanged from the previous year. The condition of the spring wheat crop for the week ending June 27 is better than a year ago and was rated mostly good with 5% excellent, 66% good, 20% fair, 6% poor, and 3% very poor. Currently, 43% of the spring wheat crop is in the boot stage, with 9% of the crop headed which is behind last year and the 5-year average. **Winter wheat** acreage seeded remained unchanged from the March 1 estimate at 1.85 million acres, but up 3 percent from last year. Producers are expecting to harvest 1.55 million acres, down 50,000 acres from the previous forecast and down 170,000 acres from last year's acreage. The winter wheat crop condition is rated 6% excellent, 50% good, 33% fair, 7% poor and 4% very poor for the week ending June 27. The winter wheat crop development is about the same as last year for the boot stage and headed at 97% and 87%, respectively, but only 2% is turning compared with 19% last year and 15% for the five-year average. **Durum wheat** acreage, at 600,000 acres, is down 6 percent from a year ago. Acreage of durum wheat intended to be harvested is estimated at 590,000 acres, down 6 percent from last year. The small grain crops have improved with the May and June rainfall, but cooler temperatures have slowed crop development. Producers are concerned over the continued lack of soil moisture and the possibility of extreme heat during the rest of the growing season.

Montana **barley** growers seeded an estimated 1.0 million acres, which is down 9% from last year's final estimate, but up 50,000 acres from the March 1, 2004 intentions. The state's barley growers intend to harvest 780,000 acres for grain this year, which is 4% below the previous year's final estimate. Planted acreage for **oats**, at 110,000 acres, is down 10,000 acres from the previous year and 20,000 acres less than intended plantings on March 1, 2004. Growers intend to harvest 45,000 acres of the oat crop for grain, unchanged from a year ago.

All wheat planted area for the **United States** is estimated at 59.9 million acres, down 3 percent from 2003. Harvested area is expected to total 50.7 million acres, down 4 percent from last year. The 2004 **winter wheat** planted area, at 43.5 million acres, is 3 percent below last year, but fractionally up from the previous estimate. Acreage planted to other **spring wheat** for 2004 is estimated at 13.7 million, down 1 percent from 2003. The **Durum** planted area for 2004 is estimated at 2.74 million acres, down 6 percent from last year.

U.S. barley growers seeded 4.67 million acres for 2004, down 12 percent from the 5.30 million acres seeded a year ago. Acres for harvest, at 4.15 million, are down 11 percent from the 2003 level. Acres seeded for the 2004 **oats** crop year totaled 4.22 million, down 8 percent from last year's planted area. Growers expect to harvest 1.94 million acres for grain, 13 percent less than the 2003 harvested acreage of 2.2 million.

Acreage for Row Crops, Hay, and Oilseeds:

Montana **corn** growers planted 60,000 acres, down 5,000 acres from a year ago and 10,000 acres from the March 1 intentions. Acreage intended for harvest as grain, at 15,000 acres, is down 2,000 acres from a year ago. **Sugar beet** producers planted an estimated 53,400 acres, up 3 percent from 2003. Producers intend to harvest 53,000 of those acres, up 3 percent from 2003. Montana's corn and sugar beet plantings were in generally good condition through late-April and early-May, but cooler temperatures have slowed the progress of the crop and a severe mid-May freeze forced some beet growers to replant. An estimated 2.55 million acres of **all hay** are expected to be harvested, 100,000 acres above last year, but 50,000 acres less than the March 1, 2004 intentions. Of the total hay expected for harvest, 1.60 million acres are expected to be **alfalfa hay**,which is unchanged from last year's figure. Producers expect to harvest 950,000 acres of **other hay,** which is up 100,000 acres from a year ago. Farmers planted 18,000 acres of **dry beans** in 2004, up 38 percent from last year and 29 percent above their March 1, 2004 intentions. Producers are looking to harvest 17,000 acres of dry beans this season, 33 percent more than last year's. **Flaxseed** growers in Montana planted an estimated 16,000 acres this year, down 1,000 from last year's acreage. Producers intend to harvest 15,000 acres of flaxseed this year, down from 17,000 acres during the 2003 crop year.

U.S. **corn** planted area for all purposes is estimated at 81.0 million acres, up 3 percent from 2003 and 2002. Growers expect to harvest 73.4 million acres for grain, up 3 percent from 2003. Farmers increased corn plantings 1.96 million acres from their March intentions. **Sugar beets** area planted totaled 1.34 million acres down 1 percent from the March intentions and down 2 percent from 2003. The area for harvest is estimated at 1.31 million, down 3 percent from 2003.

U.S. producers expect to harvest 61.6 million acres of **all hay** in 2004, 3 percent below 2003. **Alfalfa and alfalfa mixtures** are estimated at 22.2 million acres, down 6 percent from last year. **All other hay** is estimated at 39.4 million acres, down 1 percent from last year. U.S. **dry bean** growers planted 1.42 million acres for 2004, up 1 percent from last year but 26 percent below two years ago. The June planted acres estimate is 7 percent above growers plans in March. Acres to be harvested are estimated at 1.33 million, down 2 percent from last year and 24 percent below 2002. Acreage planted to **flaxseed** in 2004 is 629,000 acres, up 6 percent from last year's planted acreage of 595,000 acres. Area for harvest, forecast at 608,000 acres, is 4 percent above the harvested area in 2003.

Sweet Cherry Production Forecast

The Montana sweet cherry crop is forecast at 2,200 tons, 15 percent above last year but 6 percent less than 2002. Montana's cherry growing region experienced a warm, early spring and adequate precipitation which contributed to a good bloom. Some growers experienced frost damage during May resulting in bloom damage and reduced production potential. Most growers in Flathead and Lake counties have seen favorable crop conditions thus far. Growers are expecting the outcome of the crop to vary by cherry variety.

U.S. sweet cherry production is forecast at 276,550 tons, up 17 percent from 2003 and 52 percent above 2002. The Washington crop, at a record high production of 130,000 tons, is down 4 percent from the June 1 forecast but is 12 percent above 2003. Washington's cherry crop experienced unusually warm conditions during the spring, which contributed to a good bloom. Most growers are reporting crop sizes equal to or greater than a year ago. Rain in early June caused some crop loss due to splitting. Production in California is forecast at 65,000 tons, 5 percent more than last year. Adequate chilling hours and ideal weather conditions during bloom and the growing season have contributed to this production increase. Harvest began in late April and continued through the second week of June. Fruit quality is reported to be excellent. The sweet cherry crop in Oregon is forecast at 43,000 tons, unchanged from the previous forecast but up 13 percent from 2003. Bing harvest began mid-June in The Dalles and the Hood River Valley. Early variety harvest began the first full week of June.

U.S. May Egg Production

U.S. egg production totaled 7.50 billion during May 2004, up 2 percent from last year. Production included 6.39 billion table eggs, and 1.11 billion hatching eggs, of which 1.05 billion were broiler-type and 59.0 million were egg-type. The total number of layers during May 2004 averaged 342 million, up 2 percent from a year earlier. May egg production per 100 layers was 2,192 eggs, up 1 percent from May 2003.

May 2004 Red Meat Production

Montana slaughter plants produced 1.1 million pounds, dressed weight, of red meat during May 2004, down 3 percent from May 2003 and down 4 percent from April 2004. Cattle slaughter totaled 1,400 head, 100 head below a year ago. The average live weight, at 1,169 pounds, was down 20 pounds from last year. During May there were 900 hogs slaughtered, unchanged from a year ago. The average live weight, at 245 pounds, was up 9 pounds from 2003. May sheep slaughter in the state totaled 200 head, unchanged from last year. The average live weight decreased 7 pounds to 127 pounds.

Commercial red meat production for the United States totaled 3.60 billion pounds in May, down 9 percent from the 3.94 billion pounds produced in May 2003. Beef production, at 2.07 billion pounds, was 12 percent below the previous year. Cattle slaughter totaled 2.84 million head, down 13 percent from May 2003. The average live weight was down 4 pounds from the previous year, at 1,204 pounds. Veal production totaled 13.8 million pounds, 13 percent below May a year ago. Calf slaughter totaled 64,900 head, down 15 percent from May 2003. The average live weight was 12 pounds above last year, at 355 pounds. (continued on next page)

Red Meat Production (continued)
(Continued from page 2)

Pork production totaled 1.50 billion pounds, down 3 percent from the previous year. Hog kill totaled 7.58 million head, 3 percent below May 2003. The average live weight was 1 pound below the previous year, at 266 pounds. Lamb and mutton production, at 13.0 million pounds, was down 14 percent from May 2003. Sheep slaughter totaled 188,500 head, 15 percent below last year. The average live weight was 138 pounds, up 1 pound from May a year ago

January to May 2004 commercial red meat production was 18.4 billion pounds, down 4 percent from 2003. Accumulated beef production was down 9 percent from last year, veal was down 12 percent, pork was up 3 percent from last year, and lamb and mutton production was down 1 percent.

June 1, 2004 Grain Stocks

Stocks of all wheat in Montana on June 1, 2004 were 40.4 million bushels, down 3 percent from a year ago. All wheat stocks stored on the farm amounted to 28.0 million bushels, down 3 percent from a year ago. All wheat stored off-farm amounted 12.4 million bushels, down 2 percent from a year ago. All wheat disappearance for the March - May 2004 quarter was up 6 percent from the same quarter last year to 32.8 million bushels. This compares with 31.1 million bushels last year.

Barley stocks in all positions on June 1, 2004 were 9.0 million bushels, up 47 percent from a year ago. Barley stored on-farm was 4.0 million bushels, down 11 percent from last year. Off-farm storage of barley jumped from 1.6 million bushels a year ago to 5.0 million bushels. Disappearance of barley for the March - May 2004 quarter was down 21 percent from the same quarter last year to 7.0 million bushels. Oats stocks in all positions were 765,000 bushels, down 22 percent from last year. This is the lowest June 1 oat stocks on record for Montana. On-farm stocks of oats were 700,000 bushels, down 22 percent from a year ago. Oats stored off-farm were down 13 percent from last year to 65,000 bushels. .

All wheat stored in all positions in the United States on June 1, 2004 totaled 546 million bushels, up 11 percent from a year ago. On-farm stocks are estimated at 132 million bushels, down slightly from last year. Off-farm stocks, at 414 million bushels, are up 15 percent from a year ago. The March - May 2004 indicated disappearance is 475 million bushels, up 14 percent from the same period a year earlier. Durum wheat stocks in all positions on June 1, 2004 totaled 26.5 million bushels, down 6 percent from a year ago. On-farm stocks, at 13.5 million bushels, are down 11 percent from June 1, 2003. Off-farm stocks totaled 13.0 million bushels, down slightly from a year ago. The March - May 2004 indicated disappearance of 17.8 million bushels is down 38 percent from the same period a year earlier.

Nationally, barley stocks in all positions on June 1, 2004 totaled 120 million bushels, up 74 percent from June 1, 2003. On-farm stocks are estimated at 28.3 million bushels, 91 percent above a year ago. Off-farm stocks, at 92.0 million bushels, are 69 percent above June 2003. The March - May 2004 indicated disappearance is 32.6 million bushels, 40 percent below the same period a year earlier.

U.S. oats stored in all positions on June 1, 2004 totaled 64.7 million bushels, 30 percent above June 1, 2003. Of the total stocks on hand, 27.5 million bushels are stored on farms, 33 percent more than a year ago. Off-farm stocks totaled 37.2 million bushels, up 27 percent from a year earlier. Indicated disappearance during March - May 2004 totaled 30.3 million bushels, down 8 percent from the same period a year ago.

U.S. corn stocks in all positions on June 1, 2004 totaled 2.97 billion bushels, down slightly from June 1, 2003. Of the total stocks, 1.54 billion bushels are stored on farms, down 5 percent from a year earlier. Off-farm stocks, at 1.43 billion bushels, are up 5 percent from the previous year. The March - May 2004 indicated disappearance is 2.30 billion bushels, compared with 2.15 billion bushels during the same period last year.

Potato Stocks Up 3 Percent

The 15 major potato States held 47.4 million cwt of potatoes in storage June 1, 2004, up 3 percent from last year and 10 percent above 2002. Potatoes in storage account for 12 percent of the 2003 fall storage States' production, 1 percentage point above last year. Disappearance of 357 million cwt of potatoes is down 1 percent from last year but 4 percent above two years ago. Shrink and loss, at 29.2 million cwt so far this season, is up 7 percent from last year and 9 percent above the same date in 2002. Processors in the 9 major States used 173 million cwt of potatoes this season, down 2 percent from a year ago but 4 percent above two years ago. Dehydrating usage accounts for 39.1 million cwt of the total processing, down 3 percent from last year.

May Milk Production

Milk production in the 20 major States during May totaled 13.0 billion pounds, down 0.1 percent from May 2003. April revised production, at 12.6 billion pounds, was down 0.8 percent from April 2003. The April revision represented an increase of 4 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,684 pounds for May, 13 pounds above May 2003. The number of milk cows on farms in the 20 major States was 7.72 million head, 71,000 head less than May 2003, and 5,000 head less than April 2004.

U.S. Cattle on Feed Up 1 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.62 million head on June 1, 2004. The inventory was 1 percent above June 1, 2003 but 3 percent below June 1, 2002. Placements in feedlots during May totaled 2.36 million, 2 percent above 2003 and 4 percent above 2002. Net placements were 2.28 million. During May, placements of cattle and calves weighing less than 600 pounds were 495,000, 600-699 pounds were 486,000, 700-799 pounds were 772,000, and 800 pounds and greater were 610,000. Marketings of fed cattle during May totaled 2.03 million, 9 percent below 2003 and 7 percent below 2002. Other disappearance totaled 79,000 during May, 22 percent above 2003 and 3 percent above 2002.

U.S. Hog Inventory Up 1 Percent

U.S. inventory of all hogs and pigs on June 1, 2004 was 60.1 million head. This was 1 percent above both June 1, 2003 and March 1, 2004.

Breeding inventory, at 5.91 million head, was down 2 percent from June 1, 2003, and down slightly from last quarter. Market hog inventory, at 54.2 million head, was 1 percent above both last year and last quarter.

The March - May 2004 U.S. pig crop, at 25.5 million head, was down less than one-half of one percent from 2003, and down 2 percent from 2002. Sows farrowing during this period totaled 2.86 million head, 1 percent below last year. The sows farrowed during this quarter represented 48 percent of the breeding herd. The average pigs saved per litter was 8.93 for the March - May 2004 period, compared to 8.88 last year. Pigs saved per litter by size of operation ranged from 7.70 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.87 million sows farrow during the June-August 2004 quarter, 1 percent below the actual farrowings during the same period in both 2003 and 2002. Intended farrowings for September-November 2004, at 2.84 million sows, are down slightly from the same period in 2003, but up slightly from the same period in 2002.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 38 percent of the total U.S. hog inventory, up from 35 percent last year.

Ag Prices Received

June 1, 2004 Crop Production Forecast

Montana winter wheat producers are expecting a yield of 34 bushels per acre based on June 1 conditions, down 3 bushels from last year, but up 1 bushel from last month's forecast, according to the Montana Agricultural Statistics Service. Based on the forecast of 1.6 million acres to be harvested, total production would be 54.4 million bushels, down from 63.6 million bushels last year.

Winter wheat growing conditions in Montana improved during the past month due to receiving some much needed precipitation. Condition ratings improved during May, however winter wheat conditions are not as good as a year ago. Conditions for the week ending June 6 were rated 6% very poor, 15% poor, 46% fair, 28% good, and 5% excellent compared with 2% very poor, 5% poor, 20% fair, 50% good, and 23% excellent a year ago. While significant rainfall fell in many areas of the state, the rainfall was not enough to improve subsoil moisture conditions which are currently rated 36% very short, 31% short, and 33% adequate. Producers are concerned that high temperatures, wind, and lack of moisture during the rest of the growing season would hurt yield potential. Crop development is ahead of a year ago with 66% of the crop in the boot stage compared with 58% last year and 48% for the 5-year average for the week ending June 6. Winter wheat is beginning to head as 15% of the acreage has headed compared with 7% a year ago and 18% for the 5-year average.

U.S. winter wheat production is forecast at 1.53 billion bushels, down 1 percent from the May 1 forecast and 10 percent below 2003. Based on June 1 conditions, U.S. yield is forecast at 43.6 bushels per acre, down 0.6 bushel from the previous forecast. Grain area totals 35.1 million acres, unchanged from May 1. Hard Red production is down 3 percent from a month ago to 887 million bushels. Soft Red is down less than 1 percent from last month, and now totals 397 million bushels. White production totals 247 million bushels, up 2 percent from last month.

Across the Nation, winter wheat heading progressed rapidly across the central Great Plains and southern Corn Belt through the first half of the month. At mid-month, 69 percent of the crop was headed, compared with 63 percent last year and 61 percent for the 5-year average. At that time, heading was ahead of the normal pace throughout the Great Plains and most of the Corn Belt. By May 30, heading had advanced to 87 percent complete, 7 points ahead of last year and 6 points ahead of normal. The crop was completely headed in Arkansas, California, Kansas, and Oklahoma but heading had just started in Idaho and Montana. Late-month development was most rapid in the northern Corn Belt and Pacific Northwest. Crop condition declined during the month in the Great Plains and Corn Belt, but improved in the Rocky Mountains and Pacific Northwest.

World Ag Supply and Demand Estimartes

Because planting of spring crops is still underway in the Northern Hemisphere and remains several months away in the Southern Hemisphere, these projections are highly tentative. Substantial variation may result from weather developments, economic factors, and policy changes. National Agricultural Statistics Service (NASS) forecasts are used for U.S. winter wheat. For other U.S. crops, the March 31 NASS Prospective Plantings report is used for planted acreage, and methods used to project harvested acreage and yield are noted on each table.

Projected U.S. 2004/05 ending stocks of wheat are down 4 million bushels from last month as smaller production is partially offset by larger carryin stocks. Forecast winter wheat production is 20 million bushels below last month because of lower yields, especially in several major hard red winter producing States. Projected use is unchanged from last month but is down 190 million bushels from last year. The projected price range is unchanged at $3.25 to $3.85 per bushel.

Forecast 2003/04 U.S. wheat ending stocks are up 15 million bushels due to lower-than-expected exports.

The 2004/05 global outlook for wheat has shifted modestly from last month with projected production rising, trade increasing, and stocks growing. Projected 2004/05 global production is up nearly 5 million tons, with foreign production up just over 5 million tons from last month, led by increases for Russia, the EU-25, China, and Iran. Projected global trade is also up from last month, mostly due to increased imports by Iraq of wheat purchased in 2003/04 but not shipped until 2004/05. This year's EU-25 crop is forecast at a record 128 million tons, up 1 million tons from last month and nearly 21 million tons above last year. As a result of this large crop, EU-25 exports are projected at 15 million tons, up 1 million tons from last month and up nearly 6 million tons from last year. Projected Russian exports are up 1 million tons, offsetting a decline in India's exports. Projected global consumption is raised by nearly 2 million tons. Global ending stocks are up 3 million tons from last month but are still more than 2 million tons below the 2003/04 level. The combined 2004/05 stocks of the major foreign exporters (Argentina, Australia, Canada, and the EU-25) and the former Soviet Union are only marginally higher than last month but are up over 8 million tons from last year.

The 2004/05 outlook for U.S. feed grains is unchanged from last month, with no changes to production, use, and prices. Corn prices in 2004/05 are projected to average $2.55 to $2.95 per bushel, compared with a forecast of $2.45 to $2.55 per bushel for 2003/04.

Except for grain sorghum and barley, 2003/04 feed grain forecasts are unchanged from last month. Grain sorghum exports are lowered 10 million bushels from last month but feed and residual use is raised 10 million bushels. The projected price range for 2003/04 grain sorghum is lowered 5 cents on each end to $2.40 to $2.50 per bushel. Barley imports are raised 5 million bushels. (See table on back page.)

April 2004 Agricultural Prices Received

April 2004 full month crop prices were mostly higher compared with March 2004. Montana's winter wheat average price was $3.77 per bushel, up $0.12 from the previous month; spring wheat price was up $0.02 to $3.99 per bushel; and durum wheat prices increased $0.04 to $4.15 per bushel. Feed barley prices dropped $0.07 from the previous month to $2.08 per bushel. Malt barley averaged $3.17 per bushel and the all barley price dropped $0.16 from the previous month to $2.84 a bushel.

The mid-May price for alfalfa hay rose $2.00 to $72.00 per ton, but all other hay remained unchanged at $67.00 per ton. Mid-May grain prices were mostly higher than the previous month with winter wheat price averaging $3.81 per bushel, spring wheat was $4.06 per bushel, durum wheat was $4.15 per bushel, malt barley was $3.10 per bushel and feed barley was $2.13 per bushel.

Livestock prices for the full month of April were mixed compared to the previous month. Steer and heifer prices decreased $0.80 to $95.20 per cwt., while cows increased $3.60 to $52.20. The average price for calves was unchanged at $114.00 per cwt. Sheep prices rose $1.90 to $34.80 per cwt and lamb prices were down $14.00 to $107.00 per cwt. Milk prices increased $0.90 per cwt from March to $14.50 per cwt. Mid-month May steer and heifer prices averaged $96.70 per cwt.; cows averaged $54.60 per cwt.; calves averaged $112.00 per cwt.; and milk prices averaged a record high of $19.10 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $3.79, up $0.03, spring wheat was $3.94, up $0.02; durum wheat was $4.22, up $0.08; the all barley price was $2.78, down $0.01, and steer and heifer prices were $88.90, up $1.00 per cwt.

The U.S. mid-May winter wheat price was $3.64 per bushel, spring wheat was $3.90 per bushel, durum wheat was $4.19 per bushel, all wheat was $3.73 per bushel, malt barley was $3.04 per bushel, feed barley was $2.29 per bushel, and all barley was $2.79. Steer and heifer prices were $92.60 per cwt, cow prices were $52.40, calves were $122.00 per cwt., all hog prices were $57.80 per cwt, and all egg prices were $0.468 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in May at 132, based on 1990-92=100, is 7 points (5.6 percent) above the April Index. This is the highest index level since records began in 1910.

April 2004 Red Meat Production

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during April 2004, down 6 percent from April 2003, but up 2 percent from March 2004. Cattle slaughter totaled 1,500 head, equal to that one year ago. The average live weight, at 1,170 pounds, decreased 10 pounds from last year.

During April there were 900 hogs slaughtered, down 100 head from a year ago. The average live weight, at 238 pounds, was down 2 pounds from last year. April sheep slaughter in the state totaled 200 head, down from 300 head in April 2003. The average live weight decreased 17 pounds to 127 pounds.

Commercial red meat production for the United States totaled 3.71 billion pounds in April, down 3 percent from the 3.85 billion pounds produced in April 2003.

Beef production, at 1.96 billion pounds, was 9 percent below the previous year. Cattle slaughter totaled 2.70 million head, down 9 percent from April 2003. The average live weight was down 9 pounds from the previous year, at 1,200 pounds.

Veal production totaled 13.9 million pounds, 13 percent below April a year ago. Calf slaughter totaled 70,700 head, down 11 percent from April 2003. The average live weight was 7 pounds below last year, at 329 pounds.

Pork production totaled 1.73 billion pounds, up 4 percent from the previous year, and set a record monthly high. Hog kill totaled 8.65 million head, 4 percent above April 2003. The average live weight was unchanged the previous year, at 268 pounds.

Lamb and mutton production, at 17.4 million pounds, was down 11 percent from April 2003. Sheep slaughter totaled 256,000 head, 14 percent below last year. The average live weight was 136 pounds, up 5 pounds from April a year ago.

January to April 2004 commercial red meat production was 14.8 billion pounds, down 2 percent from 2003. Accumulated beef production was down 8 percent from last year, veal was down 12 percent, pork was up 5 percent from last year, and lamb and mutton production was up 2 percent.

Livestock County Estimates Now Available

County estimates for the January 1, 2004, cattle and calf inventory are now available at www.nass.usda.gov/mt under county data. District-level estimates for December 1, 2003 All Chickens and county-level estimates for December 1, 2003 Hogs and Pigs and January 1, 2004 Sheep and Lambs will be available at a later date.

The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county estimates are based on livestock surveys conducted at the end of 2003 and the beginning of 2004.

Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on the livestock inventories. Thank you to all the farmers and ranchers who participated in the survey!

U.S. Cattle on Feed Down 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.36 million head on May 1, 2004. The inventory was 2 percent below May 1, 2003 and 6 percent below May 1, 2002.

Placements in feedlots during April totaled 1.60 million, 14 percent below 2003 but 10 percent above 2002. Net placements were 1.51 million. During April, placements of cattle and calves weighing less than 600 pounds were 316,000, 600-699 pounds were 302,000, 700-799 pounds were 567,000, and 800 pounds and greater were 418,000.

Marketings of fed cattle during April totaled 1.89 million, 5 percent below both 2003 and 2002. Other disappearance totaled 97,000 during April, 54 percent above 2003 and 17 percent above 2002.

April Milk Production Down 0.9 Percent

Milk production in the 20 major States during April totaled 12.6 billion pounds, down 0.9 percent from April 2003. March revised production, at 12.8 billion pounds, was down 1.7 percent from March 2003. The March revision represented an increase of 0.2 percent or 22 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,630 pounds for April, 3 pounds above April 2003. The number of milk cows on farms in the 20 major States was 7.72 million head, 81,000 head less than April 2003, but 2,000 head more than March 2004.

Barley 2003 Agricultural Chemical Use

Montana barley producers applied nitrogen fertilizers to 92 percent of the acreage planted for the 2003 crop. A total of 44.2 million pounds of nitrogen fertilizer was applied to the 1.1 million acres of barley planted in Montana. Of the planted acreage 88 percent received phosphate fertilizer while potash was used on 52 percent of the acres. Total application of phosphate was 30.2 million pounds and potash totaled 9.7 million pounds

Barley producers applied 1.005 million pounds of herbicides to 93 percent of the barley acres planted in 2003. The most common herbicide applied was Glyphosate with 45 percent of the acreage sprayed. The next two most popular herbicides applied and percent of acreage sprayed were 2,4-D with 36 percent and MCPA with 20 percent.

Nationally, nitrogen was applied to 93 percent of the 2003 barley planted acreage in the following Program States: California, Idaho, Minnesota, Montana, North Dakota, Pennsylvania, South Dakota, Utah, Washington, Wisconsin, and Wyoming. Nitrogen applications ranged from 37 percent of the acres treated in Wisconsin to 99 percent in Washington. Barley growers used an average of 1.4 applications per acre while applying 40 pounds of nitrogen per treatment. This computes to a crop year rate per acre of 60 pounds. In the Program States, 79 percent of the acres of barley planted received a phosphate application, while potash was applied to 29 percent of the acreage planted to barley.

Herbicides were applied to 93 percent of the program states barley planted acreage in 2003. MCPA was the most widely applied herbicide with 45 percent of the planted acreage being treated. It was applied at a rate of 0.32 pounds per acre. The next three most widely applied herbicides applied to barley, namely 2,4-D, bromoxynil, and fenoxaprop, were applied to 30, 29, and 28 percent, respectively, of the planted barley acreage.

In 2003 program states, 3 percent of the barley planted acreage was treated with insecticides. The insecticides applied to barley were all put on less than one percent of the planted acres; therefore, no area applied values were published. Based on total pounds applied, methyl parathion at 9,000 pounds, was the most widely used insecticide on barley acres planted in the Program States. Fungicides were applied to 7 percent of the barley planted acreage in the States in the survey program.

May Potato Stocks

Montana potato producers held 500,000 cwt. of potatoes in storage on May 1, 2004, up 25 percent from the previous year. Fifteen percent of the 2003 Montana potato crop is still in storage, compared with 12 percent last year.

The 15 major potato States held 84.8 million cwt of potatoes in storage May 1, 2004, up 2 percent from last year and 4 percent above 2002. Potatoes in storage account for 21 percent of the 2003 fall storage States' production, up 1 percentage point from last year.

Disappearance of 319 million cwt of potatoes is down 2 percent from last year but 4 percent above two years ago. Shrink and loss, at 27.0 million cwt so far this season, is up 5 percent from last year and 8 percent above two years ago. This disappearance and loss includes unmarketable Maine potatoes disposed of through the Natural Resources Conservation Service's Environmental Quality Incentives Program.

Processors used 154 million cwt of 2003 crop potatoes so far this season, down 3 percent from a year ago but 4 percent above two years ago. April usage of 16.7 million cwt is 2 percent above last year and up 1 percent from two years ago. Dehydrators used 34.6 million cwt to date, down 4 percent from last year.

Western States held 59.3 million cwt of potatoes in storage on May 1, down 6 percent from last year and 5 percent below two years ago. Idaho's potato stocks are down 3 percent from last year, Washington decreased 9 percent, and Colorado's storages held 38 percent less. Potato sheds in Oregon stored 10 percent more than last year, California increased 20 percent, and Montana's storages gained 25 percent.

April U.S. Egg Production Up 2 Percent

U.S. egg production totaled 7.34 billion during April 2004, up 2 percent from last year. Production included 6.28 billion table eggs, and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 58.0 million were egg-type. The total number of layers during April 2004 averaged 342 million, up 1 percent from a year earlier. April egg production per 100 layers was 2,148 eggs, up 1 percent from April 2003.

All layers in the U.S. on May 1, 2004, totaled 342 million, up 1 percent from a year ago. The 342 million layers consisted of 282 million layers producing table or commercial type eggs, 57.2 million layers producing broiler-type hatching eggs, and 2.49 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 2004, averaged 71.0 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.85 billion eggs during April 2004, up 2 percent from a year ago. The average number of layers during April, at 319 million, was up 1 percent from a year ago.

Egg-Type Chicks Hatched Down 1 Percent

Egg-type chicks hatched during April totaled 37.5 million, down 1 percent from April 2003. Eggs in incubators totaled 34.1 million on May 1, 2004, down 3 percent from a year ago.

Domestic placements of egg-type pullet chicks for future hatchery supply flocks by leading breeders totaled 311,000 during April 2004, up 11 percent from April 2003.

Broiler Hatch Up 2 Percent

The April 2004 hatch of broiler-type chicks, at 774 million, was up 2 percent from April of the previous year. There were 661 million eggs in incubators on May 1, 2004, up 2 percent from a year earlier. Leading breeders placed 6.4 million broiler-type pullet chicks for future domestic hatchery supply flocks during April 2004, down 5 percent from April 2003.

Hired Workers Up 15 Percent, Wage Rates Up 1 Percent From a Year Ago

There were 1,077,000 hired workers on the Nation's farms and ranches during the week of April 11-17, 2004, up 15 percent from a year ago. Of these hired workers, 825,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 252,000 workers.

Farm operators paid their hired workers an average wage of $9.22 per hour during the April 2004 reference week, up 6 cents from a year earlier. Field workers received an average of $8.46 per hour, up 6 cents from last April, while livestock workers earned $8.95 per hour compared with $8.75 a year earlier. The field and livestock worker combined wage rate, at $8.58 per hour, was up 9 cents from last year.

The number of hours worked averaged 40.7 hours for hired workers during the survey week, up 1 percent from a year ago.

The largest increases in the number of hired farm workers from last year occurred in the Pacific (Oregon and Washington), Southeast (Alabama, Georgia and South Carolina), Appalachian II (Kentucky, Tennessee and West Virginia) and Mountain I (Idaho, Montana and Wyoming) regions and in California. In the Pacific region and California, the development of fruit, vegetables and spring planted crops was nearly two weeks ahead of normal, which heightened the demand for hired workers. Although moderate rains fell in parts of the Southeast region, the majority of the region remained drier than normal. Irrigation of cropland increased and supplemental feeding of livestock became active as pastures deteriorated, both of which caused greater demand for hired workers. In the Appalachian II region, continued expansion in the equine and poultry industries kept the demand for livestock workers at a high level. In the Mountain I region, above normal temperatures and below normal precipitation led to increased farm and ranch activity, which caused a greater need for hired workers.

The largest decreases in the number of hired farm workers from a year ago were in the Corn Belt I (Illinois, Indiana and Ohio), Delta (Arkansas, Louisiana and Mississippi), Southern Plains (Oklahoma and Texas), Northeast I (New York and New England) and Appalachian I (North Carolina and Virginia) regions. In the Corn Belt I region, declining cattle and poultry inventories lessened the need for livestock workers. Favorable weather prior to the reference week in the Delta region allowed field work to progress rapidly, thereby decreasing the need for workers during the reference week. In the Southern Plains region, growth of pastures and ranges was ahead of normal, which lessened the need for supplemental feeding and reduced the demand for hired workers. Cool temperatures and wet conditions in the Northeast I and Appalachian I regions limited field activity, causing fewer hired workers to be needed.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Appalachian II, Mountain I, Pacific and Mountain III (Arizona and New Mexico) regions. The higher wages in the Appalachian II region were mainly because of a higher percentage of equine workers in the work force. In the Mountain I region, wages were up due to a larger concentration of salaried workers putting in fewer hours. The higher wages in the Pacific region were because of the increased skilled worker demand for the rapidly developing fruit. In the Mountain III region, wages were up because of a higher proportion of full-time, salaried workers in the work force.

Wage Rates for Hired Workers, by Region & U.S., April 6-12, 2003 & April 11-17, 2004 1/

U.S. Agricultural Exports Forecast

U.S. agricultural exports for fiscal year 2004 are forecast at a record $61.5 billion, exceeding the fiscal 1996 record of $59.8 billion. Forecast exports are increased $2.5 billion from February and are $5.3 billion over fiscal 2003. Since February, horticultural product exports are boosted by $700 million; corn is up $400 million and wheat $300 million. Upward revisions to beef, pork, and cattle by-products raise livestock product exports $1 billion. Volume of bulk exports, at 119.7 million tons, exceeds February by 3.0 million tons, and is the largest since 1995.

Export growth in fiscal 2004 reflects higher volumes and higher unit values for feed grains, rice, cotton, beef, and many horticultural products. The improved outlook is due to favorable exchange rates, strong global economic growth, reduced competition for wheat, corn, and cotton markets, and China's robust demand for oilseeds and cotton. On the other hand, a smaller U.S. soybean crop and BSE-related bans on U.S. beef exports are factors restraining export expansion.

U.S. agricultural imports are forecast at a record $51.5 billion, a gain of $5.8 billion over last year. Horticultural products account for nearly half of the growth. The agricultural trade surplus is forecast at $10 billion.

U.S. Agricultural Trade, Fiscal Years 1999-2004, Year Ending September 30

May 1 Crop Production and Hay Stocks

Based on May 1 conditions, **Montana winter wheat** producers are expecting a yield of 33 bushels per acre, down 4 bushels from last year's final yield estimate. If realized, the total production of 52.8 million bushels would be down 17 percent from last year's 63.6 million bushels due to lower harvested acreage and yield. In the fall of 2003, Montana producers seeded 1.85 million acres of winter wheat, up 50,000 acres from the previous year. Producers expect to harvest 1.6 million acres, down 120,000 acres from last year. Dry planting conditions in some areas of the State coupled with the lack of spring moisture has resulted in more acres of winter wheat abandoned than normal. Producers are expecting to abandon 250,000 acres compared with 80,000 last year and the 10 year average of 211,000 acres.

As of May 9th, Montana's **winter wheat** crop was rated 14% very poor, 27% poor, 38% fair, 18% good, and 3% excellent, down significantly from last year's ratings of 1% very poor, 6% poor, 20% fair, 55% good, and 18% excellent. The winter wheat crop broke dormancy faster than normal this year due to warmer temperatures. All of the winter wheat acreage was green and growing by the end of April.

On May 1, **Montana hay** producers had an estimated 790,000 tons of hay on hand 163,000 tons less than they had on hand a year ago. Producers began feeding hay earlier than normal and continued heavy feeding all season. Hay production for 2003 was 4.6 million tons, 2 percent larger than the 2002 crop. Disappearance from December 2003 to May 1, 2004 totaled 3.20 million tons, up 2 percent from the same period a year earlier.

Winter wheat production for the **United States** is forecast at 1.55 billion bushels, down 9 percent from 2003. Based on May 1 conditions, the U.S. yield is forecast at 44.2 bushels per acre, 2.5 bushels less than last year. Grain area totals 35.1 million acres, down 4 percent from last season. The portion of the winter wheat crop rated good to excellent on May 2, at 48 percent, was 7 percentage points lower than a year ago. Hard Red production is down 14 percent from a year ago to 910 million bushels. Soft Red is up 5 percent and totals 399 million bushels. White production totals 242 million bushels, down 9 percent from a year ago.

U.S. all hay stored on farms May 1, 2004 totaled 25.9 million tons, up 17 percent from the previous year. This increase was mainly the result of a higher hay production in 2003. Disappearance of hay from December 1, 2003 - May 1, 2004, totaled 84.9 million tons, 5 percent greater than the disappearance of 81.0 million tons for the same period a year earlier.

Thirty-three of the 48 reporting States had higher hay stocks than a year ago. Most of the States reporting an increase in stocks were located in the eastern and central Corn Belt, Southeast, central Great Plains, central Rocky Mountains, and along the middle Atlantic and Pacific Coasts. Compared to May 2003, stocks more than doubled in the Ohio Valley due to an increase in production and mild winter weather. Stocks declined in Idaho, Montana, Nevada, and North Dakota as a result of additional hay feeding caused by unfavorable weather conditions and a decline in 2003 production compared to 2002.

Winter Wheat: Acreage, Yield, & Production, by Selected States & U.S. 2003 & Forecast May 1, 2004

2003 Meat Animals Production Disposition and Income

Cash receipts from the 2003 marketings of cattle, hogs, and sheep in **Montana** totaled $1.0 billion, up 10 percent from 2002. Cash receipts from the sales of cattle and calves were up 10 percent from 2002 to $955 million. Marketings of cattle weighing 500 lbs or more, at 1.33 million head, were down 6 percent from 2002. Marketings of calves weighing less than 500 lbs increased 17 percent from the previous year to 299,000 head. The average price received in 2003 for cattle weighing over 500 lbs increased $11.70 per cwt to $82.20 per cwt. Season average prices for calves weighing less than 500 lbs increased $15.90 per cwt to $106.00 per cwt.
The January 1, 2004 value of cattle and calf inventory was $2.3 billion, up 13 percent from 2003.

Cash receipts from the sale of hogs in Montana jumped 13 percent from 2002 to $30.1 million. Marketings of hogs and pigs rose 3 percent from the previous year to 343,400 head. The average prices received for hogs increased $3.80 from the previous year to $39.70 per cwt. The value of the hog and pig inventory on December 1, 2003 was $11.7 million, down 9 percent from last year.

Sheep and lamb cash receipts in Montana were up16 percent from the previous year to $22.4 million. Lambs experienced a significant increase in price during 2003. Marketings of sheep and lambs in 2003 were 42,000 and 218,000 head, respectively. Sheep marketings were down 21,000 head from last year while lamb marketings were down 6,000 head. The average price for lambs rose $22.70 to $103.00 per cwt. and sheep were $8.20 above last year at $34.80 per cwt. The January 1, 2004 sheep and lamb inventory value was $36.0 million, up 18 percent from the previous year.

The 2003 gross income from cattle and calves, hogs and pigs, and sheep and lambs for the **U.S.** totaled $56.6 billion, up 17 percent from 2002. Gross income increased for cattle and calves, hogs and pigs, and sheep and lambs. Cattle and calves increased 18 percent, while hogs and pigs increased 11 percent, and sheep and lambs increased 18 percent.

Total 2003 cash receipts from marketings of meat animals increased 17 percent to $56.2 billion. Cattle and calves accounted for 80 percent of this total, hogs and pigs 19 percent, and sheep and lambs 1 percent. Production increased for hogs and pigs, but declined for both cattle and calves and sheep and lambs. Average prices were up for all three species.

Cattle and Calves: Cash receipts from marketings of cattle and calves increased from $38.0 billion in 2002 to $45.1 in 2003, a 19 percent increase. All cattle and calf marketings totaled 56.8 billion pounds in 2003, up 1 percent from 2002. The U.S. annual average price per 100 pounds live weight for cattle was $79.70 an increase of $13.20 from 2002. For calves, the annual average price increased $5.60 to $102.00.

Hogs and Pigs: Cash receipts from hogs and pigs totaled $10.6 billion during 2003, up 11 percent from 2002. Marketings totaled 27.2 billion pounds in 2003, down less than one-half of one percent from 2002. The
U.S. annual average price per 100 pounds live weight increased from $33.40 in 2002 to $37.20 in 2003.

Sheep and Lambs: Cash receipts from marketings of sheep and lambs in 2003 were $505 million, up 18 percent from 2002. Marketings decreased 7 percent to 607 million pounds. The U.S. annual average price per 100
pounds live weight for sheep increased from $28.20 in 2002 to $34.90 in 2003 while for lambs, the annual average price increased $20.30 to $94.40.

2003 Milk Production, Disposition and Income

Montana's dairies produced 346 million pounds of milk in 2003, up 1 percent from 2002. There was an average of 18,000 milk cows on farms and ranches during the year, unchanged from the previous year. The average number of pounds produced per cow in 2003 was 19,222 pounds, 278 pounds more than 2002.

Cash receipts from marketings of milk during the year in Montana were $42.2 million dollars, up 2 percent from 2002. Producers received an average of $12.40 per cwt, an increase of $0.10 per cwt from last year. Total marketings of milk, at 340 million pounds, were up 1 percent from a year ago. A total of 6 million pounds of milk were used on farms and ranches where produced, 3 million pounds of which were fed to calves and 3 million pounds consumed as milk, cream, and butter.

Nationally, milk production increased 0.1 percent in 2003 to 170.3 billion pounds. The rate per cow, at 18,749 pounds, was 141 pounds above 2002. The annual average number of milk cows on farms, at 9.08 million head, was 55,0[illegible] head less than 2002.

Cash receipts from marketings of milk during 2003 totaled $21.2 billion, 3 percent above 2002. Producer returns averaged $12.55 per hundredweight, 3 percent above 2002. Marketings totaled 169 billion pounds, 0.2 percent above 2002. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.14 billion pounds of milk were used on farms where produced, 0.4 percent less than 2002. Calves were fed 86 percent of this milk, with the remainder consumed in producer households.

2003 Poultry Production and Value

Montana's value of egg production in 2003 was $5.8 million, up 45 percent from last year. Egg production in 2003 totaled 107 million eggs, up 3 percent from the previous year. The average price for eggs was 65 cents per dozen, up 19 cents from 2002.

In the United States, the combined value of production from broilers, eggs, turkeys and the value of sales from chickens in 2003, was $23.3 billion, up 14 percent from the $20.5 billion in 2002. Of the combined total, 65 percent was from broilers, 23 percent from eggs, 12 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced during 2003 was $15.2 billion, up 13 percent from 2002. The total number of broilers produced in 2003 was 8.49 billion, down 1 percent from 2002. The total amount of live weight broilers produced in 2003 was 44.0 billion pounds, down slightly from 2002. The 2003 average price per pound on a live weight equivalent basis was 34.6 cents per pound, compared with 30.5 cents in 2002.

Value of all egg production in 2003 was $5.32 billion, up 24 percent from the $4.28 billion in 2002. Egg production totaled 87.2 billion eggs, down slightly from the 87.3 billion eggs produced 2002. In 2003, all eggs averaged 73.1 cents per dozen, compared with 58.9 cents in 2002. (See table on back page)

March Agricultural Prices Received

March 2004 full month crop prices were higher compared with February 2004. **Montana's** winter wheat average price was $3.65 per bushel, up $0.05 from the previous month; spring wheat price was up $0.04 to $3.97 per bushel; and durum wheat prices increased $0.12 to $4.11 per bushel. Feed barley prices rose $0.04 from the previous month to $2.15, but oats prices dropped $0.03 to $1.63 per bushel.

The mid-April price for alfalfa hay dropped $3.00 to $70.00 per ton and all other hay increased $2.00 to $67.00 per ton. Mid-April grain prices were higher than the previous month with winter wheat price averaging $3.74 per bushel, spring wheat was $3.99 per bushel, durum wheat was $4.17 per bushel, and feed barley was $2.28 per bushel.

Livestock prices for the full month of March in Montana were mixed compared with the previous month. Steer and heifer prices increased $3.70 to $96.00 per cwt. and cows rose $1.00 to $48.60. The average price for calves was up $2.00 to $114.00 per cwt. Sheep prices fell $6.10 to $32.90 per cwt and lamb prices dropped $2.00 to $121.00 per cwt. Milk prices increased $0.80 per cwt from last month to $13.80 per cwt. Steer and heifer prices for mid-April averaged $96.50 per cwt.; cows averaged $50.80 per cwt.; calves averaged $114.00 per cwt.; and milk prices averaged $15.10 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $3.76, up $0.08, spring wheat was $3.92, up $0.09; durum wheat was $4.14, up $0.06; the all barley price was $2.79, up $0.07, and steer and heifer prices were $87.90, up $5.60 per cwt.

The U.S. mid-April winter wheat price was $3.76 per bushel, spring wheat was $3.88 per bushel, durum wheat was $4.20 per bushel, all wheat was $3.82 per bushel, malt barley was $2.98 per bushel, feed barley was $2.17 per bushel, and all barley was $2.73. Steer and heifer prices were $89.70 per cwt, cow prices were $49.00, calves were $116.00 per cwt., all hog prices were $45.10 per cwt, and all egg prices were $0.769 per dozen.

The April All Farm Products Index is 124 percent of its 1990-92 base, up 2.5 percent from the March index and 23 percent above the April 2003 index.

United States Index Summary

INDEX (1990-92=100)	March 2003	April 2003	March 2004	April 2004

Specialty Crop County Estimates for 2003

The Montana Agricultural Statistics Service released county estimates for the 2003 oilseeds and pulse crops. This is the fifth year of the data series. Data for 1998-2002 are currently being reviewed and will be available soon on our website or by contacting our office. County-level data is not always published because of established disclosure rules. Funding for these county estimates was provided by the Montana Department of Agriculture.

All dry bean production for 2003 totaled 233,000 cwt. The south central district produced the most at 92,200 cwt, followed by the Southeast district with 61,400 cwt and the Northeast district produced 58,500 cwt. **Pinto bean** production during 2003 was 209,000 cwt. for the state. Carbon county had the highest pinto bean production with 46,300 cwt. The second and third leading counties were Dawson and Prairie with 38,000 cwt. and 34,300 cwt. produced, respectively. The South Central district produced the largest crop of pinto beans followed by the Southeast district. As for **garbanzo beans**, county-level data was not published to avoid disclosure of individual information. The Northeast district produced the most garbanzo beans at 17,200 cwt., followed by the North Central district with 4,800 cwt.

Sheridan was the number one **lentil** producing county again in 2003, with 106,000 cwt. harvested. The number two county was Roosevelt with total production of 69,500 cwt., and third was Daniels county with 22,000 cwt. Growers from the Northeast district produced 83 percent of the state's lentils. **Dry edible pea** estimates indicate that Sheridan county was the largest producer in 2003 with 91,000 cwt. grown, followed by Valley county at 82,300 cwt., and Roosevelt county at 80,600 cwt. Northeast district farmers produced 74 percent of the state's dry peas. Liberty was the leading county in **Austrian winter pea** production during 2003 with 11,000 cwt. and Richland county was second with 6,600 cwt. produced.

Daniels was by far the largest **canola** producing county in 2003 with 6.0 million pounds, or 24 percent of the state's canola. The second largest county was Sheridan with 4.2 million pounds produced, followed by Valley county with 3.3 million pounds. The Northeast district produced 66 percent of the crop. Richland was the number one **safflower** producing county with 9.7 million pounds. The next leading county was Roosevelt at 4.8 million pounds, followed by Dawson's production of 4.4 million pounds. Seventy-nine percent of the state's safflower was produced in the Northeast district.

Sheridan led the state in **flaxseed** production for 2003 at 84,000 bushels. The next largest county was Valley with 78,000 bushels, followed by Roosevelt County at 12,000 bushels. Ninety-two percent of the state's flaxseed was produced in the Northeast district. Montana's total **sunflower** production was 915,000 pounds in 2003. The South Central district accounted for 110,000 pounds. Data for the other districts was combined to avoid disclosing individual information. The leading **mustard seed**-producing counties were Sheridan with 4.4 million pounds and Valley with 2.3 million pounds. Ninety-two percent of Montana's mustard seed was produced in the Northeast district.

All of the preceding information, plus yield, planted and harvested acres by county, district, and state levels are now available from the Montana Agricultural Statistics Service. They are available in printed form or can be accessed by visiting our website at www.nass.usda.gov/mt/. The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county statistics are based on an acreage and production survey of Montana farmers and ranchers conducted in the fall of 2003. Thanks to those who participated!

Montana and U.S. Potato Stocks Up from Last Year

Montana potato producers held 2.1 million cwt. of potatoes in storage on April 1, 2004, up 11 percent from the previous year. Sixty-three percent of the 2003 Montana potato crop is still in storage, compared with 59 percent in 2002.

The 15 major potato States held 126 million cwt of potatoes in storage April 1, 2004, up less than 1 percent from last year and 5 percent above 2002. Potatoes in storage account for 31 percent of the 2003 fall storage States' production, unchanged from last year.

Disappearance of 278 million cwt of potatoes is down 1 percent from last year but 4 percent above two years ago. Shrink and loss, at 25.0 million cwt so far this season, is up 4 percent from last year and 6 percent above two years ago. This disappearance and loss includes unmarketable Maine potatoes disposed of through the Natural Resources Conservation Service's Environmental Quality Incentives Program. (Continued on inside page)

Montana and U.S. Potato Stocks Up from Last Year

(Continued from front page)

Processors used 137 million cwt of 2003 crop potatoes so far this season, down 4 percent from a year ago but 4 percent above two years ago. March usage of 16.9 million cwt is 6 percent below last year and 1 percent below two years ago. Dehydrators used 30.3 million cwt to date, down 5 percent from last year.

Western States held 86.9 million cwt of potatoes in storage on April 1, down 6 percent from last year and 1 percent below two years ago. Idaho's potato stocks are down 5 percent from last year, Washington decreased 7 percent, Colorado's storages held 29 percent less, and California lost 6 percent. Potato sheds in both Oregon and Montana stored 11 percent more than last year at this time.

Central States accounted for 31.8 million cwt of potato stocks on April 1, up 22 percent from last year and 21 percent above two years ago. North Dakota stocks increased 42 percent from last year's level, Minnesota's storages held 25 percent more, Wisconsin went up 3 percent, and Michigan gained 7 percent. Nebraska and Ohio combined are up 25 percent.

Eastern States stored 7.75 million cwt of potatoes on April 1, up 12 percent from last year and 31 percent above two years ago. Maine's stocks are up 3 percent, New York's gained 241 percent, and Pennsylvania stocks increased 25 percent.

March 2004 Red Meat Production

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during March 2004, up 3 percent from March 2003 and 9 percent above February 2004. Cattle slaughter totaled 1,400 head, unchanged from a year ago. The average live weight, at 1,153 pounds, decreased 16 pounds from last year.

During March there were 1,100 hogs slaughtered, up 100 head from a year ago. The average live weight, at 237 pounds, was up 8 pounds from last year. March sheep slaughter in the state totaled 300 head, up from 200 head in March 2003. The average live weight rose one pound to 127 pounds.

Commercial red meat production for the United States totaled 3.95 billion pounds in March, up 6 percent from the 3.71 billion pounds produced in March 2003.

Beef production, at 2.11 billion pounds, was 3 percent above the previous year. Cattle slaughter totaled 2.87 million head, up 4 percent from March 2003. The average live weight was down 17 pounds from the previous year, at 1,217 pounds. Veal production totaled 14.2 million pounds, 14 percent below March a year ago. Calf slaughter totaled 76,900 head, down 10 percent from March 2003. The average live weight was 15 pounds below last year, at 308 pounds.

Pork production totaled 1.80 billion pounds, up 11 percent from the previous year, and set a record monthly high. Hog kill totaled 9.04 million head, 11 percent above March 2003. The average live weight was unchanged the previous year, at 268 pounds.

Lamb and mutton production, at 22.1 million pounds, was up 22 percent from March 2003. Sheep slaughter totaled 306,800 head, 17 percent above last year. The average live weight was 144 pounds, up 6 pounds from March a year ago.

January to March 2004 commercial red meat production was 11.1 billion pounds, down 2 percent from 2003. Accumulated beef production was down 7 percent from last year, veal was down 11 percent, pork was up 5 percent from last year, and lamb and mutton production was up 6 percent.

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.75 million head on April 1, 2004. The inventory was slightly above April 1, 2003 and 7 percent below April 1, 2002. The inventory included 6.62 million steers and steer calves, down 2 percent from the previous year. This group accounted for 62 percent of the total inventory. Heifers and heifer calves accounted for 4.06 million head, up 4 percent from 2003.

Placements in feedlots during March totaled 1.80 million, 11 percent below 2003 and 8 percent below 2002. Net placements were 1.74 million. During March, placements of cattle and calves weighing less than 600 pounds were 347,000, 600-699 pounds were 346,000, 700-799 pounds were 641,000, and 800 pounds and greater were 470,000.

Marketings of fed cattle during March totaled 1.97 million, 9 percent above 2003 and 8 percent above 2002. Other disappearance totaled 67,000 during March, 8 percent above 2003 and 3 percent below 2002.

March Egg Production Up 1 Percent

U.S. egg production totaled 7.53 billion during March 2004, up 1 percent from last year. Production included 6.44 billion table eggs, and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 58.0 million were egg-type. The total number of layers during March 2004 averaged 341 million, up slightly from a year earlier. March egg production per 100 layers was 2,209 eggs, up 1 percent from March 2003.

All layers in the U.S. on April 1, 2004, totaled 342 million, up 1 percent from a year ago. The 342 million layers consisted of 283 million layers producing table or commercial type eggs, 56.6 million layers producing broiler-type hatching eggs, and 2.44 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2004, averaged 72.0 eggs per 100 layers, up 2 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 7.03 billion eggs during March 2004, up 1 percent from a year ago. The average number of layers during March, at 318 million, was up slightly from a year ago.

March U.S. Milk Production Down 1.8 Percent

Milk production in the 20 major States during March totaled 12.8 billion pounds, down 1.8 percent from March 2003. February revised production, at 11.8 billion pounds, was up 1.4 percent from February 2003. However, adjusting for leap year, February milk production was down 2.1 percent on a per day basis from last year. The February revision represented a decrease of 35 million pounds or 0.3 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,656 pounds for March, 10 pounds below March 2003. The number of milk cows on farms in the 20 major States was 7.71 million head, 96,000 head less than March 2003, and 2,000 head less than February 2004.

January-March Milk Production Down 0.9 Percent

Milk production in the U.S. dur the January-March quarter totaled 4 billion pounds, down 0.9 percent from the January-March quarter last year. The average number of milk cows in the U.S. during the quarter was 8.99 million head, 153,000 head less than the same period last year.

March 2004 Planting Intentions

Montana **spring wheat** producers expect to seed 2.8 million acres in 2004 down 2 percent from last year. If realized, spring wheat intended seedings would be the lowest seeded acreage since 1993. **Winter wheat** seedings, at 1.85 million acres, are up 3 percent from last year and the largest acreage seeded since 1996. Winter wheat conditions at the end of March 2004 were better than a year ago and were rated 8 percent very poor, 12 percent poor, 33 percent fair, 40 percent good and 7 percent excellent. While conditions are better than a year ago, the lack of precipitation in many areas of the state is a still a major concern for the winter wheat producers. Producers are expecting to plant 620,000 acres of **durum wheat** this spring, down 3 percent from last year's highest planting since 1956. Adding the winter wheat seeded last fall to the other spring and durum wheat intended seedings shows 5.27 million acres of **all wheat** to be planted, down 20,000 acres from 2003.

Montana **barley** producers intend to plant an estimated 950,000 acres, down 14 percent from the previous year and the lowest since 1953. The intended seeded acreage for **oats** is expected to be 130,000 acres, up 10,000 acres from the previous year. Growers intend to harvest 50,000 acres of the 2004 oat crop for grain, 5,000 acres more than a year ago. **Corn** growers intend to plant 70,000 acres, up 5,000 acres from last year. Farmers intend to plant 54,000 acres of **sugar beets**, up 4 percent from 2003. The area planted to **dry beans** is expected to be 14,000 acres, up 8 percent from last year. **Hay** growers are expected to harvest 2.6 million acres, which is up 6 percent from last year's figure.

In the United States, **all wheat** planted area is expected to total 59.5 million acres in 2004, down 4 percent from 2003. **Winter wheat** planted area for the 2004 crop is 43.4 million acres, down 3 percent from 2003. The 2004 **other spring wheat** planted acreage is estimated at 13.3 million, down 4 percent from last year. Of the total, about 12.7 million acres are Hard Red Spring wheat. Area planted to **durum wheat** is intended to total 2.76 million acres, down 5 percent from a year ago.

Growers in the United States intend to seed 4.68 million acres of **barley** for 2004, down 12 percent from last year. North Dakota's expected acreage, at 1.80 million, is also 12 percent below their 2003 planted area. Acres seeded and to be seeded to **oats** is expected to total 4.31 million acres down 6 percent from last year's planted area. Growers expect to harvest 2.07 million acres for grain, down 7 percent from the 2003 harvested acreage of 2.22 million. Growers intend to plant 79.0 million acres of corn for all purposes in 2004, up fractionally from both 2002 and 2003. Area planted to **sugar beets** for the 2004 crop year is expected to total 1.36 million acres, slightly below the 2003 planted acreage. Prospective planting of **dry beans** in the U.S. totals 1.33 million acres, down 5 percent from last year and 31 percent below two years ago. Relatively low prices for the 2003 crop contribute to the expected reduction in planted acres.

U.S. producers expect to harvest 63.7 million acres of **all hay** in 2004, up 1 percent form last year. Adequate soil moisture in most of Texas, lower Mississippi Delta, and Great Lakes States enhanced producers expectations to harvest more hay. Extreme dry conditions have left soil moisture very short and water supplies are expected to be inadequate in the central Great Plains and central Rocky Mountains, which decreased harvest intentions.

The Montana 2004 prospective plantings and grain stocks estimates in this issue are the result of surveying approximately 2,000 Montana farmers in March. SPECIAL THANKS to those operators that were interviewed and responded to the survey.

March 1, 2004 Grain Stocks

Stocks of **all wheat** in Montana on March 1, 2004 were 73.2 million bushels, up 1 percent from March 1, 2003. All wheat stocks stored on the farm amounted to 50.0 million bushels, up 2 percent from a year ago. All wheat stored off-farm amounted 23.2 million bushels, down 2 percent from a year ago. All wheat disappearance for the December -February 2004 quarter was up 18 percent from the same quarter last year to 47.1 million bushels, compared with 39.8 million a year ago.

Barley stocks in all positions on March 1, 2004 were 16.0 million bushels, up 6 percent from a year ago. Barley stored on-farms was 8.0 million bushels, down 6 percent from last year. Off-farm storage of barley was up 22 percent from a year ago at 8.0 million bushels. All barley disappearance for the December- February 2004 quarter was 10.1 million bushels, down 18 percent from a year ago. **Oats** stocks in all positions were estimated at 1.6 million bushels, down 7 percent from last year. On-farm stocks of oats were 1.5 million bushels down 6 percent from 1.6 million stored a year ago. Oats stored off-farm was down 13 percent from last year to 100,000 bushels.

U.S. corn stocks in all positions on March 1, 2004 totaled 5.27 billion bushels, up 3 percent from March 1, 2003. Of the total stocks, 3.03 billion bushels are stored on farms, up 3 percent from a year earlier. Off-farm stocks, at 2.24 billion bushels, are up 2 percent from the previous year. The December 2003 - February 2004 indicated disappearance is 2.68 billion bushels, compared with 2.51 billion bushels during the same period last year.

All **wheat** stored in all positions on March 1, 2004 totaled 1.02 billion bushels for the U.S., up 12 percent from a year ago. On-farm stocks are estimated at 258 million bushels, up 9 percent from last year. Off-farm stocks, at 761 million bushels, are up 14 percent from a year ago. The indicated December 2003 - February 2004 disappearance is 501 million bushels, up 21 percent from the same period a year earlier.

U.S. **durum wheat** stocks in all positions on March 1, 2004 totaled 44.0 million bushels, down 23 percent from a year ago. On-farm stocks, at 24.8 million bushels, are down 22 percent from March 1, 2003. Off-farm stocks totaled 19.2 million bushels, down 23 percent from a year ago. The indicated December 2003 - February 2004 disappearance of 22.9 million bushels is up 15 percent from the same period a year earlier.

Barley stocks in all positions on March 1, 2004 in the U.S. totaled 151 million bushels, up 23 percent from March 1, 2003. On-farm stocks are estimated at 51.7 million bushels, 41 percent above a year ago. Off-farm stocks, at 99.8 million bushels, are 15 percent above March 1, 2003. Indicated disappearance during the December 2003 - February 2004 quarter totaled 46.4 million bushels, down fractionally from the same period a year earlier.

U.S. **oats** stored in all positions on March 1, 2004 totaled 95.1 million bushels, 15 percent above the stocks on March 1, 2003. Of the total stocks on hand, 45.6 million bushels are stored on farms, 30 percent higher than a year ago. Off-farm stocks totaled 49.5 million bushels, 3 percent above a year earlier. Indicated disappearance during December 2003 - February 2004 totaled 24.2 million bushels, compared with 20.9 million bushels for the same period a year ago.

* Revised.

Agricultural Prices Received for February 2004

February 2004 full month crop prices were mostly higher compared with January 2004. Montana's winter wheat average price was $3.60 per bushel, up $0.06 from the previous month; spring wheat prices rose $0.13 to $3.93 per bushel; and durum wheat prices increased $0.01 to $3.99 per bushel. Feed barley prices rose $0.08 from the previous month to $2.11, and malt barley prices rose $0.03 to $3.43 per bushel.

The mid-March price for alfalfa hay was down $2.00 to $73.00 per ton and all other hay decreased $1.00 to $65.00 per ton. Mid-March grain prices were mostly higher than the previous month with winter wheat price averaging $3.63 per bushel, spring wheat was $4.00 per bushel, durum wheat was $4.14 per bushel, feed barley was $2.19 per bushel and malt barley averaged $3.30 per bushel.

Livestock prices for the full month of February were mixed from the the previous month. Steer and heifer prices decreased $1.90 to $92.30 per cwt, while cows increased $2.30 to $47.60. The average price for calves decreased $5.00 to $112.00 per cwt. Sheep prices dropped $4.90 to $39.00 per cwt but lamb prices rose $9.00 to a historic high of $123.00 per cwt. Milk prices decreased $1.30 per cwt from last month to $13.00 per cwt. Steer and heifer prices for mid-March averaged $94.30 per cwt.; cows averaged $47.70 per cwt.; calves averaged $113.00 per cwt.; and milk prices averaged $13.70 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $3.68, up $0.02, spring wheat was $3.83, up $0.17; durum wheat was $4.08, up $0.11; the all barley price was $2.72, up $0.01, and steer and heifer prices were $82.30, down $3.10 per cwt.

The U.S. mid-March winter wheat price was $3.61 per bushel, spring wheat was $3.81 per bushel, durum wheat was $4.15 per bushel, all wheat was $3.71 per bushel, malt barley was $2.97 per bushel, feed barley was $2.14 per bushel, and all barley was $2.71. Steer and heifer prices were $88.60 per cwt, cow prices were $46.70, calves were $114.00 per cwt., all hog prices were $45.10 per cwt, and all egg prices were $1.00 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in March at 122, based on 1990-92=100, is 6 points (5.2 percent) above the February Index. This is the highest index level since records began in 1910.

Weekly Crop-Weather Reports

The 2004 growing season is upon us, and with it begins the weekly Crop-Weather Report. Undoubtedly, this is one of the most useful reports for producers, agribusinesses, and market analysts. The report provides up-to-date conditions and progress of Montana's crops, as well as pertinent data on moisture supplies and weather information.

We will resume publication of the weekly reports April 5, 2004. These reports will continue through November 1 when the last 2004 weekly report will be issued. At that time, monthly reports will resume.

U.S. Hog Inventory Up 2 Perent

U.S. inventory of all hogs and pigs on March 1, 2004, was 59.3 million head. This was 2 percent above March 1, 2003, but 2 percent below December 1, 2003.

Breeding inventory, at 5.92 million head, was down 2 percent from March 1, 2003, and down 1 percent from last quarter. Market hog inventory, at 53.4 million head, was 2 percent above last year, but 2 percent below last quarter.

The December 2003 - February 2004 U.S. pig crop, at 24.9 million head, was 2 percent more than 2003, and up slightly from 2002. Sows farrowing during this period totaled 2.81 million head, 2 percent above last year. The sows farrowed during this quarter represented 47 percent of the breeding herd. The average pigs saved per litter was 8.85 for the December 2003 - February 2004 period, compared to 8.81 last year. Pigs saved per litter by size of operation ranged from 7.60 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

2003 Red Meat Production

Montana slaughter plants produced 16.0 million pounds, dressed weight, of red meat during 2003, compared with 16.8 million pounds in 2002. There were 19,000 cattle slaughtered during 2003, down 6 percent from the previous year. The total live weight of 22.1 million pounds was down 5 percent from a year earlier. The average live weight was up 7 pounds to 1,159 pounds.

There were 15,000 hogs slaughtered in Montana, unchanged from 2002. Total live weight at 3.5 million pounds was unchanged from the last year. The average live weight was 234 pounds per head compared with 236 the previous year. Sheep slaughter amounted to 3,700 head, a decrease of 100 head from a year earlier. The average live weight at 126 pounds was 4 pounds heavier than the previous year. Total live weight of all sheep and lambs slaughtered in 2003 decreased one percent from 2002 to 461,000 pounds.

The number of federally inspected slaughter plants in Montana on January 1, 2003 was 10, down one plant from 2002. There were 142 non-federally inspected plants on January 1, 2004, down 5 from the same date a year ago.

Red meat production for the United States totaled 46.8 billion pounds in 2003, 1.2 percent below last year's record high. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 46.6 billion pounds.

Beef production, at 26.3 billion pounds, was 3 percent below the previous record high set last year in 2002. Veal production totaled 201.1 million pounds, down 2 percent from last year, and set a new record low. Pork production, at 20.0 billion pounds, was 2 percent above last year, setting a new record high. Lamb and mutton production totaled 203.4 million pounds, falling 9 percent below the previous record low set a year ago.

Commercial cattle slaughter during 2003 totaled 35.5 million head, down 1 percent from 2002, with federal inspection comprising 98.3 percent of the total. The average live weight was 1,231 pounds, down 20 pounds from a year ago. Steers comprised 49.2 percent of the total federally inspected slaughter, heifers 31.7 percent, dairy cows 8 percent, other cows 9.1 percent, and bulls 1.8 percent.

Commercial calf slaughter totaled 1.0 million head, down 4 percent from a year ago with 97.5 percent under federal inspection. The average live weight was 318 pounds, up 6 pounds from a year earlier.

Commercial hog slaughter totaled 100.9 million head, up 1 percent from 2002 with 98.8 percent of the hogs slaughtered under federal inspection. The average live weight was up 1 pound from last year, at 266 pounds. Barrows and gilts comprised 96.5 percent of the total federally inspected slaughter.

Commercial sheep and lamb slaughter, at 2.98 million head, was down 9 percent from 2002 with 94.2 percent comprised by federal inspection. The average live weight was up 1 pound from 2002 to 134 pounds.

There were 850 slaughtering plants under federal inspection on January 1, 2004 compared with 879 last year. Of these, 689 slaughtered at least one head of cattle during 2003 with 15 slaughtering over 56 percent of the total cattle killed. Hogs were slaughtered at 662 plants, with 13 accounting for 58 percent of the total. Likewise, 8 of the 290 plants that slaughtered calves accounted for 57 percent of the total and 4 of the 505 plants that slaughtered sheep or lambs in 2003 comprised 69 percent of the total head. Iowa, Kansas, Nebraska, and Texas accounted for over 52 percent of the United States commercial red meat production in 2003, similar to 2002.

February Red Meat Production

Montana slaughter plants produced 1.1 million pounds, dressed weight, of red meat during February 2004, up 1 percent from last month but down 12 percent from February of 2003. Cattle slaughter totaled 1,300, down 7 percent from a year ago. The average live weight of 1,164 pounds decreased 25 pounds from last year.

During February 1,100 hogs were slaughtered, unchanged from a year ago. The average live weight at 236 pounds was up 4 pounds from last year. February sheep slaughter in the state totaled 300 head, up 100 head from February 2003. The average live weight increased 7 pounds from last year to 126 pounds.

Commercial red meat production for the United States totaled 3.40 billion pounds in February, down 3 percent from the 3.50 billion pounds produced in February 2003.

Beef production, at 1.80 billion pounds, was 7 percent below the previous year. Cattle slaughter totaled 2.43 million head, down 6 percent from February 2003. The average live weight was down 28 pounds from the previous year, at 1,233 pounds.

Veal production totaled 14.5 million pounds, 9 percent below February a year ago. Calf slaughter totaled 71,500 head, down 14 percent from February 2003. The average live weight was 19 pounds above last year, at 336 pounds.

Pork production totaled 1.57 billion pounds, up 3 percent from the previous year and a new record high for February. Hog kill totaled 7.89 million head, 3 percent above February 2003. The average live weight was 1 pound above the previous year, at 268 pounds. (Continued on next page)

February Red Meat Production
(continued from front page)

Lamb and mutton production, at 14.8 million pounds, was down 2 percent from February 2003. Sheep slaughter totaled 213,000 head, 6 percent below last year. The average live weight was 139 pounds, up 6 pounds from February a year ago.

January to February 2004 commercial red meat production was 7.1 billion pounds, down 6 percent from 2003. Accumulated beef production was down 12 percent from last year, veal was down 9 percent, pork was up 2 percent from last year, and lamb and mutton production was down 3 percent.

Montana Potato Stocks Up 4 Percent, U.S. Up 1 percent

Montana potato producers held 2.9 million cwt. of potatoes in storage on March 1, 2004, up 4 percent from the previous year. Eighty-seven percent of the 2003 Montana potato crop is still in storage.

The 15 major potato States held 167 million cwt of potatoes in storage March 1, 2004, up 1 percent from last year and 5 percent above 2002. Potatoes in storage account for 41 percent of the 2003 fall storage States' production, unchanged from a year ago.

Disappearance of 237 million cwt from the start of harvest to March 1, is down 2 percent from the same period last year but 4 percent above two years ago. Shrink and loss, at 22.6 million cwt, is up 2 percent from last year and 4 percent above two years ago.

Processors used 120 million cwt of 2003 crop potatoes so far this season, down 4 percent from a year ago but 5 percent above two years ago. February usage of 18.8 million cwt is 1 percent above last year and 3 percent above two years ago. Dehydrators used 26.1 million cwt to date, down 7 percent from last year.

Western States held 114 million cwt of potatoes in storage on March 1, down 6 percent from last year and 1 percent below two years ago. Idaho's potato stocks are down 6 percent from last year, Washington decreased 3 percent, Colorado's storages held 21 percent less, and California lost 10 percent. Oregon's sheds stored 11 percent more than last year and Montana increased 4 percent.

February U.S. Milk Production Up 1.7 Percent

Milk production in the 20 major States during February totaled 11.8 billion pounds, up 1.7 percent from February 2003. However, adjusting production for the additional day due to the leap year causes February milk production to be down 1.8 percent on a per day basis. January revised production, at 12.5 billion pounds, was down 1.0 percent from January 2003. The January revision represented a decrease of 11 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,531 pounds for February, 42 pounds above February 2003. The number of milk cows on farms in the 20 major States was 7.72 million head, 91,000 head less than February 2003, but 4,000 head more than January 2004.

Montana and U.S. Crops and Grain Stocks 1997-2002

The final estimates for all crops and grains stocks for 1997 to 2002 are now available. The publication contains any changes in crop acres, yield, production, or grain stocks for 1997 to 2002. Montana had mostly minor revisions to acres, yield and production for winter wheat, barley, hay, corn, pulse crops, and oilseeds for some of the years. Hay stocks were also revised for some of the years during this period. You can find the final estimates for all crops and grain stocks on our website www.nass.usda.gov/mt.

The final estimates for the United States were also published and are available on the NASS website /www.usda.gov/nass/. Data included in this publication provide a historic record and a benchmark for current estimates. Revisions were made after a thorough review of the original survey data and all additional data now available, including the 2002 Census of Agriculture. Other data series considered included United States Department of Agriculture farm program administrative records, shipment records, exports, and quantity processed information. The Agricultural Statistics Board evaluated the current acreages with historic totals to ensure comparability with past Census relationships. Production, beginning stocks, and recorded disappearance were compared to historic totals for evaluating ending stocks. The 1998-2002 estimates are considered final and will not be revised again.

At the National level, all revisions to production estimates of major crops (corn, soybeans, all wheat) were less than 1 percent. Revisions were made to 2002 and 2001 corn estimates. The 2002 grain production estimate was revised down 0.5 percent and the 2001 production was revised down fractionally. Changes in harvested acres and yield were made to both large and small corn producing States. The 2002 soybean production was revised down 0.2 percent. Revisions were made primarily in the smaller producing States. The all wheat production estimate for 2002 was revised down 0.8 percent, the 2001 production was revised down 0.5 percent, and the 2000 and 1999 production levels were each revised down 0.2 percent. Changes in harvested acres and yield were made to both large and small wheat producing States.

U.S. Cattle on Feed Up 4 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.98 million head on March 1, 2004. The inventory was up 4 percent from the 10.55 million head on March 1, 2003 but 5 percent below March 1, 2002.

Placements in feedlots during February totaled 1.61 million, 2 percent below 2003 and 11 percent below 2002. Net placements were 1.54 million. During February, placements of cattle and calves weighing less than 600 pounds were 319,000, 600-699 pounds were 351,000, 700-799 pounds were 548,000, and 800 pounds and greater were 392,000.

Marketings of fed cattle during February totaled 1.69 million, 2 percent below 2003 and 6 percent below 2002. Other disappearance totaled 69,000 during February, 3 percent below 2003 but 10 percent above 2002.

Sheep and Lamb Losses for 2003

Montana sheep and lamb producers lost 58,000 animals to weather, predators, disease and other causes during 2003, representing a total value of more than $4.5 million. While the total number of sheep and lambs lost decreased 9,000 head from last year, the total value of inventory lost was 14 percent higher than a year ago. Higher average market prices this past year resulted in an increase to sheep and lamb values. Total inventory is 7 percent lower than the previous year. Sheep and lamb deaths amounted to 9.5 percent of the January 1 inventory and lambs born -- slightly less than the previous year.

The number of sheep and lambs lost to all predators totaled 17,700 head, down 3,700 head from last year. Lamb losses by all predators amounted to 13,800 head, down 16 percent from last year. The number of sheep lost to all predators totaled 3,900, down 1,000 head from a year ago. Predators caused an estimated $1.3 million in losses in 2003, up 6 percent from the previous year. Losses due to predators amounted to 2.9 percent of the January 1 inventory and lambs born and 31 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 67 percent of the predator caused losses and 20 percent of all death losses in the state. The value of losses attributed to coyotes was $0.8 million.

The total value of non-predatory losses was $2.6 million in 2003, 10 percent more than the previous year. Non-predatory losses accounted for 57 percent of all losses. The largest non-predatory cause of losses were lambing complications at 8,600 head.

Sheep lost to non-predatory factors totaled 10,300 head, 6 percent lower than 2002. Non-predatory lamb losses came in at 22,700 head, 6,300 head lower than a year ago.

Producers reported a 28 percent increase in the number of sheep and lambs lost to unknown causes this past year. Lambs lost to unknown causes totaled 4,500 head, compared with 3,500 head last year. Unknown causes claimed 2,800 sheep, 600 head more than last year. The value of sheep and lambs lost to unknown causes increased to $0.6 million.

February U.S. Egg Production Up 3 Percent

U.S. egg production totaled 6.89 billion during February 2004, up 3 percent from last year. Production included 5.89 billion table eggs, and 1.00 billion hatching eggs, of which 948 million were broiler-type and 54.0 million were egg-type. The total number of layers during February 2004 averaged 339 million, down slightly from a year earlier. February egg production per 100 layers was 2,033 eggs, up 4 percent from and February 2003 contained 20 weekdays, 1 holiday, and 4 Saturdays.

All layers in the U.S. on March 1, 2004, totaled 340 million, down slightly from a year ago. The 340 million layers consisted of 281 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.44 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2004, averaged 70.5 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.44 billion eggs during February 2004, up 3 percent from a year ago. The average number of layers during February, at 316 million, was down 1 percent from a year ago.

Farm Numbers & Land in Farms

The **number of farms** and ranches in Montana increased to 28,000 during 2003, 100 more than the revised number of farms last year. Revisions were made for years 1998 through 2002 to reflect the results of the 2002 Census of Agriculture data. Farms and ranches are sub-grouped by economic classes to give a clearer picture of where the changes occurred. The smallest economic sales category, the $1,000 to $9,999 sales group, contains the largest number of farms at 11,900, up 100 farms from 2002. The next economic sales category, $10,000 to $99,999, shows 10,600 farms in 2003 compared with 10,500 in 2002; and the economic sales class of $100,000 or more is 5,500, down from 5,600 in 2002.

The **land in farms and ranches** is estimated at 60.1 million acres, up 300,000 acres from 2002. Montana's average farm size is 2,146 acres. The economic sales breakdown of land in farm and ranches follows: $1,000 to $9,999 - 4.3 million acres the same as 2002; $10,000 to $99,999 - 17.8 million acres, up from 17.7 million last year; $100,000 or more of sales - 38.0 million acres, up from the 37.8 million acres in 2002. These numbers show that producers are shifting between sales categories with many moving into lower value of sales and others increasing their size of farms and value of sales. The acreage increase in the largest economic sales category reflects the consolidation of operations necessary to compete in today's tough agricultural environment.

The $100,000 to $249,999 sales category has 3,700 farms and ranches, down from 3,800 in 2002 comprising 18.8 million acres of land, up from 18.6 million acres last year. The $250,000 to $499,999 sales category has 1,200 farms and ranches comprising of 10.4 million acres of land compared with 1,200 farms and ranches and 10.5 million acres a year earlier. The $500,000 plus sales category includes 600 farms and ranches comprising of 8.8 million acres of land, equaling the number of farms in 2002, but with an increase of 100,000 acres. (Continued on back page)

Wheat and Barley Movement

Montana wheat shipped to out-of-state destinations during the June 2003 - November 2003 period, at 51.0 million bushels, was 15% below the same period last year. Over 80% of wheat shipped during this period headed west, totaling 40.9 million bushels, down 22% from a year earlier. Movements to eastern destinations during this period, totaled 4.4 million bushels, up 19% from a year ago. Other and unknown destinations totaled 5.8 million bushels, up from 3.9 million bushels a year ago. Wheat shipped by rail, amounted to 42.3 million bushels, 83% of total shipments. Wheat trucked during this period was 8.7 million bushels compared with 3.2 million bushels last year. The percentage of wheat shipped by truck was 17% of the total, compared with 5% last year.

Montana barley shipped to out-of-state destinations during the June 2003 - November 2003 period was 6.3 million bushels, down 12% from the same period last year. Shipments of barley out of Montana headed for eastern destinations fell from 3.6 million bushels last year to 3.3 million bushels this year. Shipments to western destinations were up 145% from the same period last year, at 2.7 million bushels. Shipments to other destinations dropped from 1.7 million bushels last year to 0.3 million bushels this year. Barley shipped by rail amounted to 5.8 million bushels, up 0.9 million bushels from last year. Barley hauled by rail was 91% of total movement, up from 68% for the same period last year.

1/ Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

January Ag Prices Received

January 2004 full-month crop prices were lower compared with December 2003. Montana's winter wheat average price was $3.54 per bushel, down $0.08 from the previous month; spring wheat remained steady at $3.80 per bushel; and durum wheat prices rose $0.08 to $3.98 per bushel. Feed barley prices dropped $0.13 from the previous month to $2.03, and malt barley prices decreased $0.11 to $3.40 per bushel.

The mid-February price for alfalfa hay was up $1.00 to $75.00 per ton from January, but all other hay decreased $1.00 to $66.00 per ton. Mid-February grain prices were mostly higher than the previous month with winter wheat price averaging $3.60 per bushel, spring wheat was $3.96 per bushel, durum wheat was $4.00 per bushel, and feed barley was $2.07 per bushel.

Livestock prices for the full month of January were mostly lower than the previous month, except for calves and sheep. Steer and heifer prices decreased $4.70 to $94.20 per cwt, while cows dropped $6.20 to $45.30. The average price for calves increased $3.00 to a record high $117 per cwt. Sheep prices rose $0.90 to $43.90 per cwt and lamb prices moved up $6.00 to $114 per cwt. Milk prices decreased $0.70 per cwt from last month to $14.30 per cwt. Steer and heifer prices for mid-February averaged $93.50 per cwt.; cows averaged $46.80 per cwt.; calves averaged $111 per cwt.; and milk prices averaged $13.20 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $3.66, up $0.03; spring wheat was $3.66, down $0.09; durum wheat was $3.97, up $0.01; the all barley price was $2.71, down $0.14, and steer and heifer prices were down $85.40, down $10.30 per cwt.

The U.S. mid-February winter wheat price was $3.60 per bushel, spring wheat was $3.75 per bushel, durum wheat was $4.03 per bushel, all wheat was $3.68 per bushel, malt barley was $2.88 per bushel, feed barley was $2.13 per bushel, and all barley was $2.62. Steer and heifer prices were $81.60 per cwt, cow prices were $46.20, calves were $110 per cwt., all hog prices were $43.20 per cwt., and market egg prices were $0.75 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in February at 113, based on 1990-92=100, is 2 points (1.8 percent) above the January Index. The Livestock Products Index increased 1 point (0.9 percent) from January while the All Crops Index increased 2 points (1.8 percent). Producers received higher commodity prices for soybeans, broilers, corn, and hogs. Lower prices were received for cattle, lettuce, eggs, and broccoli. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of milk, cattle, broilers, and eggs offset decreased marketings of soybeans, corn, tobacco, and wheat. This preliminary All Farm Products Index is up 14 points (14 percent) from February 2003. The Food Commodities Index increased 2 points (1.8 percent) from last month to 114, and is 18 points (19 percent) above February 2003.

United States Index Summary

INDEX (1990-92=100)	January 2003	February 2003	January 2004	February 2004

Land in Farms (continued)

The number of farms in the **United States** in 2003 is estimated at 2.13 million, 0.4 percent fewer than in 2002. The decline in farms occurred in all sales categories except the $250,000-$499,999 class which remained unchanged. Total land in farms, at 938.8 million acres, decreased 1,550,000 acres from 2002. The average size farm during 2003 was 441 acres, an increase of one acre from the previous year. The decline in the number of farms and land in farms continues to reflect consolidation in farming operations and competition for agricultural land for other uses.

The U.S. number of agricultural operations in the economic sales class $1,000-$9,999 declined 0.2 percent to 1,199,270 in 2003. Farms with sales of $10,000-$99,999 decreased 0.7% from 2002 to 600,530. The number of farms with $100,000-$249,999 in sales was 167,230, a decline of 0.9 percent. In the $250,000-$499,999 sales class, the number of farms was unchanged from the previous year. The number of agricultural operations with $500,000 or more of sales declined 0.4% from 2002. Generally favorable weather, stronger commodity prices, higher value of commodities produced, farm consolidation, and competition for other uses of farmland contributed to the shifting of farms among the sales categories.

2003 Honey Production

Montana honey producers with five or more colonies during 2003 produced 9.6 million pounds of honey, up 13 percent from 2002. The estimate of honey production includes production by colonies that were in the state for part of the year. There were 145,000 colonies producing honey in 2003, compared with 134,000 colonies in 2002. The increase in colonies and honey production is due to more beekeepers who were in the state part of the year. The honey yield per colony was 66 pounds, up 3 pounds from a year ago. Stocks on hand on December 15, 2003 was estimated at 1.9 million pounds, up from 1.1 million pounds in 2002.

Prices for Montana honey increased 10 cents per pound from last year to a record high $1.48 per pound in 2003. The value of 2003 honey production was also a record high at $14.2 million dollars, up 22 percent from last year.

Honey production in the United States from producers with five or more colonies totaled 181 million pounds, up 5 percent from 2002. There were 2.59 million colonies producing honey in 2003, up 1 percent from 2002. Yield per colony averaged 69.9 pounds, up 5 percent from the 66.7 pounds in 2002. Colonies which produced honey in more than one State were counted in each State and yields per colony may therefore be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 40.7 million pounds on December 15, 2003, up 3 percent from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

U.S. honey prices increased to a record high during 2003 to 140.4 cents, up 6 percent from 132.7 cents in 2002. Prices are based on retail sales by producers and sales to private processors and cooperatives. State level honey prices reflect the portions of honey sold through retail, co-op and private channels. U.S. honey prices for each color class are derived by weighing quantities sold for each marketing channel at the U.S. level. Honey prices for 2003 were higher than the previous year for all color classes. Some 2002 crop honey was sold at the higher prices in 2003, which caused some revisions to the 2002 crop prices.

2003 Crop Values

The value of Montana's 2003 **all wheat** crop rose 18 percent from 2002 to $525.7 million. Total production was up 25 percent but the season average price decreased $0.19 per bushel. The preliminary 2003 season average price for all wheat was $3.85 per bushel compared with $4.04 last season.

The value of Montana's **winter wheat** crop increased dramatically from last year to $235.5 million due to a large increase in acres harvested. The preliminary season average price was down $0.03 from last year to $3.70 per bushel. **Spring wheat's** value of production was down 26 percent from 2002 to $228.7 million. The season average price decreased $0.23 per bushel to $3.85. **Durum wheat's** season average price dropped $0.24 from 2002 to $4.25 per bushel. The total crop value of $61.6 million was up 6 percent from 2002.

The value of Montana's **oats** crop fell 38 percent from 2002 to $3.37 million. The season average price decreased $0.32 to $1.70 per bushel. Total value of production for **barley** was estimated at $94.8 million, down 17 percent from the previous year. The 2003 season average price, at $3.00, was up 14 cents from 2002. **Corn for grain** value of production for 2003 was estimated at $6.3 million dollars, up 41 percent from 2002. The average price per bushel increased $0.20 to $2.65.

Montana's value of production for **flaxseed** increased 7 percent to $1.28 million dollars in 2003. The price per bushel decreased $0.35 to $5.80. **Dry edible beans** value of production was estimated at $4.1 million, down 25 percent from 2002. The average price rose $2.40 per cwt to $17.60.

Value of production for **dry edible peas** in Montana, at $2.75 million, increased 86 percent from 2002. The average price per cwt decreased $1.10 to $6.10. **Austrian winter peas** value of production for the 2003 crop jumped to $689,000 from $200,000 in 2002. The average price per cwt was $12.30, up $2.30 from last year. **Lentils** value of production jumped to $3.96 million from $2.06 million in 2002. The average price increased $0.70 to $14.50 per cwt.

Montana's value of production for **potatoes** was $26.7 million, up slightly from the previous year. The average price per cwt was $8.00, $0.25 below 2002. **Sugar beets** value of production for 2002 is estimated at $44.94 million, up slightly from the previous year. The season average price jumped $2.20 per ton from 2001 to $41.00.

The 2003 season average price for **all hay** decreased $6.00 from last year to $76.50 per ton. The value of production was down 6 percent to $351.2 million. **Alfalfa hay's** 2003 season average price was estimated at $77.00, down $8.00 from last year while **other hay's** season average price decreased $2.00 to $72.50.

2003 Alfalfa Seed Production

Alfalfa seed production for 2003 was estimated at 2.1 million pounds, up 5% from the revised 2002 production. Harvested acreage at 6,200 was down 500 acres from last year's acreage of 6,700 acres. The state average yield was estimated at 335 pounds per acre, up from the 296 pounds per acre a year ago. Irrigated yields averaged 460 pounds per acre, up from 370 pounds in 2002 and non-irrigated yields averaged 90 pounds per acre, up 12 pounds from last year.

Producers used an average of 2.7 gallons of leaf cutter bees per acre on all acres harvested for alfalfa seed in 2003, compared with 3.1 gallons per acre in 2002. Leaf cutter bees were used on 39% of the reported irrigated acres at the rate of 3.8 gallons per acre and 12% of the reported non-irrigated acres at the rate of 0.4 gallons per acre. Alfalfa seed growers who utilized leaf cutter bees produced an average of 23% more seed per acre irrigated acre and 11% more per non-irrigated acre than those that did not use bees to pollinate their crop.

Proprietary varieties made up 23% of this year's production, common uncertified varieties accounted for 76% of the production and common certified varieties represented 1%.

The average price received for the 2003 crop was $1.01 per pound, down 14 cents from last year's average price.

ALFALFA SEED: Estimates by Agricultural Statistics Districts, 2003

District	TOTAL			IRRIGATED			NON-IRRIGATED		
	Acres	Yield	Production	Acres	Yield	Production	Acres	Yield	Production

2003 Wheat, Barley, and Oats County Estimates Now Available

The 2003 crop year county estimates for barley, oats, all wheat, winter wheat, durum wheat and spring wheat are now available. Estimates are made for acres planted, acres harvested for grain, average yield per harvested acre and production. Estimates are made by practices for irrigated crops and non-irrigated crops. Non-irrigated wheat and barley crops are further divided into cropping practices for acres that were re-cropped or continuously cropped and non-irrigated crops harvested from previously fallowed acres. Oats county estimates are estimated by practices of irrigated and non-irrigated only. These estimates are available on our website at http://www.nass.usda.gov/mt/ or they can be requested by calling or writing our office.

U.S. and Canadian Cattle

This publication is a result of a joint effort by Statistics Canada and NASS to release the number of cattle and calves by class and calf crop for both countries within one publication. This information was requested by the U.S. cattle industry to provide producers additional information about potential beef supplies. U.S. inventory numbers were previously released on January 30, 2004.

All cattle and calves in the **U. S. and Canada combined** totaled 109.5 million head on January 1, 2004, down slightly from a year ago. All cows and heifers that have calved, at 47.9 million head, was up slightly from a year ago.

All cattle and calves in the **United States** as of January 1, 2004, totaled 94.9 million head, 1 percent below the 96.1 million on January 1, 2003. All cows and heifers that have calved, at 41.9 million was down 1 percent from the 42.1 million on January 1, 2003.

All cattle and calves in **Canada** as of January 1, 2004, totaled 14.7 million head, up 9 percent from the 13.5 million on January 1, 2003. All cows and heifers that have calved, at 6.1 million, was up 5 percent from the 5.8 million on January 1, 2003.

U.S. Cattle on Feed Up 4 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.1 million head on February 1, 2004. The inventory was 4 percent above February 1, 2003 but 4 percent below February 1, 2002.

Placements in feedlots during January totaled 1.75 million, 16 percent below 2003 and 20 percent below 2002. Net placements were 1.65 million. During January, placements of cattle and calves weighing less than 600 pounds were 362,000, 600-699 pounds were 466,000, 700-799 pounds were 576,000, and 800 pounds and greater were 342,000.

Marketings of fed cattle during January totaled 1.78 million, down 10 percent from 2003 and down 14 percent from 2002. Other disappearance totaled 94,000 during January, 25 percent above 2003 and 6 percent above 2002.

January 2004 Red Meat Production

Montana slaughter plants produced 1.1 million pounds, dressed weight, of red meat during January 2004, down 33 percent from last month and down 26 percent from January of 2003. Cattle slaughter totaled 1,200, down 33 percent from a year ago. The average live weight of 1,160 pounds increased by 10 pounds from last year.

During January 1,200 hogs were slaughtered, unchanged from a year ago. The average live weight at 238 pounds was down 4 pounds from last year. January sheep slaughter in the state totaled 300 head, the same as January 2003. The average live weight increased 5 pounds from last year to 128 pounds.

Commercial red meat production for the United States totaled 3.71 billion pounds in January, down 9 percent from the 4.07 billion pounds produced in January 2003.

Beef production, at 1.92 billion pounds, was 16 percent below the previous year. Cattle slaughter totaled 2.57 million head, down 14 percent from January 2003. The average live weight was 1,249 pounds, down 19 pounds from January a year ago.

Veal production totaled 16.0 million pounds, 10 percent below January a year ago. Calf slaughter totaled 79,000 head, down 16 percent from January 2003. The average live weight was 336 pounds, up 18 pounds from January a year ago.

Pork production totaled 1.76 billion pounds, up 1 percent from the previous year. Hog kill totaled 8.79 million head, slightly above January 2003. The average live weight was 269 pounds, up 1 pound from January a year ago.

Lamb and mutton production, at 15.4 million pounds, was down 3 percent from January 2003. Sheep slaughter totaled 219,200 head, 8 percent below last year. The average live weight was 141 pounds, up 8 pounds from January a year ago.

U.S. January Milk Production Down 0.9 Percent

Milk production in the 20 major States during January totaled 12.5 billion pounds, down 0.9 percent from January 2003. December revised production, at 12.3 billion pounds, was down 0.2 percent from December 2002. The December revision represented an increase of 0.5 percent or 62 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,620 pounds for January, 5 pounds above January 2003. The number of cows on farms in the 20 major States was 7.72 million head, 92,000 head less than January 2003, but 5,000 head more than December 2003.

The annual production of milk for the U.S. during 2003 was 170.3 billion pounds, 0.1 percent above 2002. Revisions to 2002 production increased the annual total by 0.2 percent. Revised 2003 production was up 0.4 percent from last month's publication. Production per cow in the U.S. averaged 18,749 pounds for 2003, 141 pounds above 2002. The average annual rate of milk production per cow has increased 16 percent from 1994.

The average number of milk cows on farms in the U.S. during 2003 was 9.08 million head, down 0.6 percent from 2002. The average number of milk cows was revised down 2,000 head for 2002, and down 1,000 head for 2003.

Special Note: This issue contains monthly, quarterly, and annual revisions for 2002-2003. Preliminary 2002 Census data were used in the review process for the estimates included in this publication. States requiring a 5-year historical revision may carry a disjointed data series from the current historical data series. December 2002 and prior estimates contained in this publication will be republished in the Milk Cows and Production, Final Estimates 1998-2002 publication, which is scheduled for release on April 30, 2004.

Montana Potato Stocks Up 3 Percent, U.S. Up 1 Percent

Montana potato producers held 3.0 million cwt. of potatoes in storage on February 1, 2004, up 3 percent from the previous year. Ninety percent of the 2003 Montana potato crop is still in storage.

The 15 major potato States held 201 million cwt of potatoes in storage February 1, 2004, up 1 percent from last year and 4 percent above 2002. Potatoes in storage account for 50 percent of the 2003 fall storage States' production, up 1 percentage point from last year. Stocks by type were 4 percent red, 14 percent round white, 2 percent long white (Shepody), and 80 percent russet, with more reds and round whites and fewer russets than a year ago.

Disappearance of 203 million cwt from the start of harvest to February 1, is down 2 percent from the same period last year but 4 percent above two years ago. Shrink and loss, at 20.6 million cwt, is up 1 percent from last year and 5 percent above two years ago.

Processors used 101 million cwt of 2003 crop potatoes so far this season, down 5 percent from a year ago but 5 percent above two years ago. January usage of 14.6 million cwt is 1 percent below last year and 10 percent below two years ago. Dehydrators used 22.1 million cwt to date, down 7 percent from last year.

Western States held 136 million cwt of potatoes in storage on February 1, down 6 percent from last year and 1 percent below two years ago. Idaho's potato stocks are down 8 percent from last year, Washington decreased 1 percent, Colorado's storages held 20 percent less, and California lost 17 percent. Oregon's sheds stored 8 percent more than last year and Montana increased 3 percent.

Hired Workers Down 5 Percent, Wage Rates Up 1 Percent From a Year Ago

There were 847,000 hired workers on the Nation s farms and ranches during the week of January 11-17, 2004, down 5 percent from a year ago. Of these hired workers, 667,000 workers were hired directly by farm operators. Agricultural service employees on f1arms and ranches made up the remaining 180,000 workers.

Farm operators paid their hired workers an average wage of $9.41 per hour during the January 2004 reference week, up 7 cents from a year earlier. Field workers received an average of $8.39 per hour, up 9 cents from last January, while livestock workers earned $8.84 per hour compared with $8.90 a year earlier. The field and livestock worker combined wage rate, at $8.55 per hour, was up 5 cents from last year.

The number of hours worked averaged 38.1 hours for hired workers during the survey week, up 1 percent from a year ago.

The largest decreases in number of hired farm workers from last year occurred in the Northeast I (New England and New York), Pacific (Oregon and Washington) and Mountain III (Arizona and New Mexico) regions and in California and Florida.

The largest increases in number of hired farm workers from a year ago were in the Southern Plains (Oklahoma and Texas), Lake (Michigan, Minnesota and Wisconsin), Southeast (Alabama, Georgia and South Carolina) and Delta (Arkansas, Louisiana and Mississippi) regions.

Hired farm worker wage rates were generally above a year ago in most regions. The largest increases occurred in the Appalachian II (Kentucky, Tennessee and West Virginia), Corn Belt I (Illinois, Indiana and Ohio), Corn Belt II (Iowa and Missouri) and Delta regions.

Wage Rates for Hired Workers, by Region & U.S., January 12-18, 2003 & January 11-17, 2004 1/

Montana and United States Grazing Rates Increase

The average grazing fees paid by Montana producers for grazing livestock on privately owned, non-irrigated grazing land was higher for all methods except for per head in 2003. The average amount paid for grazing livestock on an AUM (animal unit month) basis was $15.20 per month, up 10 cents from last year. Cattle producers paid $17.40 per cow-calf pair in 2003, up 10 cents from the previous year. The average per head rate was $15.90 per month, down 40 cents from last year.

In the 17 States that estimate grazing fees in the United States, the average charge on an AUM basis was $12.30 per month in 2003, unchanged from the previous year. Cow-calf rates averaged $14.40 per month, up 20 cents and per head rates averaged $13.10 per month, up 40 cents from 2002.

All grazing fees are for privately-owned, non-irrigated grazing land. Rates charged for public land, irrigated land, and harvested cropland were excluded. The average AUM rate includes reported AUM rates plus reported cow-calf rates that were converted to an AUM basis. The cow-calf rate was converted to AUM basis using the following formula (1 AUM=cow-calf *0.833).

January U.S. Egg Production Down Slightly

U.S. egg production totaled 7.38 billion during January 2004, down slightly from last year. Production included 6.32 billion table eggs, and 1.06 billion hatching eggs, of which 996 million were broiler-type and 60.0 million were egg-type. The total number of layers during January 2004 averaged 338 million, down 1 percent from a year earlier. January egg production per 100 layers was 2,184 eggs, up 1 percent from January 2003.

January 2004 contained 22 weekdays, 2 holidays, and 5 Saturdays, compared to January 2003 which contained 23 weekdays, 2 holidays, and 4 Saturdays.

All layers in the U.S. on February 1, 2004, totaled 338 million, down 1 percent from a year ago. The 338 million layers consisted of 280 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.48 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 2004, averaged 69.8 eggs per 100 layers, down slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 6.88 billion eggs during January 2004, down 1 percent from a year ago. The average number of layers during January, at 315 million, was down 1 percent from a year ago.

December Egg Production

January 1, 2004 Cattle Inventory

Montana's January 1, 2004 inventory of cattle and calves was 2.40 million head, down 2% from the revised 2003 inventory of 2.45 million head. Prolonged drought conditions coupled with record high cattle prices during the last half of the year resulted in significant reductions in the number of steers, other heifers, and calves in the inventory. The cattle and calf inventory is the lowest since 1991 when it was 2.35 million head.

The inventory of beef cows that had calved on January 1, 2004 was up 3% from a year ago to 1.472 million head. The number of milk cows in the state was unchanged from year ago to 18,000 head. There were 1.54 million calves born during 2003, up 1% from the previous year.

Beef heifer replacements, weighing 500 pounds or more, were up 8% from the previous year to 420,000 head. Milk heifer replacements decreased 3,000 head from last year to 8,000 head. The number of other heifers weighing 500 lbs or more, decreased 25% from last year to 142,000 head. This is the lowest number of other heifers in the inventory since 1982 when 107,000 head were on hand.

The inventory of steers weighing 500 lbs or more, dropped 17% from last year to 200,000 head and is the lowest inventory since 1991. The inventory of calves weighing less than 500 lbs, at 50,000 head, was down 29% from last year. This is the lowest inventory of calves weighing less than 500 lbs on record for January 1. Inventory of bulls, weighing 500 pounds or more, decreased 10,000 head from last year to 90,000 head. The number of cattle and calves on full feed that will be sent directly to slaughter was unchanged from a year ago at 70,000 head.

All cattle and calves in the United States as of January 1, 2004, totaled 94.9 million head, 1% below the 96.1 million on January 1, 2003. All cows and heifers that have calved, at 41.9 million, were down 1% from the 42.1 million on January 1, 2003. Beef cows, at 32.86 million, were down slightly from January 1, 2003. Milk cows, at 8.99 million, were down 2% from January 1, 2003.

Other class estimates on January 1, 2004 and the change from January 1, 2003, are as follows:

- All heifers 500 pounds and over, 19.3 million, down 1%.
- Beef replacement heifers, 5.52 million, down 2%.
- Milk replacement heifers, 4.02 million, down 2%.
- Other heifers, 9.80 million, down 1%.
- Steers weighing 500 pounds and over, 16.3 million, down 2%.
- Bulls weighing 500 pounds and over, 2.21 million, down 2%.
- Calves under 500 pounds, 15.2 million, down 2%.
- Cattle and calves on feed for slaughter in all feedlots, 13.8 million, up 4%.
- The combined total of calves under 500 pounds, and other heifers and steers over 500 pounds outside of feedlots, 27.5 million, down 4%.

The 2003 calf crop was estimated at 37.9 million head, down 1% from 2002. Calves born during the first half of the year are estimated at 27.7 million, down 1% from 2002.

Special Note: Preliminary 2002 Census data were used in the review process for the 2004 and revised 2003 estimates. States requiring 5-year historical revisions may carry a disjointed data series from their current historical data series. Any revisions for estimates from January 1, 2003 and prior years will be published in the Cattle, Final Estimates 1999-2003 publications which is scheduled for release on April 30, 2004.

January 1, 2004 Sheep Inventory and 2003 Wool Production

Montana's sheep and lamb inventory was a record low 300,000 head on January 1, 2004, down 3% from last year.

Breeding sheep and lamb numbers remain unchanged at 280,000 head. Ewes one year and older were unchanged at 220,000 head. Rams one year and older, at 7,000 head, were down 1,000 head from the previous year. Replacement lambs, at 53,000 head, were up 1,000 head from a year ago. The 2003 lamb crop was 280,000 head, a decrease of 5% from the 2002 lamb crop.

Market sheep and lambs on hand January 1, 2004 totaled 20,000 head down 10,000 head from 2003. Of that total 2,000 head were market sheep. Of the 18,000 head of market lambs, only 6% weighed less than 65 pounds, 22% weighed 65-84 pounds, 44% were in the 85-105 pound category, and 28% were over 105 pounds.

Montana wool growers produced 2.6 million pounds of wool during 2003, down 7% from 2002. The 2003 average price per pound of wool increased 27 cents to $1.03 per pound, which increased the value of all wool produced by 26% for a total value of $2.674 million dollars. The total head shorn decreased 6% from 2002 to 272,000 head. The average fleece weight decreased from 9.6 pounds in 2002 to 9.5 pounds in 2003.

All sheep and lamb inventory in the United States on January 1, 2004, totaled 6.09 million head, down 3% from 2003 and 9% below two years ago. The inventory has trended downward since peaking at 56.2 million head in 1942. Breeding sheep inventory declined to 4.48 million head on January 1, 2004, down 4% from 4.66 million head on January 1, 2003. Ewes one year old and older, at 3.60 million head, were 4% below last year. Continued on back page.

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys.

Agricultural Prices Received for December 2003

December full month crop prices were mostly lower compared with November 2003. Montana's winter wheat average price was $3.62 per bushel, down $0.03 from the previous month; spring wheat dropped $0.03 to $3.80 per bushel; and durum wheat prices decreased $0.04 to $3.90 per bushel. Feed barley prices were unchanged from the previous month at $2.16, and malt barley prices jumped $0.54 to $3.51 per bushel. Oat prices for December 2003 were $1.58 per bushel.

The mid-January price for alfalfa hay was down $3.00 to $74.00 per ton and all other hay dropped $1.00 to $67.00 per ton. The mid-January grain prices were mixed from the previous month with winter wheat price averaging $3.67 per bushel, spring wheat was $3.86 per bushel, durum wheat was $3.97 per bushel, and feed barley was $2.05 per bushel.

Livestock prices for the full month of December were mostly higher than the previous month. Steer and heifer prices increased $0.40 to $98.90 per cwt. and cows rose $1.70 to $51.50. The average price for calves jumped $4.00 to $114.00 per cwt. Sheep prices were up $0.30 to $43.00 per cwt, but lamb prices dropped $8.00 to $108.00 per cwt. Milk prices increased $0.30 per cwt from last month to $15.00 per cwt. Steer and heifer prices for mid-January averaged $95.40 per cwt.; cows averaged $45.40 per cwt.; calves averaged $114.00 per cwt.; and milk prices averaged $15.10 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $3.63, up $0.08, spring wheat was $3.75, up $0.08; durum wheat was $3.96, up $0.05; the all barley price was $2.94, up $0.08, and steer and heifer prices were $95.70, down $4.30 per cwt.

The U.S. mid-January winter wheat price was $3.70 per bushel, spring wheat was $3.73 per bushel, durum wheat was $4.03 per bushel, all wheat was $3.73 per bushel, malt barley was $3.00 per bushel, feed barley was $2.20 per bushel, and all barley was $2.70. Steer and heifer prices were $81.20 per cwt, cow prices were $45.80, calves were $105.00 per cwt., all hog prices were $35.70 per cwt, and all egg prices were $0.806 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in January, at 111, based on 1990-92=100, is 2 points (1.8 percent) below the December Index. The Livestock Products Index is down 5 points (4.5 percent) from December while the All Crops Index is unchanged. Lower prices received for cattle, lettuce, milk, and tomatoes more than offset higher commodity prices for broilers, soybeans, corn, and eggs. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of cattle, soybeans, corn, and strawberries offset decreased marketings of cotton, grapes, tobacco, and cottonseed.

This preliminary All Farm Products Index is up 11 points (11 percent) from January 2003. The Food Commodities Index, at 112, is 3 points (2.6 percent) below last month but 14 points (14 percent) above January 2003.

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

January 1, 2004 Sheep Inventory

(continued from front page)

Market sheep and lambs on January 1, 2004, totaled 1.61 million head, down 2% from January 1, 2003. Market lambs comprised 96% of the total. Market lambs by weight were 27% under 65 pounds, 16% were between 65 - 84 pounds, 23% were between 85 - 105 pounds, and 30% were over 105 pounds.

The 2003 lamb crop of 4.12 million head was down 5% from 2002 and established a new record low. The 2003 lambing rate was 109 lambs per 100 ewes one year old and older on January 1, 2003, unchanged from 2002.

Shorn wool production in the United States during 2003 was 38.1 million pounds, down 8% from 2002. Sheep and lambs shorn totaled 5.06 million head, down 8% from 2002. The average price paid for wool sold in 2003 was $0.72 per pound for a total value of $27.4 million dollars, up 25% from $21.9 million dollars in 2002.

December Egg Production

U.S. egg production totaled 7.53 billion during December 2003, up 1 percent from last year. Production included 6.48 billion table eggs, and 1.06 billion hatching eggs, of which 995 million were broiler-type and 61.0 million were egg-type. The total number of layers during December 2003 averaged 339 million, down 1 percent from a year earlier. December egg production per 100 layers was 2,225 eggs, up 2 percent from December 2002.

2003 Chicken Inventory and Egg Production

There were 485,000 total chickens on **Montana** farms and ranches on December 1, 2003, up 1 percent from a year ago. The December 1, 2003 inventory included 355,000 layers 20 weeks old and older, 40,000 pullets between 13 and 20 weeks old, and 89,000 pullets 13 weeks and under. The total value of all chickens on December 1, 2002 was $1.5 million, up 1 percent from last year. The average value per bird, at $3.10, was unchanged from the 2002.

Montana chickens produced 107 million eggs during the year ending November 30, 2003, up 3 percent from last year. The state had an average of 355,000 layers in 2003, up 4 percent from a year ago. The average production per layer on hand was 301 eggs, down 1 percent from 2002.

The **U.S.** inventory of chickens on hand on December 1, 2003 (excluding commercial broilers) was 449 million birds, up 1 percent from last year. Egg production during the year ending November 30, 2003 totaled a record high 87.2 billion eggs, up slightly from 2002. Table egg production, at 74.4 billion eggs, was up slightly from the previous year. Hatching egg production, at 12.8 billion eggs, decreased 1 percent from 2002.

U.S. layer numbers during 2003 averaged 335 million, down 1 percent from the year earlier. The annual average production per layer on hand in 2003 was 259 eggs, up one percent from the 2002 average of 257.

The total value of all chickens on December 1, 2003 was $1.11 billion, up 5 percent from December 1, 2002. The average value increased from $2.37 per bird on December 1, 2002, to $2.47 per bird on December 1, 2003.

U.S. Cattle on Feed Up 6 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.2 million head on January 1, 2004. The inventory was 6 percent above January 1, 2003 but 3 percent below January 1, 2002. The inventory included 6.84 million steers and steer calves, up 5 percent from the previous year. This group accounted for 61 percent of the total inventory. Heifers and heifer calves accounted for 4.33 million head, up 9 percent from January 1, 2003.

Placements in feedlots during December totaled 1.75 million, 10 percent above 2002 and 11 percent above 2001. Net placements were 1.66 million. During December, placements of cattle and calves weighing less than 600 pounds were 503,000, 600-699 pounds were 529,000, 700-799 pounds were 448,000, and 800 pounds and greater were 268,000.

Marketings of fed cattle during December totaled 1.74 million, 3 percent below 2002 and 4 percent below 2001. Other disappearance totaled 90,000 during December, 9 percent below 2002 and 3 percent below 2001.

Montana Potato Stocks Up 3 Percent; U.S. Stocks Up 1 Percent

Montana potato producers held 3.1 million cwt. in storage on January 1, 2004, up 3 percent from the previous year. Ninety-three percent of the 2003 Montana potato crop was still in storage.

The 15 major potato States held 234 million cwt of potatoes in storage January 1, 2004, up 1 percent from last year and 4 percent above 2002. Potatoes in storage account for 58 percent of the 2003 fall storage States' production, up 1 percentage point from last year. Stocks by type show more round whites and fewer russets than a year ago. Disappearance of 170 million cwt of potatoes is down 3 percent from last year but 5 percent above 2001 movement. Shrink and loss, at 17.4 million cwt so far this season, is down 4 percent from last year but 1 percent above the same date in 2001.

Processors in the 9 major States used 86.8 million cwt of potatoes this season, down 6 percent from a year ago but 8 percent above two years ago. Dehydrating usage accounts for 18.4 million cwt of the total processing, down 6 percent from last year. December 1, 2003, stocks were revised up slightly, with changes in Colorado, Nebraska, and New York.

December 2003 Red Meat Production

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during December 2003, down 4 percent from the previous December, but up 13 percent from November 2003. Cattle slaughter totaled 2,000 head, unchanged from a year ago. The average live weight, at 1,153 pounds, decreased 10 pounds from 2002.

During December there were 1,500 hogs slaughtered, up 7 percent from a year ago. The average live weight, at 243 pounds, rose 5 pounds from last year. December sheep slaughter in the state totaled 400 head, the same as December 2002. The average live weight decreased 2 pounds from last year to 125 pounds.

Commercial red meat production for the United States totaled 3.88 billion pounds in December, up slightly from the 3.86 billion pounds produced in December 2002.

Beef production, at 1.97 billion pounds, was 6 percent below the previous year. Cattle slaughter totaled 2.67 million head, down 4 percent from December 2002. The average live weight was down 21 pounds from the previous year, at 1,244 pounds.

Veal production totaled 19.0 million pounds, 6 percent above December a year ago. Calf slaughter totaled 97,500 head, down 1 percent from December 2002. The average live weight was 17 pounds above last year, at 322 pounds.

Pork production totaled 1.87 billion pounds, up 9 percent from the previous year. Hog kill totaled 9.35 million head, 8 percent above December 2002. The average live weight was 1 pound above the previous year, at 269 pounds.

Lamb and mutton production, at 18.0 million pounds, was down 3 percent from December 2002. Sheep slaughter totaled 262,000 head, 6 percent below last year. The average live weight was 137 pounds, up 4 pounds from December a year ago.

January to December 2003 commercial red meat production was 46.5 billion pounds, down 1 percent from 2002. Accumulated beef production was down 3 percent from last year, veal was down 2 percent, pork was up 1 percent from last year, and lamb and mutton production was down 9 percent.

U.S. October-December Milk Production Down 0.6 Percent

Milk production in the U.S. during the October-December quarter totaled 41.3 billion pounds, down 0.6 percent from the October-December quarter last year. The average number of milk cows in the U.S. during the quarter was 9.01 million head, 141,000 head less than the same period last year.

Milk production in the 20 major States during December totaled 12.3 billion pounds, down 0.3 percent from December 2002. November revised production, at 11.7 billion pounds, was down 0.1 percent from November 2002. The November revision represented an increase of 13 million pounds or 0.1 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,589 pounds for December, 14 pounds above December 2002.

The number of milk cows on farms in the 20 major States was 7.71 million head, 93,000 head less than December 2002, but unchanged from November 2003.

World Ag Supply and Demand Estimates

Projected U.S. 2003/04 ending stocks of wheat are down 24 million bushels from last month due to increased exports. Projected exports are 25 million bushels above last month because of increased world import demand and the strong pace of exports to date. Both HRW and SRW exports increase 10 million bushels while HRS exports rise by 5 million bushels. Changes in use of the wheat classes result in a 44-million-bushel drop in HRW ending stocks and an increase of 23 million in SRW stocks. The projected 2003/04 wheat price range is up 5 cents on both ends to $3.25 to $3.45 per bushel.

Winter wheat seedings are estimated at 43.46 million acres, 3 percent less than last year.

Global 2003/04 wheat production is projected 2.2 million tons higher this month, due primarily to a larger crop in India. Global consumption increased 2.7 million tons, mainly due to larger food use in India and Ukraine and more wheat feeding in the EU. Global imports are up 1.7 million tons from last month. Projected imports by China are 1 million tons higher because of recent sales agreements made with Canada and Australia as well as the stronger-than-expected pace of purchases from the United States. Projected global ending stocks are down slightly from last month, and are 23 percent less than last year's level.

Note: The recent discovery of bovine spongiform encephalopathy (BSE) in a cow in the State of Washington has caused importers to either ban or restrict the importation of beef from the United States. Trade forecasts in this report reflect actions announced by importing countries as of January 11. Due to uncertainties as to the length of the bans, it is assumed that these restrictions will remain in place until such time as importing countries announce a change in policy. Subsequent forecasts will reflect any announced changes. Although the discovery of a BSE-infected cow has had significant impacts on international trade, the effects on U.S. meat production are expected to be minimal. U.S. beef demand has remained firm and biological lags inherent in the sector are expected to limit changes. Beef production projections for 2004 are unchanged from last month. The January 30 Cattle report will provide an opportunity to reevaluate production forecasts for 2004. Pork production projections are raised due to larger-than-expected December 1, 2003, hog inventories and greater first-half 2004 farrowing intentions. Poultry production projections are little changed from last month. Expected broiler production is unchanged as eggs set data and higher weights continue to point toward an industry expansion. Turkey production is lowered slightly as turkey hatchery data point toward lower production in first-half 2004. The meat production forecast for 2003 is reduced slightly this month as lower beef and turkey production offset stronger-than-expected pork production.

The 2004 beef export forecast is reduced more than 90 percent as Canada remains the only major importer currently accepting beef from the United States, with the restriction that imported beef must be boneless and from animals less than 30 months of age. Beef import forecasts for 2004 are reduced from last month as world markets adjust to bans on imports from the United States. Pork export forecasts for 2003 and 2004 are raised to reflect both the strong pace of exports to date and increased opportunities for sales in Asia following the ban on U.S. beef imports. Poultry export forecasts are raised as sales to Russia and Mexico have been strengthening. Pork and poultry exports are expected to continue to be helped by the declining value of the U.S. dollar.

The increase in supplies of beef now available on the domestic market is expected to pressure cattle prices. Cattle prices in 2004 are now forecast at $72 to $78 per cwt compared to $84 to $91 per cwt last monthPork price forecasts for 2004 are lowered as higher pork production and larger beef supplies pressure red meat markets. Broiler price forecasts for 2004 are unchanged from last month as exports strengthen.

Dairy production forecasts for 2003/04 are lowered 400 million pounds from last month as forecasts of both cow numbers and milk per cow are reduced. Forecast commercial use is lowered slightly from last month but continues to reflect improved demand from 2002/2003. As a result, forecast milkfat-basis CCC net removals are lowered from last month. Milk price forecasts are raised with the Class III price range expected at $11.20 to $11.70 per cwt and the Class IV price at $10.00 to $10.70 per cwt. The higher Class IV price reflects expectations of continued strength in butter prices. The all milk price range is narrowed to $12.40 to $12.90 per cwt.

Winter Wheat Seedings

Montana producers seeded 1.85 million acres of winter wheat last fall for the 2004 crop year, up 50,000 acres or 3 percent from the 2003 crop. This would be the largest planted acreage since 1996 when 2.15 million acres were seeded.

Winter wheat seeding last fall began slowly as producers were concerned about the lack of soil moisture. Winter wheat seeding was completed by October 19. Emergence reached 89% by the end of November compared with 95% for last year. Winter wheat conditions at the end of December were rated at 8% very poor, 15% poor, 43% fair, 33% good, and 1% excellent compared with 1% very poor, 25% poor, 55% fair, 18% good, 1% excellent, respectively a year ago. The snowfall received during December has provided good snow cover and was rated 36% excellent, 38% good, 19% fair, 6% poor, and 1% very poor.

U.S. winter wheat planted area for harvest in 2004 is estimated at 43.5 million acres. This is down 3 percent from 2003. Seeding began last August and advanced ahead of the 5-year average pace throughout the fall. Nearly all of the U.S. acreage was seeded by December 1.

Hard red winter (HRW) wheat seeded area in the United States is about 31.0 million acres, down 4 percent from 2003.

Soft Red Winter (SRW) area, at about 8.3 million acres, is up slightly from last year while white winter wheat seeded area totals about 4.2 million acres, down 7 percent from 2003.

2003 Late Season Crops Summary

Montana producers planted 65,000 acres of **corn** in 2003, unchanged from 2002. Acres harvested for grain were 17,000 acres, 4,000 acres more than in 2002. The average yield was 140.0 bushels per acre, identical to last year. Grain production increased 560,000 bushels from a year ago to 2.380 million bushels due to an increase in acres harvested. The number of acres harvested for corn silage decreased 2,000 acres from 2002 to 47,000 acres. Corn silage yield averaged a record high 24 tons per acre, 2 tons higher than a year ago.

Sugar beet producers in Montana planted 51,700 acres in 2003, down 6,300 acres from last year. Harvested acreage amounted to 51,500 acres, down 4,400 acres from 2002. Yield increased 5.8 tons from last year to average 25.4 tons per acre. Total production of 1.308 million tons, was up 19 percent from the previous year. **Fall potato** production in Montana totaled 3.339 million cwt., up 4 percent from last year. Producers harvested 10,600 acres compared with 10,400 in 2002. Potato yields increased 5 cwt. from a year ago to 315 cwt. per acre.

All hay harvested in Montana was down 150,000 acres from last year, to 2.45 million acres. All hay production was 4.635 million tons, up slightly from a year ago due to increases in alfalfa acreage and other hay yield. **Alfalfa hay** harvested acreage was 1.60 million, up 200,000 acres from last season. The average yield was 2.1 tons per acre, which is unchanged from the previous year. **Other hay** harvested acreage was 850,000, down 350,000 acres from the previous year. The decrease was mainly due to a reduction in the amount of CRP acreage hayed. The average yield was 1.5 tons per acre, compared with 1.4 tons per acre last year. Montana **hay stocks** were estimated at 3.986 million tons on December 1, down 1 percent from last year. Montana hay producers **seeded** an estimated 120,000 acres of alfalfa and alfalfa mixtures during 2003, which is equal to last year's seedings. New seedings include those mixed with a nurse crop, other forage, or direct seedings.

U.S. corn for grain production is estimated at 10.1 billion bushels, down 2 percent from the November forecast but up 12 percent from the 9.01 billion bushels produced in 2002. The average U.S. grain yield is estimated at 142.2 bushels per acre, 1.0 bushel below the November forecast but up 12.2 bushels from 2002. Both production and yield estimates are the largest on record. **Corn silage** production for the U.S. is estimated at 106 million tons, 1 percent above the 2002 level.

U.S. sugar beets production is estimated at 30.6 million tons, slightly below the November 1 forecast but 10 percent above last year's production. **Fall potatoes** production in the United States for 2003 is estimated at 411 million cwt., down less than 1 percent from the December forecast and 1 percent below last year. Area harvested, at 1.09 million acres, is down 2 percent from last year but 2 percent above two years ago. The average yield is estimated at 377 cwt per acre, 4 cwt above last year.

U.S. all hay production for 2003 is estimated at 157 million tons, down 2 percent from the October 1 forecast but up 4 percent from the 2002 total. **Alfalfa and alfalfa mixtures** production in 2003 totaled 76.3 million tons. All **other hay** production in 2003 totaled 80.8 million tons. Growers seeded 3.12 million acres of alfalfa and alfalfa mixtures during 2003. U.S. **stocks of all hay** stored on farms totaled 111 million tons on December 1, 2003, up 7 percent from 2002.

2003 Oilseeds Summary

Montana's **flaxseed** production for 2003 was 221,000 bushels, 26,000 bushels higher than last year's figure. Planted and harvested acreages were both 17,000, compared to 2002, when growers planted 17,000 acres and harvested 15,000. The average yield for 2003 was 13.0 bushels per acre, unchanged from the previous year.

Production of **mustard seed** in Montana during 2003 was 12.3 million pounds compared with 11.0 million in 2002. Planted acres of mustard amounted to 20,500 acres with 20,200 acres harvested. During 2002, Montana producers planted 27,000 acres of mustard seed and harvested 25,000 acres. Mustard seed yields averaged 610 pounds per acre this year, which is 170 pounds per acre more than 2002.

Montana **canola** growers planted 28,000 acres in 2003, 9,500 acres less than 2002. Harvested acreage was 27,000 acre, down 7,500 acres from last year. The 2003 canola yield was 940 pounds per acre, up 80 pounds per acre from last year.

Growers produced 32.34 million pounds of **safflower** in Montana during 2003. Safflower plantings in Montana totaled 42,500 acres with 42,000 acres harvested. Yield was 770 pounds per acre, down 30 pounds per acre from last year. The 2002 safflower crop produced 30.4 million pounds from 39,500 planted and 38,000 harvested acres.

Montana's 2003 all **sunflower** production was 915,000 pounds, compared with 928,000 pounds produced in 2002. Producers in the state planted 2,600 acres and harvested 1,200 acres in 2003, compared to 2002 when planted acreage was 1,700 and harvested was 1,600. The average yield is 763 pounds per acre, compared to 580 pounds per acres in 2002. (Continued on back page)

December 1, 2003 Grain Stocks

Stocks of **all wheat** in Montana on December 1, 2003 were 120.3 million bushels, up 7 percent from December 1, 2002. All wheat stocks stored on the farm amounted to 94.0 million bushels, up 8 percent from a year ago. All wheat stored off-farm amounted 26.3 million bushels, up 3 percent from a year ago. All wheat disappearance for the September - November 2003 quarter was up 20 percent from the same quarter last year to 32.2 million bushels, compared with 26.8 million a year ago.

Barley stocks in all positions on December 1, 2003 were 26.1 million bushels, down 10 percent from a year ago. Barley stored on-farms was 18.0 million bushels, down 18 percent from last year. Off-farm storage of barley was up 16 percent from a year ago at 8.1 million bushels. All barley disappearance for the September - November 2003 quarter was 9.1 million bushels, down 22 percent from a year ago. Oats stocks in all positions were estimated at 1.81 million bushels, down 14 percent from last year. On-farm stocks of oats were 1.7 million bushels down 15 percent from 2.0 million stored a year ago. Oats stored off-farm was down 4 percent from last year to 110,000 bushels.

The on-farm **storage capacity** of all storage facilities in Montana, normally used for storing grain, was estimated to be 130 million bushels, unchanged from a year ago. There were 167 off-farm storage facilities in Montana on December 1, 2003. The storage capacity of off farm facilities was 68.8 million bushels, down 1 percent from a year ago.

U.S. all wheat stored in all positions on December 1, 2003 totaled 1.52 billion bushels, up 15 percent from a year ago. On-farm stocks are estimated at 492 million bushels, up 28 percent from last year. Off-farm stocks, at 1.03 billion bushels, are up 10 percent from a year ago. The indicated September - November 2003 disappearance is 518 million bushels, up 20 percent from the same period a year earlier.

Durum wheat stocks in all positions on December 1, 2003 for the U.S. totaled 67.0 million bushels, down 13 percent from a year ago. On-farm stocks, at 41.4 million bushels, are down 19 percent from last year. Off-farm stocks totaled 25.6 million bushels, down 1 percent from a year ago. The indicated September - November 2003 disappearance of 20.3 million bushels is up 26 percent from the same period a year earlier.

U.S. **barley** stocks in all positions on December 1, 2003 totaled 198 million bushels, up 16 percent from December 1, 2002. On-farm stocks are estimated at 97.2 million bushels, 17 percent above a year ago. Off-farm stocks, at 101 million bushels, are 16 percent above December 2002. Indicated disappearance during the September - November 2003 quarter totaled 43.7 million bushels, down 19 percent from the same period a year earlier.

Oats stored in all positions on December 1, 2003 in the U.S. totaled 119 million bushels, 15 percent above the stocks on December 1, 2002. Of the total stocks on hand, 64.3 million bushels are stored on farms, 22 percent more than a year ago. Off-farm stocks totaled 54.9 million bushels, 7 percent above a year earlier. Indicated disappearance during September - November 2003 totaled 12.5 million bushels, up 58 percent from the same period a year ago.

U.S. **corn** stocks in all positions on December 1, 2003 totaled 7.94 billion bushels, up 4 percent from December 1, 2002. Of the total stocks, 5.29 billion bushels are stored on farms, up 10 percent from a year earlier. Off-farm stocks, at 2.66 billion bushels, are down 6 percent from the previous year. The September - November 2003 indicated disappearance is 3.26 billion bushels, compared with 2.97 billion bushels during the same period last year.

The United States on-farm **storage capacity** totaled 11.0 billion bushels on December 1, 2003, down 1 percent from December 1, 2002. Iowa continues to lead all States in on-farm storage capacity with 1.65 billion bushels, followed by Illinois and Minnesota with 1.20 billion bushels each; Nebraska, 960 million bushels; and North Dakota with 710 million bushels. The top five States account for 52 percent of the Nation's on-farm storage capacity. On-farm grain storage capacity includes all bins, cribs, sheds, and other structures normally used to store whole grains or oilseeds located on farms.

Agricultural Prices Received for November 2003

November full month crop prices were mixed compared with October 2003. Montana's winter wheat average price was $3.65 per bushel, up $0.10 from the previous month; spring wheat moved up $0.23 to $3.83 per bushel; but durum wheat prices dropped $0.06 to $3.94 per bushel. Feed barley prices increased $0.09 from the previous month to $2.16, but malt barley prices decreased $0.25 to $2.97 per bushel.

The mid-December price for alfalfa hay was up $1.00 to $77.00 per ton, but all other hay dropped $1.00 to $68.00 per ton. The mid-December grain prices were mostly lower than the previous month with winter wheat price averaging $3.60 per bushel, spring wheat was $3.75 per bushel, durum wheat was $3.88 per bushel, feed barley was $2.13 per bushel and malt barley averaged $3.63 per bushel.

Livestock prices for the full month of November were mostly higher than the previous month. Steer and heifer prices jumped $2.30 to $98.50 per cwt, while cows rose $0.20 to $49.80. The average price for calves increased $3.00 to $110.00 per cwt. Sheep prices rose $7.00 to $42.70 per cwt and lamb prices jumped $10.00 to $116.00 per cwt. Milk prices dropped $0.20 per cwt from last month to $14.70 per cwt. Steer and heifer prices for mid-December averaged $99.20 per cwt.; cows averaged $51.40 per cwt.; calves averaged $114.00 per cwt.; and milk prices averaged $14.60 per cwt.

Nationally, prices for November and changes from October were as follows: winter wheat was $3.55, up $0.18, spring wheat was $3.67, up $0.13; durum wheat was $3.91, up $0.01; the all barley price was $2.41, down $0.36, and steer and heifer prices were $100.00, up $2.20 per cwt.

The U.S. mid-December winter wheat price was $3.62 per bushel, spring wheat was $3.63 per bushel, durum wheat was $3.84 per bushel, all wheat was $3.63 per bushel, malt barley was $2.79 per bushel, feed barley was $1.99 per bushel, and all barley was $2.41. Steer and heifer prices were $98.60 per cwt, cow prices were $49.90, calves were $113.00 per cwt., all hog prices were $34.90 per cwt, and all egg prices were $0.739 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in November is 117, based on 1990-92=100, 4 points (3.5 percent) above the October Index. Both the Livestock and Products Index and the All Crops Index were higher in November. Producers received higher commodity prices for cattle, corn, soybeans, and wheat. Lower prices were received for cotton, hogs, and milk. The seasonal change in the mix of commodities farmers sell, based on the past 3-year average, also affects the overall index. Increased average marketings of all milk, cotton, cattle, and cottonseed offset decreased marketings of peanuts, soybeans, sunflowers, and potatoes.

This preliminary All Farm Products Index is up 20 points (20.6 percent) from November 2002. The Food Commodities Index increased 5 points (4.3 percent) above last month to 121, and is 25 points (26.0 percent) above November 2002. This index value is the highest since records began in 1975.

United States Index Summary

INDEX (1990-92=100)	November 2002	December 2002	November 2003	December 2003

2003 Oilseed Summary (continued)

U.S. production of **flaxseed** in 2003 totaled 10.4 million bushels, down 17 percent from the previous year. Yield is estimated at 17.9 bushels, unchanged from 2002.

U.S. **safflower** production in 2003 totaled 272.6 million pounds, down 9 percent from the previous year. Yield is estimated at 1,286 pounds, down 234 pounds from 2002. U.S. production of **mustard seed** in 2003 totaled 77.4 million pounds, down 37 percent from 2002. Yield is estimated at 723 poundss, up 18 pounds from the previous year.

U.S. **canola** production in 2003 is 1.51 billion pounds, down 3 percent from 2002. The canola yield, at 1,416 pounds, is up 198 pounds from last year.

The 2003 **sunflower** production totaled 2.67 billion pounds, 7 percent above the 2002 production but down 22 percent from 2001. The estimated yield per acre, at 1,213 pounds, increased 71 pounds from 2002.

2003 Pulse Crops Summary

Montana's **dry bean** growers produced 233,000 cwt. in 2003, down 35 percent from 2002. Producers planted 13,000 acres of beans this year, down 52 percent from last year, driven mostly by a significant reduction in garbanzo bean acreage. Growers harvested 12,800 acres, which yielded 1,820 lbs. per acre, compared with last year's 23,000 acres harvested and the average yield of 1,570 lbs. per acre. **Pinto bean** production in 2003 was 209,000 cwt., which is 27 percent less than last year. Planted acreage was 9,700, down 3,800 acres from last year. Harvested acreage, at 9,700 acres, is 25 percent below the previous year. The yield was 2,150 lbs. per acre, which is 70 pounds less than last year. **Garbanzo beans** production, at 22,000 cwt., is 69 percent lower than last year due to decreased acreage. Planted acreage was 3,200, down from 12,700 acres last year. Harvested area was 3,000 acres, down 6,600 acres from last year. Because of the continued drought, many producers had to abandon their acreage or chose to graze or hay their fields. The yield was 730 pounds per acre, down from last year's 740 pounds per acre. **Small garbanzo beans** producers planted 2,100 acres, of which 2,000 were harvested with a yield of 900 lbs. per acre. Total production was 18,000 cwt. for 2003. **Large garbanzo beans** producers planted 1,100 acres, of which 1,000 were harvested with a yield of 400 lbs. per acre. Total production of large garbanzo beans was 4,000 cwt.

Dry edible pea production for 2003 in Montana was 450,000 cwt., up 245,000 cwt. from 2002. Planted and harvested acreage was 33,000 and 31,000 acres, respectively. In 2002, growers planted 32,000 acres and harvested 27,000. Average yield for 2003 was 14.5 cwt. per acre, compared with 7.6 cwt. last year. **Austrian winter pea** production in 2003 was 56,000 cwt., which is 36,000 cwt. higher than last year's figure. Planted acreage was 9,500, unchanged from 2002 acreage. Harvested acreage, at 7,000, was double the previous year. The yield was 8.0 cwt. per acre in 2003, compared with 5.8 cwt. in 2002. Producers used fewer acres for forage and hay in 2003.

Montana's 2003 production of **lentils** was 273,000 cwt., up 83 percent from a year ago. Additional harvested area combined with favorable yields in the largest lentil producing counties in the State. Planted area was 30,000 acres and harvested acres were 26,000 acres. In 2002, the planted and harvested acres were 25,000 and 21,000, respectively. The average yield was 10.5 cwt. per acre in 2003, compared with 7.1 cwt. in 2002.

U.S. **dry edible bean** production is estimated at 22.5 million cwt. for 2003, down 1 percent from the December forecast and 25 percent below last year.

Production of **dry edible peas** in Idaho, Montana, North Dakota, Oregon, and Washington is estimated at 5.20 million cwt. for 2003, up 4 percent from the November 1 forecast and 23 percent above 2002. Production of **Austrian winter peas** in Idaho, Montana, and Oregon for the 2003 season is estimated at 174,000 cwt., up 21 percent from the November 1 forecast and 6 percent above 2002.

Production of **lentils** in Idaho, Montana, North Dakota, and Washington is estimated at 2.44 million cwt. for 2003, up 7 percent from the November 1 forecast but 3 percent below 2002.

Specialty Crop County Estimates for 2002

The Montana Agricultural Statistics Service released county estimates for the 2002 oilseeds and pulse crops. This is the fourth year of the data series. County-level data is not always published because of established disclosure rules. Funding for these county estimates was provided by the Montana Department of Agriculture.

Dry bean county estimates for Montana are published for the following classes: all, garbanzo, pinto, and other beans. Pinto bean production during 2002 was 287,000 cwt. for the state. **Carbon** county had the most pinto bean production in the state with 60,500 cwt. The second and third leading counties were **Dawson** and **Prairie** with 55,000 cwt. and 42,300 cwt. produced, respectively. The south-central district produced the largest crop of pinto beans followed by the northeastern district. As for garbanzo beans, **Roosevelt** County produced the most in 2002 at 25,600 cwt. The second leading county was **Sheridan** with 16,200 cwt of production. The northeastern district produced the most garbanzo beans in Montana.

Sheridan was the number one lentil producing county again in 2002, with 54,300 cwt. harvested. The number two county was **Roosevelt** with total production of 24,700 cwt., and third was **Daniels** county with 18,300 cwt. Growers from the northeastern district produced 74 percent of the state's lentils. Dry edible pea estimates indicate that **Roosevelt** county was the largest producer in 2002 with 44,900 cwt. grown, followed by **Sheridan** county at 34,600 cwt., and **Dawson** county at 21,600 cwt. Northeastern district farmers produced 73 percent of the state's dry peas. **Richland** was a leading county in Austrian winter pea production during 2002 with 2,900 cwt. Big Horn county was also a leading county but data was not published to avoid disclosure of individual information.

Sheridan was by far the largest canola producing county in 2002 with 10.4 million pounds, or 35 percent of the state's canola. The second largest county was **Daniels** with 4.6 million pounds produced, followed by **Valley** county with 2.9 million pounds. The northeastern district produced 75 percent of the crop. **Roosevelt** was the number one safflower producing county with 7.7 million pounds. The next leading county was **Richland** at 6.3 million pounds, followed by **Dawson's** production of 4.8 million pounds. Eighty-three percent of the state's safflower was produced in the northeast district.

Sheridan led the state in flaxseed production for 2002 at 78,500 bushels. The next largest county was **Valley** with 55,000 bushels, followed by **Roosevelt** County at 13,500 bushels. Ninety-one percent of the state's flaxseed was produced in the northeast district. The central district accounted for 48 percent of Montana's sunflower production. While the south-central district also produced a large amount of the sunflower crop, data was not published to avoid disclosing individual information. The leading mustard seed producing counties were **Sheridan** with 4.6 million pounds and **Valley** with 2.6 million pounds. Almost all of Montana's mustard seed was produced in the northeast district.

All of the preceding information, plus yield, planted acres, and harvested acres by county, district, and state levels are now available from the Montana Agricultural Statistics Service. They are available in printed form or can be accessed by visiting our website at www.nass.usda.gov/mt/. The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county statistics are based on an acreage and production survey of Montana farmers and ranchers conducted in the fall of 2002. Thanks to those who participated!

Montana April 1 Potato Stocks Up 1 Percent, U.S. Stocks Up 4 Percent

Montana potato producers held 1.8 million cwt. of potatoes in storage on April 1, 2003, up 1 percent from the previous year. Fifty-six percent of the 2002 Montana potato crop is still in storage, compared with 54 percent last year.

The 15 major potato States held 125 million cwt of potatoes in storage April 1, 2003, up 4 percent from last year but 19 percent below a year ago. Storage accounts for 30 percent of the 2002 fall storage States' production, down 1 percentage point from last year.

Disappearance, at 286 million cwt, from the start of harvest in 2002 to April 1, is up 7 percent from the same period last year but 6 percent below two years ago. March disappearance was 38.9 million cwt, up 1 percent from a year ago but 12 percent below two years ago. Shrink and loss, at 23.9 million cwt, is up 2 percent from last year but 28 percent below two years ago.

Processors used 145 million cwt of 2002 crop potatoes so far this season, up 10 percent from a year ago but 4 percent below two years ago. March usage of 18.2 million cwt is 6 percent above last year but 8 percent below two years ago. Dehydrators used 31.9 million cwt to date.

Western States held 93.9 million cwt of potatoes in storage on April 1, up 7 percent from last year but 21 percent below two years ago. Idaho's potato stocks are up 9 percent from last year and Colorado's are up 30 percent. Washington's potato stocks are 2 percent above last year but Oregon's storage is down 12 percent. California's stocks are double last year and Montana's are up 1 percent.

Montana Red Meat Production Up 4 Percent

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during March 2003, up 4 percent from March 2002 and down 2 percent from February 2003. Cattle slaughter totaled 1,600 head, equal to that one year ago. The average live weight, at 1,150 pounds, increased 9 pounds from last year.

During March there were 1,000 hogs slaughtered, unchanged from a year ago. The average live weight, at 239 pounds, was up 8 pounds from last year.

March sheep slaughter in the state totaled 300 head, up from 200 head in March 2002. The average live weight remained the same, at 121 pounds.

Commercial red meat production for the United States totaled 3.70 billion pounds in March, up 1 percent from the 3.68 billion pounds produced in March 2002. Beef production, at 2.05 billion pounds, was 1 percent below the previous year.

Cattle slaughter totaled 2.77 million head, up 1 percent from March 2002. The average live weight was 1,234 pounds, down 7 pounds from March a year ago.

Veal production totaled 16.5 million pounds, 10 percent above March a year ago. Calf slaughter totaled 85,100 head, up 10 percent from March 2002. The average live weight was 323 pounds, down 1 pound from March a year ago.

Pork production totaled 1.62 billion pounds, up 2 percent from the previous year. Hog kill totaled 8.15 million head, 2 percent above March 2002. The average live weight was 268 pounds, up 1 pound from March a year ago.

Lamb and mutton production, at 18.2 million pounds, was down 18 percent from March 2002. Sheep slaughter totaled 264,000 head, 19 percent below last year. The average live weight was 138 pounds, unchanged from March a year ago.

January - March red meat production was 11.27 billion pounds, virtually unchanged from 2002. Accumulated beef production was down 1 percent from last year, veal was up 8 percent, pork was up 2 percent, and lamb and mutton production was down 15 percent.

U.S. Cattle on Feed Down 8 Percent

Cattle and calves on feed for the slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.70 million head on April 1, 2003. The inventory was 8 percent below April 1, 2002 and 7 percent below April 1, 2001.

The inventory included 6.72 million steers and steer calves, down 7 percent from the previous year. This group accounted for 63 percent of the total inventory. Heifers and heifer calves accounted for 3.92 million head, down 9 percent from 2002.

Placements in feedlots during March totaled 2.04 million, 5 percent above 2002 and 11 percent above 2001. Net placements were 1.98 million.

During March, placements of cattle and calves weighing less than 600 pounds were 276,000, 600-699 pounds were 390,000, 700-799 pounds were 744,000, and 800 pounds and greater were 632,000.

Marketings of fed cattle during March totaled 1.80 million, 1 percent below 2002 and 6 percent below 2001. Other disappearance totaled 62,000 during March, 10 percent below 2002 and 37 percent below 2001.

U.S. Egg Production Down 1 Percent

U.S. egg production totaled 7.36 billion during March 2003, down 1 percent from last year. Production included 6.26 billion table eggs and 1.11 billion hatching eggs, of which 1.04 billion were broiler-type and 64.0 million were egg-type.

The total number of layers during March 2003 averaged 338 million, up slightly from a year earlier. March egg production per 100 layers was 2,181 eggs, down 1 percent from March 2002.

All layers in the U.S. on April 1, 2003, totaled 338 million, up slightly from a year ago. The 338 million layers consisted of 278 million layers producing table or commercial type eggs, 57.3 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2003, averaged 70.8 eggs per 100 layers, down slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 6.87 billion eggs during March 2003, down 1 percent from a year ago. The average number of layers during March, at 315 million, was down slightly from a year ago.

Montana Quarterly Milk Production Up 1 Percent from the Previous Year

During the January-March 2003 quarter, Montana milk cows produced 84 million pounds of milk, up 1 million pounds from the previous quarter a year ago. The inventory of milk cows was 18,000 head, unchanged from the previous year.

Milk production in the U.S. during the January-March quarter totaled 43.0 billion pounds, up 1.3 percent from the January-March quarter last year. The average number of milk cows in the U.S. during the quarter was 9.16 million head, 43,000 head more than the same period last year.

Milk production in the 20 major States during March totaled 13.0 billion pounds, up 1.5 percent from March 2002.

February revised production, at 11.6 billion pounds, was up 1.6 percent from February 2002. The February revision represented a decrease of 8 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,664 pounds for March, 10 pounds above March 2002.

The number of milk cows on farms in the 20 major States was 7.81 million head, 67,000 head more than March 2002, and 2,000 head more than February 2003.

Will the Farm Act Get Pulses Racing?

Dry peas, lentils, and small chickpeas - pulse crops - are relatively minor in acreage, supply, and use in the U.S. compared with corn, soybeans, and wheat. However, pulses could be poised for expansion due to their inclusion in the 2002 Farm Act.

New marketing loan benefits, combined with agronomic advantages and a growing number of processors, may increase the attractiveness of planting pulse crops, particularly in the Northern Great Plains. Accommodating increased supply is likely to hinge on expanding current markets and creating new ones.

In the U.S., dry peas and lentils have traditionally been produced in the Palouse, an area centered along the borders of eastern Washington, northern Idaho, and northeast Oregon. Chickpeas, on the other hand, have long been grown in California. Since the mid-1990's, acreage of all 3 crops has expanded to the Northern Great Plains, with **North Dakota** emerging as the region's leader.

Processors, exporters, and industry representatives generally agree that if production of these commodities does expand, it will likely occur in the Northern Great Plains rather in the Palouse, because of greater land availability, lower land costs, and flatter terrain. While production outside this region is possible, expansion will likely be constrained by the fact that pulses are cool-season crops. Pulse acreage may increase in Nebraska, **eastern Montana**, Colorado, and Wyoming, while Arizona and New Mexico could see greater acreage planted to chickpeas.

2003 Planting Intentions

Montana **spring wheat** producers expect to seed 3.1 million acres in 2003 down 17 percent from last year. If these expectations hold, spring wheat seedings would be smallest acreage since 1993. Last years acreage was significantly impacted by the large number of acres of winter wheat abandoned and reseeded to spring wheat. Producer comments indicate that it is too early to tell how much winter wheat acreage will end up being abandoned and reseeded to spring wheat. **Winter wheat** seedings, at 1.85 million acres, are up 28 percent from last year due to more favorable fall planting conditions. Winter wheat conditions are better than a year ago and were rated 4% very poor, 18% poor, 60% fair, 16% good and 2% excellent for the month ending February 2003. While conditions are better than a year ago, the lack of precipitation in most areas of the state is a concern for the winter wheat crop breaking dormancy. Producers are expecting to plant 600,000 acres of **durum wheat** this spring, up 2 percent from a year ago. Adding the winter wheat seeded last fall to the other spring and durum wheat intended seedings shows 5.55 million acres of **all wheat** to be planted, down 4 percent from 2002.

Montana **barley** producers intend to plant an estimated 1.2 million acres, unchanged from the previous year. The intended seeded acreage for **oats** is expected to be 135,000 acres, down 10,000 acres from the previous year. Growers intend to harvest 60,000 acres of the 2003 oat crop for grain, 5,000 acres more than a year ago. **Corn** growers intend to plant 60,000 acres, down 5,000 acres from last year. Farmers intend to plant 59,000 acres of **sugar beets**, up 2 percent from 2002. The area planted to **dry beans** is expected to be 25,000 acres, down 7 percent from last year. **Hay** growers are expected to harvest 2.6 million acres, which is unchanged from last year's figure.

In the United States, **all wheat** planted area is expected to total 61.7 million acres in 2003, up 2 percent from 2002. **Winter wheat** planted area for the 2003 crop is 44.3 million acres, up 6 percent from 2002. The 2003 other spring wheat planted acreage is estimated at 14.6 million, down 7 percent from last year. Of the total, about 13.8 million acres are Hard Red **Spring wheat**. Area planted to **Durum wheat** is intended to total 2.83 million acres, down 3 percent from a year ago.

Growers in the United States intend to seed 5.38 million acres of **barley** for 2003, up 6 percent from a year ago. The intended acreage in North Dakota is up 400,000 acres from last year. Acres seeded and to be seeded for **oats** is expected to total 4.83 million, down 4 percent from last year's planted area. Growers expect to harvest 2.20 million acres for grain, 5 percent more than the 2002 harvested acreage of 2.10 million. Growers intend to plant 79.0 million acres of **corn** for all purposes in 2003, virtually unchanged from 2002 but 4 percent above 2001. Area planted to **sugarbeets** for the 2003 crop year is expected to total 1.40 million acres, 2 percent below the 2002 planted area. Prospective plantings of **dry beans** in the U.S. totals 1.52 million acres, down 21 percent from last year but 6 percent above two years ago. Low prices for the 2002 crop pushed planting intentions down in 11 of the 18 major producing States.

U.S. producers expect to harvest 63.6 million acres of **all hay** in 2003, down 1 percent from 2002. Harvested acres for 2003 are expected to decrease in 17 States. North Dakota, down 900,000 acres, has the largest decrease following the drought conditions last year which resulted in more Conservation Reserve Program land and small grain acres harvested for hay.

The Montana 2003 prospective plantings and grain stocks estimates in this issue are the result of surveying approximately 2,000 Montana farmers and ranchers in March. **SPECIAL THANKS** to those operators that were interviewed and responded to the survey.

Planted Acreage, 2001-2002 and Intended 2003 Montana and United States

March 1, 2003 Grain Stocks

Stocks of all wheat in Montana on March 1, 2003 were 72.7 million bushels, down 12 percent from a year ago. All wheat stocks stored on the farm amounted to 49.0 million bushels, down 21 percent from a year ago. All wheat stored off-farm amounted 23.7 million bushels, up 13 percent from a year ago. All wheat disappearance for the December - February 2003 quarter was up 53 percent from the same quarter last year to 39.8 million bushels, compared with 26.0 million a year ago.

Barley stocks in all positions on March 1, 2003 were 15.0 million bushels, slightly higher than a year ago. Barley stored on-farm was 8.5 million bushels, up 6 percent from last year. Off-farm storage of barley was down 7 percent from a year ago at 6.5 million bushels. All barley disappearance for the December - February 2003 quarter was 13.9 million bushels, up 62 percent from a year ago. Oats stocks in all positions were estimated at 1.7 million bushels, down 7 percent from last year. On-farm stocks of oats were 1.6 million bushels down 6 percent from 1.7 million stored a year ago. Oats stored off-farm was down 23 percent from last year to 115,000 bushels.

All wheat stored in the United States on March 1, 2003 totaled 905 million bushels, down 25 percent from a year ago. On-farm stocks are estimated at 233 million bushels, down 31 percent from last year. Off-farm stocks, at 672 million bushels, are down 23 percent from a year ago. The indicated December 2002 - February 2003 disappearance is 415 million bushels, up slightly from the same period a year earlier. U.S. durum wheat stocks in all positions on March 1, 2003 totaled 56.5 million bushels, up 9 percent from a year ago. On-farm stocks, at 31.7 million bushels, are up 5 percent from March 1, 2002. Off-farm stocks totaled 24.8 million bushels, up 15 percent from a year ago. The indicated December 2002 - February 2003 disappearance of 20.2 million bushels is down 18 percent from the same period a year earlier.

U.S. barley stocks in all positions on March 1, 2003 totaled 124 million bushels, down 13 percent from March 1, 2002. On-farm stocks are estimated at 36.7 million bushels, 20 percent below a year ago. Off-farm stocks, at 86.8 million bushels, are 9 percent below March 1, 2002. Indicated disappearance during the December 2002 - February 2003 quarter totaled 46.5 million bushels, down 13 percent from the same period a year earlier.

Oats stored in the United States on March 1, 2003 totaled 82.4 million bushels, 12 percent below the stocks on March 1, 2002. Of the total stocks on hand, 35.0 million bushels are stored on farms, 13 percent less than a year ago. Off-farm stocks totaled 47.4 million bushels, 11 percent below a year earlier. Indicated disappearance during December 2002 - February 2003 totaled 21.3 million bushels, up 2 percent from the same period a year ago

Corn stocks in all positions on March 1, 2003 totaled 5.13 billion bushels, down 11 percent from March 1, 2002. Of the total stocks, 2.94 billion bushels are stored on farms, down 12 percent from a year earlier. Off-farm stocks, at 2.19 billion bushels, are down 10 percent from the previous year. The December 2002 - February 2003 indicated disappearance is 2.51 billion bushels, compared with 2.47 billion bushels during the same period last year.

Agricultural Prices Received

February 2003 full month crop prices were generally lower compared with January 2003. Montana's winter wheat average price was $3.73 per bushel, down $0.24 from the previous month; spring wheat prices fell $0.31 to $3.84 per bushel; and durum wheat prices increased $0.13 to $4.75 per bushel. Feed barley prices dropped $0.03 from the previous month to $2.18, and malt barley prices rose $0.03 to $3.15 per bushel. Oat prices fell $0.05 from the previous month to $1.83.

The mid-March price for alfalfa hay was up $3.00 to $85.00 per ton and all other hay decreased $1.00 to $72.00 per ton. Mid-March grain prices were mostly lower than the previous month with winter wheat price averaging $3.50 per bushel, spring wheat was $3.80 per bushel, durum wheat was $4.60 per bushel, feed barley was $2.17 per bushel and malt barley averaged $3.28 per bushel.

Livestock prices for the full month of February were mostly lower than the previous month. Steer and heifer prices decreased $2.70 to $80.00 per cwt, while cows increased $3.40 to $40.80. The average price for calves decreased $2.30 to $93.50 per cwt. Sheep prices remained unchanged at $43.50 per cwt and lamb prices were unchanged at $103.00 per cwt. Milk prices decreased $1.40 per cwt from last month to $11.40 per cwt. Steer and heifer prices for mid-March averaged $76.20 per cwt.; cows averaged $41.10 per cwt.; calves averaged $94.00 per cwt.; and milk prices averaged $11.50 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $3.52, down $0.14, spring wheat was $3.79, down $0.25; durum wheat was $4.24, up $0.01; the all barley price was $2.87, up $0.02, and steer and heifer prices were $78.10, up $0.30 per cwt.

The U.S. mid-March winter wheat price was $3.27 per bushel, spring wheat was $3.69 per bushel, durum wheat was $4.13 per bushel, all wheat was $3.49 per bushel, malt barley was $3.14 per bushel, feed barley was $2.35 per bushel, and all barley was $2.92. Steer and heifer prices were $76.20 per cwt, cow prices were $39.80, calves were $96.40 per cwt., all hog prices were $35.00 per cwt, and all egg prices were $0.687 per dozen.

The March All Farm Products Index is 99 percent of its 1990-92 base, unchanged from the February index but 6.6 percent below the March 2002 index.

Weekly Crop-Weather Reports

The 2003 growing season is upon us, and with it begins the weekly Crop-Weather Report. Undoubtedly, this is one of the most useful reports for producers, agribusinesses, and market analysts. The report provides up-to-date conditions and progress of Montana's crops, as well as pertinent data on moisture supplies and weather information.

We will resume publication of the weekly reports April 7, 2003. These will continue through November 3 when the last 2003 weekly report will be issued. At that time, monthly reports will resume.

U.S. Hog Inventory Down

U.S. inventory of all hogs and pigs on March 1, 2003, was 58.1 million head. This was 2 percent below March 1, 2002, and 2 percent below December 1, 2002. Breeding inventory, at 5.96 million head, was down 4 percent from March 1, 2002, and down 1 percent from last quarter. Market hog inventory, at 52.2 million head, was 2 percent below last year and 3 percent below last quarter.

The December 2002-February 2003 U.S. pig crop, at 24.4 million head, was 2 percent less than 2002, and 2 percent more than 2001. Sows farrowing during this period totaled 2.77 million head, 2 percent below last year. The sows farrowed during this quarter represented 46 percent of the breeding herd. The average pigs per litter was 8.81 pigs saved per litter for the December 2002-February 2003 period, compared to 8.74 last year. Pigs saved per litter by size of operation ranged from 7.60 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs. U.S. hog producers intend to have 2.84 million sows farrow during the March-May 2003 quarter, 3 percent below the actual farrowings during the same period in 2002, and 1 percent below 2001. Intended farrowings for June-August 2003, at 2.79 million sows, are 3 percent below the same period in both 2002 and 2001.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 35 percent of the total U.S. hog inventory, up from 31 percent last year.

All inventory and pig crop estimates for March 2002 through December 2002 were reviewed using final pig crop, official slaughter, death loss, import, and export data in U.S. level balance sheets. Based on the findings of this review, adjustments of one percent were made to the September 1, 2002 inventory, two percent to the June-August 2002 pig crop, and one percent to the December 1, 2002 inventory.

Annual Red Meat Production

Montana slaughter plants produced 16.8 million pounds, dressed weight, of red meat during 2002, compared with 16.4 million pounds in 2001. There were 20,200 cattle slaughtered during 2002, up 2% from the previous year. The total live weight of 23.3 million pounds was up 2% from a year earlier. The average live weight was up 3 pounds to 1,152 pounds.

There were 15,000 hogs slaughtered in Montana, an increase of 1,300 head from 2001. Total live weight at 3.5 million pounds was up 6% from the last year. The average live weight was 236 pounds per head compared with 244 the previous year. Sheep slaughter amounted to 3,800 head, an increase of 200 head from a year earlier. The average live weight at 122 pounds was 2 pounds heavier than the previous year. Total live weight of all sheep and lambs slaughtered in 2002 increased 9% from 2001 to 465,000 pounds.

The number of federally inspected slaughter plants in Montana on January 1, 2003, was 10, down one plant from 2001. There were 147 non-federally inspected plants on January 1, 2003, up 8 from the same date a year ago.

Red meat production in commercial plants and on farms for the United States totaled 47.3 billion pounds in 2002, a new record high. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 47.2 billion pounds.

Beef production, at 27.2 billion pounds, rose 1% above the previous record high set in 2000. Veal production totaled 205.2 million pounds, up 1% from the record low set last year. Pork production, at 19.7 billion pounds, was 2% above the record high set in 1999. Lamb and mutton production totaled 222.2 million pounds, falling 3% below the previous record low set a year ago.

Commercial cattle slaughter during 2002 totaled 35.7 million head, up 1% from 2001, with federal inspection comprising 98.3% of the total. The average live weight was 1,251 pounds, up 30 pounds from a year ago. Steers comprised 49.9% of the total federally inspected slaughter, heifers 32.3%, dairy cows 7.4%, other cows 8.7%, and bulls 1.7%.

Commercial calf slaughter totaled 1.05 million head, up 4% from a year ago with 97.5% under federal inspection. The average live weight was 312 pounds, down 8 pounds from a year earlier.

Commercial hog slaughter totaled 100.3 million head, up 2% from 2001, with 98.7% of the hogs slaughtered under federal inspection. The average live weight, at 265 pounds, was up 1 pound from last year. Barrows and gilts comprised 96.5% of the total federally inspected slaughter.

Commercial sheep and lamb slaughter, totaled 3.29 million head, up 2% from 2001, with 94.1% comprised by federal inspection. The average live weight fell 7 pounds from 2001 to 133 pounds.

There were 879 slaughtering plants under federal inspection on January 1, 2003, compared with 881 last year. Of these, 706 slaughtered at least one head of cattle during 2002 with 15 slaughtering over 56% of the total cattle killed. There were 683 plants that slaughtered hogs, with 13 accounting for 57% of the total. Likewise, 6 of the 268 plants that slaughtered calves accounted for 49% of the total and 7 of the 525 plants that slaughtered sheep or lambs in 2002 comprised 80% of the total head. Iowa, Kansas, Nebraska, and Texas accounted for over 52% of the United States commercial red meat production in 2002.

February Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during February 2003, down 2% from February 2002 and 6% from January 2003. Cattle slaughter totaled 1,600 head, down 6% from a year ago. The average live weight, at 1,146 pounds, decreased 1 pound from last year.

During February there were 1,200 hogs slaughtered, up 100 head from a year ago. The average live weight, at 237 pounds, was up 3% from last year. February sheep slaughter in the state totaled 300 head, the same as February 2002. The average live weight decreased 3% from last year to 123 pounds.

Commercial red meat production for the United States totaled 3.50 billion pounds in February, virtually unchanged from the 3.50 billion pounds produced in February 2002.

Beef production, at 1.94 billion pounds, was 2% below the previous year. Cattle slaughter totaled 2.57 million head, down 2% from February 2002. The average live weight was 1,261 pounds, up 6 pounds from February a year ago.

Veal production totaled 15.8 million pounds, 10% above February a year ago. Calf slaughter totaled 83,100 head, up 14% from February 2002. The average live weight was 316 pounds, down 10 pounds from February a year ago.

Pork production totaled 1.52 billion pounds, up 3% from the previous year. Hog kill totaled 7.68 million head, 2% above February 2002. The average live weight was 267 pounds, unchanged from February a year ago.

Lamb and mutton production, at 15.0 million pounds, was down 16% from February 2002. Sheep slaughter totaled 224,200 head, 14% below last year. The average live weight was 133 pounds, down 4 pounds from February a year ago.

National Agricultural Week, March16-22, is a good time to say thanks to all of Montana's agricultural producers that supply food and fiber to people in Montana, across the country, and around the world. Thank you!

Montana Potato Stocks Down 13 Percent, U.S. Up 3 percent

Montana potato producers held 2.8 million cwt. of potatoes in storage on March 1, 2003, down 13 percent from the previous year. Eighty-seven percent of the 2002 Montana potato crop is still in storage.

The 15 major potato States held 164 million cwt of potatoes in storage March 1, 2003, up 3 percent from last year but 17 percent below 2001. Storage accounts for 40 percent of the 2002 fall storage States' production, down 1 percentage point from last year.

Disappearance, at 247 million cwt, from the start of harvest in 2002 to March 1, is up 8 percent from the same period last year but 5 percent below two years ago. February disappearance was 33.6 million cwt, virtually unchanged from a year ago but 8 percent below two years ago. Shrink and loss, at 22.2 million cwt, is up 2 percent from last year but 24 percent below two years ago.

Processors used 126 million cwt of 2002 crop potatoes so far this season, up 10 percent from a year ago but 4 percent below two years ago. February usage of 18.8 million cwt is 2 percent above last year and 3 percent above two years ago. Dehydrators used 28.0 million cwt to date. This processing report does not include chip potatoes from the Klamath Basin of Oregon and California.

Western States held 121 million cwt of potatoes in storage on March 1, up 6 percent from last year but 18 percent below two years ago. Idaho's potato stocks are up 7 percent from last year and Colorado's are up 35 percent. Washington's potato stocks are 2 percent above last year, but Oregon's storage is down 14 percent. California's stocks are 67 percent above last year and Montana's are up 14 percent.

February Milk Production Up

Milk production in the 20 major States during February totaled 11.6 billion pounds, up 1.7 percent from February 2002. January revised production, at 12.5 billion pounds, was up 1.8 percent from January 2002. The January revision represented an increase of 1 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,485 pounds for February, 13 pounds above February 2002. The number of milk cows on farms in the 20 major States was 7.81 million head, 66,000 head more than February 2002, and 3,000 head more than January 2003.

Organic Grains, Legumes, and Oilseeds

Organic farming is one of the fastest growing segments of U.S. agriculture. As consumer interest continues to gather momentum, many U.S. producers, manufacturers, distributors, and retailers are specializing in growing, processing, and marketing an ever-widening array of organic agricultural and food products.

Organic grain, oilseed, and legume production relies on ecologically based practices, such as biological pest management and composting, and crops are produced on land that has had no prohibited substances applied to it for at least 3 years prior to harvest. Soil fertility and crop nutrients are managed through tillage and cultivation practices, crop rotations, and cover crops, supplemented with manure and crop waste material and allowed synthetic substances. Crop pests, weeds, and diseases are controlled through physical, mechanical, and biological control management methods.

U.S. farmers produced certified organic grain crops on over 291,000 acres in 1997. A variety of certified organic grains was grown in 35 States in 1997

North Dakota was the top producing State, with over 50,000 acres. Another dozen States - **Montana,** Minnesota, Idaho, Colorado, Nebraska, Iowa, Utah, Kansas, California, South Dakota, Wisconsin, and Texas - had at least 10,000 certified organic acres of grain crops

Corn, wheat, and **oats** were grown organically in over 24 States in 1997. **Wheat** was produced under certified organic farming systems on over 125,000 acres in 1997, **corn** was grown on over 42,000 acres, and **oats** and **barley** were each grown on almost 30,000 acres. Other certified organic grain crops - **sorghum, rice** (including wild rice), **spelt, millet, buckwheat**, and **rye** - were grown on under 15,000 acres each. State and private groups certified another 22,967 acres of organic grain crops in 1997 that could not be broken out into acreage for specific crops.

Certified organic grain acreage was well under 1 percent of the U.S. total for **corn, wheat, barley**, and **rice**. However, between 1 and 3.5 percent of the U.S. **oats, millet**, and **rye** crops were certified organic in 1997. About a third of two specialty grain crops - **spelt** (used in cereals and other food products) and **buckwheat** - were grown under certified organic farming systems in 1997.

Soybeans are the top legume crop grown under certified organic farming systems. U.S. growers produced over 82,000 acres of certified organic soybeans in 1997. Organic soybeans accounted for 0.1 percent of total soybean acreage in the United States.

Certified organic **dry peas** and **lentils** were grown on nearly 5,200 acres in the United States in 1997. **Montana** and **North Dakota** led with over 1,500 acres each. Organic dry peas and lentils accounted for about 1 percent of the total dry pea and lentil acreage in the United States in 1997.

Certified organic **dry beans** were grown on over 4,600 acres in 1997, and California had almost a quarter of those acres.

Certified organic oilseeds - including **flax** and **sunflowers** - were grown on 31,400 acres in 18 States in 1997. Certified organic sunflowers were grown on almost 11,000 acres, and flax was grown on over 8,000 acres. **North Dakota** was by far the biggest producer, with over 7,000 acres of flax and 4,500 acres of sunflowers. Certified organic flax represented almost 6 percent of total U.S. flax acreage in 1997, while organic sunflowers represented 0.4 percent of the total sunflower acreage.

SOURCE: *Recent Growth Patterns in the U.S. Organic Foods Market*, Catherine Greene/AIB-777, September 2002, Economic Research Service/USDA.

Sheep and Lamb Losses for 2002

Montana sheep and lamb producers lost 67,000 animals to weather, predators, disease and other causes during 2002, representing a total value of more than $4.1 million. While the total number of sheep and lambs lost increased only 1,000 head from last year, the total value of inventory lost was 29 percent higher than a year ago. Higher average market prices this past year resulted in an increase to sheep and lamb values. Total inventory is 7 percent lower than the previous year. Sheep and lamb deaths amounted to 9.9 percent of the January 1 inventory and lambs born -- slightly more than the previous year.

The number of sheep and lambs lost to all predators totaled 21,400 head, up 1,500 head from last year. Lamb losses by all predators amounted to 16,500 head, down 2 percent from last year. The number of sheep lost to all predators totaled 4,900, up 1,800 head from a year ago. Predators caused an estimated $1.3 million in losses in 2002, up 50 percent from the previous year. Losses due to predators amounted to 3.2 percent of the January 1 inventory and lambs born and 32 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 65 percent of the predator caused losses and 21 percent of all death losses in the state. The value of losses attributed to coyotes was $809,200.

The total value of non-predatory losses was $2.5 million in 2002, 24 percent above the previous year. Non-predatory losses accounted for 60 percent of all losses. The largest non-predatory cause of losses was weather conditions at 13,400 head. Sheep lost to non-predatory factors totaled 10,900 head, 19 percent higher than 2001. Non-predatory lamb losses came in at 29,000 head, 3,900 head higher than a year ago.

Producers reported less sheep and lambs lost to unknown causes this past year. This resulted in a 24 percent decrease in the number of sheep and lambs lost to unknown causes from last year. Lambs lost to unknown causes totaled 3,500 head, compared with 5,100 head last year. Unknown causes claimed 2,200 sheep, 200 head less than last year. The value of sheep and lambs lost to unknown causes was $384,200.

U.S. Cattle on Feed Down

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.52 million head on March 1, 2003. The inventory was down 9 percent from the 11.52 million head on March 1, 2002 and 10 percent below March 1, 2001.

Placements in feedlots during February totaled 1.66 million, 8 percent below 2002 but 5 percent above 2001. Net placements were 1.59 million. During February, placements of cattle and calves weighing less than 600 pounds were 263,000, 600-699 pounds were 376,000, 700-799 pounds were 597,000, and 800 pounds and greater were 421,000. Marketings of fed cattle during February totaled 1.73 million, 4 percent below 2002 and 1 percent below 2001. Other disappearance totaled 71,000 during February, 13 percent above 2002 but 12 percent below 2001.

U.S. February Egg Production

U.S. egg production totaled 6.62 billion during February 2003, up 1 percent from last year. Production included 5.63 billion table eggs and 985 million hatching eggs, of which 927 million were broiler-type and 58.0 million were egg-type.

The total number of layers during February 2003 averaged 338 million, up slightly from a year earlier. February egg production per 100 layers was 1,957 eggs, up 1 percent from February 2002.

February 2003 contained 20 weekdays, one holiday and four Saturdays, the same as February 2002.

All layers in the U.S. on March 1, 2003, totaled 338 million, up slightly from a year ago. The 338 million layers consisted of 278 million layers producing table type eggs, 57.4 million layers producing broiler-type hatching eggs, and 2.62 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2003, averaged 69.6 eggs per 100 layers, down 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.18 billion eggs during February 2003, up slightly from a year ago. The average number of layers during February, at 316 million, was down slightly from a year ago.

Wheat and Barley Movement

Montana wheat shipped to out-of-state destinations during the June - November 2002 period, at 59.5 million bushels, was 74% higher than a year ago.

Over 89% of wheat shipped during this period headed west, totaling 52.8 million bushels, up 86% from a year earlier. Movements to eastern destinations were also up during this period, totaling 3.4 million bushels compared with 1.7 million a year ago. Other and unknown destinations totaled 3.3 million bushels, down 17% from year ago.

Wheat shipped by rail, amounted to 56.4 million bushels, 95% of total shipments. Wheat trucked during this period was 3.1 million bushels, 3% higher than last year. The percentage of wheat shipped by truck was 5% of the total, lower than a year ago.

Montana barley shipped to out-of-state destinations during the June - November 2002 period was 7.5 million bushels, down 14% from the same period last year.

Shipments of barley out of Montana headed for eastern destinations deceased from 5.0 million bushels last year to 3.8 million bushels this year. Shipments to western destinations were down from the same period last year, at 1.9 million bushels. Shipments to other destinations were up 0.7 million bushels from last year to 1.8 million bushels this year.

Barley shipped by rail amounted to 5.2 million bushels, down 2.1 million bushels from last year. Barley hauled by rail was 69% of total movement, down from 83% from the same period last year.

Land in Farms 2002

The number of farms and ranches in Montana increased to 28,000 during 2002, 500 more than the revised number of farms a year earlier. Farms and ranches are sub-grouped by economic sales classes which give a clearer picture of where the changes occurred. The smallest economic sales category, the $1,000 to $9,999 sales group showed the biggest increase with 500 more farms in 2002, up from 11,000 farms in 2001. With 11,500 farms, the $1,000 to $9,999 sales group contains the largest number of farms. Although many producers in this class left agriculture altogether, the total number of operators in this group increased due to poor economic conditions in 2002. The next economic sales category, $10,000 to $99,999, shows 9,900 farms in 2002 compared with 10,000 in 2001 and the economic sales class of $100,000 or more increased 100 farms from 2001 to 6,600 farms in 2002.

The land in farms and ranches is estimated at 56.7 million acres, unchanged from the previous two years. The economic sales breakdown of land in farm and ranches follows: $1,000 to $9,999 - 3.5 million acres compared with 3.7 million in 2001; $10,000 to $99,999 - 15.7 million acres, down from 15.9 million last year; $100,000 or more of sales - 37.5 million acres, up from the 37.1 million acres in 2001. These numbers show that producers are shifting between sales categories with many moving into lower value of sales and others increasing their size of farms and value of sales. The acreage increase in the largest economic sales category reflects the consolidation of operations that were necessary to compete in today's tough agricultural environment.

1/ Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

January Agricultural Prices

January 2003 full month crop prices were lower compared with December 2002. Montana's winter wheat average price was $3.97 per bushel, down $0.27 from the previous month; spring wheat prices fell $0.33 to $4.15 per bushel; and durum wheat prices decreased $0.05 to $4.62 per bushel. Feed barley prices dropped $0.03 from the previous month to $2.21, and malt barley prices fell $0.11 to $3.12 per bushel.

The mid-February price for alfalfa hay was down $5.00 to $82.00 per ton and all other hay decreased $3.00 to $73.00 per ton. Mid-February grain prices were mostly lower than the previous month with winter wheat price averaging $3.69 per bushel, spring wheat was $4.11 per bushel, durum wheat was $4.34 per bushel, feed barley was $2.21 per bushel and malt barley averaged $3.05 per bushel.

Livestock prices for the full month of January were mostly higher than the previous month. Steer and heifer prices decreased $0.80 to $82.70 per cwt, while cows increased $1.40 to $37.40. The average price for calves increased $1.20 to $95.80 per cwt. Sheep prices rose $2.90 to $43.50 per cwt and lamb prices moved up $9.00 to $103.00 per cwt. Milk prices increased $0.70 per cwt from last month to $12.80 per cwt. Steer and heifer prices for mid-February averaged $81.10 per cwt.; cows averaged $41.00 per cwt.; calves averaged $96.30 per cwt.; and milk prices averaged $12.60 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $3.66, down $0.19, spring wheat was $4.04, down $0.16; durum wheat was $4.23, down $0.01; the all barley price was $2.85, down $0.18, and steer and heifer prices were $77.80, up $2.70 per cwt.

The U.S. mid-February winter wheat price was $3.53 per bushel, spring wheat was $3.93 per bushel, durum wheat was $4.17 per bushel, all wheat was $3.71 per bushel, malt barley was $3.13 per bushel, feed barley was $2.23 per bushel, and all barley was $2.85. Steer and heifer prices were $78.90 per cwt, cow prices were $38.10, calves were $97.60 per cwt., all hog prices were $34.40 per cwt, and all egg prices were $0.640 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in February is 99, based on 1990-92=100, unchanged from the January index. Higher prices for cattle, hogs, corn, and soybeans offset lower prices for tomatoes, broilers, wheat, and eggs. The seasonal change in the mix of commodities farmers sell also affects the overall index. Increased marketings of cattle, broilers, eggs, and strawberries offset decreased marketings of corn, soybeans, wheat, and oranges.

U.S. January Pig Crop Down 2 Percent

The January 2003 U.S. pig crop at 8.13 million head, was 2 percent below the previous year. Sows farrowing during this period totaled 930 thousand head, 2 percent below last year. The average pigs per litter for January increased to 8.74, compared to 8.73 last year.

The U.S. inventory of sows and gilts on February 1, 2003, was 5.81 million head, down 3 percent from February 1, 2002. U.S. sows and gilts bred during January totaled 1.15 million head, down 3 percent from the previous year.

United States Index Summary

INDEX (1990-92=100)	January 2002	February 2002	January 2003	February 2003

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

Land in Farms (continued)

The number of farms and ranches in Montana increased to 28,000 during 2002, 500 more than the revised number of farms a year earlier. Farms and ranches are sub-grouped by economic sales classes which give a clearer picture of where the changes occurred. The smallest economic sales category, the $1,000 to $9,999 sales group showed the biggest increase with 500 more farms in 2002, up from 11,000 farms in 2001. With 11,500 farms, the $1,000 to $9,999 sales group contains the largest number of farms. Although many producers in this class left agriculture altogether, the total number of operators in this group increased due to poor economic conditions in 2002. The next economic sales category, $10,000 to $99,999, shows 9,900 farms in 2002 compared with 10,000 in 2001 and the economic sales class of $100,000 or more increased 100 farms from 2001 to 6,600 farms in 2002.

The land in farms and ranches is estimated at 56.7 million acres, unchanged from the previous two years. The economic sales breakdown of land in farm and ranches follows: $1,000 to $9,999 - 3.5 million acres compared with 3.7 million in 2001; $10,000 to $99,999 - 15.7 million acres, down from 15.9 million last year; $100,000 or more of sales - 37.5 million acres, up from the 37.1 million acres in 2001. These numbers show that producers are shifting between sales categories with many moving into lower value of sales and others increasing their size of farms and value of sales. The acreage increase in the largest economic sales category reflects the consolidation of operations that were necessary to compete in today's tough agricultural environment.

Honey Production

Honey produced in Montana by producers with five or more colonies during 2002 was 8.4 million pounds of honey, down 39% from 2001. The estimate of honey production and colonies includes production by colonies that were in the state for part of the year. There were 134,000 colonies producing honey in 2002, compared with 136,000 colonies in 2001. The honey yield per colony was 63 pounds, down 39 pounds from a year ago. Stocks on hand on December 15, 2002 totaled 1.1 million pounds, down 3.5 million pounds from 2001. The improved honey prices resulted in lower percentage of the honey crop on hand December 15, 2002. Prices for Montana honey increased 68 cents per pound from last year to $1.35 per pound in 2002. The value of 2002 honey production was $11.4 million dollars, up 23% from last year.

U.S. honey production in 2002 from producers with five or more colonies totaled 171 million pounds, down 8% from 2001. There were 2.52million colonies producing honey in 2002, up 1% from 2001. Yield per colony averaged 67.8 pounds, down 8% from the 74.0 pounds in 2001. Colonies which produced honey in more than one State were counted in each State and yields per colony may therefore be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 39.0 million pounds on December 15, 2002, down 40% from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

Honey prices for the U.S. increased to a record high during 2002 to 128.6 cents, up 83% from 70.4 cents in 2001. Prices are based on retail sales by producers and sales to private processors and cooperatives. State level honey prices reflect the portions of honey sold through retail, co-op and private channels. U.S. honey prices for each color class are derived by weighing quantities sold for each marketing channel at the U.S. level. Honey prices for 2002 were higher than the previous year for all color classes. Some 2001 crop honey was sold at the higher prices in 2002, which caused some revisions to the 2001 crop prices.

2002 Crop Values

The value of Montana's 2002 **all wheat** crop rose 54% from 2001 to $466.7 million. Total production was up 14% and the season average price increased $1.11 per bushel. The 2002 season average price for all wheat was $4.25 per bushel compared with $3.14 last season.

The value of Montana's **winter wheat** crop increased 39% from last year to $81.9 million. The preliminary season average price was up 83 cents to $3.90 per bushel. **Spring wheat's** value of production was at $326.4 million, up 63% from 2001. The season average price increased $1.24 per bushel to $4.30. **Durum wheat's** season average price increased 70 cents from 2001 to $4.50 per bushel. The total crop value of $58.5 million was up 30% from 2001 and is the highest durum wheat value of production on record.

The value of Montana's **oats** crop increased 15% from 2001 to $5.39 million. The season average price increased 4 cents to $2.00 per bushel. Total value of production for **barley** was estimated at $115.7 million, up 48% from the previous year. The 2002 season average price, at $2.90, was up 25 cents from 2001.

Montana's value of production for **flaxseed** increased 53% to $1.2 million dollars. The price per bushel increased $1.80 to $6.15. **Dry edible beans** value of production was estimated at $5.5 million, down 16% from 2001. The average price dropped $2.10 per cwt to $15.20.

Value of production for **dry edible peas** in Montana, at $1.42 million, increased 16% from 2001. The average price per cwt increased $2.00 to $6.90. **Austrian winter peas** value of production for the 2002 crop decreased 15% to $187,000. The average price per cwt was $9.35, down $1.65 from last year. Lentils value of production dropped 23% from 2001 to $1.86 million. The average price increased $1.50 to $12.50 per cwt.

Montana's value of production for **potatoes** was $36.75 million, up 22% from the previous year. The average price per cwt was $11.40, $2.25 above 2001.

Sugar beets value of production for 2001 is estimated at $44.62 million, down 3% from the previous year. The season average price jumped $4.10 per cwt from 2000 to $38.80.

The season average price for **all hay** decreased $10.00 from last year to $84.00 per ton. The value of production was down 8% to $379.1 million.

Alfalfa hay's 2002 season average price was estimated at $85.50, down $10.00 from last year while **other hay's** season average price decreased $11.00 to $76.00.

Alfalfa Seed Production Down

Alfalfa seed production for 2002 was estimated at 1.383 million pounds, down 58% from the 3.30 million pounds produced last year. Harvested acreage, at 5,000, was down from 9,000 acres in 2001. The state average yield was estimated at 277 pounds per acre, down from 367 pounds per acre a year ago. Irrigated yield averaged 412 pounds per acre, down from 477 pounds per acre in 2001 and non-irrigated yields averaged 56 pounds per acre, up 12 pounds per acre from last year.

Producers used an average of 3.0 gallons of leaf cutter bees per acre harvested for alfalfa seed in 2002, compared with 2.1 gallons per acre in 2001. Leaf cutter bees were used on 72% of the reported irrigated acres at the rate of 3.6 gallons per acre and 12% of the reported non-irrigated acres at the rate of 2.0 gallons per acre. Alfalfa seed growers who utilized leaf cutter bees produced an average of 5% more seed per acre irrigated acre and 105% more per non-irrigated acre than those that did not use bees to pollinate their crop.

Proprietary varieties made up 68% of this year's production, down 20 percentage points from last year. Common uncertified varieties accounted for 31% of the production and common certified varieties represented 1 percent.

The average price received for the 2002 crop was $1.15 per pound, down 12 cents from last year's average price.

Montana's north-central district lead regional production by harvesting 36.2% of the state's alfalfa seed. The south-central district was the second largest production area with 28.0 percent.

ALFALFA SEED: Estimates by Agricultural Statistics Districts, 2002

District	TOTAL			IRRIGATED			NON-IRRIGATED		
	Acres	Yield	Production	Acres	Yield	Production	Acres	Yield	Production

2002 Wheat, Barley, and Oats County Estimates Now Available

The 2002 crop year county estimates for barley, oats, all wheat, winter wheat, durum wheat and spring wheat are now available. Estimates are made for acres planted, acres harvested for grain, average yield per harvested acre and production. Estimates are made by practices for irrigated crops and non-irrigated crops as well as crops that were re-cropped or continuously cropped and non-irrigated crops harvested from previously fallowed acres. Oats county estimates are estimated by practice of irrigated and non-irrigated only. These estimates are available on our website http:// www.nass.usda.gov/mt/ or they can be requested by calling or writing our office.

U.S. and Canadian Cattle

This data is a result of a joint effort by Statistics Canada and NASS to release the number of cattle and calves by class and calf crop for both countries within one publication. This information was requested by the U.S. cattle industry to provide producers additional information about potential beef supplies. U.S. inventory numbers were previously released on January 31, 2003.

All cattle and calves in the **U.S. and Canada combined** totaled 109.5 million head on January 1, 2003, 1 percent below a year earlier. All cows and heifers that have calved, at 47.8 million head, were down slightly from a year ago.

All cattle and calves in the **United States** as of January 1, 2003, totaled 96.1 million head, 1 percent below the 96.7 million on January 1, 2002 and 1 percent below the 97.3 million two years ago. All cows and heifers that have calved, at 42.1 million were down slightly from the 42.2 million on January 1, 2002 and down 1 percent from the 42.6 million two years ago.

All cattle and calves in **Canada** as of January 1, 2003, totaled 13.4 million head, down 3 percent from the 13.8 million on January 1, 2002, and 2 percent below the 13.6 million two years ago. All cows and heifers that have calved, at 5.7 million, was down 1 percent from the 5.7 million on January 1, 2002, but relatively unchanged from two years ago.

U.S. Cattle on Feed Down

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.7 million head on February 1, 2003. The inventory was 8 percent below February 1, 2002 and 11 percent below February 1, 2001. Placements in feedlots during January totaled 2.14 million, 2 percent below 2002 and 6 percent below 2001. Net placements were 2.06 million. During January, placements of cattle and calves weighing less than 600 pounds were 433,000, 600-699 pounds were 587,000, 700-799 pounds were 706,000, and 800 pounds and greater were 409,000.

Marketings of fed cattle during January totaled 1.97 million, down 5 percent from 2002 and down 4 percent from 2001. Other disappearance totaled 75,000 during January, 16 percent below 2002 and 4 percent below 2001.

Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during January 2003, unchanged from the previous January, but down 12 percent from December 2002. Cattle slaughter totaled 1,800 head, up 6 percent from a year ago. The average live weight, at 1,150 pounds, increased 12 pounds from last year.

During January there were 1,200 hogs slaughtered, up 100 head from a year ago. The average live weight, at 242 pounds, was down 4 percent from last year. January sheep slaughter in the state totaled 300 head, the same as January 2002. The average live weight decreased 2 percent from last year to 123 pounds.

Commercial red meat production for the United States totaled 4.08 billion pounds in January, relatively unchanged from a year ago.

Beef production, at 2.29 billion pounds, was 2 percent below the previous year. Cattle slaughter totaled 3.01 million head, down 2 percent from January 2002. The average live weight was 1,268 pounds, up 8 pounds from January a year ago.

Veal production totaled 17.9 million pounds, 6 percent above January a year ago. Calf slaughter totaled 93,800 head, up 7 percent from January 2002. The average live weight was 317 pounds, down 4 pounds from January a year ago.

Pork production totaled 1.75 billion pounds, up 2 percent from the previous year and a monthly record high. Hog kill totaled 8.79 million head, 1 percent above January 2002. The average live weight was 268 pounds, unchanged from January a year ago.

Lamb and mutton production, at 15.9 million pounds, was down 10 percent from January 2002. Sheep slaughter totaled 238,800 head, 6 percent below last year. The average live weight was 133 pounds, down 7 pounds from January a year ago.

U.S. January Milk Production

Milk production in the 20 major States during January totaled 12.5 billion pounds, up 1.8 percent from January 2002. December revised production, at 12.3 billion pounds, was up 1.6 percent from December 2001. The December revision represented an increase of 0.6 percent or 70 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,608 pounds for January, 17 pounds above January 2002. The number of cows on farms in the 20 major States was 7.81 million head, 56,000 head more than January 2002, and 4,000 head more than December 2002. 2002 Annual Milk Production Up 2.6 Percent from 2001

The annual production of milk for the U.S. during 2002 was 169.8 billion pounds, 2.6 percent above 2001. Revisions to 2001 production increased the annual total by less than 0.1 percent. Revised 2002 production was up 0.1 percent from last month's publication.

Production per cow in the U.S. averaged 18,571 pounds for 2002, 412 pounds above 2001. Average annual rate of milk production per cow has increased 18 percent since 1993. The average number of milk cows on farms in the U.S. during 2002 was 9.14 million head, up 0.3 percent from 2001. Average number of milk cows was revised down 1,000 head for 2001, and up 2,000 head for 2002 from the previous estimates.

Hired Workers Down One Percent, Wage Rates Up 4 Percent from a Year Ago

There were 884,000 hired workers on the Nation s farms and ranches the week of January 12-18, 2003, down 1 percent from a year ago. Of these hired workers, 724,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 160,000 workers.

Farm operators paid their hired workers an average wage of $9.32 per hour during the January 2003 reference week, up 35 cents from a year earlier. Field workers received an average of $8.29 per hour, up 4 cents from last January, while livestock workers earned $8.91 per hour compared with $8.20 a year earlier. The field and livestock worker combined wage rate, at $8.50 per hour, was up 27 cents from last year. The number of hours worked averaged 37.8 hours for hired workers during the survey week compared with 38.5 hours a year ago.

The largest increases in number of hired farm workers over last year occurred in California, Florida, and in the Appalachian II (Kentucky, Tennessee and West Virginia) and Lake (Michigan, Minnesota and Wisconsin) regions.

The largest decreases in number of hired farm workers from a year ago were in the Southern Plains (Oklahoma and Texas), Northeast II (Delaware, Maryland, New Jersey and Pennsylvania), Mountain I (Idaho, Montana and Wyoming) and Corn Belt I (Indiana, Illinois and Ohio) regions.

U.S. Potato Stocks Up 3 Percent

Montana potato producers held 2.9 million cwt. of potatoes in storage on February 1, 2003, up 10 percent from the previous year. Ninety percent of the 2002 Montana potato crop is still in storage.

The 15 major potato States held 197 million cwt of potatoes in storage February 1, 2003, up 3 percent from last year but 16 percent below 2001. Storage accounts for 48 percent of the 2002 fall storage States' production, down 2 percentage points from last year. Stocks by type show more reds and round whites but fewer long whites and russets than a year ago. Disappearance of 213 million cwt, is up 9 percent from last year but 5 percent below 2000 crop movement. Shrink and loss, of 20.4 million cwt so far this season, is up 3 percent from last year but 22 percent below the same date in 2000.

Processors in the 9 major States used 109 million cwt of potatoes this season, up 13 percent from a year ago but 4 percent below two years ago.

Grazing Rates Increase

The average grazing fees paid by Montana producers for grazing livestock on privately owned, non-irrigated grazing land rose for all methods in 2002. The shortage of pasture and the effects of the prolonged drought are continuing to contribute to the increased rates this year.

The average amount paid for grazing livestock on an AUM (animal unit month) basis was $15.10 per month, up 20 cents from last year. Cattle producers paid $17.30 per cow-calf pair in 2002, up 60 cents from the previous year. The average per head rate was $16.30 per month, up 30 cents from last year.

In the 17 States that estimate grazing fees in the United States, the average charge on an AUM basis was $12.30 per month in 2002, up 40 cents from the previous year. Cow-calf rates averaged $14.20 per month, up 30 cents and per head rates averaged $12.70 per month, up 30 cents from 2001.

All grazing fees are for privately owned, non-irrigated grazing land. Rates charged for public land, irrigated land, and harvested cropland were excluded. The average AUM rate includes reported AUM rates plus reported cow-calf rates that were converted to an AUM basis. The cow-calf rate was converted to AUM basis using the following formula (1 AUM=cow-calf *0.833).

U.S. January Egg Production Up 1 Percent

U.S. egg production totaled 7.34 billion during January 2003, up 1 percent from last year. Production included 6.25 billion table eggs and 1.08 billion hatching eggs, of which 1.02 million were broiler-type and 64.0 million were egg-type. The total number of layers during January 2003 averaged 338 million, up slightly from a year earlier. January egg production per 100 layers was 2,170 eggs, compared to 2,143 eggs in January 2002.

Hogs & Pigs
Chicken Inventory and Annual Egg Production
December Egg Production

Cattle and Calf Inventory

Montana's cattle and calf inventory was down 2% from a year ago to 2.40 million head on January 1, 2003. The cattle and calf inventory is the lowest since 1991 when the inventory was 2.35 million head. This would be the third lowest inventory in the past 40 years. Prolonged drought and poor pasture and range conditions have caused producers to continue to cut back their herds and in some cases to liquidate the entire herd. Inventories of beef cows that have calved, milk cow replacements, and calves weighing less than 500 lbs were all down significantly this year.

The inventory of beef cows that had calved on January 1, 2003 was down 4% from July 1, 2002 and down 3 % from a year ago to 1.402 million head. This is the lowest inventory of beef cows since 1991 when there were 1.396 million beef cows on hand. The number of milk cows in the state dropped 1,000 head from year ago to 18,000 head. There were 1.49 million calves born during 2002, down 4% from the previous year.

Beef heifer replacements, weighing 500 pounds or more, were up 3% from the previous year to 380,000 head. Milk heifer replacements decreased 2,000 head from last year to 11,000 head. The number of other heifers weighing 500 lbs or more, increased 1% from last year to 179,000 head.

The inventory of steers weighing 500 lbs or more, dropped 2% from last year to 240,000 head. The inventory of calves weighing less than 500 lbs, at 70,000 head, was down 7% from last year. This is the lowest inventory of calves weighing less than 500 lbs on record for January 1. Inventory of bulls, weighing 500 pounds or more, was unchanged from last year at 100,000 head. The number of cattle and calves on full feed that will be sent directly to slaughter was unchanged from a year ago at 70,000 head.

There were 12,500 operations in Montana during 2002 with one or more head, down 6% or 800 operations from last year. The number of beef cow operations with one or more beef cows decreased 4% to 11,400, while the number of operations with one or more milk cows dropped 50 operations to 600.

All cattle and calves in the United States as of January 1, 2003, totaled 96.1 million head, 1% below the 96.7 million on January 1, 2002 and 1% below the 97.3 million two years ago. All cows and heifers that have calved, at 42.1 million, were down slightly from the 42.2 million on January 1, 2002 and down 1% from the 42.6 million two years ago. Beef cows, at 32.95 million, were down 1% from both January 1, 2002 and January 1, 2001. Milk cows, at 9.15 million, were up slightly from January 1, 2002 but down slightly from two years ago.

Other class estimates on January 1, 2003 and the change from January 1, 2002, are as follows:
- All heifers 500 pounds and over, 19.6 million, down slightly.
- Beef replacement heifers, 5.61 million, up 1%.
- Milk replacement heifers, 4.10 million, up 1%.
- Other heifers, 9.89 million, down 2%.
- Steers weighing 500 pounds and over, 16.6 million, down 1%.
- Bulls weighing 500 pounds and over, 2.25 million, up slightly.
- Calves under 500 pounds, 15.6 million, down 1%.
- Cattle and calves on feed in the United States for slaughter in all feedlots, 12.9 million, down 7%.

The 2002 calf crop in the United States was estimated at 38.2 million head, down slightly from 2001 and down 1% from 2000. Calves born during the first half of the year are estimated at 27.9 million, down 1% from 2001 and down 2% from 2000.

The number of operations in the United States with one or more head of cattle totaled 1.03 million during 2002, down 2% from 2001 and 4% below 2000. Beef cow operations in 2002 were down 1% from 2001 and 3% below 2000. Milk cow operations were 6% below last year and 13% below two years ago.

Sheep Inventory and Wool Production

Montana's sheep and lamb inventory set a new record low at 300,000 head on January 1, 2003, down 10% from last year. Drought, unstable prices, and predators in 2002 were key factors in the continued decline.

Breeding sheep and lamb numbers decreased 30,000 head from last year to 270,000 head. Ewes one year and older were down 8% to 213,000 head. Rams one year and older, at 8,000 head, were unchanged from the previous year. Replacement lambs, at 49,000 head, were down 11,000 head from a year ago. The 2002 lamb crop was 315,000 head, a decrease of 7% from the 2001 lamb crop.

There were 30,000 market sheep and lambs on hand January 1. Only 1,000 head were market sheep. Of the 29,000 total market lambs, 7% weighed less than 65 pounds, 21% weighed 65-84 pounds, 59% were in the 85-105 pound category, and 14% were over 105 pounds. There were 1,700 sheep and lamb operations with 1 or more head in Montana during 2002, 100 less than a year ago.

Montana wool growers produced 2.7 million pounds of wool during 2002, down 10% from 2001. The 2002 average price per pound of wool increased 31 cents to 76 cents per pound, which increased the value of all wool produced by 53% for a total value of $2.045 million dollars. The total head shorn decreased 12% from 2001 to 279,000 head. The average fleece weight increased from 9.4 pounds in 2001 to 9.6 pounds in 2002.

All sheep and lamb inventory in the United States on January 1, 2003, totaled 6.35 million head, down 5% from 2002 and 9% below two years ago. The inventory has trended down since peaking at 56.2 million head in 1942. Breeding sheep inventory declined to 4.68 million head on January 1, 2003, down 5% from 4.91 million head on January 1, 2002. Ewes one year old and older, at 3.79 million head, were 5% below last year.

Market sheep and lambs on January 1, 2003, totaled 1.67 million head, down 6% from January 1, 2002. Market lambs comprised 96% of the total. Twenty-six percent were lambs under 65 pounds, 17% were 65 - 84 pounds, 24% 85 - 105 pounds, 29% were over 105 pounds, and 4% were market sheep.

The 2002 lamb crop of 4.36 million head was down 3% from 2001 and established a new record low. The 2002 lambing rate was 110 per 100 ewes one year old and older on January 1, 2002, unchanged from 2001. The number of operations with sheep during 2002 totaled 64,170, down 19% from 2001 and 3% from 2000.

Shorn wool production in the United States during 2002 was 41.2 million pounds, down 4% from 2001. Sheep and lambs shorn totaled 5.45 million head, down 4% from 2001. The average price paid for wool sold in 2002 was $0.53 per pound for a total value of $21.8 million dollars, up 42% from $15.3 million dollars in 2001.

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys.

Agricultural Prices Received

December full month crop prices were mixed compared with November 2002. Montana's winter wheat average price was $4.24 per bushel, down $0.04 from the previous month; spring wheat remained unchanged from a month ago at $4.48 per bushel; and durum wheat prices decreased $0.37 to $4.67 per bushel. Feed barley prices increased $0.01 from the previous month to $2.24, and malt barley prices increased $0.14 to $3.23 per bushel.

The mid-January price for alfalfa hay was up $1.00 to $87.00 per ton and all other hay increased $1.00 to $76.00 per ton. The mid-January grain prices were mixed from the previous month with winter wheat price averaging $4.08 per bushel, spring wheat was $4.08 per bushel, durum wheat was $4.83 per bushel, feed barley was $2.30 per bushel and malt barley averaged $3.30 per bushel.

Livestock prices for the full month of December were higher then the previous month. Steer and heifer prices increased $2.50 to $83.50 per cwt, while cows increased $2.80 to $36.00. The average price for calves increased $7.20 to $94.60 per cwt. Sheep prices rose $9.70 to $40.60 per cwt and lamb prices moved up $5.20 to $94.00 per cwt. Milk prices increased $0.70 per cwt from last month to $12.10 per cwt. Steer and heifer prices for mid-January averaged $83.60 per cwt.; cows averaged $36.50 per cwt.; calves averaged $96.20 per cwt.; and milk prices averaged $12.00 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $3.85, down $0.31, spring wheat was $4.20, down $0.07; durum wheat was $4.24, down $0.29; the all barley price was $3.03, up $0.24, and steer and heifer prices were $75.10, up $3.10 per cwt.

The U.S. mid-January winter wheat price was $3.47 per bushel, spring wheat was $3.88 per bushel, durum wheat was $4.22 per bushel, all wheat was $3.66 per bushel, malt barley was $3.27 per bushel, feed barley was $2.34 per bushel, and all barley was $3.00. Steer and heifer prices were $77.60 per cwt, cow prices were $35.50, calves were $95.50 per cwt., all hog prices were $31.80 per cwt, and all egg prices were $0.529 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in January is 99, based on 1990-92=100, up 1 point (1.0 percent) from a revised December index. Higher prices for broilers, lettuce, cattle, and hogs more than offset lower prices for wheat, corn, turkeys, and soybeans. The seasonal change in the mix of commodities farmers sell also affects the overall index. Increased marketings of cattle, soybeans, corn, and strawberries offset decreased marketings of cotton, tobacco, grapes, and milk.

The preliminary All Farm Products Index is 4 points (4.2 percent) above January 2002. Higher prices for soybeans, corn, cattle, and wheat more than offset lower prices for lettuce, hogs, broilers, and broccoli.

The Food Commodities Index increased 1 point (1.0 percent) above last month to 98, and is 1 point (1.0 percent) above January last year.

United States Index Summary

INDEX (1990-92=100)	December 2001	January 2002	December 2002	January 2003
Prices Received	93	95	98	99
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	122	122	126	126
Ratio 2/	76	78	78	79

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

December U.S. Pig Crop

U.S. pig crop at 7.95 million head, was 1 percent below the previous year. Sows farrowing during this period totaled 905 thousand head, 2 percent below last year. The average pigs per litter for December increased to 8.78, compared to 8.66 last year. The U.S. inventory of sows and gilts on January 1, 2003, was 5.84 million head, down 3 percent from January 1, 2002. U.S. sows and gilts bred during December totaled 1.17 million head, down 2 percent from the previous year.

Chicken Inventory and Annual Egg Production

There were 480,000 total chickens on Montana farms and ranches on December 1, 2002, unchanged from a year ago. The December 1, 2002 inventory included 355,000 layers 20 weeks old and older, 61,000 pullets between 13 and 20 weeks old, and 63,000 pullets 13 weeks and under. The total value of all chickens on December 1, 2001 was $1.49 million, up 4 percent from last year. The average value per bird, at $3.10, increased $0.10 from the previous year.

Montana chickens produced 104 million eggs during the year ending November 30,2002, up 10 percent from last year. The state had an average of 341,000 layers in 2002, up 6 percent from a year ago. The average production per layer on hand was 305 eggs, up 3 percent from the previous year.

The U.S. total number of chickens on hand on December 1, 2002 (excluding commercial broilers) was 439 million birds, down 1 percent from last year. Egg production during the year ending November 30, 2002 totaled a record high 86.7 billion eggs, up 1 percent from the previous year's total of 85.7 billion eggs. Table egg production, at 73.8 billion eggs, increased 1 percent from 2001. Hatching egg production, at 12.9 billion eggs, decreased slightly.

Layer numbers during 2002 averaged 337 million, up 1 percent from the year earlier. The annual average production per layer on hand in 2002 was 257 eggs, up slightly from the 2001 average of 256. Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 2002, totaled 377 million, down 1 percent from December 1, 2001. Of the 377 million potential layers, 89 percent were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks.

The total value of all chickens on December 1, 2002, was $1.05 billion, down 2 percent from December 1, 2001. The average value decreased from $2.42 per bird on December 1, 2001, to $2.38 per bird on December 1, 2002.

December U.S. Egg Production

U.S. egg production totaled 7.38 billion during December 2002, down 1 percent from last year. Production included 6.33 billion table eggs and 1.05 billion hatching eggs, of which 992 million were broiler-type and 61.0 million were egg-type. The total number of layers during December 2002 averaged 337 million, down 1 percent from a year earlier. December egg production per 100 layers was 2,187 eggs, compared to 2188 eggs in December 2001.

HIGHLIGHTS:

Cattle on Feed
Potato Stocks
Quarterly Milk Production
Red Meat Production
Annual Crop Production
Wheat: Supply, Disappearance & Price
Annual Oilseed Production

U.S. Cattle on Feed Down 8 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.6 million head on January 1, 2003. The inventory was 8 percent below January 1, 2002 and 10 percent below January 1, 2001. The inventory included 6.53 million steers and steer calves, down 8 percent from the previous year. This group accounted for 62 percent of the total inventory. Heifers and heifer calves accounted for 3.98 million head, down 9 percent from January 1, 2002.

Placements in feedlots during December totaled 1.59 million, 1 percent above 2001 but 6 percent below 2000. Net placements were 1.49 million. During December, placements of cattle and calves weighing less than 600 pounds were 421,000, 600-699 pounds were 507,000, 700-799 pounds were 407,000, and 800 pounds and greater were 255,000.

Marketings of fed cattle during December totaled 1.80 million, 1 percent below 2001 but 3 percent above 2000. Other disappearance totaled 99,000 during December, 6 percent above 2001 and 4 percent above 2000.

Montana Potato Stocks Up 8 Percent, U.S. Up 3 Percent

Montana potato producers held 3.0 million cwt. of potatoes in storage on January 1, 2003, up 8 percent from the previous year. Ninety-three percent of the 2002 Montana potato crop was still in storage.

The 15 major potato States held 232 million cwt of potatoes in storage on January 1, 2003, up 3 percent from last year but 16 percent below 2001. Storage accounts for 56 percent of the 2002 fall storage States' production, down 2 percentage points from last year. Stocks by type show more reds and fewer russets than a year ago. Disappearance of 179 million cwt, is up 10 percent from last year but 3 percent below 2000 crop movement. Shrink and loss of 18.4 million cwt so far in the season is up 6 percent from last year but 14 percent below the same date in 2000.

Processors in the 9 major States used 92.8 million cwt of potatoes this season, up 15 percent from a year ago but 3 percent below two years ago. Dehydrating usage accounts for 19.7 million cwt of the total processing. December 1, 2002 stocks were revised up slightly, with changes in California and Pennsylvania.

U.S. October-December Milk Production Up 1.7 Percent

The quarterly production of milk for the U.S. was 41.5 billion pounds, 1.7 percent above the October-December period last year. The average number of milk cows in the U.S. during the quarter was 9.15 million head, 43,000 head more than the same period last year.

Milk production in the 20 major States during December totaled 12.2 billion pounds, up 1.8 percent from December 2001. November revised production, at 11.7 billion pounds, was up 1.4 percent from November 2001. The November revision represented a decrease of 0.4 percent or 43 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,567 pounds for December, 18 pounds above December 2001.

The number of cows on farms in the 20 major States was 7.80 million head, 47,000 head more than December 2001, and 6,000 head more than November 2002.

December Red Meat Production

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during December 2002, unchanged from the previous December, but up 7 percent from November 2002. Cattle slaughter totaled 2,000 head, up 5 percent from a year ago. The average live weight, at 1,152 pounds, increased 14 pounds from last year.

During December there were 1,300 hogs slaughtered, unchanged from a year ago. The average live weight, at 244 pounds, was down 4 percent from last year. December sheep slaughter in the state totaled 400 head, the same as December 2001. The average live weight decreased 2 percent from last year to 124 pounds.

Commercial red meat production for the United States totaled 3.86 billion pounds in December, up 1 percent from the 3.81 billion pounds produced in December 2001.

Beef production, at 2.11 billion pounds, was slightly below the previous year. Cattle slaughter totaled 2.77 million head, down slightly from December 2001. The average live weight was 1,265 pounds, up 9 pounds from December a year ago.

Veal production totaled 18.0 million pounds, 15 percent above December a year ago. Calf slaughter totaled 98,300 head, up 16 percent from December 2001. The average live weight was 305 pounds, down 4 pounds from last year.

Pork production totaled 1.72 billion pounds, up 3 percent from the previous year. Hog kill totaled 8.66 million head, 3 percent above December 2001. The average live weight was 268 pounds, unchanged from a year ago.

Lamb and mutton production, at 18.5 million pounds, was down 3 percent from December 2001. Sheep slaughter totaled 278,500 head, slightly below last year. The average live weight was 133 pounds, down 5 pounds from last year.

January - December red meat production was 47.2 billion pounds, 3 percent above the previous year. Accumulated beef production was up 4 percent from last year, veal was up 1 percent, pork was up 3 percent, and lamb and mutton production was down 3 percent.

2002 Annual Crop Summary 1/

Crop	Year	MONTANA						US
		Acres Planted	Acres Harvested	Yield Per Acre	Total Production	Season Avg. Price	Value of Production	Production

World Supply and Demand Estimates

Projected U.S. 2002/03 ending stocks of wheat are up 70 million bushels from last month due to reduced domestic use and trade. Projected exports are 25 million bushels below last month because of increased competition. Imports are reduced 5 million bushels because of a dramatically slower pace in recent months and very tight spring wheat supplies in Canada. Feed and residual use is reduced 50 million bushels because December 1 stocks indicate smaller-than-expected use during the first 6 months of the marketing year. The projected 2002/03 wheat price range is reduced 15 cents on each end to $3.50 to $3.80 per bushel.

Global 2002/03 production, consumption, and ending stocks projections are little changed in aggregate from last month, but there are numerous country-specific changes. Global imports are up from last month, largely due to a 1.5-million-ton increase in prospective EU imports to a world-leading 9.5 million tons. Projected exports for Russia are 2 million tons higher because of a stronger than expected pace to date. Projected Australian supplies and exports are up from last month as larger beginning stocks more than offset a smaller prospective crop. These higher export prospects are largely offset by reductions for several countries. Reduced exports for Argentina reflect smaller production prospects, while smaller prospective shipments by India, the EU, and the United States are linked to smaller than expected sales to date. The United States and EU account for most of the rise from last month in projected 2002/03 global ending stocks.

The 2003 total meat production forecast is lowered from last month as higher beef production is more than offset by lower pork and broiler production. The weather-related slow pace of cattle marketings during the last months of 2002 implies increased marketings and slaughter in the first half of 2003. USDA's Cattle report, which will be released January 31, will provide an indication of producer breeding intentions and available supplies of feeder cattle. Pork production is lowered slightly from last month as the December 30 Quarterly Hogs and Pigs report showed continued declines in hog inventories and lower intended farrowings than expected. Broiler production forecasts are lowered as weekly eggs set and chicks placed data have been below a year earlier since early fall. First-quarter 2003 Choice steer prices are raised slightly as cattle markets are reflecting concerns over the impacts of winter weather. Hog prices are raised due to tighter hog supplies in 2003. Poultry price forecasts are unchanged as large supplies continue to pressure poultry prices.

Milk production forecasts for 2002/03 are lowered slightly from last month. Although the rate of decline in cow numbers for the year is reduced from last month, gains in milk per cow continue to lag historical trends. Relatively weak milk prices in 2003 are expected to provide little incentive to increase output per cow. Class III prices are expected to be weaker at $9.85 to $10.35 per cwt, down slightly from last month, and Class IV price are forecast at $10.05 to $10.75 per cwt. The all milk price will average $11.35 to $11.85 per cwt.

Wheat: Supply, Disappearance, and Price, United States, 1985-2002

HIGHLIGHTS:

- Winter Wheat Seedings
- Late Season Crops & Hay Stocks
- Grain Stocks
- Ag Prices Received
- Pulse Crops & Oilseeds Crops

Winter Wheat Seedings

Montana producers seeded 1.75 million acres of winter wheat this fall for the 2003 crop year, up 300,000 acres or 21% from the 2002 crop. This would be the largest planted acreage since 1996, but down from the 1987-96 average of 2.32 million acres planted.

Winter wheat seeding progressed rapidly as conditions this fall were favorable for planting. By the end of October, 98% of the winter wheat acres were seeded, 2 points ahead of the 5 year average. Emergence reached 80% by the end of October compared with 72% for last year and 73% for the 5-year average. Protectiveness of snow cover was rated 97% very poor, 2% poor, and 1% fair for the month ending December 31, 2002 due to the lack of snow received so far this season. The condition of the winter wheat crop has deteriorated since planting, however it is still rated better than a year ago at this time. The condition of the winter wheat crop was rated 1% very poor, 25% poor, 55% fair, 18% good, and 1% excellent for the end of December 2002 compared with 8% very poor, 41% poor, 49% fair, 2% good a year ago.

Winter wheat seedings in the United States for 2003 is estimated at 44.2 million acres. This is up 6% from 2002 and is the largest acreage since 1998. Hard red winter (HRW) wheat seeded area is about 32.1 million acres, up 8 from 2002. Significant acreage increases are reported in all major HRW States. Two major factors, high prices at the time of seeding and last year's drought, contributed to the larger acreage. Prices were very strong this fall, especially during September and October when most of the winter wheat was planted. Last year's drought left soil moisture supplies low. Wheat requires less moisture than many alternate crops in the major HRW States, making it a more appealing option. Additionally, the drought left forage supplies limited, therefore many growers in the southern Great Plains planted wheat in hopes that enough moisture would be received to provide grazing.

2002 Late Season Crops

Montana producers planted 65,000 acres of **corn** in 2002, unchanged from 2001. Acres harvested for grain were 13,000 acres, identical to last year's figure. The average yield was 140.0 bushels per acre, down 8 bushels from last year. Grain production declined 5% from a year ago to 1.820 million bushels due to a reduction in yield. The number of acres harvested for corn silage decreased 2,000 acres from 2001 to 49,000 acres. Corn silage yield averaged 22 tons per acre, unchanged from a year ago.

Sugar beet producers in Montana planted 58,000 acres in 2002, up 600 acres from last year. Harvested acreage amounted to 55,900 acres, up 2,400 acres from last year's PIK-reduced acreage. A significant amount of acreage was lost this year due to frost and freeze conditions. Yield decreased 1.9 tons from last year to average 19.6 tons per acre. Total production of 1.1 million tons, was down 5% from the previous year.

Fall potato production in Montana totaled 3.224 million cwt., down 2% from last year. Producers harvested 10,400 acres compared with 10,300 in 2001. Potato yields decreased 10 cwt. from a year ago to 310 cwt. per acre.

All hay harvested in Montana was up 150,000 acres from last year, to 2.60 million acres. All hay production was 4.62 million tons, up 4% or 175,000 tons from a year ago. **Alfalfa hay** harvested acreage was 1.40 million, down 50,000 acres from last season. The average yield was 2.1 tons per acre, which is unchanged from the previous year. **Other hay** harvested acreage was 1.20 million, up 200,000 acres from the previous year due to more CRP acres and small grains being cut for hay. The average yield was 1.4 tons per acre, equal to last year's figure.

Montana **hay stocks** were estimated at 4.019 million tons on December 1, up 12% from last year, but 5% less than the 1992-2001 average stocks held. Montana hay producers seeded an estimated 120,000 acres of alfalfa and alfalfa mixtures during 2002, which is equal to last year's seedings. New seedings include those mixed with a nurse crop, other forage, or direct seedings.

U.S. **corn for grain** production is estimated at 9.01 billion bushels, virtually unchanged from the November forecast but down 5% from the 9.51 billion bushels produced in 2001. The average U.S. grain yield is estimated at 130.0 bushels per acre, 2.4 bushels above the November forecast but down 8.2 bushels from 2001.

U.S. **sugarbeet** production is estimated at 27.6 million tons, 2% below the November 1 forecast but 7% above last year's production. Growers in the 12 sugarbeet-producing States harvested 1.36 million acres, slightly above the November estimate and 9% above last year's 1.24 million acres. The yield is estimated at 20.3 tons per acre, 0.4 ton below both the November forecast and the 2001 yield.

Production of **fall potatoes** in the U.S. for 2002 is forecast at 417 million cwt, up fractionally from the December forecast and 6% above last year. However, this is 11% smaller than the record high 2000 crop. Area harvested, at 1.11 million acres, is up 4% from last year but 6% below two years ago. The average yield is estimated at 374 cwt per acre, 7 cwt above last year. Production estimates are generally lower this year in Central and Eastern States but higher in the West.

U.S. **all hay production** for 2002 is estimated at 151 million tons, up slightly from the October 1 forecast but down 4% from the 2001 total. The average yield, at 2.34 tons per acre, is up 0.02 ton from the October forecast but down 0.13 ton from the previous year.

(Continued on next page.)

The Montana crop production and grain stocks estimates in this issue are the result of surveying approximately 1,700 Montana farmers and ranchers in December. SPECIAL THANKS to those operators that were interviewed and responded to the survey.

(Continued from first page.)

Alfalfa and alfalfa mixtures production in U.S. totaled 73.8 million tons, down 1% from the October forecast and 8% below 2001. This is the lowest production since 1968. The severe drought conditions in the northern and central Great Plains and Rocky Mountains lowered harvested acres from the previous year. U.S. **all other hay production** in 2002 totaled 77.1 million tons, up 2% from the October 1 forecast and up 1% from the 2001 total. Severe drought conditions during the summer resulted in the release of Conservation Reserve Program (CRP) land for hay harvest.

Stocks of all hay stored on U.S. farms totaled 104 million tons on December 1, 2002, down 6% from the previous year. Disappearance of hay from May 2002 - December 2002 totaled 69.7 million tons, compared to 25.1 million tons for the same period a year ago.

December 1, 2002 Grain Stocks

Stocks of all wheat in Montana on December 1, 2002 were 112.4 million bushels, up 3% from December 1, 2001. All wheat stocks stored on the farm amounted to 87.0 million bushels, up 1% from a year ago. All wheat stored off-farm amounted 25.4 million bushels, up 11% from a year ago. All wheat disappearance for the September - November 2002 quarter was up 28% from the same quarter last year to 26.8 million bushels, compared with 20.9 million a year ago. .

Barley stocks in all positions on December 1, 2002 were 29.0 million bushels, up 23% from a year ago. Barley stored on-farm was 22.0 million bushels, up 29% from last year. Off-farm storage of barley was up 6% from a year ago at 7.0 million bushels. All barley disappearance for the September - November 2002 quarter was 11.8 million bushels, up 53% from a year ago. Oats stocks in all positions were estimated at 2.1 million bushels, up 6% from last year. On-farm stocks of oats were 2.0 million bushels up 5% from 1.9 million stored a year ago. Oats stored off-farm was up 28% from last year to 115,000 bushels.

The on-farm storage capacity of all storage facilities in Montana, normally used for storing grain, was estimated to be 340 million bushels, up 3% from a year ago. There were 175 off-farm storage facilities in Montana on December 1, 2002. The storage capacity of off farm facilities was 69.56 million bushels, up 4% from a year ago.

In the United States, all wheat stored in all positions on December 1, 2002 totaled 1.32 billion bushels, down 19% from a year ago. On-farm stocks are estimated at 385 million bushels, down 26% from last year. Off-farm stocks, at 936 million bushels, are down 15% from a year ago. The indicated September - November 2002 disappearance is 430 million bushels, down 19% from the same period a year earlier. Durum wheat stocks in all positions on December 1, 2002 totaled 75.4 million bushels, down 2% from a year ago. On-farm stocks, at 49.5 million bushels, are down slightly from December 1, 2001. Off-farm stocks totaled 25.9 million bushels, down 4% from a year ago. The indicated September - November 2002 disappearance of 17.4 million bushels is down 15% from the same period a year earlier.

Barley stocks in all positions in the United States on December 1, 2002 totaled 170 million bushels, down 13% from December 1, 2001. On-farm stocks are estimated at 83.4 million bushels, 10% below a year ago. Off-farm stocks, at 86.6 million bushels, are 16% below December 2001. Indicated disappearance during the September - November 2002 quarter totaled 54.0 million bushels, up 7% from the same period a year earlier.

U.S. oats stored in all positions on December 1, 2002 totaled 104 million bushels, 9% below the stocks on December 1, 2001. Of the total stocks on hand, 52.3 million bushels are stored on farms, 10% less than a year ago. Off-farm stocks totaled 51.3 million bushels, 9% below a year earlier. Indicated disappearance during September - November 2002 totaled 8.12 million bushels, up 5.94 million from the same period a year ago.

Agricultural Prices Received

November full month crop prices were mostly higher compared with October 2002. Montana's winter wheat average price was $4.28 per bushel, up $0.22 from the previous month; spring wheat moved down $0.18 to $4.48 per bushel; and durum wheat prices gained $0.07 to $5.04 per bushel. Feed barley prices increased $0.01 from the previous month to $2.23, malt barley prices increased $0.02 to $3.09 per bushel. Oat prices increased $0.01 to $2.23 a bushel.

The mid-December price for alfalfa hay was up $3.00 to $86.00 per ton and all other hay held steady at $75.00 per ton. The mid-December grain prices were mixed from the previous month with winter wheat price averaging $4.05 per bushel, spring wheat was $4.44 per bushel, durum wheat was $5.00 per bushel, feed barley was $2.23 per bushel and malt barley averaged $3.11 per bushel.

Livestock prices for the full month of November were mostly higher then the previous month. Steer and heifer prices increased $.80 to $81.00 per cwt, while cows fell $1.10 to $33.20. The average price for calves increased $1.20 to $87.40 per cwt. Sheep prices rose $6.50 to $30.90 per cwt and lamb prices moved up $4.70 to $88.80 per cwt. Milk prices fell $0.60 per cwt from last month to $11.40 per cwt. Steer and heifer prices for mid-December averaged $83.70 per cwt.; cows averaged $35.80 per cwt.; calves averaged $95.80 per cwt.; and milk prices averaged $11.90 per cwt.

Nationally, prices for November and changes from October were as follows: winter wheat was $4.16, down $0.16, spring wheat was $4.27, down $0.17; durum wheat was $4.53, up $0.10; the all barley price was $2.79, up $0.14, and steer and heifer prices were $72.00, up $3.50 per cwt.

The U.S. mid-December winter wheat price was $3.83 per bushel, spring wheat was $4.00 per bushel, durum wheat was $4.25 per bushel, all wheat was $3.93 per bushel, malt barley was $3.13 per bushel, feed barley was $2.29 per bushel, and all barley was $2.85. Steer and heifer prices were $74.80 per cwt, cow prices were $34.20, calves were $93.60 per cwt., all hog prices were $30.00 per cwt, and all egg prices were $0.679 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in December is 97, based on 1990-92=100, down 1 point (1.0 percent) from the November index. Lower prices for wheat, lettuce, broccoli, and eggs more than offset higher prices for cattle, tomatoes, hogs, and strawberries. The seasonal change in the mix of commodities farmers sell also affects the overall index. Decreased marketings of cattle, soybeans, grapes, and corn offset increased marketings of wheat, tobacco, milk, and oranges.

The preliminary All Farm Products Index is 4 points (4.3 percent) above December, 2001. Higher prices for soybeans, wheat, corn, and cattle more than offset lower prices for broilers, hogs, lettuce, calves, and dry beans.

The Food Commodities Index declined 1 point (1.0 percent) from last month to 96, but is 2.1 percent above November last year.

United States Index Summary

INDEX (1990-92=100)	Nov. 2001	Dec. 2001	Nov. 2002	Dec. 2002

2002 Pulse Crops Summary

Montana's **dry bean** growers produced 361,000 cwt. in 2002, down 4% from 2001. Producers planted 26,900 acres of beans this year, down 38% from last year, driven mostly by a significant reduction in garbanzo bean acreage. Growers harvested 23,000 acres, which yielded 1,570 lbs. per acre, compared with last year's 28,500 acres harvested and the average yield of 1,320 lbs. per acre. **Pinto bean** production in 2002 was 287,000 cwt., which is 44% better than last year's figure. Planted acreage was 13,500, up 2,000 acres from last year. Harvested acreage, at 12,900 acres, is 29% above the previous year. The yield was 2,220 lbs. per acre, which is 220 pounds more than last year. The production estimate for **garbanzo beans**, at 71,000 cwt., is 58% lower than last year due to decreased acreage. Planted acreage was 12,700, down from 18,800 acres last year. Harvested area was 9,600 acres, down 8,400 acres from last year. Because of the drought, many producers chose to graze or hay their fields. The yield was 740 pounds per acre, down from last year's 950 pounds per acre.

Dry edible pea production for 2002 in Montana was 205,000 cwt., down 18% from 2001. Planted and harvested acreages are estimated at 32,000 and 27,000 acres, respectively. Average yield was 760 lbs. per acre, which is 50% below last year. **Austrian winter pea** production in 2002 was 20,000 cwt., which is equal to last year's figure. Planted acreage was 9,500, down 400 acres from last year. Harvested acreage, at 3,500, is 1,000 acres above the previous year. The yield was 580 lbs. per acre, which is 210 pounds less than last year. Austrian winter peas are grown primarily as a forage or hay crop in the state, which accounts for the high level of abandonment.

Montana's 2002 production of **lentils** was 149,000 cwt., down 32% from 2001. Planted area was 25,000 acres and harvested acres are set at 21,000. The average yield was 710 lbs. per acre, or 390 pounds less than in 2001.

U.S. **dry edible bean** production is estimated at 30.0 million cwt for 2002, 53% above last year. Production of **dry edible peas** in Idaho, Montana, North Dakota, Oregon, and Washington is estimated at 4.24 million cwt for 2002, 13% above the revised 2001 total. Production of **Austrian winter peas** in Idaho, Montana, and Oregon for the 2002 season is estimated at 164,000 cwt, 69% above 2001. Production of **lentils** in Idaho, Montana, North Dakota, and Washington is estimated at 2.51 million cwt for 2002, 13% below 2001. .

2002 Oilseeds Summary

Montana's **flaxseed** production for 2002 was 195,000 bushels, 15,000 bushels higher than last year's figure. Planted and harvested acreages were 17,000 and 15,000, respectively. The average yield for 2002 was 13.0 bushels per acre, two bushels better than the previous year. Production of **mustard seed** in Montana during 2002 was 11.0 million pounds compared with 8.5 million in 2001. Mustard plantings were set at 27,000 acres with 25,000 acres harvested.. Mustard seed yields averaged 440 pounds per acre this year, which is 410 pounds per acre less than 2001. Montana **canola** growers planted 37,500 acres in 2002, 20,500 acres less than 2001. Of the acres planted, 34,500 were harvested which is 15,000 lower than last year. During the 2002 season canola yield was 860 pounds per acre, down 10 pounds per acre over last year.

Growers produced 30.4 million pounds of **safflower** in Montana during 2002. Safflower plantings in Montana total 39,500 acres with 38,000 acres harvested and a yield of 800 pounds per acre Montana's 2002 all **sunflower** production was 931,000 pounds, compared with 740,000 pounds produced in 2001.

U.S. production of **flaxseed** in 2002 totaled 12.6 million bushels, up 10 % from the previous year. Safflower production in the United States, at 298 million pounds, is up 23 % from 2001. **Mustard seed** production, at 123 million pounds, is more than triple the previous year due to increased acreage.

U.S. **canola** production in 2002, is 1.55 billion pounds, down 22 % from the record production in 2001. Canola yield, at 1,218 pounds, decreased 156 pounds from last year. The 2002 U.S. **sunflower** production totaled 2.50 billion pounds, 27 % below the 2001 production.

HIGHLIGHTS:

- November Milk Production
- Cattle on Feed
- Red Meat Production
- Potato Production
- Hogs & Pigs Inventory
- November Egg Production

November Milk Production Up 1.8 Percent

Milk production in the 20 major States during November totaled 11.7 billion pounds, up 1.8 percent from November 2001. October revised production, at 12.0 billion pounds, was up 2.1 percent from October 2001. The October revision presented a decrease of 26 million pounds or 0.2 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,501 pounds for November, 16 pounds above November 2001. The number of milk cows on farms in the 20 major States was 7.79 million head, 54,000 head more than November 2001, and 1,000 head more than October 2002.

U.S. Cattle on Feed Down 8 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.9 million head on December 1, 2002. The inventory was 8 percent below December 1, 2001 and 9 percent below December 1, 2000.

Placements in feedlots during November totaled 1.98 million, 4 percent above 2001 but 2 percent below 2000. Net placements were 1.89 million. During November, placements of cattle and calves weighing less than 600 pounds were 589,000, 600-699 pounds were 660,000, 700-799 pounds were 417,000, and 800 pounds and greater were 311,000.

Marketings of fed cattle during November totaled 1.73 million, 4 percent below 2001 and 5 percent below 2000. Other disappearance totaled 90,000 during November, 13 percent above 2001 but 14 percent below 2000.

Cattle on Feed in Historic 7 States Down 8 Percent

Cattle on feed December 1, 2002, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.4 million, down 8 percent from the previous year and 8 percent below December 1, 2000.

Placements in feedlots during November totaled 1.67 million, 5 percent above 2001 but 1 percent below 2000. Marketings during November totaled 1.51 million, 2 percent below 2001 and 4 percent below 2000. Other disappearance during November was 80,000 head, 18 percent above 2001 but 10 percent below 2000.

November Red Meat Production Down 2 Percent from the Previous Year

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during November 2002. Red meat production was down 11 percent from the previous month and 2 percent from the previous year.

Cattle slaughtered statewide totaled 1,800 head, which is unchanged from a year ago. The average live weight, at 1,136 pounds, was down 18 pounds from the previous year. During November there were 1,200 hogs slaughtered in Montana, the same as a year ago. The average live weight, at 247 pounds, was up 12 pounds from a year ago. The number of sheep slaughtered, at 300 head, is 100 head less than the previous year. The average live weight was down 9 pounds from last year, to 121 pounds.

Commercial red meat production for the United States totaled 3.91 billion pounds in November, down 2 percent from the 3.97 billion pounds produced in November 2001.

Beef production, at 2.16 billion pounds, was 2 percent below the previous year. Cattle slaughter totaled 2.86 million head, down 1 percent from November 2001. The average live weight was 1,260 pounds, up 5 pounds from November a year ago.

Veal production totaled 16.9 million pounds, 4 percent above November a year ago. Calf slaughter totaled 91,100 head, up 4 percent from November 2001. The average live weight was 308 pounds, unchanged from November a year ago.

Pork production totaled 1.71 billion pounds, down 1 percent from the previous year. Hog kill totaled 8.66 million head, 1 percent below November 2001. The average live weight was 268 pounds, down 1 pound from November a year ago.

Lamb and mutton production, at 17.8 million pounds, was down 9 percent from November 2001 and 6 percent below the previous record low set in 1998. Sheep slaughter totaled 271,300 head, 5 percent below last year. The average live weight was 132 pounds, down 6 pounds from November a year ago.

January - November red meat production was 43.3 billion pounds, 3 percent above the previous year. Accumulated beef production was up 4 percent from last year, veal was down 1 percent, pork was up 3 percent, and lamb and mutton production was down 3 percent.

U.S. Potato Production Up, December 1 Stocks Down

Montana producers held 3,050,000 cwt in storage on December 1, 2002. This is 2 percent higher than was on hand in 2001 and represents 95 percent of the total 2002 potato production in Montana.

The 15 major potato States held 265 million cwt of potatoes on December 1, 2002, up 2 percent from last year but 15 percent below 2000. Storage accounted for 65 percent of the 2002 fall production, down 2 percentage points from last year. Stocks by type were 3 percent red, 11 percent round white, 3 percent long white (Shepody), and 83 percent russet; with more round whites and fewer long whites and russets than a year ago.

Disappearance, at 146 million cwt, from the start of harvest to December 1, is up 13 percent from the same period last year but 2 percent below two years ago. Shrink and loss, at 16.2 million cwt, is up 10 percent from last year and 14 percent below two years ago.

Western States held 188 million cwt of potatoes in storage on December 1, up 6 percent from last year but 15 percent below two years ago. Idaho's potato stocks are up 5 percent from last year and Colorado's are up 29 percent. The return of irrigation water to the Klamath Basin boosted California's stocks 25 percent from last year and helped increase Oregon's stocks by 3 percent. Washington's sheds stored the same amount of potatoes as last year but Montana's stocks are up 2 percent.

Production of fall potatoes for 2002 is forecast at 417 million cwt, up less than 1 percent from November and 6 percent above last year. However, this is 11 percent smaller than the record high 2000 crop. Area harvested, at 1.11 million acres, is up 4 percent from last year but 7 percent below two years ago. The average yield is forecast at 374 cwt per acre, 3 cwt above last month and 7 cwt above last year. Production estimates are generally lower this year in Central and Eastern States but higher in the West. Harvest was completed on schedule in nearly all States.

The nine Western States' production is forecast at 293 million cwt, up 11 percent from last year but 11 percent below 2000. Acreage harvested, at 695,800 acres, gained 8 percent from last year, while the average yield of 422 cwt per acre is up 11 cwt. California growers responded with record high yields with adequate irrigation water available in the Tule Lake Basin. Colorado's production rose 31 percent as farmers had sufficient irrigation water to sustain them through the hot, dry summer weather. Idaho's production increased 11 percent from last year as potatoes were able to size up at the end of the season. Production in Oregon was adjusted upward 31 percent from the November forecast with current storage totals and corrections made in objective yield data. Production now stands at 24.9 million cwt, up 20 percent from last year but 19 percent below 2000. Washington's production forecast is down 5 percent from last month but up 1 percent from 2001 despite lower yields. Production in Nevada and New Mexico rose 10 and 12 percent, respectively, from a year ago. Montana's production is down 3 percent and Utah is down 29 percent.

1/ Stocks include processor holdings and most of the seed to plant following year's crop. Seed usage for all seasons in 2002 totaled 29.3 million cwt.

Montana Hog Inventory Up

The inventory of all hogs and pigs in Montana on December 1, 2002 was 185,000 head, 9 percent above a year ago. Breeding stock was up 11 percent from last December to 21,000 head. Market hog numbers increased to 164,000 head, up 9 percent from last year.

There were 38,000 sows farrowed in Montana during the period of December 2001 through November 2002. This was unchanged from a year ago. The number of pigs saved per litter increased slightly to 9.16 and resulted in an annual pig crop of 348,000 head, a 1 percent increase from last year. There were 500 farms with one or more hogs in Montana in 2002, down from 550 farms last year.

U.S. inventory of all hogs and pigs on December 1, 2002, was 58.9 million head. This was 1 percent below December 1, 2001, and 2 percent below September 1, 2002.

Breeding inventory, at 6.01 million head, was down 3 percent from December 1, 2001, and down 1 percent from last quarter. Market hog inventory, at 52.9 million head, was 1 percent below last year and 2 percent below last quarter.

The September-November 2002 U.S. pig crop, at 24.9 million head, was 2 percent less than 2001, and 1 percent less than 2000. Sows farrowing during this period totaled 2.82 million head, 2 percent below last year. The sows farrowed during this quarter represented 47 percent of the breeding herd. The average pigs per litter was 8.83 pigs saved per litter for the September-November 2002 period, compared to 8.82 last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.81 million sows farrow during the December 2002-February 2003 quarter, 1 percent below the actual farrowings during the same period in 2002, and 2 percent above 2001. Intended farrowings for March-May 2003, at 2.85 million sows, are 3 percent below the same period in 2002, and 1 percent below 2001.

The number of hog operations with hogs totaled 75,350 during 2002, down 7 percent from last year and 13 percent below 2000. Places with 2,000 or more hogs on hand accounted for 10 percent of the operations and 75 percent of the inventory. This is the first time operations with inventories over 2,000 head have controlled 75 percent or more of the total inventory. The number of operations with over 5,000 head of inventory, at 2,258, accounted for 53 percent of the total inventory, up from 52 percent a year ago. The total number of hogs under contract, owned by these over 5,000 head operations but raised by contractees, accounted for 33 percent of the total U.S. hog inventory, unchanged from last year.

U.S. November Egg Production Up 1 Percent

U.S. egg production totaled 7.25 billion during November 2002, up 1 percent from last year. Production included 6.23 billion table eggs and 1.02 billion hatching eggs, of which 962 million were broiler-type and 57.0 million were egg-type. The total number of layers during November 2002 averaged 339 million, up slightly from a year earlier. November egg production per 100 layers was 2,140 eggs, up 1 percent from the 2,128 eggs in November 2001. November 2002 contained 21 weekdays, two holidays and five Saturdays, compared to 22 weekdays, two holidays and four Saturdays in November 2001.

All layers in the U.S. on December 1, 2002, totaled 339 million, up slightly from a year ago. The 339 million layers consisted of 282 million layers producing table or commercial type eggs, 53.8 million layers producing broiler-type hatching eggs, and 2.57 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 2002, averaged 71.3 eggs per 100 layers, up slightly from a year ago.

Laying flocks in the 30 major egg producing States produced 6.76 billion eggs during November 2002, up slightly from a year ago. The average number of layers during November, at 316 million, was down slightly from a year ago.

"Best Wishes for 2003"

May your holiday season be filled with joy and precipitation! All of us at Montana Agricultural Statistics Service wish you and your family a very happy holiday season.

I cannot believe 2002 is coming to a close; the older you get the more the years run together. Montana farmers and ranchers are made of hardy stock, and they faced another year of persistent drought with optimism saying, "This year was not as bad as last year." Conditions for seeding the 2003 winter wheat crop were some of the best farmers have seen in six years, due largely to August rains. The rains also delayed harvesting of spring seeded crops until October. In fact, some producers had their winter wheat seeded before they harvested their spring wheat. Montanans remain optimistic that precipitation will come and the crops will flourish.

Excluding 2001 production, the 2002 crop was the smallest since 1940. Winter wheat production was 21 million bushels, up slightly from 2001's dismal production. Spring wheat production was 75.9 million bushels, up 16 percent from 2001, due to increased acreage harvested. Farmers had to abandon record numbers of seeded acres, due to the drought. Late spring rains saved producers from a total loss.

Neighbors helped neighbors get through one more year of drought, living up to the saying that "Montana is the Last, Best Place." Drought conditions hit livestock producers hard, creating shortages of feed and water and forcing many ranchers to market livestock earlier than normal at lighter weights. Current cattle inventory as of January 1, 2002, was 2.45 million head. When compared to 2.55 million head in 2001, Montana ranchers decreased cattle by 100,000 head (in one year) due to drought. In many cases, ranchers had to find additional sources of feed, haul water to livestock, cull herds heavily, and in some cases liquidate herds because of feed and water shortages. People who make their living from the land continue to be filled with optimism that the future will be better and the cycle of drought will be broken in 2003. Farmers and ranchers are infinitely optimistic that the snow and rain will fall and resupply the reservoirs and aquifers.

Montana Agricultural Statistics Service is also hopeful about the future of Montana agriculture because of the remarkable people who make a living from the land. To everyone involved in Montana's agriculture, thank you for your continued support. With your help, we can provide sound statistical facts that you can use to chart the future course of **Montana's Number One Industry--Agriculture**. We sincerely hope that you and your family have a joyous and safe holiday season.

Sincerely,

Peggy Stringer

PS. Look for the 2002 Census of Agriculture in your mailbox around mid-December. The Census is conducted every five years and is the most comprehensive source of county agricultural information available.

2002 Dry Edible Bean Production

Production for Montana's **dry edible bean** crop was estimated at 374,000 cwt, down less than 1% from the 2001 crop. Planted acreage for 2002 is estimated to be 26,500 acres, down 39% from last year. Harvested area for this year is 23,000 acres, 19% below 2001. The yield is forecast at 1,630 pounds per acre, 310 pounds better than last year.

Pinto bean production for Montana is estimated to be 289,000 cwt, which is 45% more than last year. Acres planted, at 13,500 is up 17% from 2001. Harvested acreage, at 13,100, is 31% higher than the previous year. The yield is forecast at 2,210 pounds per acre, 210 pounds better than last year. Better availability of irrigation water has led to this year's increase in acreage and production.

Garbanzo bean production is forecast at 77,000 cwt for 2002, compared with 171,000 cwt for last year. Planted acreage was set at 12,600 acres, down 60% from last year. Harvested area is estimated at 9,500 acres. The yield is forecast at 810 pounds per acre, down 15% from last year's 950 pounds per acre. Producers have suggested disease problems and limited marketing channels contributed to the reduction in garbanzo bean acreage.

U.S. dry edible bean production is forecast at 30.2 million cwt for 2002, up 9% from the October forecast and 54% above last year. This increase is a rebound from last year's drought reduced production in eastern and central States. Harvested area is forecast at 1.74 million acres, 3% above the last forecast and 39% above 2001. The average U.S. yield of 1,733 pounds per acre climbed 101 pounds above the October forecast and is 164 pounds greater than a year ago. Production is above a year ago in 10 of the 18 producing States. Most notable are a six-fold increase in Michigan after last year's drought and a 70% gain in North Dakota where planted acres are record high. Production is up from last year for all classes except garbanzo, black eye, great northern, and small white. Navies are up 130%, pinto's climbed 49%, and blacks are almost quadrupled from last year. Small red, baby lima, cranberry, and pink are also up sharply.

October U.S. Pig Crop Down

The October 2002 U.S. pig crop at 8.33 million head, was 2% below the previous year. Sows farrowing during this period totaled 940 thousand head, 2% below last year. The average pigs per litter for October increased to 8.86, compared to 8.85 last year.

The U.S. inventory of sows and gilts on November 1, 2002, was 5.83 million head, down 2% from November 1, 2001. U.S. sows and gilts bred during October totaled 1.18 million head, down 1% from the previous year.

ERS Economist Says Fed Cattle Market Strengthens

Fed-steer prices have rallied $5 since early October, reaching the upper $60s per cwt in early November as poor feeding conditions slowed marketings. With weekly beef production running above year-earlier levels, the market strength indicates relatively good product movement in export and domestic channels. Prices strengthened in early November as muddy feedlot conditions resulted in weight loss and reduced marketings.

Although beef production in the October-December quarter is expected to be about 1% over a year earlier, prices for fed cattle are expected to average in the upper $60s per cwt as packers compete for declining numbers of cattle. In recent months, fed-cattle marketings have been brisk relative to inventory levels. On October 1, cattle-on-feed-inventory (7 states) was down 5% from a year earlier. Feeder cattle supplies outside feedlots on October 1 were about unchanged from a year earlier. However, placements are expected to remain below year-earlier levels, as wheat-grazing prospects in the High Plains winter wheat areas are the best in several years. Improved weather conditions will result in more light cattle moved to pasture.

The upturn in prices will likely continue next year as steer and heifer slaughter drops each quarter relative to a year earlier, with the largest year-to-year declines occurring in the second half. Cow slaughter is expected to drop sharply in 2003 as forage conditions improve. Assuming normal winter feeding conditions, gains in average slaughter weight should slow from this year's record pace, but will rise modestly as the proportion of cows in the slaughter mix declines. For the year, beef production is forecast down 5% in 2003. Prospects for reduced beef supplies and higher cattle prices next year depend to a large extent on "normal" forage and grazing conditions in spring and summer, which would encourage producers to retain animals for breeding rather than feeding them for slaughter.

SOURCE for the above information: Livestock, Dairy and Poultry Situation and Outlook, ERS, November 26, 2002.

Agricultural Prices Received for October

October full month crop prices were mostly higher compared with September 2002. Montana's winter wheat average price was $4.06 per bushel, up $0.07 from the previous month; spring wheat moved up $0.20 to $4.66 per bushel; and durum wheat prices gained $0.58 to $4.97 per bushel. Feed barley prices increased $0.09 from the previous month to $2.22, malt barley prices decreased $0.04 to $3.07 per bushel.

The mid-November price for alfalfa hay was down $4.00 to $83.00 per ton and all other hay held steady at $75.00 per ton. The mid-November grain prices were mixed from the previous month with winter wheat price averaging $4.10 per bushel; spring wheat was $4.65; durum wheat was $5.05; feed barley was $2.21; and malt barley averaged $3.28.

Livestock prices for the full month of October were mixed compared with the previous month. Steer and heifer prices increased $3.80 to $80.20 per cwt, while cows fell $1.70 to $34.30. The average price for calves decreased $4.50 to $86.20 per cwt. Sheep prices rose $3.00 to $24.40 per cwt and lamb prices moved up $5.00 to $84.10 per cwt. Milk prices rose $0.20 per cwt from last month to $12.00 per cwt. Steer and heifer prices for mid-November averaged $80.60 per cwt.; cows averaged $31.70 per cwt.; calves averaged $85.50 per cwt.; and milk prices averaged $12.10 per cwt.

Nationally, prices for October and changes from September were as follows: winter wheat was $4.37, up $0.23, spring wheat was $4.44, up $0.15; durum wheat was $4.43, up $0.23; the all barley price was $2.65, up $0.01, and steer and heifer prices were $68.50, up $0.50 per cwt.

The U.S. mid-November winter wheat price was $4.15 per bushel, spring wheat was $4.32 per bushel, durum wheat was $4.23 per bushel, all wheat was $4.23 per bushel, malt barley was $3.14 per bushel, feed barley was $2.33 per bushel, and all barley was $2.81. Steer and heifer prices were $70.90 per cwt, cow prices were $32.60, calves were $90.40 per cwt., all hog prices were $27.40 per cwt, and all egg prices were $0.563 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in November is 97, based on 1990-92=100, up 1 point (1.0 percent) from the October index. Higher prices for soybeans, eggs, cattle, and tomatoes more than offset lower prices for hogs, milk, lettuce, and corn. The seasonal change in the mix of commodities farmers sell also affects the overall index. Increased marketings of cotton, milk, cattle, and cottonseed offset decreased marketings of soybeans, peanuts, potatoes, and sunflower.

The preliminary All Farm Products Index is 4 points (4.3 percent) above November, 2001. Higher prices for corn, soybeans, wheat, and cattle more than offset lower prices for broilers, hogs, turkeys, and calves.

The Food Commodities Index increased 2 points (2.1 percent) above last month to 96, but is 1.0 percent below November last year.

United States Index Summary

U.S. Cattle on Feed Down 9 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.7 million head on November 1, 2002. The inventory was 9 percent below both November 1, 2001 and November 1, 2000.

Placements in feedlots during October totaled 2.39 million, 12 percent below 2001 and 16 percent below 2000. Net placements were 2.30 million. During October, placements of cattle and calves weighing less than 600 pounds were 809,000, 600-699 pounds were 638,000, 700-799 pounds were 521,000, and 800 pounds and greater were 420,000.

Marketings of fed cattle during October totaled 1.98 million, 4 percent above 2001 and 3 percent above 2000. Other disappearance totaled 84,000 during October, 24 percent above 2001 and 27 percent above 2000.

October Milk Production Up

Milk production in the 20 major States during October totaled 12.0 billion pounds, up 2.3 percent from October 2001. September revised production, at 11.7 billion pounds, was up 2.5 percent from September 2001. The September revision represented a decrease of 91 million pounds or 0.7 percent from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,544 pounds for October, 22 pounds above October 2001. The number of milk cows on farms in the 20 major States was 7.79 million head, 67,000 head more than October 2001, and 8,000 head more than September 2002.

Red Meat Production Up

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during October 2002, up 1 percent from last year and 2 percent from the previous month's production. Cattle slaughter totaled 2,000 head, equal to one year ago. The average live weight decreased 19 pounds to 1,139 pounds.

During October there were 1,300 hogs slaughtered, compared with 1,100 one year ago. The average live weight, at 244 pounds, was down 3 pounds from last year. October sheep slaughter in the state totaled 400 head, the same number as October 2001. The average live weight decreased 2 pounds to 125 pounds.

Commercial red meat production for the United States totaled 4.38 billion pounds in October, up 3 percent from the 4.27 billion pounds produced in October 2001 and a new record high for October. Beef production, at 2.51 billion pounds, was 5 percent above the previous year and a new record high for October. Cattle slaughter totaled 3.27 million head, up 3 percent from October 2001. The average live weight was 1,270 pounds, up 23 pounds from October a year ago.

Veal production totaled 18.7 million pounds, 5 percent above October a year ago. Calf slaughter totaled 100,800 head, up 7 percent from October 2001. The average live weight was 308 pounds, down 10 pounds from October a year ago.

Pork production totaled 1.83 billion pounds, down slightly from the previous year. Hog kill totaled 9.40 million head, 1 percent above October 2001. The average live weight was 264 pounds, down 3 pounds from October a year ago.

Lamb and mutton production, at 19.6 million pounds, was down 1 percent from October 2001. Sheep slaughter totaled 300,200 head, 4 percent above last year. The average live weight was 131 pounds, down 6 pounds from October a year ago.

January - October red meat production was 39.4 billion pounds, 4 percent above the previous year. Accumulated beef production was up 5 percent from last year, veal was down 1 percent, pork was up 3 percent, and lamb and mutton production was down 2 percent.

U.S. October Egg Production Up

U.S. egg production totaled 7.41 billion during October 2002, up 1 percent from last year. Production included 6.34 billion table eggs and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 58.0 million were egg-type. The total number of layers during October 2002 averaged 338 million, up slightly from a year earlier. October egg production per 100 layers was 2,192 eggs, up 1 percent from the 2,180 eggs in October 2001.

All layers in the U.S. on November 1, 2002, totaled 338 million, up slightly from a year ago. The 338 million layers consisted of 281 million layers producing table or commercial type eggs, 54.8 million layers producing broiler-type hatching eggs, and 2.55 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 2002, averaged 71.1 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.94 billion eggs during October 2002, up 1 percent from a year ago. The average number of layers during October, at 317 million, was up slightly from a year ago.

World Supply & Demand Estimates

World supply and demand estimates for wheat incorporate revised estimates of China's wheat consumption and stocks. The changes are due to indications that USDA's previous estimates of China's wheat stocks were too low. The changes reflect information collected by the U.S. Agricultural Attache in Beijing, trade sources, and statements by Chinese officials regarding total grain stocks. Internal prices and trade patterns also strongly suggest stocks are much more abundant than USDA's previous estimates. Since production and trade estimates are unchanged, except for higher projected exports for 2002/03, higher stocks can only be attained by lowering use, specifically non-feed use. Per capita consumption of wheat is reduced slightly starting in 1990/91, with marginally stronger reductions from 1994/95 to 2002/03 as rising incomes led urban consumers to switch to other foods.
(Continued on next page.)

Supply and Demand Estimates

(continued from page one)

Estimates of wheat feed use are raised 2 million tons per year for 2002/03 and the previous 2 years. Old and revised historical supply and demand estimates for China wheat are available at: http://www.usda.gov/oce/waob/wasde/wasde.htm.

WHEAT: Projected U.S. 2002/03 ending stocks of wheat are down 13 million bushels from last month due to lower production and smaller projected imports. Estimated production is revised down 8 million bushels because of reduced area. Some of the other spring wheat and durum acres that producers indicated they intended to harvest for grain during the collection of data for the Small Grains Summary 2002 report were not harvested for grain. Projected imports are reduced 5 million bushels from last month. The projected price range is raised 10 cents on the low end to $3.65 to $3.95 per bushel.

Projected world 2002/03 wheat production is down marginally from last month as reductions for Australia, Algeria, and Bulgaria more than offset gains for Kazakstan, Russia, and Afghanistan. The smaller projected Australian crop results in a 2-million-ton reduction in exports for their October-September marketing year. However, relatively strong exports during July-September 2002 result in only a 1-million-ton reduction for the July-June international trade year. Projected global imports are up from last month, led by a 2-million-ton increase for the EU. The larger global imports and reduced Australian exports are offset by higher projected exports for Russia, Ukraine, and Eastern Europe. Global stocks are up sharply due to historical revisions in China stocks.

COARSE GRAINS: Projected 2002/03 ending stocks of corn are up 84 million bushels from last month due to a 34-million-bushel gain in production and reduced use. Projected feed and residual use is up 25 million bushels due to lower sorghum feeding. However, exports are down 75 million bushels because of increased competition. Projected sorghum exports are 25 million bushels above last month due to expanding global imports and reduced competition. In addition, forecast sorghum production is reduced slightly. The smaller crop and expanding exports are only partially offset by lower feed and residual use, lowering ending stocks of sorghum 10 million bushels. The projected price range for corn is down 10 cents on each end of the range to $2.20 to $2.60 per bushel.

Global coarse grain production, trade, and use are down slightly from last month, but ending stocks are higher. There are numerous country-specific production changes from last month, highlighted by larger corn production in Argentina and Eastern Europe, lower corn production in Brazil, lower Mexico sorghum production, and lower production of barley in Australia. The larger corn crops result in expanded corn export prospects for Argentina and Eastern Europe. Plus, projected exports by China are up 500,000 tons. With global imports up only slightly from last month, U.S. export prospects are reduced. U.S. sorghum export prospects are improved because of a sharply smaller sorghum crop in Mexico and reduced exports (and higher imports) for Australia. Larger China corn stocks are due to lower projected feed use in 2002/03 and the previous 2 years because of increased wheat feeding estimates.

OILSEEDS: Projected U.S. oilseed ending stocks for 2002/03 are up this month as increased production is only partially offset by higher use prospects. U.S. oilseed production, at 82.7 million tons, is up 0.8 million tons this month as a larger soybean crop offsets reductions for peanut and cottonseed production. Soybean production is forecast at 2.69 billion bushels, up 36 million bushels from last month, based on a higher average yield.

Projected U.S. soybean stocks are increased 10 million bushels to 185 million bushels as production increases more than use. Soybean exports are projected at 890 million bushels, up 40 million bushels from last month due to stronger than expected early-season shipments, especially to China. However, soybean crush is lowered due to reduced soybean meal export prospects. Soybean meal exports are lowered 0.4 million short tons to 6.2 million tons, based on increased meal exports from South America. Soybean oil ending stocks for 2002/03 are projected at 1,485 million pounds, down 145 million pounds from last month due mostly to reduced production.

The U.S. season-average soybean price range for 2002/03 is lowered 10 cents on each end to $4.95 to $5.85 per bushel. Soybean oil prices are raised 0.5 cents on both ends of the range to 19.5 to 20.5 cents per pound, due to lower projected ending stocks. Soybean meal prices are projected at $155 to $185 per short ton, down $10 on both ends of the range.

Global oilseed production for 2002/03 is projected at 321.7 million tons, up 3.8 million tons from last month. Foreign production is forecast at 238.9 million tons, up 3.0 million tons, based largely on increased soybean production. Soybean production in Argentina is forecast at a record 32.5 million tons, up 1.5 million tons, based on increased area and higher yields. Soybean production for Brazil is raised 1 million tons to a record 49 million tons, based on higher projected area, especially in Southern Brazil as producers switch more area from corn. Soybean production for China is increased 0.8 million tons to 16.4 million tons, based on higher area. Australian rapeseed production is reduced 200,000 tons to 800,000 tons because of severe drought. Global oilseed ending stocks are increased 3.4 million tons this month to 32.8 million tons based on larger soybean stocks.

LIVESTOCK, POULTRY, AND DAIRY: Forecast meat production for 2002 and 2003 is little changed this month Third-quarter 2002 poultry production is raised due to higher-than-expected slaughter, but lower eggs set data over the past several weeks point toward slower broiler production growth in the fourth quarter. Third-quarter broiler exports are raised to reflect strong shipments to Russia during August. This month, forecast total egg production is unchanged for 2002 and is raised for 2003. Table egg production is forecast slightly higher, but the gains will be mostly offset by declines in hatching egg production. Livestock and poultry price forecasts are little changed this month.

Projected milk production for 2002/03 is raised from last month. Additional milk production is expected to continue pressuring already weak product markets and lead to larger CCC net removals of nonfat dry milk and generally lower product prices. Pressured by weak butter prices, the Class IV price for 2002/03 is projected to average $10.45 to$11.35 per cwt, and weak cheese prices likely will result in the Class III price averaging $10.10 to $10.80 per cwt. The all milk price is projected at $11.65 to $12.35 per cwt.

(See table on back page.)

2002 Census of Agriculture

Farm and ranch operators across America and Montana are about to participate in the Nation's largest, most detailed statistical portrait of U.S. agriculture – the 2002 Census of Agriculture. Conducted by the USDA's National Agricultural Statistics Service (NASS), the census will provide a comprehensive portrait of agriculture at the county, state, and national levels depicting how farms and ranches stand today compared with five years ago.

Census of agriculture report forms will be mailed to farm and ranch operators in late December to collect data for the 2002 calendar year. Operators must complete and return their forms by February 3, 2003.

Data provided by individual farmers and ranchers is held strictly confidential by law (Title 7, U.S. Code). Statistical results are aggregated and published only in geographical summaries to prevent identification of individual farms.

New questions will collect information on multiple operators per farm, production contracts, certified organic acreage, grain storage capacity, computer and Internet use, and new commodities such as bison, deer, elk, llamas, emus, and ostriches. Other questions will be similar to those asked in previous censuses and will focus on key information such as acreage and land use, operator characteristics, crop and livestock production, and agricultural product sales.

Twenty-five percent of operators will also be asked about production expenses, fertilizers and chemicals, machinery and equipment, market value of land and buildings, and income from farm-related sources. Report forms are tailored by region to make them less burdensome and more relevant to respondents in different parts of the country.

How do census of agriculture results help farmers and ranchers?

- **Farm organizations, Congress, and State and local governments** have the facts needed to plan programs that help farmers and ranchers get the most for their investments.
- **Farm machinery manufacturers, grain elevators, slaughter and cold storage, and other agribusinesses** more effectively target their locations to where they are most needed by using county and State statistics, resulting in economic benefit for farm operators.
- **Seed and fertilizer producers** compare yields and other information to help operators do the most effective job.
- **Irrigation specialists, water resource developers, and irrigation equipment manufacturers** convert census knowledge into practical advice for farm operators.
- **State and national lawmakers** use census facts to determine where to allocate funds that will benefit agriculture producers.
- **Farm broadcasters and agricultural editors** convey census results to their audiences and use the data to help focus their stories on important areas of agriculture.
- **Researchers and legislators** use county-level data to define problem areas and help farmers recover from outbreaks of disease and pests.

A farm, for census purposes, is any place from which at least $1,000 worth of agricultural products were produced and sold or could have been sold during the census year. Because a key strength of the census is providing detailed facts about small farms, every response counts – whether from a large or very small operation. By responding completely and accurately, farmers and ranchers can make the 2002 Census of Agriculture an effective tool to help chart the future of their industry.

To find results from previous censuses and a wealth of current statistics on agriculture, visit www.usda.gov/nass/. Results from the 2002 Census of Agriculture will be released in the spring of 2004.

Hired Workers Down 5 Percent, Wage Rates up 4 Percent From a Year Ago

There were 1.19 million hired workers on the Nation's farms and ranches the week of October 6-12, 2002, down 5 percent from a year ago. There were 935 thousand workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 250 thousand workers.

Farm operators paid their hired workers an average wage rate of $8.93 per hour during the October 2002 survey week, up 34 cents from a year earlier. Field workers received an average of $8.30 per hour, up 29 cents from last October. Livestock workers earned $8.44 per hour compared with $8.39 a year earlier. The Field and Livestock worker combined wage rate, at $8.33 was up 24 cents from last year. The number of hours worked averaged 40.4 hours for hired workers during the survey week compared with 41.7 hours a year ago.

Hired Workers: Annual Average Wage Rates By State, 2001-02 1/ 2/

State	All Hired		Field		Field & Livestock	
	2001	2002	2001	2002	2001	2002

HIGHLIGHTS:

November 1 Crop Production
2002 Crop Year Summary
Ag Prices Received

November 1 Crop Production Forecast

Spring wheat production was revised downward to 75.9 million bushels from 80.5 million bushels and **durum wheat** production was revised up to 13.0 million bushels from 12.54 million bushels. Survey respondents who reported durum or other spring wheat acreage not yet harvested in Montana and North Dakota during the surveys conducted to prepare the Small Grains 2002 Summary were re-contacted to determine how many of these acres were actually harvested and record the actual production from those acres. Based on this updated information, harvested acreage was reduced for both durum and other spring wheat in these two States. Durum area declined 5,000 acres in Montana and 50,000 acres in North Dakota. Other spring wheat harvested area declined 50,000 and 100,000 acres in Montana and North Dakota, respectively. The Montana durum yield increased 1.0 bushel from the previous estimate, while the other spring wheat yield declined 1.0 bushel. North Dakota yields for both crops were unchanged from the previous estimate. **All wheat** production in the United States is 1.62 billion bushels, 17 percent below last year, and less than 1 percent lower than the previous estimate. Because unharvested production is a component of **on-farm stocks**, changes were made to the September 1 on-farm stocks levels comparable to the production adjustments.

Montana **dry edible pea** production is forecast to be 204,000 cwt, down 18 percent from last year's revised estimate. Due to a classification change in dry edible pea acreage, dry pea estimates no longer include desi chickpea acreage. Desi chickpea acreage is now included in the garbanzo dry bean acreage. Planted acreage for 2002 is estimated at 32,000 acres, up 6,000 acres from last year. Harvested acres is estimated at 24,000 acres, up from 16,500 acres last year. The yield is forecast at 850 pounds per acre, down from 1,510 pounds per acre last year. The high temperatures during the growing season and lack of rainfall during the critical stages of crop development, severely reduced yields for dry peas and lentils.

Austrian winter pea production in Montana is forecasted to be 24,000 cwt, up 4,000 cwt from last year. Harvested acreage at 3,000 acres is expected to be up 500 acres from last year. Planted acreage for 2002 is estimated to be 9,500 acres, down 400 acres from last year. Most of the Austrian winter pea acres planted this year were harvested as forage or hay rather than for peas. The average yield is forecast to be 800 lbs per acre, up 10 lbs per acre from last year.

Lentil production in Montana is forecast to be 121,000 cwt for 2002, down 45 percent from last year. Planted acreage at 25,000 acres, is expected to be up 3,000 acres from last year. Harvested acres, at 22,000 acres, is up 2,000 acres from last year. Average yield is expected to be 550 lbs per acre down from 1,100 lbs last year.

Montana **sugar beets** production was forecast at 1.14 million tons, down 1 percent from last year. Forecasted yield, of 20.0 tons per acre, is down 1.5 tons per acre from 2001. Late planting and replanting of sugar beets and extreme heat during July and August reduced yields from a year ago. Harvested acreage is up 3,500 acres from last year to 57,000 acres.

Fall potato production in Montana is forecast to be 3.213 million cwt, down 3 percent from last year. Harvested acres are estimated at 10,200 acres, down 100 acres from last year. The yield is forecast at 315 cwt per acre, down 5 cwt per acre from the previous year. As of November 1, ninety-nine percent of the crop had been harvested which is 6 points ahead of the five-year average.

2002 Montana Crop Year Summary

During the fall of 2001 Montana grain growers seeded 1.45 million acres of winter wheat, 150,000 acres more than the previous year. This is 18 percent below the 1.77 million acres average for the last 10 years.

November 2001 was unseasonably warm and dry. A large, upper-level ridge of high pressure over the western U.S. kept the storm track to the north and thus Pacific storms were unable to move into the area. By the end of November, winter wheat had emerged on 92% of the seeded acreage. Topsoil moisture was rated 0% surplus, 12% adequate, 40% short, and 48% very short. Subsoil moisture was rated 0% surplus, 11% adequate, 36% short, and 53% very short. Warmer and drier than normal conditions prevailed over Montana again in December allowing farmers to do some minor fieldwork. Winter wheat protectiveness of snow cover was rated at 0% excellent, 1% good, 2% fair, 57% poor, and 40% very poor. The lack of snow cover continued to allow wind damage to occur to the winter wheat crop. At the end of December 2001 wind damage was rated at 49% heavy, 19% moderate, 25% light, and 7% none. Freeze and drought damage was estimated at 17% heavy, 49% moderate, 32% light and only 2% with no damage.

Chinook winds brought warmer and drier than normal conditions to Montana during January 2002, allowing farmers to do some minor fieldwork. However, producers were becoming increasingly concerned about the lack of snow cover to protect winter wheat from cold temperatures and gusty winds. As of the end of January, protectiveness of snow cover was rated 0% excellent, 2% good, 15% fair, 14% poor, and 69% very poor. Wind damage to the winter wheat crop was reported to be 28% heavy, 35% moderate, 16% light, and 21% with none at month's end. The overall condition of the winter wheat crop was rated 0% excellent, 2% good, 47% fair, 45% poor, and 6% very poor.

February weather was generally similar to the previous two months with above normal temperatures, below normal precipitation, and insignificant moisture. Snow cover remained mostly inadequate to offer much protection to the winter wheat crop. March showed some improvement, but parched soil rapidly absorbed what moisture did fall. Many areas of the state received near normal amounts of rain or snow the first weeks of April. Precipitation was very light the last part of the month, which allowed producers to make good seeding progress with small grains. Topsoil moisture was rated very short or short for a majority of the state by month's end. Winter wheat was 16% still dormant, 54% greening and 30% green and growing . Some areas of the state received rain the first week in May, but hot, dry conditions prevailed the rest of the month. Topsoil moisture during May continued to be rated very short or short for the majority of the state. Small grains seeding was nearly completed by the last week of May.

November 1, 2002 Crop Production Forecast, Montana and U.S.

2002 Crop Year Summary (cont.)

Rain showers began to fall across the state in June, with some major storm events developing in the north central part of Montana. By the middle of June, much of the state had reached normal levels of precipitation based on April 1 to date averages. Crop conditions improved as a result of the mid-June rains. Sixty-two percent of the winter wheat crop was reported in fair and excellent condition at month's end. On the other-hand, all the moisture slowed haying progress, putting growers behind. Topsoil moisture was rated 8% very short, 28% short, 62% adequate, and 2% surplus.

Precipitation continued to fall during July. Some producers reported hail damage to crops. Winter wheat was only 6% harvested by the end of the month, well behind the five-year average of 26%. The first cutting of alfalfa hay was 97% complete, and the second cutting was 23% finished by month's end. CRP acres were grazed or hayed throughout the state. Montana had hot temperatures and precipitation the first week in August. At month's end, the winter wheat harvest was 94% finished, but the spring wheat, barley, and oats harvest were less than half complete. The second cutting of alfalfa hay was 75% complete, compared with 79% last year.

During the first week of September rainfall was received throughout the state, and temperatures returned to more normal levels. The effect of late season precipitation was evident, as producers were behind on harvesting progress. The 2002 winter wheat crop was 74% seeded by month's end, well ahead of the 52% average for the last 5 years.

The September Small Grains Summary shows Montana's 2002 winter wheat production was 21.00 million bushels, up 10% from last year's crop. Producers seeded 1.45 million acres, but harvested only 750,000 acres, 120,000 acres less than were harvested in 2001. The 2002 average yield was 28.0 bushels per acre, which is 6 bushels more than last year's average. The final yield was reduced by 2 bushels from the August 1 forecast. Hard red winter represented 99 percent of the acreage for both the 2001 and 2002 crop years. The balance was white wheat.

Spring wheat production in Montana was estimated at 75.9 million bushels, up 16% from 2001. Final seeded acreage was 3.75 million acres, 200,000 acres more than 2001 and 250,000 more than earlier forecast. Producers harvested 3.45 million acres, up 200,000 acres from the earlier forecast and 600,000 acres from last year. Yields averaged 22.0 bushels per acre, down 1 bushel from 2001. Hard red spring represented 99 percent of the acreage for 2001 and 2002 crop years. The balance was white wheat.

Montana durum wheat growers seeded 590,000 acres and harvested 565,000 acres in 2002. The average yield for Montana was 23.0 bushels per acre, 1 bushel less than 2001. Total production was estimated at 12.995 million bushels, down 6 percent from last year. The 2002 production is the third highest on record, as is harvested acreage. Only the 978,000 acres harvested in 1956 and 577,000 acres in 1957 exceed this year's harvested acreage.

September Agricultural Prices

September full month crop prices were mostly higher compared with August 2002. Montana's winter wheat average price was $3.99 per bushel, up $0.34 from the previous month; spring wheat moved up $0.83 to $4.46 per bushel; and durum wheat prices gained $0.63 to $4.41 per bushel. Feed barley prices increased $0.04 from the previous month to $2.13, and malt barley prices decreased $0.11 to $3.11 per bushel.

The mid-October price for alfalfa hay was up $2.00 to $87.00 per ton and all other hay held steady at $75.00 per ton. The mid-October grain prices were mixed with winter wheat price averaging $4.39 per bushel; spring wheat was $4.89; durum wheat was $4.45; feed barley was $2.05; and malt barley averaged $3.05.

Livestock prices for the full month of September were mostly lower compared with the previous month. Steer and heifer prices increased $1.50 to $76.40 per cwt, while cows fell $0.60 to $36.00. The average price for calves decreased $0.90 to $90.70 per cwt. Sheep prices fell $2.30 to $21.40 per cwt and lamb prices moved up $3.20 to $79.10 per cwt. Milk prices were up $0.20 per cwt from last month to $12.00 per cwt. Steer and heifer prices for mid-October averaged $79.90 per cwt.; cows averaged $33.60 per cwt.; calves averaged $86.70 per cwt.; and milk prices averaged $12.20 per cwt.

Nationally, prices for September and changes from August were as follows: winter wheat was $4.14, up $0.51, spring wheat was $4.29, up $0.63; durum wheat was $4.20, up $0.65; the all barley price was $2.66, down $0.04, and steer and heifer prices were $68.00, up $0.90 per cwt.

The U.S. mid-October winter wheat price was $4.41 per bushel, spring wheat was $4.47 per bushel, durum wheat was $4.06 per bushel, all wheat was $4.41 per bushel, malt barley was $2.90 per bushel, feed barley was $2.26 per bushel, and all barley was $2.58. Steer and heifer prices were $67.80 per cwt, cow prices were $33.70, calves were $91.10 per cwt., all hog prices were $31.90 per cwt, and all egg prices were $0.54 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in October is 95, based on 1990-92=100, down 4 points (4.0 percent) from the September index. Lower prices for broilers, potatoes, corn, and soybeans more than offset increased prices for hogs, wheat, milk, and tobacco. The seasonal change in the mix of commodities farmers sell also affects the overall index. Decreased marketings of wheat, milk, grapes, and tobacco more than offset increased marketings of soybeans, corn, cotton, and sorghum.

United States Index Summary

INDEX (1990-92=100)	Sept. 2001	Oct. 2001	Sept. 2002	Oct. 2002

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

2002 Crop Year Summary (cont.)

Barley planted in Montana increased to 1.20 million acres, 100,000 acres more than 2001. Producers harvested 950,000 acres, 230,000 acres more than were harvested for grain in 2001. Final yields averaged 42.0 bushels per acre, up 1 bushel from last year. Production was estimated at 39.9 million bushels, up 35% from last year. The 2002 production is the fifth smallest crop since 1961 when 26.4 million bushels were realized.

Oat production in Montana was 2.695 million bushels, down 12 percent from last year. Planted acreage was estimated at 145,000 acres, up 15,000 from last year. Harvested acreage was set at 55,000 acres, down 5,000 from 2001. Yields averaged 49.0 bushels per acre, 9.0 bushels more than last year.

The October alfalfa hay yield forecast was 2.00 tons per acre. If realized this would be 0.1 ton per acre less than last year. Total production of alfalfa hay is estimated to be 3.40 million tons, up 12 percent from last year. The harvested acreage of 1.7 million acres for alfalfa is up 250,000 acres from last year's final estimate. Other hay yield was estimated at 1.5 tons per acre, down 0.1 ton from 2001. Other hay production is expected to be 1.725 million tons, 23 percent more than last year. Harvested acreage is up 150,000 acres from last year. All hay production is estimated at 5.125 million tons, up 15 percent from last year.

Montana sugar beet production was forecast at 1.14 million tons on November 1, down 1 percent from last year. Forecast yield of 20.0 tons per acre was down 1.5 tons per acre from last year's final yield. Potato production in the state is forecast to be 3.213 million cwt, down 3 percent from last year. Harvested acres are estimated at 10,200, down 100 acres from last year. Yield is forecast to be 315 cwt per acre, down 5 cwt from the previous year.

October 1, 2002 All Hay Production Forecast Up 15 Percent from 2001

Alfalfa hay yield in Montana remains unchanged from the August forecast of 2.0 tons per acre. If realized, this would be 0.1 ton per acre below last year's final estimate. Total production of alfalfa hay is estimated to be 3.4 million tons, up 12 percent from the previous year. Harvested acreage at 1.7 million for alfalfa shows a 250,000 acre increase from 2001. **Other hay** yield did not change from August's forecast, and is estimated at 1.5 tons per acre, up 7 percent from last year. Other hay production is expected to be 1.73 million tons, up 23 percent from last year. Harvested acreage is 1,150,000 acres, up 150,000 acres from 2001. Late spring rains and approval to cut hay on CRP land throughout much of the state lead to an overall increase in harvested acreage this year. **All hay** production is estimated at 5.13 million tons, up 15 percent from last year.

Montana **sugar beet** production is forecast at 1.197 million tons, unchanged from last month's forecast, but up 4 percent from last year. Forecasted yield, at 21.0 tons per acre, is unchanged from last month, but is down 0.5 tons per acre from last year. Harvested acreage is forecast to be 57,000 acres, up 3,500 acres from last year. Sugar beet harvest is behind with 14 percent of the beets pulled for the week ending October 6th, compared with the 5-year average of 30 percent.

Nationally, **alfalfa hay** production is forecast at 74.7 million tons, virtually unchanged from August, but down 7 percent from last year. Yields are expected to average 3.09 tons, which is the same as August, but down 0.28 ton from last year. Harvested area is 24.1 million acres, unchanged from the August estimate, but up 1 percent from 2001. The yield, in all but 7 States, is below or at last year's level. The severe drought conditions in the northern and central Great Plains and Rocky Mountains throughout the growing season continue to support a lower yield compared to last year.

Other hay production for the U.S. is forecast at 75.8 million tons, 3 percent below the August forecast, and 1 percent below last year. Yields are expected to average 1.87 tons per acre, down 0.05 ton from the August forecast and 0.06 ton below 2001. Harvested acreage is estimated at 40.6 million, unchanged from the last forecast, but up 2 percent from 2001.

In the U.S., **sugar beet** production is forecast at 28.6 million tons, up slightly from the September 1 forecast and 11 percent above last year's production. Growers in the 12 sugar beet-producing States expect to harvest 1.37 million acres. This is unchanged from the September estimate, but 10 percent above last year. The yield is forecast at 20.9 tons per acre, 0.1 ton above September and 0.2 ton above 2001.

September Milk Production Up 3.3 Percent

Milk production in the 20 major States during September totaled 11.8 billion pounds, up 3.3 percent from September 2001. August revised production, at 12.2 billion pounds, was up 4.1 percent from August 2001. The August revision represented an increase of 0.2 percent or 27 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,510 pounds for September, 38 pounds above September 2001. The number of cows on farms in the 20 major States was 7.79 million head, 56,000 head more than September 2001, but 4,000 head less than August 2002.

September Pig Crop Down 1 Percent

The September 2002 U.S. pig crop at 8.37 million head, was 1 percent below the previous year. Sows farrowing during this period totaled 943 thousand head, 2 percent below last year. The average pigs per litter for September increased to 8.87, compared to 8.78 last year.

The U.S. inventory of sows and gilts on October 1, 2002, was 5.87 million head, down 2 percent from October 1, 2001.

U.S. sows and gilts bred during September totaled 1.15 million head, down 2 percent from the previous year.

Montana Agricultural Statistics 2002 Bulletin Available Soon

This annual report contains state and county crop and livestock estimates, farm income, prices, farm numbers, Montana's rank among states, and other statistical data.

The *Montana Agricultural Statistics* bulletin will be available soon in printed form or on our website at http://www.nass.usda.gov/mt/. The price for the printed bulletin is $10.00. Those who supply survey information are not charged.

The Census of Agriculture Is Coming

The 2002 Census of Agriculture will appear in your mailbox in late December. It provides official facts representing all U.S. producers and commodities. Don't be left out when decisions are made about you and American agriculture.

You Make it Known - Agriculture Counts!

October 1, 2002 Crop Production Forecast, Montana and U.S.

U.S. Cattle on Feed Down

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.4 million head on October 1, 2002. The inventory was 6 percent below October 1, 2001 and 5 percent below October 1, 2000. The inventory included 6.26 million steers and steer calves, down 6 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.08 million head, down 8 percent from 2001.

Placements in feedlots during September totaled 2.19 million, 2 percent above 2001 but 19 percent below 2000. Net placements were 2.14 million. During September, placements of cattle and calves weighing less than 600 pounds were 614,000, 600-699 pounds were 487,000, 700-799 pounds were 582,000, and 800 pounds and greater were 505,000. Marketings of fed cattle during September totaled 1.85 million, 1 percent above 2001 but 7 percent below 2000. Other disappearance totaled 53,000 during September, 15 percent above 2001 but 2 percent below 2000.

September Egg Production Up

U.S. egg production totaled 7.15 billion during September 2002, up 1 percent from last year. Production included 6.10 billion table eggs and 1.05 billion hatching eggs, of which 989 million were broiler-type and 56.0 million were egg-type. The total number of layers during September 2002 averaged 337 million, up 1 percent from a year earlier. September egg production per 100 layers was 2,119 eggs, up 1 percent from the 2,103 eggs in September 2001.

All layers in the U.S. on October 1, 2002, totaled 338 million, up slightly from a year ago. The 338 million layers consisted of 280 million layers producing table or commercial type eggs, 54.9 million layers producing broiler-type hatching eggs, and 2.45 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 2002, averaged 70.2 eggs per 100 layers, up slightly from a year ago. Laying flocks in the 30 major egg producing States produced 6.69 billion eggs during September 2002, up 1 percent from a year ago. The average number of layers during September, at 316 million, was up slightly from a year ago.

Wheat Utilization for 1997-2001 Marketing Years

The June 2000 - May 2001 marketing year total wheat supply was 148.0 million bushels, 25 percent lower than a year earlier, and 34 percent below the 1998-99 marketing year. Total supply is calculated by adding 2001 all wheat production to June 2000 all wheat stocks. Total disposition of 95.7 million bushels was 34 percent less than the quantity marketed during the1999-2000 marketing year. Ending stocks of 52.3 million bushels were 2 percent more than last year. Wheat utilization reports are assembled from Grain Movement Reports and Grain Market News data by the Montana Agriculture Statistics Service. Funding was provided by the Montana Wheat and Barley Committee

Montana shipped 67.7 million bushels out of state during the 2000 - 2001 marketing year, 48 percent less than moved during the same period last year. Shipments to the Pacific Northwest totaled 44.8 million bushels, 49 percent less than the 1999 - 2000 season, and accounted for 66 percent of the wheat shipped out of state. Pacific Northwest export facilities accounted for 34.7 million bushels, while Pacific Northwest processing terminals accounted for 7.6 million bushels.

Inspected exports of hard red winter, hard red spring, hard white, and durum wheat from Pacific ports were 195.5 million bushels, down 4 percent from the previous year. Montana's recorded share of those exports was 19 percent, 24 points below the 1999-2000 marketing year.

September Red Meat Production up 35 Percent from 2001

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during September 2002. Red meat production was down 11 percent from the previous month, but up 35 percent from the previous year.

Cattle slaughtered statewide totaled 1,900 head, which is 500 head more than a year ago. The average live weight, at 1,138 pounds, was up 9 pounds from the previous year. During September there were 1,400 hogs slaughtered in Montana, 300 more than a year ago. The average live weight, at 242 pounds, was down 2 pounds from a year ago. The number of sheep slaughtered, at 400 head, is the same as the previous year. The average live weight was up 8 pounds from last year, to 125 pounds.

Commercial red meat production for the United States totaled 3.87 billion pounds in September, up 6 percent from the 3.67 billion pounds produced in September 2001.

Beef production, at 2.20 billion pounds, was 4 percent above the previous year. Cattle slaughter totaled 2.86 million head, up 2 percent from September 2001. The average live weight was 1,264 pounds, up 24 pounds from September a year ago.

Veal production totaled 16.3 million pounds, 9 percent above September a year ago. Calf slaughter totaled 88,800 head, up 13 percent from September 2001. The average live weight was 303 pounds, down 11 pounds from September 2001.

Pork production totaled 1.64 billion pounds, up 8 percent from the previous year and a monthly record high. Hog kill totaled 8.51 million head, 9 percent above September 2001. The average live weight was 260 pounds, down 2 pounds from September a year ago.

Lamb and mutton production, at 17.6 million pounds, was up 8 percent from September 2001. Sheep slaughter totaled 276,200 head, 13 percent above last year. The average live weight was 128 pounds, down 7 pounds from September 2001.

January - September red meat production was 35.0 billion pounds, 4 percent above the previous year. Accumulated beef production was up 5 percent from last year, veal was down 2 percent, pork was up 4 percent, and lamb and mutton production was down 2 percent.

Montana August 2002 Red Meat Production Up 19 Percent from the Previous Year

Montana slaughter plants produced 1.8 million pounds, dressed weight, of red meat during August 2002, up 19 percent from last year and 6 percent from the previous month's production. Cattle slaughter totaled 2,100 head, up from 1,700 head one year ago. The average live weight increased 16 pounds to 1,139 pounds.

During August there were 1,800 hogs slaughtered, compared with 1,700 one year ago. The average live weight, at 231 pounds, was up 1 pound from last year. August sheep slaughter in the state totaled 400 head, down 100 head from August 2001. The average live weight increased 6 pounds to 118 pounds.

Commercial red meat production for the United States totaled 4.14 billion pounds in August, up 2 percent from the 4.06 billion pounds produced in August 2001.

Beef production, at 2.47 billion pounds, was 2 percent above the previous year. Cattle slaughter totaled 3.21 million head, down 1 percent from August 2001. The average live weight was 1,259 pounds, up 31 pounds from August a year ago. Veal production totaled 16.7 million pounds, 3 percent below August a year ago. Calf slaughter totaled 96,000 head, up 2 percent from August 2001. The average live weight was 288 pounds, down 15 pounds from August a year ago.

Pork production totaled 1.64 billion pounds, up 2 percent from the previous year. Hog kill totaled 8.54 million head, 2 percent above August 2001. The average live weight was 259 pounds, up 1 pound from August a year ago.

Lamb and mutton production, at 16.6 million pounds, was down 11 percent from August 2001. Sheep slaughter totaled 264,600 head, 3 percent below last year. The average live weight was 126 pounds, down 11 pounds from August a year ago.

U.S. Cattle on Feed Down 7 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.13 million head on September 1, 2002. The inventory was 7 percent below September 1, 2001 and 2 percent below September 1, 2000.

Placements in feedlots during August totaled 2.22 million, 1 percent above 2001 but 9 percent below 2000. Net placements were 2.18 million. During August, placements of cattle and calves weighing less than 600 pounds were 525,000, 600-699 pounds were 483,000, 700-799 pounds were 625,000, and 800 pounds and greater were 585,000.

Marketings of fed cattle during August totaled 2.14 million, 2 percent below 2001 and 3 percent below 2000. Other disappearance totaled 43,000 during August, 20 percent below 2001 and 12 percent below 2000.

Cattle on Feed in Historic 7 States Down 6 Percent

Cattle on feed September 1, 2002, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 8.85 million, down 6 percent from the previous year and 1 percent below September 1, 2000.

Placements in feedlots during August totaled 1.94 million, 2 percent above 2001 but 7 percent below 2000. Marketings during August totaled 1.81 million, 3 percent below 2001 and 5 percent below 2000. Other disappearance during August was 35,000 head, 24 percent below 2001 and 3 percent below 2000.

Maltsters and Brewers Purchased 7.5 Million Bushels of the 2001 Barley Crop

Maltsters and brewers purchased 7.5 million bushels of Montana's 2001 barley crop to make malt, down 42 percent from 2000, according to a recent survey conducted by the Montana Agricultural Statistics Service. The survey was requested and funded by the Montana Wheat and Barley Committee. The average protein of the 2001 malting crop was 12.2 percent, which is 0.2 point less than the average protein obtained from the 2000 crop.

Montana growers seeded 1.10 million acres of barley in 2001, down 150,000 acres from 2000. Of the total, over 650,000 acres were seeded to malting type varieties. If the yield of malting varieties equaled the state average yield per planted acre for all barley, then approximately 17.4 million bushels of malting type would have been produced. Because only 7.5 million bushels were used for malt, the remaining 9.9 million bushels did not make the malting grade or exceeded demand for malting barley. The barley utilized for malt represented approximately 26 percent of the 2001 total barley crop compared with 34 percent in both 2000 and 1999.

Anheuser Busch varieties were the most frequently purchased by maltsters and brewers and represented 46.3 percent of the total purchases. Harrington varieties were the second most commonly purchased. Seventy-one percent of all malt barley purchased was grown in North Central Montana. South Central Montana growers produced over 17 percent of the total.

(See table on back page.)

2001 Potato Production and Disposition

Montana's 2001 potato production totaled 3,296,000 cwt., 6 percent below last year and 1 percent lower than 1999's production. Producers harvested 10,300 acres, 1,000 less than a year ago and 600 acres fewer than two years ago. Potato yields averaged 320 cwt. per acre compared with 310 cwt. in 2000 and 305 cwt. in 1999.

Value of production from the 2001 crop was $30.2 million, up 50 percent from 2000. The average price was $9.15 per cwt., an increase of $3.40 from the previous year's crop. Sales of Montana's 2001 potato crop totaled $27.0 million, which is 78 percent above last year's crop. Producers sold 2,956,000 cwt. from the 2001 crop compared with 2,638,000 cwt. a year ago.

Total U.S. 2001 potato production is estimated at 438 million cwt., 2 percent below the estimate made in the Annual Crop Summary in January and down 15 percent from the record high 2000 crop. Harvested area, at 1.22 million acres, shrank 9 percent from a year ago. The average yield of 358 cwt. per acre was down 23 cwt. from 2000 and 1 cwt. below the average yield from the 1999 crop. By season, winter production dropped 17 percent, spring slipped less than 1 percent, summer fell 5 percent, and fall dropped 16 percent from the previous year.

Winter and spring seasonal estimates were carried forward from earlier revisions. Summer potato production was revised to 18.2 million cwt. for 2001, down 5 percent from 2000. Harvested area, at 58,800 acres, was down 7 percent from the previous year. The average yield of 310 ct. per acre was record high for summer potatoes and 6 cwt. above the previous year.

Fall potatoes were finalized at 394 million cwt. for 2001, down 16 percent from the record high crop of 2000. Area harvested in 2001 was estimated at 1.07 million acres, down 10 percent from a year earlier. The average yield, at 367 cwt. per acre, was down 25 cwt. from the record high a year ago. Final production of fall potatoes was 2 percent below both the Annual Crop Summary in January and the first forecast made in November 2001.

Value of all potato production in 2001 was estimated at a record high $3.06 billion, up 18 percent from the previous year. The average price, at $6.99 per cwt., jumped $1.91 from a year earlier.

Sales from the 2001 potato crop totaled 401 million cwt., down 14 percent from 2000. Sales accounted for 92 percent of 2001 production. Non sales accounted for 36.6 million cwt., down 25 percent from the previous year. Over the past five years, 91 percent of the potatoes grown have been sold. The other 9 percent were either lost (shrinkage and loss) or used on farms where grown (seed, home use, and livestock feed).

Processors used 251 million cwt. of raw potatoes from the 2001 crop, down 13 percent from a year earlier. Table stock sales totaled 122 million cwt., 12 percent below the previous year. Seed sales of 25.1 million cwt. were up 8 percent. Sales for livestock feed, at 3.50 million cwt., were down 65 percent from a year earlier. A government diversion program at the end of the 2000 potato marketing year purchased 6.87 million cwt. of potatoes that were fed to livestock. Current feeding is more in line with the feed utilization of 3.14 million cwt. in 1999.

Chip potato use totaled 54.1 million cwt. in 2001, up 3 percent from the previous year. Frozen french fries and other frozen products utilized 150 million cwt. of raw potatoes, down 13 percent. Potatoes used for dehydrating totaled 40.7 million cwt., a drop of 26 percent. Canning use, at 4.31 million cwt., declined 15 percent. Starch, flour and other products were made from 1.16 million cwt. of potatoes, down 41 percent from the previous year.

Shrinkage and loss was estimated at 31.2 million cwt. for 2001, down 29 percent from 2000. Livestock feed on potato farms and home use totaled 1.25 million cwt., a decrease of 16 percent. Growers kept 4.14 million cwt. for seed on their own farms, up 9 percent from a year earlier.

August U.S. Milk Production Up 3.8 Percent

Milk production in the 20 major States during August totaled 12.2 billion pounds, up 3.8 percent from August 2001. July revised production, at 12.3 billion pounds, was up 2.3 percent from July 2001. The July revision represented an increase 1 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,568 pounds for August, 48 pounds above August 2001. The number of milk cows on farms in the 20 major States was 7.79 million head, 51,000 head more than August 2001, and 3,000 head more than July 2002.

August U.S. Egg Production Up 2 Percent

U.S. egg production totaled 7.35 billion during August 2002, up 2 percent from last year. Production included 6.26 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 61.0 million were egg-type. The total number of layers during August 2002 averaged 336 million, up 1 percent from a year earlier. August egg production per 100 layers was 2,189 eggs, up 1 percent from the 2,170 eggs in August 2001. August 2002 contained 22 weekdays, and five Saturdays, compared to August 2001 which contained 23 weekdays, and four Saturdays.

All layers in the U.S. on September 1, 2002, totaled 336 million, up 1 percent from a year ago. The 336 million layers consisted of 278 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.51 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 2002, averaged 70.8 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.89 billion eggs during August 2002, up 2 percent from a year ago. The average number of layers during August, at 315 million, was up 1 percent from a year ago.

Hogs & Pigs
Wheat Supply & Demand - ERS
Wheat & Barley Movement
Milk Cow & Sheep Co. Estimates
Ag Prices Received

July U.S. Pig Crop Up 2 Percent

The July 2002 U.S. pig crop at 8.68 million head, was 2 percent more than the previous year. Sows farrowing during this period totaled 980 thousand head, 2 percent above last year. The average pigs per litter for July decreased to 8.85, compared to 8.87 last year.

The U.S. inventory of sows and gilts on August 1, 2002, was 5.95 million head, slightly below August 1, 2001.

U.S. sows and gilts bred during July totaled 1.16 million head, up slightly from the previous year.

U.S. Wheat Supply and Demand

The September projection for U.S. 2002/03 ending stocks of wheat are down 60 million bushels from last month due to expanding use and lower imports. Projected imports are reduced 20 million bushels due to the extremely tight supplies of spring wheat in Canada. However, the smaller spring wheat imports are partially offset by projected imports of 7 million bushels of feed wheat. Projected exports are up 50 million bushels from last month because of reduced competition, while projected food use is down 10 million bushels. The lower food use reflects recently released mill grind estimates by the Bureau of the Census. The projected price range is up 25 cents on each end to $3.45 to $4.05 per bushel.

Global wheat production is little changed in aggregate, but numerous country-specific changes will have a dramatic impact on trade patterns. Combined production of the major foreign exporters (Argentina, Australia, Canada, and the EU) is reduced 10.8 million tons from last month due to droughts in Canada and Australia and prolonged rains and flooding in parts of the EU (largely Germany). While the lower EU production will not have an impact on expected EU exports and is partially offset by increased imports, projected EU ending stocks are down about 4 million tons from last month.

The smaller prospective production in Canada and Australia is projected to reduce their combined exports 8 million tons from last month and 13.5 million tons from last year. The lower exports for these countries are offset by reduced global imports and expanding exports by the United States, Russia, Ukraine, and India. Combined exports are up 4 million tons for Russia and Ukraine due to their expanding supplies (production is up more than 10 million tons from last month) and the tight supplies in the major exporters. Projected global ending stocks are down 3 million tons from last month as reductions in the major exporters and China more than offset gains in Russia and Ukraine.

Wheat and Barley Movement

Montana wheat shipped to out-of-state destinations during the December 2001 - May 2002 period, at 33.5 million bushels, was 52% lower than a year ago. Over 84% of wheat shipped during this period headed west, totaling 28.0 million bushels, down 56% from a year earlier. Movements to eastern destinations during this period, totaling 2.7 million bushels, down 3% from a year ago. Other and unknown destinations totaled 2.8 million bushels, down from 3.5 million bushels a year ago. Wheat shipped by rail, amounted to 30.4 million bushels, 91% of total shipments. Wheat trucked during this period was 3.0 million bushels compared with 3.9 million bushels last year. The percentage of wheat shipped by truck was 9% of the total, compared with 6% last year.

Agricultural Prices Received for July

July full month crop prices were mostly higher compared with June 2002. Montana's winter wheat average price was $3.41 per bushel, up $0.33 from the previous month; spring wheat moved up $0.23 to $3.31 per bushel; and durum wheat prices gained $0.08 to $3.61 per bushel. Feed barley prices increased $0.16 from the previous month to $2.08, but malt barley prices fell $0.07 to $2.94 per bushel.

The mid-August price for alfalfa hay was up $1.00 to $86.00 per ton and all other hay increased $1.00 to $77.00 per ton. The mid-August grain prices were mostly all higher with winter wheat price averaging $3.65 per bushel; spring wheat was $3.65; durum wheat was $3.85; feed barley was $1.81; and malt barley averaged $2.90.

Livestock prices for the full month of July were mostly lower compared with the previous month. Steer and heifer prices dropped $1.70 to $74.80 per cwt, while cows fell $4.10 to $36.70. The average price for calves fell $1.30 to $90.00 per cwt. Sheep prices increased $0.60 to $24.70 per cwt and lamb prices moved up $2.50 to $79.10 per cwt. Milk prices increased $1.00 per cwt from last month to $12.30 per cwt. Steer and heifer prices for mid-August averaged $74.70 per cwt.; cows averaged $36.50 per cwt.; calves averaged $88.10 per cwt.; and milk prices averaged $12.40 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $3.19, up $0.33, spring wheat was $3.30, up $0.23; durum wheat was $3.61, up $0.08; the all barley price was $2.11, up $0.11, and steer and heifer prices were $66.60, down $1.70 per cwt.

The U.S. mid-August winter wheat price was $3.65 per bushel, spring wheat was $3.65 per bushel, durum wheat was $3.85 per bushel, all wheat was $3.66 per bushel, malt barley was $2.90 per bushel, feed barley was $1.81 per bushel, and all barley was $2.28. Steer and heifer prices were $ 74.70 per cwt, cow prices were $36.50, calves were $88.10 per cwt., all hog prices were $34.20 per cwt, and all egg prices were $0.439 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in August was 101, based on 1990-92=100, up 1 point (1.0 percent) from the July index. Higher prices for corn, wheat, strawberries, and lettuce more than offset decreased prices for hogs, broilers, grapes, and potatoes. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for tobacco, cattle, grapes, and sweet corn more than offset decreased marketings of wheat, hay, milk, and strawberries.

The current All Farm Products Index is 9 points (8.2 percent) below August, 2001. Lower prices for broilers, hogs, cattle, and lettuce more than offset higher prices for corn, wheat, soybeans, and grapes. The Food Commodities Index increased by 1 point (1.0 percent) over last month to 99, but was 14 points (12 percent) below August last year.

United States Index Summary

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

Wheat and Barley Movement (continued)

Montana barley shipped to out-of-state destinations during the December 2001 - May 2002 period was 9.0 million bushels, down 16% from the same period last year. Shipments of barley out of Montana headed for eastern destinations rose from 4.7 million bushels last year to 6.4 million bushels this year. Shipments to western destinations were down 82% from the same period last year, at 0.8 million bushels. Shipments to other destinations went up from 1.4 million bushels last year to 1.8 million bushels this year, a 29% increase. Barley shipped by rail amounted to 6.8 million bushels, down 2.8 million bushels from last year. Barley hauled by rail was 75% of total movement, dow from 90% for the same period last year.

HIGHLIGHTS:

U.S. Mushroom Sales
Farm Labor
July Milk Production
Cattle on Feed
Red Meat Production
Cattle & Beef Cow Co. Estimates
All Hay County Estimates
U.S. & Canadian Cattle
Egg Production

U.S. All Mushroom Sales Down

Sales of the 2001-2002 U.S. mushroom crop were 851 million pounds, 1 percent below 2000-2001 and down 2 percent from two seasons ago. Value of sales of the U.S. mushroom crop was $912 million, up 5 percent from the two previous seasons. The number of growers, at 262, is down 4 from last season. Average price was $1.07 per pound, up 6 cents from 2000-2001.

Sales of Agaricus mushrooms for fresh market were a record high 695 million pounds, up less than 1 percent from the previous record high set last season. Sales of Agaricus mushrooms for processing were 143 million pounds, 7 percent below last season. Value of sales for all Agaricus Mushrooms totaled a record high $875 million dollars, 6 percent higher than both 2000-2001 and 1999-2000 when the previous record was set.

U.S. Hired Workers Down 12 Percent

There were 1.21 million hired workers on the Nation's farms and ranches during the week of July 7-13, 2002, down 12 percent from a year ago. There were 966,000 workers hired directly by farm operators. Agricultural Service employees on farms and ranches made up the remaining 240,000 workers.

Farm operators paid their hired workers an average wage rate of $8.60 per hour during the July 2002 survey week, up 31 cents from a year earlier. Field workers received an average of $7.91 per hour, up 21 cents from last July. Livestock workers earned $8.37 per hour compared with $7.89 a year earlier. The Field and Livestock worker combined wage rate was up 27 cents from last year.

The number of hours worked averaged 39.7 hours for hired workers during the survey week, down 0.2 hours from a year ago.

U.S. July Milk Production

Milk production in the 20 major States during July totaled 12.3 billion pounds, up 2.3 percent from July 2001. June revised production, at 12.3 billion pounds, was up 2.2 percent from June 2001. The June revision represented an increase of 0.2 percent or 27 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,580 pounds for July, 28 pounds above July 2001. The number of milk cows on farms in the 20 major States was 7.79 million head, 40,000 head more than July 2001, and 7,000 head more than June 2002.

U.S. Cattle on Feed Down 7 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.09 million head on August 1, 2002. The inventory was 7 percent below August 1, 2001 and 1 percent below August 1, 2000.

Placements in feedlots during July totaled 1.84 million, 7 percent below 2001 and 4 percent below 2000. Net placements were 1.80 million. During July, placements of cattle and calves weighing less than 600 pounds were 369,000, 600-699 pounds were 365,000, 700-799 pounds were 591,000, and 800 pounds and greater were 515,000.

Marketings of fed cattle during July totaled 2.19 million, 7 percent above 2001 and 5 percent above 2000. Other disappearance totaled 45,000 during July, 24 percent below 2001 but 2 percent above 2000.

July Red Meat Production

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during July 2002, up 31 percent from July 2001 and equal to the previous month's production. Cattle slaughter totaled 2,000 head, up from 1,500 head one year ago. The average live weight increased 5 pounds to 1,145 pounds.

During July there were 1,600 hogs slaughtered, compared with 1,200 one year ago. The average live weight, at 234 pounds, was up 2 pounds from last year. July sheep slaughter in the state totaled 300 head, unchanged from July 2001. The average live weight increased 6 pounds to 118 pounds.

Commercial red meat production for the United States totaled 4.02 billion pounds in July, up 10 percent from the 3.64 billion pounds produced in July 2001 and a new record high for July. Beef production, at 2.43 billion pounds, was 11 percent above the previous year and a new record high for July. Cattle slaughter totaled 3.19 million head, up 8 percent from July 2001. The average live weight was 1,248 pounds, up 32 pounds from July a year ago.

Veal production totaled 16.7 million pounds, 6 percent above July a year ago. Calf slaughter totaled 95,700 head, up 15 percent from July 2001. The average live weight was 290 pounds, down 22 pounds from July a year ago.

Pork production totaled 1.56 billion pounds, up 8 percent from the previous year and a new record high for July. Hog kill totaled 8.07 million head, 8 percent above July 2001. The average live weight was 260 pounds, unchanged from July a year ago.

Lamb and mutton production, at 16.3 million pounds, was down 4 percent from July 2001. Sheep slaughter totaled 257,600 head, 6 percent above last year. The average live weight was 127 pounds, down 13 pounds from July a year ago.

January - July red meat production was 27.0 billion pounds, 4 percent above the previous year. Accumulated beef production was up 5 percent from last year, veal was down 3 percent, pork was up 3 percent, and lamb and mutton production was down 2 percent.

Combined U.S. and Canadian July 1, 2002 Cattle Inventory

All cattle and calves in the U. S. and Canada combined totaled 120.5 million head on July 1, 2002, 1 percent below a year earlier. All cows and heifers that have calved, at 48.7 million head, were slightly below a year ago.

All cattle and calves in the United States as of July 1, 2002, totaled 105.2 million head, 1 percent below the 105.8 million on July 1, 2001 and 1 percent below the 106.3 million two years ago. All cows and heifers that have calved, at 42.9 million were slightly below the 43.0 million on July 1, 2001 and 1 percent below 43.2 million two years ago.

All cattle and calves in Canada as of July 1, 2002, totaled 15.3 million head, down 1 percent from the 15.4 million on July 1, 2001, but 2 percent above the 15.0 million two years ago. All cows and heifers that have calved, at 5.8 million, was down 1 percent from the 5.9 million on July 1, 2001, but relatively unchanged from two years ago.

U.S. July Egg Production Up 2 Percent

U.S. egg production totaled 7.34 billion during July 2002, up 2 percent from last year. Production included 6.24 billion table eggs and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 62.0 million were egg-type. The total number of layers during July 2002 averaged 335 million, up 1 percent from the total average number of layers during July 2001. July egg production per 100 layers was 2,190 eggs, up 1 percent from the 2,166 eggs in July 2001.

All layers in the U.S. on August 1, 2002, totaled 336 million, up 1 percent from a year ago. The 336 million layers consisted of 276 million layers producing table or commercial type eggs, 56.5 million layers producing broiler-type hatching eggs, and 2.67 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 2002, averaged 70.3 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.88 billion eggs during July 2002, up 2 percent from a year ago. The average number of layers during July, at 314 million, was up 1 percent from a year ago.

survey results summary issued twice monthly by the
Montana Agricultural Statistics Service

USDA-NASS

Issue: 02-15 (0279-0394) Released: August 13, 2002

HIGHLIGHTS:

- August 1 Crop Production
- Sheep & Hog Inventory by County Now Available
- Farm Real Estate Values
- Ag Prices Received
- Farm Production Expenditures

Montana's All Wheat Production Down 19 Percent from Last Month

Montana's **all wheat production** is expected to be 19 percent lower than last month's forecast, but still 18 percent higher than last year's drought-reduced crop. Based on August 1 conditions, producers expect to harvest 113.76 million bushels of all wheat, up from the 96.57 million bushels harvested last year. The area for harvest is expected to be 4.88 million acres, unchanged from last month, but up 16 percent from last year. This is the last forecast until the final small grains summary is published on September 30, 2002.

The forecasted **winter wheat** yield, at 30.0 bushels per acre, is down 3 bushels per acre from July, but 8 bushels per acre higher than last year. Production is forecast to be 24.0 million bushels, up 25 percent from last year. While the rainfall earlier in the growing season helped plant counts for fields that survived, the extreme heat, winds, and lack of rainfall during July caused poor pollination and fertilization, resulting in plants with lighter head weights or no heads at all. Winter wheat harvest is still behind at 30 percent complete compared with 60 percent last year and 56 percent for the 5-year average.

Spring wheat production forecast is 78.1 million bushels, up 19 percent from last year's drought-reduced production. The expected yield of 22.0 bushels per acre is down 6 bushels from last month and down 1 bushel from last year. The yield potential and condition of the spring wheat crop deteriorated during the month due to the heat and lack of rainfall. Harvest is just underway with 7 percent complete compared with 8 percent last year and 7 percent for the 5-year average. **Durum wheat** production is forecast to be 11.66 million bushels, down 2 percent from last year and down 19 percent from last month. The expected yield of 22.0 bushels per acre is down 5 bushels from last month and down 2 bushels from last year.

Barley yields are expected to average 45.0 bushels per acre in 2002, 4 bushels better than last year. Barley production is forecast to be 42.75 million bushels compared with 29.52 million produced last year. Harvest was reported to be 9 percent complete.

Oat producers expect to harvest 4.08 million bushels of grain, 70 percent more than was produced last year. The expected yield of 48.0 bushels is 8 bushels better than last year's yield. Harvest was reported to be 7 percent complete for the week ending August 4.

Sugar beet production is forecasted to be 1.197 million tons, up 4 percent from last year. The expected yield, at 21.0 tons per acre is down slightly from the 21.5 tons per acre last year. **Dry edible bean** growers expect to harvest 21,000 of the 24,000 planted acres this year. Harvested acreage is estimated to be down 3,000 acres from 2001. Yield is estimated at 1,700 cwt., 320 cwt. per acre better than the previous year. All dry bean production is expected to be 357,000 cwt., up 8 percent from last year's figure. By class, 14,500 acres of **pintos**, 8,000 acres of **garbanzos,** and 500 acres of **other** beans were planted in 2002. A decrease in planting of large seed type garbanzo beans is leading the overall reduction in bean acreage this year. Subsequently, all bean yield is up based on the larger percentage of irrigated pintos to all beans.

Alfalfa hay is expected to yield 2.00 tons per acre in 2002, down 0.10 tons per acre from the previous year. Growers plan to harvest 1.7 million acres, up significantly from last year's 1.45 million acres. Production is expected at 3.40 million tons, a 12 percent increase over the 2001 figure. As of August 4 , 98 percent of first cutting and 32 percent of second cutting had been completed on alfalfa hay. The average yield for **other hay** is forecast to be 1.50 tons per acre, up 0.10 tons per acre from last year. Production on the 1.150 million acres of other hay expected to be harvested is forecast at 1.73 million tons, an increase of 23 percent from 2001. As of August 4, 90 percent of first cutting and 16 percent of second cutting of other hay had been completed.

Nationally, the final **Winter wheat** production forecast is 1.16 billion bushels, the lowest level since 1971. This is down 2 percent from last month, and 15 percent below 2001. The U.S. yield is forecast at 38.9 bushels per acre, down 0.7 bushels from last month. Other **Spring wheat** production is forecast at 448 million bushels, down 8 percent from last month and 13 percent below 2001. The U.S. yield is forecast at 29.5 bushels per acre, 2.5 bushels less than July 1. **Durum wheat** production is forecast at 79.5 million bushels, down 5 percent from last month and 2001. The U.S. yield is forecast at 29.5 bushels per acre, 1.8 bushels less than last month.

Barley production in United States for 2002 is forecast at 252 million bushels, down 5 percent from the July forecast, but 1 percent above 2001. Based on August 1 conditions, producers expect to harvest an average of 55.9 bushels per acre, down 3.1 bushels from July and down 2.3 bushels from last year. U.S. **oat** production for 2002 is forecast at 143 million bushels, 3 percent less than the July 1 forecast, but 22 percent above last year's 117 million bushels. The forecasted yield is 54.2 bushels per acre, 1.9 bushels below the July 1 forecast and down 7.1 bushels from 2001. If realized, this would be the lowest yield since 1991.

U.S. **sugar beet** production for 2002 is forecast at 27.6 million tons. If realized, this would be 7 percent above last year's production. Growers in the 12 sugar beet-producing States expect to harvest 1.35 million acres, 1 percent less than the June estimate, but 9 percent more than last year. The yield is forecast at 20.4 tons per acre, 0.3 ton below 2001. (Continued on next page.)

(Continued from first page.)

Dry edible bean production in the United States is forecast at 27.2 million cwt in 2002, up 39 percent from last year and 3 percent above two years ago. This is the largest dry bean crop since 1999 when production was 33.1 million cwt. This increase is a rebound from last year's drought reduced production in eastern and central States.

Alfalfa production is forecast at 74.6 million tons in the United States, down 7 percent from last year. Yields are expected to average 3.09 tons, down 0.28 ton from last year. **Other Hay** production forecast for 2002 is 78.0 million tons, up 2 percent from 2001. Based on August 1 conditions, yields are expected to average 1.92 tons per acre, down slightly from last year.

4/ Acreage forecast available November 12, 2002.

Farm Real Estate Values Up

The average value of farm real estate in Montana on January 1, 2002 was $384 per acre, up $9.00 from 2001. The average value of cropland rose $8.00 to $510 per acre, compared with a year ago. The average value of irrigated cropland was $1,530, $30 more than a year ago, while non-irrigated cropland gained $5.00 per acre to $365 per acre on January 1, 2002. Pasture values increased $5 to $260 per acre. Montana farm real estate values have been steadily increasing over the past five years.

The U.S. farm real estate value, including all land and buildings, averaged $1,210 per acre as of January 1, 2002, up 5.2 percent from the previous year. All states except Delaware, Nevada, New Mexico, and Washington showed gains from last year. The $60 per acre increase in farm real estate values continued a climb that began in 1987. The overall increase followed cropland and pasture values, which rose by 4.4 and 5.0 percent, respectively, during 2002. Cropland values had been increasing by more than 5 percent a year, so this represents a slower rate of increase than previous years, likely due to low commodity prices and drought in western States.

The average value of cropland in the U.S. rose 4.4 percent to $1,650 per acre. The largest percent increases, at 8.6 and 5.3 percent, were in the Lake States and Northeast regions, respectively. Cropland values were highest in the Pacific region, at $3,710 per acre, and lowest in the Northern Plains, at $719 per acre.

The average value per acre for pasture in the U.S. increased 5.0 percent, with the great majority of States going up. The Mountain and Southern Plains regions, accounting for half of the pastureland in the U.S., both showed increases from 2001. Pasture values were highest in the Northeast, at $2,330 per acre, and lowest in the Northern Plains, at $251 per acre.

Agricultural Prices Received for June

June full month crop prices were mixed compared with May 2002. Montana's winter wheat average price was $3.08 per bushel, up $0.09 from the previous month; spring wheat jumped $0.14 to $3.08 per bushel; and durum wheat prices fell $0.18 to $3.53 per bushel. The average price received for oats increased $0.02 to $2.24 per bushel. Feed barley prices fell $0.27 from the previous month to $1.92, but malt barley prices rose $0.08 to $3.01 per bushel.

The mid-July price for alfalfa hay was down $3.00 to $85.00 per ton and all other hay dropped $6.00 to $76.00 per ton. The mid-July grain prices were mostly all higher with winter wheat price averaging $3.24 per bushel; spring wheat was $3.41; durum wheat was $3.68; feed barley was $1.95; and malt barley averaged $3.10.

Livestock prices for the full month of June were mixed compared with the previous month. Steer and heifer prices dropped $0.30 to $76.50 per cwt, while cows fell $0.60 to $40.20. The average price for calves fell $1.60 to $91.30 per cwt. Sheep prices increased $2.20 to $24.10 per cwt and lamb prices jumped $10.10 to $76.60 per cwt. Milk prices dropped $1.30 per cwt from last month to $11.30 per cwt. Steer and heifer prices for mid-July averaged $73.10 per cwt.; cows averaged $36.80 per cwt.; calves averaged $90.00 per cwt.; and milk prices averaged $12.20 per cwt.

Nationally, prices for June and changes from May were as follows: winter wheat was $2.91, up $0.18, spring wheat was $2.98, up $0.08; durum wheat was $3.40, up $0.03; the all barley price was $2.08, down $0.16, and steer and heifer prices were $67.00, down $1.40 per cwt.

The U.S. mid-July winter wheat price was $3.18 per bushel, spring wheat was $3.29 per bushel, durum wheat was $3.71 per bushel, all wheat was $3.22 per bushel, malt barley was $2.39 per bushel, feed barley was $1.89 per bushel, and all barley was $2.07. Steer and heifer prices were $ 66.10 per cwt, cow prices were $37.70, calves were $93.20 per cwt., all hog prices were $38.20 per cwt, and all egg prices were $0.576 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in July was 100, based on 1990-92=100, up 2 points (2.0 percent) from the June index. Higher prices for wheat, soybeans, hogs, and corn more than offset decreased prices for broilers, milk, eggs, and cattle. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for grapes, wheat, tobacco, and tomatoes more than offset decreased marketings of milk, cantaloupe, potatoes, and asparagus.

United States Index Summary

INDEX (1990-92=100)	June 2001	July 2001	June 2002	July 2002
Prices Received	107	108	98	100
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	124	124	123	123

Sheep & Hog County Estimates Now Available

Livestock county estimates for January 1, 2002 sheep and lamb inventory and December 1, 2001, hog and pig inventory are now available in printed form from the Montana Agricultural Statistics Service or you may find them under county data on our website at www.nass.usda.gov/mt/.

The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. The county and district estimates are based on livestock surveys conducted at the end of 2001 and beginning of 2002. Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on their livestock inventories. Thanks to all the farmers and ranchers who participated in the survey!

Farm Production Expenditures

U.S. farm production expenditures totaled $197.0 billion in 2001, up 3.9% from the revised 2000 total of $189.6 billion. The largest contributors to the increase were tractors and self-propelled machinery up 13.0%; seeds and plants up 10.7%; labor up 6.3% and farm services up 5.1 percent. These increases more than offset a 7.1% decrease in farm improvements and construction. The largest two expenditure categories were farm services, which accounted for 13.6% of the U.S. total production expenses, and feed, which accounted for 12.8% of the U.S. total. The farm services category includes expense items such as custom work, utilities, marketing charges, veterinary services, transportation costs, and miscellaneous business expenses.

The average expenditures per U.S. farm in 2001 were $91,547, compared to $87,543 as revised for 2000. On the average, U.S. farm operations in 2001 spent $12,408 on farm services; $11,711 on feed; $10,224 on labor; $8,783 on livestock and poultry purchases; and $7,807 on rent. Revised estimates for 2000 indicated that U.S. farms spent an average of $11,728 on farm services; $11,312 on feed; $9,558 on labor; $8,311 on livestock and poultry purchases; and $7,434 on rent.

Montana's July Cattle Inventory Down 4 Percent

The all cattle and calf inventory in Montana was 3.35 million head on July 1, 2002, down 4 percent from a year ago and down 11 percent from July 2002. More than 3 years of drought have caused continued reduction of cattle and calf inventories. Rainfall during May, June and early July helped pasture and hay growth in many areas of the state and temporarily relieved drought concerns. However, the lack of moisture and high temperatures since then is causing pasture conditions to deteriorate. Pasture and range conditions have dropped since the end of June and are now rated 26% very poor, 25% poor, 34% fair, 13% good, and 2% excellent for the week ending July 14th. Pasture conditions are rated worse than a year ago at this time.

The beef cow inventory in the state dropped 6 percent from a year ago to 1.462 million head. Milk cow inventory dropped 1,000 head from last year to 18,000 head. The 2002 calf crop is expected to be 1,490,000 million head, down 4 percent from last year.

All cattle and calves in the United States as of July 1, 2002, totaled 105.2 million head, 1 percent below the 105.8 million on July 1, 2001 and 1 percent below the 106.3 million two years ago. All cows and heifers that have calved, at 42.9 million, were slightly below the 43.0 million on July 1, 2001 and 1 percent below the 43.2 million two years ago. Beef cows, at 33.8 million, were down slightly from July 1, 2001 and 1 percent below two years ago. Milk cows, at 9.15 million, were up 1 percent from July 1, 2001 but were down 1 percent from two years ago.

Other class estimates on July 1, 2002 and the changes from July 1, 2001, are as follows:

- All heifers 500 pounds and over, 16.2 million, down 1 percent.
- Beef replacement heifers, 4.6 million, unchanged.
- Milk replacement heifers, 3.7 million, up 3 percent.
- Other heifers, 7.9 million, down 4 percent.
- Steers weighing 500 pounds and over, 14.5 million, down 1 percent.
- Bulls weighing 500 pounds and over, 2.1 million, unchanged.
- Calves under 500 pounds, 29.5 million, down 1 percent.
- All cattle and calves on feed for slaughter, 12.4 million, down 5 percent.

The United States 2002 calf crop is expected to be 38.4 million, up slightly from 2001 but down 1 percent from 2000. Calves born during the first half of the year are estimated at 28.0 million, down slightly from 2001 and down 1 percent from 2000.

U.S. All Sheep & Lamb Inventory Totals 8.10 Million Head

All sheep and lamb inventory in the United States on July 1, 2002, totaled 8.10 million head, 2 percent below July 1, 2001. Breeding sheep inventory declined to 4.78 million head on July 1, 2002, 2 percent below July 1, 2001. Market sheep and lambs (including newborn lambs), at 3.32 million head, were 2 percent below last July.

Of the July 1, 2002 breeding herd, 3.98 million head were ewes one year old and older, 185,000 head were rams one year old and older, and 615,000 head were replacement lambs (including newborn lambs).

Region 3 (CO, MT, SD, UT, & WY) accounted for 34.5 percent of the total sheep and lambs. Region 2 (NM & TX) accounted for 21.5 percent, Region 1 (AZ, CA, ID, NV, OR, & WA) for 17.7 percent, Region 4 (IA, KS, MN, MO, NE, ND, & OK) for 15.1 percent, and Region 5 (all other states) accounted for 11.2 percent.

The 2002 lamb crop in the United States is expected to total 4.31 million head, down 4 percent from the 2001 lamb crop of 4.50 million head. Lambs born during January through June 2002 totaled 3.84 million head or 89 percent of the yearly total. An additional 470,000 head are expected to be born during the period July through December 2002.

U.S. Cattle on Feed Down 5 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.49 million head on July 1, 2002. The inventory was 5 percent below July 1, 2001 but 1 percent above July 1, 2000. The inventory included 6.46 million steers and steer calves, down 1 percent from the previous year. This group accounted for 62 percent of the total inventory. Heifers and heifer calves accounted for 3.97 million head, down 11 percent from 2001.

Placements in feedlots during June totaled 1.64 million, 16 percent below 2001 and 1 percent below 2000. Net placements were 1.59 million. During June, placements of cattle and calves weighing less than 600 pounds were 341,000, 600-699 pounds were 356,000, 700-799 pounds were 513,000, and 800 pounds and greater were 434,000. Marketings of fed cattle during June totaled 2.08 million, 2 percent below 2001 and 5 percent below 2000. Other disappearance totaled 51,000 during June, 34 percent below 2001 and 11 percent below 2000.

U.S. June Pig Crop Up 2 Percent

The June 2002 U.S. pig crop at 8.66 million head, was 2 percent more than the previous year. Sows farrowing during this period totaled 976 thousand head, 1 percent above last year. The average pigs per litter for June increased to 8.87, compared to 8.85 last year. The U.S. inventory of sows and gilts on July 1, 2002, was 5.98 million head, slightly above July 1, 2001. U.S. sows and gilts bred during June totaled 1.19 million head, down slightly from the previous year.

June Red Meat Production

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during June 2002, up 28 percent from June 2001 and 5 percent from the previous month. Cattle slaughter totaled 2,000 head, compared with 1,600 head one year ago. The average live weight, at 1,152 pounds, decreased 12 pounds from last year.

During June there were 1,600 hogs slaughtered, 700 more than a year ago. The average live weight, at 248 pounds, was down 17 pounds from June 2001. The number of sheep slaughtered, at 200 head, was 100 more than a year ago. Average live weight, at 123 pounds, was 8 pounds heavier than last year.

Commercial red meat production for the United States totaled 3.81 billion pounds in June, up 1 percent from the 3.76 billion pounds produced in June 2001. Beef production, at 2.30 billion pounds, was 1 percent above the previous year. Cattle slaughter totaled 3.06 million head, down 2 percent from June 2001. The average live weight was 1,236 pounds, up 38 pounds from June a year ago.

Veal production totaled 14.6 million pounds, 6 percent below June a year ago and a new record low for June. Calf slaughter totaled 75,900 head, down 2 percent from June 2001. The average live weight was 319 pounds, down 14 pounds from June a year ago.

Pork production totaled 1.48 billion pounds, up 2 percent from the previous year. Hog kill totaled 7.54 million head, 1 percent above June 2001. The average live weight was 265 pounds, up 2 pounds from June a year ago.

Lamb and mutton production, at 15.1 million pounds, was down 8 percent from June 2001 and a new record low for June. Sheep slaughter totaled 229,700 head, 1 percent below last year. The average live weight was 131 pounds, down 10 pounds from June a year ago.

January - June red meat production was 23.0 billion pounds, 3 percent above the previous year. Accumulated beef production was up 4 percent from last year, veal was down 4 percent, pork was up 2 percent, and lamb and mutton production was down 2 percent.

U.S. Mink Pelt Production

Mink pelt production in the United States in 2001 totaled 2.57 million pelts, down 4 percent from 2000. Wisconsin, the largest mink producing State, produced 672,000 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard -36.9 percent; Mahogany - 22.6 percent; Gunmetal - 18.4 percent; Demi-buff - 5.0 percent; Sapphire - 4.2 percent. The remaining color classes accounted for 12.9 percent.

Mink pelts produced during the 2001 crop year were valued at $85.9 million dollars, down 5 percent from $90.6 million a year ago. The average price per pelt for the 2001 crop year was $33.50, down from $34.00 in 2000.

Female mink bred to produce kits in 2002 totaled 620,500, down 1 percent from the previous year. Percent of total females bred to produce kits in 2002 by color class are: Standard - 38.2 percent; Mahogany - 20.2 percent; Gunmetal - 19.2 percent; Sapphire - 6.2 percent. The remaining color classes accounted for 16.2 percent.

There were 324 mink farms producing pelts in 2001, down 7 percent from a year ago. Leading States were Utah with 80 farms, Wisconsin with 65 farms and Minnesota with 36. There were 21 mink farms which also raised fox in 2001, down from 24 the previous year.

Montana Wheat & Barley Varieties Seeded in 2002

Neeley remained the leading variety of **winter wheat** seeded in Montana for the fifteenth consecutive year, with 263,800 acres planted. Total acres planted decreased 10 percent from last year's 293,200 acres. **Rampart** remained a close second in 2002, with 263,200 thousand acres seeded this crop season. **Tiber** remained in third place with 163,200 acres seeded. **Rocky** replaces Morgan this year as the number four variety in Montana, with 149,400 acres planted in 2002. Rocky accounted for over 10 percent of the state's seeded acreage. These top four varieties accounted for 60.0 percent of the winter wheat acreage seeded in 2002. The top four varieties for 2001 accounted for 59.4 percent of the total acreage for the state.

McNeal was the leading **spring wheat** variety planted for the fifth consecutive year, accounting for over 39 percent of the seeded acreage, with almost 1.48 million acres planted. **Reeder** moved into second place with 396,800 acres planted this year. Last year Reeder was the fifth most popular variety with nearly 119,500 acres. **Ernest** fell to third place in ranking this year with 389,900 thousand acres planted, compared to 277,200 acres last year. **Fortuna** took fourth place for the second year in a row with over 262,600 acres planted statewide. These top four varieties accounted for 67.4 percent of the spring wheat acreage seeded in 2002. The top four varieties for 2001 accounted for 72.2 percent of the seeded acreage.

Kyle continued to be the leading **durum** variety for the sixth consecutive year. There were 216,900 acres planted in the state, accounting for 40.2 percent of the total seeded acres. **Mountrail** remained the second most popular variety of durum wheat in the state for the second year in a row. There were 144,000 acres planted or 26.7 percent of the state's durum wheat. **Ben** took third place ranking again this year with 29,900 acres planted or 5.5 percent of the state total for durum wheat. **Utopia** became the fourth most popular variety this year with 26,800 acres planted or 5.0 percent of the state's durum wheat. These top four varieties account for 77.4 percent of total acres seeded to durum wheat. This compares with the 69.7 percent reported in 2001 for the top four varieties

Harrington remained the top **barley** variety planted in the state for the ninth year in a row. It was seeded on 572.5 thousand acres or 47.7 percent of Montana's barley acreage. **B 1202** maintained the second place malting variety position for the seventh consecutive year with 67.9 thousand acres or 5.7 percent of the barley planted. **Moravian 37** is ranked third among malting barley varieties for the second year in a row with a significant increase in seeded acreage to 54.1 thousand, or 4.5 percent of the state's acreage. **B Merit** rounds out the top four malting varieties again in 2002, with 31.6 thousand acres, or 2.6 percent of seeded acreage.

Haybet remained in the lead position for **feed barley** for the third year in a row, with almost 129 thousand acres planted this year, which accounted for 10.7 percent of the total barley acres seeded in Montana for 2002. This is 16.2 thousand more acres than the 112.6 thousand acres planted in 2001. **Baronesse** was the second most popular feed barley again in 2002. It represents 3.6 percent of the total acreage or 42.9 thousand acres for feed barley seeded in Montana for 2002. This is down from the 55 thousand acres planted last year. **Hector** became the third place choice for feed barley this year with 37.9 thousand acres seeded or 3.2 percent of the barley acreage state-wide. This is compared to the 30.2 thousand acres planted in 2001. **Bowman** is the fourth leading feed-type variety this year with 37.7 thousand acres or 3.1 percent of the state-wide barley acres seeded in 2002. This is compared to the 23.6 thousand acres planted in 2001.

* American Malting Barley Association, Inc. recommended for malting and brewing for Montana.

This report was made possible by funds provided by the Montana Wheat and Barley Committee.

Montana Quarterly Milk Production Down, U.S. Milk Up

During the April-June 2002 quarter, Montana milk cows produced 85 million pounds of milk, down 2 million pounds from the same quarter a year ago. Montana milk cows numbered 18,000 head, down 1,000 from last year.

The quarterly production of milk for the U.S. was 44.0 billion pounds, 3.0 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.15 million head, 33,000 head more than the same period last year.

Milk production in the 20 major States during June totaled 12.3 billion pounds, up 2.0 percent from June 2001. May revised production, at 13.0 billion pounds, was up 3.0 percent from May 2001. The May revision represented a decrease of 0.2 percent or 25 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,579 pounds for June, 24 pounds above June 2001. The number of cows on farms in the 20 major States was 7.78 million head, 29,000 head more than June 2001, and 16,000 head more than May 2002.

U.S. Egg Production Up 2 Percent

U.S. egg production totaled 7.12 billion during June 2002, up 2 percent from last year. Production included 6.03 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 60.0 million were egg-type. The total number of layers during June 2002 averaged 335 million, up 1 percent from the total average number of layers during June 2001. June egg production per 100 layers was 2,124 eggs, up 1 percent from the 2,100 eggs in June 2001.

All layers in the U.S. on July 1, 2002 totaled 335 million, up 1 percent from a year ago. The 335 million layers consisted of 275 million layers producing table or commercial type eggs, 57.3 million layers producing broiler-type hatching eggs, and 2.51 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 2002, averaged 70.9 eggs per 100 layers, up 1 percent from a year ago.

Laying flocks in the 30 major egg producing States produced 6.66 billion eggs during June 2002, up 2 percent from a year ago. The average number of layers during June, at 314 million, was up slightly from a year earlier.

Wheat Supply & Demand - ERS

Montana's All Wheat Production up 44 percent from 2001

Montana's **all wheat production** is expected to be 45% higher than last year's drought-reduced crop. Based on July 1 conditions, producers expect to harvest 140.11 million bushels of all wheat, up from the 96.57 million bushels harvested last year. The area for harvest is expected to be 4.88 million acres, up 16% from last year.

The forecasted **winter wheat** yield, at 33.0 bushels per acre, is up 3 bushels per acre from June and 11 bushels per acre higher than last year as rainfall during June increased yield potential. Production is forecast to be 26.40 million bushels, up 38% from last year due to the higher expected yield. Acres expected to be harvested is unchanged from the June forecast, but acreage is down 8% from last year to 800,000 acres. Winter wheat conditions aroung the state have seen significant improvement when compared to earlier this spring. Prior to receiving rainfall, conditions were rated for the week ending May 5 at 40% very poor, 22% poor, 29% fair, 8% good and 1% excellent. This compares with conditions for the week ending July 7 at 8% very poor, 20% poor, 43% fair, 24% good, and 5% excellent. Crop development continues to be behind normal as 17% of the crop was rated as turning color for the week ending July 7, compared with 57% last year and 45% for the 5-year average. While favorable weather conditions have led to improved yields, hot, dry weather since July 1 could reduce yield potential if those conditions continue.

The first **spring wheat** production forecast is 99.4 million bushels, up 52% from last year's drought-reduced production. The increased production is due to higher expected yields than last year and more harvested acres. The harvested acres are expected to be 3.55 million, up 25% due to more acres planted this year. The expected yield of 28.0 bushels per acre is up 5 bushels per acre from last year. Spring wheat conditions are much improved over a year ago as conditions for the week ending July 7 were rated 3% very poor, 5% poor, 31% fair, 50% good, and 11% excellent compared with 16% very poor, 25% poor, 36% fair, 20% good, and 3% excellent last year. While the timing of the rainfall was very beneficial, yields could drop if the recent hot, dry weather continues through the rest of the growing season. **Durum wheat** production is forecast to be 14.31 million bushels, up 20% from last year due to a 7% increase in harvested acres to 530,000 acres and higher expected yield. The expected yield of 27.0 bushels per acre is up 3 bushels from last year.

Barley yields are expected to average 50.0 bushels per acre in 2002, 9 bushels better than last year. Barley production is forecast to be 47.50 million bushels compared with 29.52 million produced last year. Growers expect to harvest 950,000 acres, 230,000 more than harvested in 2001. **Oats** producers expect to harvest 4.59 million bushels of grain, 91% more than was produced last year. The 2002 area for harvest is expected to be 85,000 acres compared with 60,000 harvested for grain in 2001. The expected yield of 54.0 bushels is 14 bushels better than last year's yield.

Montana **potato** producers planted 9,000 acres during 2002, down 600 acres from last year. This is the smallest planted acreage since 1990, when growers also planted 9,000 acres. The first forecast of potato production will be on November 12, 2002. Pulse crop growers reduced their acreage this year. **Dry edible pea** farmers planted an estimated 27,000 acres during 2002, and expect to harvest 25,000 acres. Last year, growers planted 31,000 acres of edible peas and harvested just 21,000 acres. **Lentil** growers planted 15,000 acres this year, down 32% from last year. Producers are expecting to harvest 14,000 of those acres for grain. Last year 22,000 acres of lentils were put in the ground, with 20,000 acres harvested. **Austrian winter pea** acreage is down this year. Seven thousand acres were planted during 2002, while 9,900 were planted last year. Just 2,000 acres of this year's crop is expected to be harvested as peas, with the remaining acreage being hayed or grazed.

Nationally, **winter wheat** production is forecast at 1.18 billion bushels, the lowest level since 1971. The production forecast is down 5% from last month and down 13% from 2001. The decline in production from the June forecast is due to a reduction in harvested acreage and a lower forecasted yield. Acres for harvest as grain are forecast at 29.8 million, 1% below the June forecast and down 5% from 2001. This is the smallest harvested acreage since 1917. The U.S. yield is forecast at 39.6 bushels per acre, down 1.4 bushels from last month. Hard red winter, at 634 million bushels, is down 6% from a month ago. White winter is down 1% this month and now totals 203 million bushels. Soft red winter, at 341 million bushels, is down 5% from the last forecast. **Durum wheat** production is forecast at 84.1 million bushels, up 1% from 2001. The U.S. yield is forecast at 31.3 bushels per acre, 1.3 bushels more than last year. **Other spring wheat** production is forecast at 486 million bushels, down 5% from 2001. The U.S. yield is forecast at 32.0 bushels per acre, 3.2 bushels lower than last year. Of this total, 443 million is hard red spring wheat, down 7% from last season.

Oat production in the U.S. is forecast at 148 million bushels, 26% above last year's 117 million bushels. The forecasted yield is 56.1 bushels per acre, down 5.2 bushels from 2001. Area for harvest is estimated at 2.63 million acres, up 38% from last year. U.S. **barley** production for 2002 is forecast at 265 million bushels, 6% above 2001. Based on July 1 conditions, producers expect to harvest an average of 59.0 bushels per acre, up 0.8 bushel from last year. Area harvested, at 4.50 million acres, is up 210,000 acres from 2001.

Planted acreage of **lentils** in Idaho, Montana, North Dakota, and Washington is estimated at 190,000 acres, down 5% from last year and 12% less than 2000. Harvested acreage is estimated at 187,000, down 5% from last year.

(Continued on next page)

July 1 Crop Production Forecast

(Continued from front page)

Planted acreage of **dry edible peas** for 2002 is estimated at 271,500 acres, up 28% from last year and 44% above 2000. Planted acreage of **Austrian winter peas** in Idaho, Montana, and Oregon is estimated at 15,000 acres and harvested acreage is estimated at 9,000 acres.

Montana and U.S. Sweet Cherry Production Forecast Down

Montana's **sweet cherry** growers expect to produce 1,500 tons this year, a decrease of 26 percent from last year's 2,020 tons, according to the Montana Agricultural Statistics Service. Growers indicate the late spring, snow during bloom set, and poor pollination as limiting factors to crop production. Bearing acres are also down this season as well.

U.S. **sweet cherry** production is forecast 203,985 tons, down 11 percent from 2001 and 1 percent below 2000. This is the lowest sweet cherry production since 1998 when 196,900 tons were produced.

The Washington crop, at 90,000 tons, is down 5 percent from the previous forecast and 15 percent below last year. Poor pollination and frost combined to reduce the Washington sweet cherry crop. Production in California is forecast at 65,000 tons, 18 percent more than last year. California's production was boosted by an increase in bearing acreage and good weather during bloom. The California forecast was carried forward from the June Crop Production report. The sweet cherry crop in Oregon is forecast at 39,000 tons, unchanged from the previous forecast but down 2 percent from 2001. Oregon's production was decreased by poor weather during bloom, which more than offset an increase in bearing acres.

The Michigan sweet cherry crop is forecast at 5,500 tons, down 76 percent from last year and 72 percent below 2000. Most sweet cherry producing areas in Michigan received below freezing temperatures in April and May that killed buds or blossoms. Cold, wet, and windy conditions also limited pollination.

Idaho is expecting a sweet cherry crop of 1,700 tons, up 21 percent from last year but 43 percent below 2000. The Idaho crop suffered some freeze damage but not quite as severely as the frost that hit the 2001 crop. Utah is forecasting sweet cherry production to be 400 tons, a decline of 43 percent from last year's crop. A hard frost in Utah has severely reduced fruit set.

New York and Pennsylvania are expecting smaller crops than last season, down 55 and 34 percent, respectively. Frost conditions severely limited crop potential in both States.

Agricultural Prices Received for May 2002

May full month crop prices were mostly down compared with April 2002. Montana's winter wheat average price was $2.99 per bushel, down $0.05 from the previous month; spring wheat dropped $0.11 to $2.94 per bushel; and durum wheat prices fell $0.04 to $3.71 per bushel. The average price received for oats was down $0.12 to $2.22 per bushel. On the contrary, barley prices rose last month. Feed barley prices increased $0.15 from the previous month to $2.19, while malt barley prices were up a penny to $2.93 per bushel.

The mid-June price for alfalfa hay was down $2.00 to $88.00 per ton, while all other hay remained unchanged at $82.00 per ton. The mid-June winter wheat price averaged $3.06 per bushel; spring wheat was $3.05; durum wheat was $3.60; feed barley was $2.05; and malt barley averaged $2.90.

Livestock prices for the full month of May were mostly down compared with the previous month. Steer and heifer prices fell $0.60 to $76.80 per cwt, while cows were up $0.20 to $40.80. The average price for calves dropped $1.40 to $92.90 per cwt. Sheep prices decreased $4.10 to $21.90 per cwt, but lamb prices were up $3.70 to $66.50 per cwt. Milk prices were down $0.30 per cwt from last month to $12.60 per cwt. Steer and heifer prices for mid-June averaged $76.20 per cwt.; cows averaged $39.50 per cwt.; calves averaged $92.50 per cwt.; and milk prices averaged $12.50 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was $2.73, down $0.02, spring wheat was $2.90, down $0.02; durum wheat was $3.37, down $0.02; the all barley price was $2.24, up $0.14, and steer and heifer prices were $68.20, down $2.40 per cwt.

The U.S. mid-June winter wheat price was $2.86 per bushel, spring wheat was $2.84 per bushel, durum wheat was $3.16 per bushel, all wheat was $2.86 per bushel, malt barley was $2.34 per bushel, feed barley was $1.86 per bushel, and all barley was $2.05. Steer and heifer prices were $ 65.80 per cwt, cow prices were $38.70, calves were $94.90 per cwt., all hog prices were $34.50 per cwt, and all egg prices were $0.633 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in May was 97, based on 1990-92=100, up 1 point (1.0 percent) from the revised May index. Higher prices for eggs, broilers, broccoli, and hogs offset decreased prices for cantaloupe, cattle, milk, and peaches. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for wheat, grapes, hay, and cantaloupe more than offset decreased marketings of oranges, tomatoes, strawberries, and sweet corn. Compared with June last year, the All Farm Products Index was down 9 points (8.4 percent). Lower prices for cattle, broilers, hogs, and celery more than offset higher prices for potatoes, corn, eggs, and wheat.

United States Index Summary

INDEX (1990-92=100)	May 2001	June 2001	May 2002	June 2002
Prices Received	108	107	97	98

June 1, 2002 Crop Acreage Small Grain Acreage:

All wheat planted acreage in Montana is estimated to be 5.69 million acres, up 6 percent from last year and is the highest acreage planted since 1997. **Spring wheat** producers planted an estimated 3.75 million acres, up 6 percent from last year and up 6 percent from what they intended to plant on March 1, 2002. Producers intend to harvest 3.55 million acres of spring wheat this year, up 25 percent from last year's drought reduced acreage. The large abandonment of winter wheat acreage this spring has partially contributed to more acres of spring wheat being planted this year. The condition of the spring wheat crop for the week ending June 23 is significantly better than last years crop at this time as conditions were rated 0% very poor, 3% poor, 32% fair, 53% good and 12% excellent. Moisture received since the beginning of May has significantly improved crop prospects. **Winter wheat** acreage planted remained unchanged from the March 1 estimate at 1.40 million acres, up 8 percent from last year. However, due to dry planting conditions, harsh winter, and poor spring growing conditions, winter wheat producers are expecting to harvest 800,000 acres, down 200,000 acres from the previous forecast and down 70,000 acres from last year's drought reduced acreage. This would be the smallest acreage of winter wheat harvested since 1937. The percentage of winter wheat for grain harvest this year, at 57.1%, ranks as the fourth lowest percentage on record. Rainfall came too late to avoid the high acreage abandonment, however, the condition of the remaining acreage has improved significantly since earlier this spring and is now rated better than last year's crop at this time. The condition of the winter wheat crop for the week ending June 23 was rated 15% very poor, 20% poor, 31% fair, 29% good, and 5% excellent compared with 41%, 31%, 19%, 8% and 1%, respectively, a year ago. **Durum wheat** acreage, at 540,000 acres, is up 6 percent from a year ago and is the largest durum wheat planted acreage since 1956. Acreage of durum wheat intended to be harvested is estimated at 530,00 acres, up 7 percent from last year.

Montana **barley** producers planted an estimated 1.2 million acres, up 9 percent from last year, but down 4 percent from what was intended to be planted on March 1, 2002. The state's barley growers intend to harvest 950,000 acres for grain this year, 32 percent more than the previous year's harvest. Planted acreage for **oats**, at 155,000 acres, is up 25,000 acres the previous year and is 15% percent greater than intended plantings on March 1, 2002. Growers intend to harvest 85,000 acres of the oat crop for grain, 25,000 acres more than a year ago.

In the United States, **all wheat** planted area is estimated at 60.1 million acres, up 1 percent from 2001. Harvested area is expected to total 47.6 million acres, down 2 percent from last year. The 2002 **winter wheat** planted area, at 41.4 million acres, is less than 1 percent above both last year and the previous estimate. Area harvested for grain is expected to total 29.8 million acres, down 1 percent from the June 1 forecast and 5 percent below the 2001 total. This is the smallest area for grain since 1917. Acreage planted to **other spring wheat** for 2002 is estimated at 16.0 million, up 2 percent from 2001. Grain area is expected to total 15.2 million acres, up 4 percent from last year. **Durum** wheat planted area for 2002 is estimated at 2.76 million acres, down 5 percent from last year. Area to be harvested for grain is expected to total 2.69 million acres, 4 percent below last year's level.

Nationally, **barley** growers seeded 5.05 million acres for 2002, up 2 percent from the 4.97 million acres seeded a year ago. This level is an increase from the record low planted acreage of 2001. Acres for harvest, at 4.50 million, rebounded 5 percent from the 2001 level. The area planted to **oats** last fall and this spring totaled 5.09 million acres, 1 percent below the March intentions, but 15 percent above last year's final seeded acres. Acreage to be harvested for grain, at 2.63 million acres, is 4 percent above the March intentions and 38 percent more than last year's record low. The increases for planted and harvested acres are the first since 1997.

Row Crops, Hay & Oilseeds Acreage:

Montana **corn** growers planted an estimated 55,000 acres, which is down 10,000 acres from a year ago and down 10,000 acres from the March 1 intentions. Acreage intended to be harvested for grain, at 14,000 acres, is up 1,000 acres from a year ago. **Sugar beet** producers planted an estimated 57,800 acres, up 1 percent from 2001. Many acres of sugarbeets had to be replanted due to freezing temperatures this spring. An estimated 2.85 million acres of **all hay** are expected to be harvested, which is 400,000 acres more than last year's drought affected harvest, and 650,000 acres more than was intended to be cut on March 1, 2002. The sharp increase in optimism for the 2002 hay crop is a reflection of high hay prices and increased precipitation throughout the state, following more than 3 years of drought. Of the total hay expected for harvest, 1.7 million acres are expected to be **alfalfa** hay, which is up 250,000 acres from last year's figure. Producers expect to harvest 1,150,000 acres of **other hay,** which is up 150,000 acres from a year ago. Farmers planted 23,000 acres of **dry beans** in 2002, down 40 percent from last year and 23 percent below their March 1, 2002 intentions. Producers are looking to harvest 21,000 acres of dry beans this season, 9 percent less than last year's number. The relatively small decrease in harvested acreage, when compared to the reduction in seedings, can be attributed mostly to a reduction in garbanzo bean acreage. Bean prices are down and the threat of Ascochyta blight is making production more difficult. **Flaxseed** growers in Montana planted an estimated 17,000 acres of the oilseed this season, up 21 percent from last year's acreage. Producers intend to harvest 15,000 acres of flaxseed this year, 25 percent more than the previous year.

(Continued on next page)

(Continued from 1st page)

In the U.S. **corn** planted area for all purposes is estimated at 78.9 million acres, up 4% from 2001 but down 1% from 2000. Growers expect to harvest 72.1 million acres for grain, up 5% from 2001. **Sugarbeet** area planted totaled 1.41 million acres in the 12 sugarbeet producing States, down 1% from the March intentions but up 3% from 2001. The area for harvest is estimated at 1.37 million, 10% above 2001, when harvested acreage was reduced by the payment-in-kind diversion program.

Producers expect to harvest 64.7 million acres of **all hay** in 2002, up less than 2% from 2001. This is the largest harvested acreage of all hay since 1988. **Alfalfa** and **alfalfa mixture** are estimated at 24.1 million acres, up 1% from last year. New seedings of alfalfa and alfalfa mixtures, published in the Crop Production 2001 Summary, were 6% higher in 2001 compared to 2000. All **other hay** is estimated at 40.6 million acres, up 2% from last year.

U.S. **dry bean** growers planted 1.86 million acres for 2002, up 30% from last year and 6% above two years ago. High prices for the 2001 crop have encouraged growers to plant more acres this year after last year's reduced crop. Estimated plantings are 6% above the March intentions. Eleven of the 18 producing States are increasing planted acreage this year. Six States are reducing their plantings and 1 State planted the same acreage. Acres to be harvested are forecast at 1.75 million, 40% above last year and 9% above 2000. North Dakota growers planted 750,000 acres, a gain of 70% from last year.

Acreage planted to **flaxseed** in 2002 is 844,000 acres, up 44% from last year's planted area, and the largest area planted since 1979 when 922,000 acres were planted. Area for harvest, estimated at 821,000, is 42% above the harvested acres in 2001. In North Dakota growers planted 800,000 acres of flaxseed, up 45% from 2001. This is the largest flaxseed planted acreage in North Dakota since 1975.

U.S. Potato Stocks

The 15 major potato States held 51.5 million cwt. of potatoes in storage June1, 2002, down 16% from last year but 9% above 2000. Storage accounts for 13% of the 2001 fall storage States' production, the same as last year. Disappearance of 343 million cwt, is down 14% from last year and the lowest in the last 4 years. Processors in the 9 major States used 166 million cwt of potatoes this season, down 13% from a year ago.

U.S. Egg Production Up Slightly

U.S. egg production totaled 7.26 billion during May 2002, up slightly from last year. Production included 6.13 billion table eggs and 1.14 billion hatching eggs, of which 1.07 billion were broiler-type and 65.0 million were egg-type. The total number of layers during May 2002 averaged 334 million, slightly lower than the average number of layers during May 2001. May egg production per 100 layers was 2,172 eggs, up 1% from the 2,160 eggs in May 2001.

U.S. May Milk Production

Milk production in the 20 major States during May totaled 13.0 billion pounds, up 3.2% from May 2001. April revised production, at 12.6 billion pounds, was up 3.3% from April 2001. The April revision represented an increase of 0.3% or 42 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,681 pounds for May, 49 pounds above May 2001.

The number of milk cows on farms in the 20 major States was 7.76 million head, 14,000 head more than May 2001, and 9,000 head more than April 2002.

June 1, 2002 Grain Stocks

Stocks of all wheat in Montana on June 1, 2002 were 52.3 million bushels, up 2 percent from a year ago. All wheat stocks stored on the farm amounted to 37.0 million bushels, up 9 percent from a year ago. All wheat stored off-farm amounted 15.3 million bushels, down 12 percent from a year ago. All wheat disappearance for the March - May 2002 quarter was down 36 percent from the same quarter last year to 30.6 million bushels. This compares with 41.6 million last year. Wheat stocks by class and by district are no longer available due to funding cuts by the Montana Wheat & Barley Committee.

Barley stocks in all positions on June 1, 2002 were 6.1 million bushels, down 41 percent from a year ago. Barley stored on-farm was 3.0 million bushels, down 50 percent from last year. Off-farm storage of barley was down 28 percent from a year ago to 3.1 million bushels. Oats stocks in all positions were 965,000 bushels, down 1 percent from last year. On-farm stocks of oats were 900,000 bushels unchanged from a year ago. Oats stored off-farm was down 7 percent from last year to 65,000 bushels.

United States, all wheat stored in all positions on June 1, 2002 totaled 772 million bushels, down 12 percent from a year ago. On-farm stocks are estimated at 212 million bushels, up 7 percent from last year. Off-farm stocks, at 560 million bushels, are down 18 percent from a year ago. The indicated March - May 2002 disappearance is 438 million bushels, down 5 percent from the same period a year earlier.

Durum wheat stocks in all positions on June 1, 2002 totaled 33.0 million bushels, down 27 percent from a year ago. On-farm stocks, at 20.6 million bushels, are down 29 percent from June 1, 2001. Off-farm stocks totaled 12.4 million bushels, down 23 percent from a year ago. The indicated March - May 2002 disappearance of 18.9 million bushels is down 32 percent from the same period a year earlier.

Barley stocks in all positions in the United States on June 1, 2002 totaled 92.8 million bushels, down 13 percent from June 1, 2001. On-farm stocks are estimated at 23.2 million bushels, 20 percent below a year ago. Off-farm stocks, at 69.6 million bushels, are 10 percent below June 2001. Indicated disappearance during the March - May 2002 quarter totaled 48.9 million bushels, down 12 percent from the same period a year earlier.

Oats stored in all positions on June 1, 2002 totaled 63.2 million bushels, 13 percent below the stocks stored in all positions on June 1, 2001. Of the total stocks on hand, 28.7 million bushels were stored in on-farm facilities, 11 percent less than a year ago. Off-farm stocks totaled 34.5 million bushels, 15 percent less than last year. Indicated disappearance during the March - May 2002 quarter totaled 30.2 million bushels, 19 percent less than the same period a year ago.

May Red Meat Production

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during May 2002, up 21% from May 2001 and 4% from the previous month. Cattle slaughter totaled 1,900 head, compared with 1,600 head one year ago. The average live weight, at 1,135 pounds, decreased 55 pounds from last year.

During May there were 1,500 hogs slaughtered, which is 600 more than a year ago. The average live weight, at 249 pounds, was 10 pounds greater than last year. The number of sheep slaughtered, at 200 head, was 100 more than a year ago.The average live weight was identical to the previous year at 126 pounds.

Commercial red meat production for the United States totaled 4.02 billion pounds in May, up 4% from the 3.88 billion pounds produced in May 2001 and a new record high for May. Beef production, at 2.34 billion pounds, was 2% above the previous year and a new record high for May. Cattle slaughter totaled 3.15 million head, down 2% from May 2001. The average live weight was 1,223 pounds, up 39 pounds from May a year ago.

Veal production totaled 15.4 million pounds, 3% below May a year ago and a new record low for May. Calf slaughter totaled 77,800 head, down 1% from May 2001. The average live weight was 330 pounds, down 5 pounds from May a year ago. Pork production totaled 1.65 billion pounds, up 6% from the previous year and a new record high for May. Hog kill totaled 8.33 million head, 5% above May 2001. The average live weight was 267 pounds, up 3 pounds from May 2001. Lamb and mutton production, at 19.5 million pounds, was up 16% from May 2001. Sheep and lamb slaughter totaled 284,100 head, 19% above last year. The average live weight was 138 pounds, down 3 pounds from May a year ago.

May red meat production was 19.2 billion pounds, 4% above the previous year. Accumulated beef production was up 5% from last year, veal was down 4%, pork was up 3%, and lamb and mutton production was down 1%.

U.S. Cattle on Feed Down

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.94 million head on June 1, 2002. The inventory was 3% below June 1, 2001 and slightly below June 1, 2000.

Placements in feedlots during May totaled 2.23 million, 6% below 2001 and 3% below 2000. Net placements were 2.16 million. During May, placements of cattle and calves weighing less than 600 pounds were 350,000, 600-699 pounds were 434,000, 700-799 pounds were 744,000, and 800 pounds and greater were 699,000. Marketings of fed cattle during May totaled 2.17 million, 1% below 2001 and slightly below 2000.

Other disappearance totaled 72,000 during May, 29% below 2001 and 37% below 2000.

U.S. Hog Inventory Up 2 Percent

U.S. inventory of all hogs and pigs on June 1, 2002, was 59.8 million head. This was 2% above both June 2001, and March 1, 2002. Breeding inventory, at 6.21 million head, was up slightly from June 1, 2001, but down slightly from last quarter. Market hog inventory, at 53.6 million head, was 2% above both last year and last quarter. The March-May 2002 U.S. pig crop, at 25.9 million head, was 1% more than both 2001 and 2000.

Sows farrowing during this period totaled 2.93 million head, 2% above last year. The sows farrowed during this quarter represented 47% of the breeding herd. The average pigs per litter was 8.81 pigs saved per litter for the March-May 2002 period, compared to 8.89 pigs last year. U.S. hog producers intend to have 2.93 million sows farrow during the June-August 2002 quarter, 2% above the actual farrowing during the same period in 2001.

SPECIAL THANKS to the approximately 2,500 Montana farmers and ranchers who were interviewed and responded to June Agricultural Surveys. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

June 1, 2002 Crop Production Forecast

Montana winter wheat producers were expecting a yield of 30 bushels per acre based on June 1 conditions, up 8 bushels from last year and 2 bushels above last month's forecast. Improved moisture conditions and the abandonment of many poorer fields contributed to the increase in yield prospects. Based on the previous month's forecasted harvested acres estimate of 1.0 million acres, total production would be 30.0 million bushels, up 57 percent from last year. Harvested acreage was not updated from the previous month because additional survey information was not available. The results of the June Acreage Surveys, which are currently underway, will be released on June 28, 2002 and will update harvested acreage and provide a better indication of winter wheat abandoned since planting last fall.

The winter wheat conditions in the state improved during the month as significant moisture was received in the major growing areas. While this rain came too late for fields already abandoned, yield potential improved on the remaining acreage. Continued favorable growing conditions will be necessary to maintain yield potential. As of June 9, winter wheat conditions were rated 16 percent very poor, 33 percent poor, 30 percent fair, 20 percent good, and 1 percent excellent, which is significantly better than last year's ratings which were 47 percent very poor, 29 percent poor, 16 percent fair, 6 percent good, and 2 percent excellent. However, a cool late spring has caused the winter wheat crop development to be way behind normal. As of the week ending June 9, barely 1 percent of the winter wheat crop had headed compared with the 5-year average of 33 percent and 45 percent a year ago.

U.S. winter wheat production is forecast at 1.24 billion bushels, down 5 percent from the May 1 forecast and 9 percent below 2001 to the lowest level since 1978. Based on June 1 conditions, the U.S. yield is forecast at 41.0 bushels per acre, down 2.1 bushels from the previous forecast. Grain area totals 30.2 million acres, unchanged from May 1. Hard Red production is down 6 percent from a month ago to 672 million bushels. Soft Red is down 3 percent from last month, and now totals 360 million bushels. White production totals 206 million bushels, down 2 percent from last month.

Area for 2002 grain harvest in the United States is forecast at 30.2 million acres, unchanged from May 1, but down 4 percent from 2001. This is the smallest winter wheat area since 1917. As of June 2, heading had reached 82 percent in the 18 major States. Harvest progress was at 5 percent, ranging from none in most States to 35 percent in Texas.

U.S. Wheat Supply and Demand Estimates

With planting of 2002/03 crops still underway in the Northern Hemisphere and several months away in the Southern Hemisphere, early-season projections in this report are highly tentative. Today's National Agricultural Statistics Service forecasts are used for U.S. winter wheat.

Projected U.S. 2002/03 ending stocks of wheat are down 64 million bushels from last month as lower production and increased use more than offset higher forecast carry in stocks. Forecast winter wheat production is reduced 63 million bushels due to lower yields. Food use is down 5 million bushels from last month, but exports are increased 25 million bushels because of reduced competition. The projected price range for wheat for 2002/03 is up 15 cents on each end to $2.65 to $3.25 per bushel, compared with $2.78 estimated for 2001/02.

Forecast 2001/02 ending stocks of wheat are up 20 million bushels from last month. The 5-million- bushel drop in food use reflects recently released mill grind estimates by the Census Bureau. Forecast exports are down 15 million bushels due to slow late-season pace of sales and shipments.

Global 2002/03 world wheat production and ending stocks projections are down from last month. Lower foreign production is led by reductions of 2 million tons for China, 1.5 million tons for Australia, and 0.3 to 0.5 million tons each for several countries. Larger crops in the EU, Morocco, and Brazil are only partially offsetting. Although projected imports by Morocco are down from last month, the major impact from the production changes is a 1-million-ton reduction in Australia's exports. Larger U.S. and EU exports offset the reduction for Australia. The United States, China, the EU, Russia, and Ukraine account for most of the drop in projected 2002/03 global ending stocks from last month.

Agricultural Prices Received for April, Montana Livestock Prices Fall

April full month crop prices were mixed compared with March 2002, according to the Montana Agricultural Statistics Service. Montana's winter wheat average price was $3.04 per bushel, down $0.04 from March; spring wheat was $0.06 higher at $3.05 per bushel; and durum wheat prices dropped $0.18 to $3.75 per bushel. The average price received for oats rose $0.07 to $2.34 per bushel. Feed barley prices increased $0.21 from the previous month to $2.04, while malt barley prices were down $0.07 to $2.92 per bushel.

The mid-May price for alfalfa hay was down $3.00 to $90.00 per ton and all other hay decreased $2.00 to $82.00 per ton. The mid-May winter wheat price averaged $2.85 per bushel; spring wheat was $3.05; durum wheat was $3.60; oats was $2.25; feed barley was $2.00; and malt barley averaged $2.95.

Livestock prices for the full month of April were all drastically down compared with the previous month. Steer and heifer prices fell $6.10 to $77.40 per cwt, and cows were down $2.70 to $40.60. The average price for calves dropped $9.70 to $94.30 per cwt. Sheep prices decreased $1.90 to $26.00 per cwt and lamb prices were down $6.20 to $62.80 per cwt. Milk prices were down $0.20 per cwt from last month to $12.90 per cwt. Steer and heifer prices for mid-May averaged $77.70 per cwt.; cows averaged $41.00 per cwt.; calves averaged $93.30 per cwt.; and milk prices averaged $12.80 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $2.75, down $0.06, spring wheat was $2.92, up $0.01; durum wheat was $3.39, up $0.06; the all barley price was $2.10, down $0.08, and steer and heifer prices were $70.60, down $3.70 per cwt.

The U.S. mid-May winter wheat price was $2.72 per bushel, spring wheat was $2.92 per bushel, durum wheat was $3.12 per bushel, all wheat was $2.80 per bushel, malt barley was $2.58 per bushel, feed barley was $1.91 per bushel, and all barley was $2.14. Steer and heifer prices were $ 69.30 per cwt, cow prices were $40.20, calves were $98.90 per cwt., all hog prices were $34.50 per cwt, and all egg prices were $0.505 per dozen.

The preliminary United States All Farm Products Index of Prices Received by Farmers in May was 98, based on 1990-92=100, up 3 points (3.2 percent) from the revised April index. Higher prices for broilers, potatoes, hogs, and oranges more than offset lower prices for lettuce, cattle, milk, and cucumbers. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for cantaloupe, grapes, sweet corn, and peaches more than offset decreased marketings of cattle, milk, apples and asparagus. Compared with May last year, the All Farm Products Index was down 10 points (9.3 percent). Lower prices for broilers, hogs, cattle, and cucumbers more than offset higher prices for potatoes, strawberries, corn, and soybeans. The Food Commodities Index increased by 4.3 percent over last month to 97, but was 11.8 percent below last year.

United States Index Summary

INDEX (1990-92=100)	April 2001	May 2001	April 2002	May 2002
Prices Received	103	106	105	95
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	124	124	123	123
Ratio 2/	83	85	85	77

1/ Prices paid indexes (1990-92=100) published monthly. 2/ Ratio of index of prices received by farmers to index of prices paid.

April Milk Production Up 2.9 Percent In Major States

Milk production in the 20 major States during April totaled 12.5 billion pounds, up 2.9 percent from April 2001. March revised production, at 12.8 billion pounds, was up 3.1 percent from March 2001. The March revision represented a decrease of 7 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,614 pounds for April, 43 pounds above April 2001.

The number of milk cows on farms in the 20 major States was 7.75 million head, 12,000 head more than April 2001, and 8,000 head more than March 2002.

U.S. April Egg Production Down Slightly

U.S. egg production totaled 7.08 billion during April 2002, down slightly from last year. Production included 5.99 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 62.0 million were egg-type. The total number of layers during April 2002 averaged 336 million, slightly lower than the average number of layers during April 2001. April egg production per 100 layers was 2,109 eggs, slightly higher than the 2,106 eggs in April 2001.

April 2002 contained 22 weekdays, and four Saturdays, compared to 21 weekdays and four Saturdays in April 2001.

All layers in the U.S. on May 1, 2002, totaled 335 million, down 1 percent from a year ago. The 335 million layers consisted of 274 million layers producing table or commercial type eggs, 58.2 million layers producing broiler-type hatching eggs, and 2.71 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 2002, averaged 69.4 eggs per 100 layers, slightly higher than a year ago.

Laying flocks in the 30 major egg producing States produced 6.64 billion eggs during April 2002, down slightly from a year ago. The average number of layers during April, at 314 million, was down 1 percent from a year earlier.

Montana April 2002 Red Meat Production Up 18 Percent From the Previous Year

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during April 2002, up 18 percent from April 2001 and 35 percent from the previous month. Cattle slaughter totaled 1,900 head, compared with 1,600 head one year ago. The average live weight, at 1,133 pounds, decreased 29 pounds from last year.

During April there were 1,300 hogs slaughtered, which is 200 more than a year ago. The average live weight, at 242 pounds, was 3 pounds less than last year. The number of sheep slaughtered, at 200 head, was unchanged from a year ago. The average live weight was up 9 pounds from the previous year to 127 pounds.

Commercial red meat production for the United States totaled 3.90 billion pounds in April, up 11 percent from the 3.51 billion pounds produced in April 2001 and a new record high for April.

Beef production, at 2.19 billion pounds, was 13 percent above the previous year and a new record high for April. Cattle slaughter totaled 2.95 million head, up 9 percent from April 2001. The average live weight was 1,227 pounds, up 41 pounds from April a year ago.

Veal production totaled 16.1 million pounds, 6 percent above April a year ago. Calf slaughter totaled 82,000 head, up 10 percent from April 2001. The average live weight was 327 pounds, down 13 pounds from April a year ago.

Pork production totaled 1.67 billion pounds, up 9 percent from the previous year and a new record high for April. Hog kill totaled 8.43 million head, 8 percent above April 2001. The average live weight was 267 pounds, up 2 pounds from April a year ago.

Lamb and mutton production, at 19.1 million pounds, was down 5 percent from April 2001. Sheep slaughter totaled 278,300 head, 4 percent below last year. The average live weight was 138 pounds, down 2 pounds from April a year ago.

Livestock County Estimates Now Available for Cattle, Milk Cows and Beef Cattle

County estimates for the January 1, 2002 cattle and calf inventory are now available under www.nass.usda.gov/mt/ county data. District estimates for December 1, 2001 all chickens and county estimates for December 1, 2001 Hogs and Pigs and January 1, 2002 Sheep and Lambs will be available at a later date.

(Continued on the next page.)

(Continued from the 1st page)

The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. The county estimates are based on livestock surveys conducted at the end of 2001 and beginning of 2002. Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on the livestock inventories. About 10,000 questionnaires were tabulated and summarized. Thanks to all the farmers and ranchers who participated in the survey!

U.S. Cattle on Feed Down 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.96 million head on May 1, 2002. The inventory was 2 percent below May 1, 2001 but slightly above May 1, 2000.

Placements in feedlots during April totaled 1.45 million, 6 percent below 2001 and 15 percent below 2000. Net placements were 1.37 million. During April, placements of cattle and calves weighing less than 600 pounds were 210,000, 600-699 pounds were 255,000, 700-799 pounds were 512,000, and 800 pounds and greater were 476,000.

Marketings of fed cattle during April totaled 1.99 million, 10 percent above 2001 and 6 percent above 2000.

Other disappearance totaled 83,000 during April, 7 percent below 2001 and 8 percent below 2000.

Montana May 1 Potato Stocks Down 7 Percent, U.S. Stocks Down 17 Percent

Montana potato producers held 0.7 million cwt. of potatoes in storage on May 1, 2002, down 7 percent from the previous year. The stocks represent 23 percent of the total 2001 production, 2 percentage points more than last year's May 1 stocks as a percent of the 2000 harvest.

The 15 major potato States held 91.1 million cwt of potatoes in storage May 1, 2002, down 17 percent from last year but 5 percent above 2000. Storage accounts for 23 percent of the 2001 fall storage States' production, down 1 percentage point from a year ago. Disappearance of 303 million cwt, is down 13 percent from last year and the lowest since 1992. Processors in the 9 major States used 148 million cwt of potatoes this season, down 13 percent from a year ago.

2001 Specialty Crops County Estimates

The Montana Agricultural Statistics Service has published county estimates for 2001 oilseeds and pulse crops. This is the third year of the data series. County-level data is not always published because of established disclosure rules. Funding for these county estimates was provided by the Montana Department of Agriculture.

Dry bean county estimates for Montana are published for these classes: all, garbanzo, and other, which is principally pintos. Other dry bean production for 2001 was 205,000 cwt. for the state. **Prairie** county had the largest other bean production in the state with 43,000 cwt. The second and third leading counties were **Carbon** and **Dawson** with 40,000 cwt. and 22,000 cwt. produced, respectively. The south-central district produced the largest crop of other beans followed closely by the southeast district. Looking at garbanzo beans, **Daniels** county produced the most in 2001 with 29,000 cwt. The second leading county was **Roosevelt** with 28,400 cwt. No other counties for garbanzo beans were published to avoid disclosure of individual information. The northeastern district produced the most garbanzo beans in Montana.

For the 2001 lentil crop, **Sheridan** was the number one county with 87,000 cwt. produced. The number two county was **Roosevelt** with total production at 54,000 cwt., and the third largest was **Richland** county with 14,900 cwt. Northeastern district farmers produced 78 percent of the state's lentils. Dry edible peas county estimates reveal **Roosevelt** county was the largest producer in 2001 with 56,500 cwt., followed by **Richland** county at 44,500 cwt., and **Pondera** county at 19,500 cwt. Northeastern district farmers produced 70 percent of the state's dry peas. **Teton** and **Dawson** were the leading counties for Austrian winter pea production in 2001 with 5,800 cwt. and 4,000 cwt., respectively.

Sheridan was by far the largest canola producing county in 2001 with 14.8 million pounds, or 33 percent of the state's canola. The second largest county was **Daniels** with 10.1 million pounds produced, followed by **Roosevelt** county with 3.3 million pounds. The northeastern district produced 72 percent of the crop. **Richland** was once again the number one safflower producing county with 5.6 million pounds. The next leading county was **Daniels** at 5.0 million pounds, followed by **McCone's** production of 3.6 million pounds. Seventy-five percent of the state's safflower was produced in the northeast district.

Sheridan led the state in flaxseed production for 2001 at 97,000 bushels. The next county was **Valley** with 36,000 bushels, followed by **Roosevelt** county at 15,500 bushels. Eighty-nine percent of the state's flaxseed was produced in the northeast district. The south-central district accounted for 39 percent of Montana's sunflower production, but county-level data was not published to avoid disclosure of individual information. The leading mustard seed producing counties were **Sheridan** with 4.5 million pounds and **McCone** with 1.3 million pounds. Almost all of Montana's mustard seed was produced in the northeast district.

All the preceding information along with yields and planted and harvested acres by county, district, and state levels are now available from the Montana Agricultural Statistics Service. They are available in printed form or can be accessed by visiting our website at www.nass.usda.gov/mt/. The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county statistics are based on an acreage and production survey of Montana farmers and ranchers conducted in the fall of 2001. Thanks to those who participated!

U.S. Hired Workers Up 6 Percent, Wage Rates Up 6 Percent From a Year Ago

There were 1.08 million hired workers on the Nation's farms and ranches during the week of April 7-13, 2002, up 6 percent from a year ago. There were 890,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 189,000 workers. Migrant workers accounted for 8.8 percent of the April hired work force compared with 8.9 percent in April 2001. The migrant worker percent of hired workers will be discontinued after this report.

Farm operators paid their hired workers an average wage rate of $8.83 per hour during the April 2002 survey week, up 52 cents from a year earlier. Field workers received an average of $8.06 per hour, up 45 cents from last April. Livestock workers earned $8.43 per hour compared with $8.01 a year earlier. The Field and Livestock worker combined wage rate was up 44 cents from last year.

Number of hours worked averaged 40.2 hours for hired workers during the survey week, unchanged from a year ago.

U.S. Agricultural Losses Valued at $944 Million Due to Wildlife Damage

Crop and livestock losses from wildlife in the United States totaled $944 million during 2001. Field crop losses to wildlife totaled $619 million, livestock and poultry losses totaled $178 million, and losses of vegetables, fruits and nuts totaled $146 million. These losses include destruction of or damage to crops in the field and death or injury to livestock caused by wildlife.

Individuals were allowed to report more than one wildlife species causing damage, if applicable. Occurrence of wildlife species reported causing damage should not be used to derive dollar loss by species.

A random sample of U.S. producers was surveyed to provide data for these estimates. Survey procedures ensured that all crop and livestock producers, regardless of size, had a chance to be included in the survey. About 12,000 operators were contacted during February and March by telephone interview. Estimates are subject to sampling and non-sampling errors. Non-sampling error was minimized through rigid quality control in the data collection process and a careful review of reported data for consistency and reasonableness.

This report is released as a cooperative effort between the National Agricultural Statistics Service and Animal and Plant Health Inspection Service - Wildlife Services.

2000 Agricultural Postharvest Chemical Use for Wheat

Montana Agricultural Statistics Service contacted 75 commercial grain storage or grain processing facilities during the summer of 2001 to determine the types and amounts of chemicals applied to wheat in off-farm storage. Based on total pounds applied, **silicon dioxide** and **aluminum phosphide** were the most commonly used postharvest chemicals applied. Montana's commercial grain storage facilities operators applied 2,700 pounds of silicon dioxide to control insects in wheat. Although aluminum phosphide is commonly referred to as a fumigant, it is used to kill insects, insect larvae, and mites, and is classified as an insecticide by the EPA. Montana's facility operators applied 1,100 pounds aluminum phosphide to control insects in wheat.

Montana grain storage operators used one or more of the following strategies in determining their treatment schedules. About two-thirds relied on **visual grain inspection**; 13% on **preset calendar dates**; 13% on **bin samples** and 13% on **scheduled fumigation with other handling operations**. No operators used **insect traps** to determine schedules. Seven percent of operators based fumigation on customers requests. Fourteen percent of Montana commercial grain storage facilities operators use an **aeration controller system** to determine the optimum running time (considering humidity and temperature) for aeration fans. Seven percent of Montana operators use **temperature cables in bins** to monitor grain temperature in bins. Ten percent of operators use a **deep bin sampler** which allows one to reach deeply into a grain bin and sample grain that is normally out of reach to typical probe samplers. Sixteen percent of Montana's operators use **power probes** to sample grain. Most of Montana's operators (79%) use a **protein analyzer** to determine the protein of grain. Only about one-sixth of Montana grain storage operators use a **phosphine pellet dispenser** to apply chemicals.

U.S. April Pig Crop Up 1 Percent

The April 2002 U.S. pig crop at 8.57 million head, was 1 percent more than the previous year. Sows farrowing during this period totaled 965 thousand head, 1 percent above last year. The average pigs per litter for April declined to 8.88, compared to 8.90 last year.

The U.S. inventory of sows and gilts on May 1, 2002, was 5.99 million head, slightly above May 1, 2001. U.S. sows and gilts bred during April totaled 1.18 million head, up 1 percent from the previous year.

- Hogs &Pigs
- Wheat Supply & Demand
- Ag Prices

May 1 Crop Production and Hay Stocks

Based on conditions May 1, **Montana winter wheat** producers are expecting a yield of 28 bushels per acre, up 6 bushel from last year's final yield estimate. However, this is down 6 bushels from the May 1, 2001 forecast. If realized, total production of 28.0 million bushels would be up 46 percent from a year ago due to an increase in acreage and expected yield from 2001. In the fall of 2001, Montana producers seeded 1.4 million acres of winter wheat, up 100,000 acres from the previous year. Producers expect to harvest 1.0 million acres, up 130,000 acres from last year. Acreage expected not to be harvested for grain is currently estimated to be 400,000 acres compared with 430,000 acres last year. If drought and poor weather conditions persist, acres not harvested for grain are expected to increase above last year's unusually large abandonment. The largest amount of unharvested acres ever recorded was 1.06 million acres in 1985 when 2.46 million acres were planted. Producers in the North Central district have been the most severely impacted by the drought and poor weather conditions.

Due to weather conditions, winter wheat has been very slow to break dormancy, as 9% of the acres were rated still dormant, 42% greening, and 49% green and growing for the week ending May 5th. This compares with 1% dormant, 15% greening, 84% green and growing a year ago. Slow crop development and weather conditions have added a significant amount of uncertainty for producers regarding the number of acres that will actually be harvested for grain and expected yields. Many producer comments indicated it was too early to tell what they will do and many indicated they were waiting for the crop adjustor to come. Yields on remaining acreage will be severely impacted if significant rainfall isn't received soon and during the growing season. For the week ending May 5, the condition of the winter wheat crop was significantly worse than the previous year and the 5 year average as conditions were rated 40 percent very poor, 22 percent poor, 29 percent fair, 8 percent good, and 1 percent excellent. Last year the condition ratings were 12% very poor, 24% poor, 40% fair, 21% good, and 3% excellent, while the 5 year average is 5% very poor, 13% poor, 38% fair, 40% good, and 4% excellent.

Winter wheat production for the United States is forecast at 1.30 billion bushels, down 4 percent from 2001. This is the lowest production since 1978. Based on May 1 conditions, the U.S. yield is forecast at 43.1 bushels per acre, 0.4 bushels less than last year. Area for 2002 grain harvest in the United States is forecast at 30.2 million acres, down 4 percent from 2001. This will be the smallest winter wheat area harvested since 1917.

The portion of the United States winter wheat crop rated good to excellent on April 28, at 36 percent, was 5 percentage points lower than last year. The Kansas, Oklahoma, and Texas good to excellent ratings were only 25 percent, 34 percent, and 24 percent, respectively. Overall, condition ratings on April 28 were lower than any corresponding week since 1989. Dry weather aided winter wheat seeding across the Great Plains and Pacific Northwest last fall. Temperatures were favorable for development across most of the Nation, but emergence and growth were spotty and uneven due to topsoil moisture shortages, especially in Kansas and Oklahoma.

Montana hay producers had an estimated 845 thousand tons of hay on hand as of May 1, almost double the amount they had on hand a year ago. Last year's hay stocks were one of the lowest on record. Increased hay production from CRP and small grain acreage harvested for hay during 2001 and decreased livestock inventories contributed to the increased hay stocks. Disappearance from December 2001 to May 1, 2002 totaled 2.76 million tons, up 1 percent from last year.

Stocks of all hay stored on farms in the United States totaled 22.5 million tons on May 1, up 7 percent from the previous year. The increase in May 1 stocks was mainly the result of the 2001 hay crop increasing by 3 percent. Disappearance of hay from December 1, 2001 - May 1, 2002, totaled 88.0 million tons, 4 percent higher than the disappearance of 84.5 million tons for the same period a year ago. Disappearance was up from last year despite the mild winter, due to dry spring conditions limiting pasture and extending the hay feeding period in the Southeast, Great Plains, and Rocky Mountain States.

Winter Wheat: Acreage, Yield, & Production, by Selected States & U.S. 2001 & Forecast May 1, 2002

State	Area Harvested		Yield		Production	
	2001	2002	2001	2002	2001	2002

2001 Cash Receipts for Meat Animals in Montana and the U.S.

Cash receipts from the 2001 marketings of cattle, hogs, and sheep in Montana totaled $1.03 billion, up 1 percent from 2000. Cash receipts from the sales of cattle and calves were up 1 percent from 2000 to a new historic high. Cattle and calf cash receipts almost eclipsed the billion mark for the first time at $978 million. Increased cattle marketings and higher prices for cattle contributed to the increase in cash receipts. Marketings of cattle weighing 500 lbs or more, at 1.4 million head, were up 1 percent from 2000. This is the third highest marketings of cattle weighing 500 lbs or more. Marketings of calves weighing less than 500 lbs decreased 4 percent from the previous year to 350,000 head. The average price received in 2000 for cattle weighing over 500 lbs rose $2.20 per cwt to $80.50 per cwt. Season average prices for calves weighing less than 500 lbs decreased $3.80 per cwt to $99.20 per cwt. The average price received for cattle was the highest on record, while calf prices were the second highest on record. The total value of the cattle and calf inventory on January 1, 2002, was 2.1 billion dollars, down 5 percent from last year. Decreases in cattle and calf inventory and lower values contributed to the decline.

Cash receipts from the sales of hogs in Montana rose 17 percent from 2000 to $35.7 million dollars. Marketings of hogs and pigs rose 11 percent from the previous year to 344,000 head. The average prices received for hogs rose $3.80 from the previous year to $43.60 per cwt. The value of the hog and pig inventory on December 1, 2001 was 13.8 million dollars, up 11 percent from last year.

Sheep and lamb cash receipts were down 24 percent from the previous year to 18.5 million dollars. Decreased marketings of lambs and a dramatic drop in lamb prices contributed to the large decline cash receipts. Marketings of sheep and lambs in 2001 were 79,000 and 251,000 head, respectively. Sheep marketings were up 26,000 head from last year while lamb marketings were down 34,000 head. The average price for lambs dropped $24.70 per cwt to $59.80 per cwt while sheep were up $2.50 per cwt from last year to $33.90 per cwt. The value of the sheep and lamb inventory was 26.8 million dollars, down 21 percent from the previous year.

In the United States, the 2001 gross income from cattle and calves, hogs and pigs, and sheep and lambs for the U.S. totaled $53.7 billion, up 1 percent from 2000. Gross income rose for hogs and pigs, but fell for calves and calves and sheep and lambs. Hogs and pigs increased 6 percent, while cattle and calves and sheep and lambs decreased 1 and 15 percent respectively. Total 2001 cash receipts from marketings of meat animals increased 1 percent to $53.3 billion. Cattle and calves accounted for 76 percent of this total, hogs and pigs 23 percent, and sheep and lambs 1 percent. Production increased for hogs and pigs, but decreased for both cattle and calves and sheep and lambs. Average prices were up from 2000 levels for cattle and calves, hogs and pigs, and sheep while lambs showed a decrease.

U.S. cash receipts from marketings of cattle and calves decreased from $40.7 billion in 2000 to $40.4 in 2001, a 1 percent decrease. All cattle and calf marketings totaled 55.3 billion pounds in 2001, down 4 percent from 2000. The U.S. annual average price per 100 pounds live weight for cattle was $71.30 an increase of $2.70 from 2000. For calves, the annual average price increased $2.00 to $106.00.

Cash receipts from hogs and pigs totaled $12.5 billion during 2001, up 6 percent from 2000. Marketings increased to 26.9 billion pounds in 2001, up 1 percent from 2000. The U.S. annual average price per 100 pounds live weight increased $2.00 to $44.30 in 2001.

Sheep and lamb cash receipts in the United States were $398 million, down 15 percent from 2000. Marketings declined 1 percent to 641 million pounds. The U.S. annual average price per 100 pounds live weight for sheep increased from $34.30 in 2000 to $34.60 in 2001 while for lambs, the annual average price decreased $12.90 to $66.90.

U.S. March 2002 Pig Crop Up 1 Percent

The March 2002 U.S. pig crop, at 8.59 million head, was 1 percent more than the previous year. Sows farrowing during this period totaled 973 thousand head, 1 percent above last year. The average pigs per litter for March declined to 8.83, compared to 8.87 last year.

The U.S. inventory of sows and gilts on April 1, 2002, was 6.00 million head, slightly above April 1, 2001. U.S. sows and gilts bred during March totaled 1.18 million head, up 1 percent from the previous year.

U.S. Wheat Supply and Demand Estimates

The first report of USDA's assessment of U.S. Wheat supply and demand prospects and U.S. price prospects for the 2002/03 season shows prospects for a smaller crop and reduced exports. Projections are based on economic analysis, normal weather, trends, and judgment. Because planting of spring crops is still underway, these projections are highly tentative. Substantial variation may result from weather developments, economic factors, and policy changes. National Agricultural Statistics Service (NASS) forecasts are used for U.S. winter wheat. For other U.S. crops, the March 28 NASS Prospective Plantings report is used for planted acreage, and methods used to project harvested acreage and yield are noted on each table.

The 2002/03 outlook for U.S. wheat is dominated by prospects for the smallest U.S. wheat exports in more than 30 years. Total production is projected down 4 percent from 2001/02 to 1,886.0 million bushels. The survey-based forecast of winter wheat production is 4 percent below a year earlier due to lower area and yields. Using planting intentions and average harvested-to-planted ratios and yields results in lower spring wheat (including durum) production. The smaller crop and the smallest carry in stocks since 1998/99 drop total 2002/03 supplies almost 7 percent below a year earlier.

Projected 2002/03 use is down around 4 percent from a year earlier. Domestic use is up slightly due to expanding food use. However, projected exports of 875 million bushels are down 100 million bushels from the 2001/02 forecast and would be the lowest since 610 million bushels in 1971/72. Reduced U.S. export prospects are due to smaller U.S. supplies, shrinking global imports, and intense competition. Although total use is declining, it will exceed production plus imports and result in a further drop in U.S. ending stocks. However, U.S. prices will receive little added support from the declining stocks due to the bleak export prospects. The projected price range for 2002/03 is $2.50 to $3.10 per bushel, compared with an estimated $2.78 for 2001/02.

Projected 2002/03 global wheat production is up sharply from a year earlier, led by gains in the EU. Expanding use is expected to absorb the larger crops, leaving global ending stocks little changed from a year earlier. Production in the major exporters (Argentina, Australia, Canada, and the EU) is projected up more than 19 million tons or almost 13 percent. In addition, India's crop is expected to rise more than 5 million tons in 2002/03, intensifying the pressure to reduce already huge government stocks via exports. The combined production of Russia, Ukraine, and Kazakstan is projected down more than 10 million tons from 2001/02 but carry in stocks are up more than 14 million tons, leaving ample supplies for export. Global imports are projected down slightly, despite an expected doubling in China's imports from the 1.5 million tons expected for 2001/02. EU imports, forecast at a world-leading 8 million tons for 2001/02, are expected to drop by half.

(Continued on the back)

Agricultural Prices Received

March full-month crop prices were mostly higher compared with February 2002, except for other hay and feed barley. Montana's winter wheat average price was $3.08 per bushel, up $0.05 from February; spring wheat was $0.01 higher at $2.99 per bushel; and durum wheat prices rose $0.01 to $3.93 per bushel. The average price received for oats rose $0.11 to $2.27 per bushel. Feed barley prices dropped $0.14 from the previous month to $1.83, while malt barley prices were up $0.02 to $2.99 per bushel.

The mid-April price for alfalfa hay was up $1.00 to $93.00 per ton and all other hay decreased $1.00 to $84.00 per ton. The mid-April winter wheat price averaged $3.10 per bushel; spring wheat was $3.05; durum wheat was $3.85; oats was $2.25; feed barley was $1.90; and malt barley averaged $2.95.

Livestock prices for the full month of March were mixed compared with the previous month, while mid-month prices were down significantly. Steer and heifer prices were down $0.30 to $83.50 per cwt, but cows were up $3.80 to $43.30. The average price for calves rose $2.00 to $104.00 per cwt. Sheep prices decreased $3.60 to $27.90 per cwt and lamb prices were down $0.70 to $69.00 per cwt. Milk prices were down $0.10 per cwt from last month to $13.10 per cwt. Steer and heifer prices for mid-April averaged $76.10 per cwt.; cows averaged $40.00 per cwt.; calves averaged $97.70 per cwt.; and milk prices averaged $13.10 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $2.81, up $0.06, spring wheat was $2.91, up $0.06; durum wheat was $3.33, down $0.16; the all barley price was $2.18, down $0.03, and steer and heifer prices were $74.30, up $0.70 per cwt.

The U.S. mid-April winter wheat price was $2.73 per bushel, spring wheat was $2.88 per bushel, durum wheat was $3.16 per bushel, all wheat was $2.80 per bushel, malt barley was $2.54 per bushel, feed barley was $1.75 per bushel, and all barley was $2.10. Steer and heifer prices were $ 71.20 per cwt, cow prices were $40.50, calves were $102.00 per cwt., all hog prices were $30.50 per cwt, and all egg prices were $0.519 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in April was 95, based on 1990-92=100, down 10 points (9.5 percent) from the revised March index. Declining lettuce prices along with decreases for hogs, eggs, and cattle, more than offset increased prices for onions, hay, apples, and potatoes. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for cattle, strawberries, milk, and oranges more than offset decreased marketings of soybeans, corn, wheat, and cotton. Compared with April last year, the All Farm Products Index was down 11 points (10.4 percent). Lower prices for broilers, milk, hogs, and cattle more than offset higher prices for potatoes, tomatoes, apples, and carrots. The food commodities index decreased by 13.0 percent over both last month and last year.

Montana March 2002 Red Meat Production Down 8 Percent From the Previous Year

Montana slaughter plants produced 1.1 million pounds, dressed weight, of red meat during March 2002, down 8 percent from March 2001 and 6 percent from the previous month. Cattle slaughter totaled 1,400 head, compared with 1,500 head one year ago. The average live weight, at 1,145 pounds, increased 6 pounds from last year.

During March there were 1,000 hogs slaughtered, which is 100 less than a year ago. The average live weight, at 241 pounds, was 2 pounds less than last year. The number of sheep slaughtered, at 200 head, was unchanged from a year ago. The average live weight was up 8 pounds from the previous year to 126 pounds.

Commercial red meat production for the United States totaled 3.68 billion pounds in March, down 2 percent from the 3.76 billion pounds produced in March 2001. Beef production, at 2.06 billion pounds, was 2 percent below the previous year. Cattle slaughter totaled 2.74 million head, down 6 percent from March 2001. The average live weight was 1,241 pounds up 42 pounds from March a year ago.

Veal production totaled 15.0 million pounds, 9 percent below a year ago. Calf slaughter totaled 77,500 head, down 8 percent from last year. The average live weight was 323 pounds, unchanged from a year ago. Pork production totaled 1.58 billion pounds, down 3 percent from the previous year. Hog kill totaled 7.98 million head, 4 percent below March 2001. The average live weight was 267 pounds up 3 pounds from March a year ago. Lamb and mutton production, at 22.3 million pounds, was down 5 percent from a year ago. Sheep slaughter totaled 324,500 head, 1 percent below last year. The average live weight was 138 pounds, down 5 pounds from a year ago.

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.58 million head on April 1, 2002. The inventory was almost one- half percent above April 1, 2001 and 3 percent above April 1, 2000. The inventory included 7.23 million steers and steer calves, up 4 percent from the previous year. This group accounted for 62 percent of the total inventory. Heifers and heifer calves accounted for 4.30 million head, down 4 percent from 2001.

Placements in feedlots during March totaled 1.95 million, 6 percent above 2001 but 4 percent below 2000. Net placements were 1.88 million. During March, placements of cattle and calves weighing less than 600 pounds were 314,000, 600-699 pounds were 372,000, 700-799 pounds were 702,000, and 800 pounds and greater were 565,000. Marketings of fed cattle during March totaled 1.83 million, 5 percent below 2001 and 11 percent below 2000. Other disappearance totaled 69,000 during March, 30 percent below 2001 and 33 percent below 2000.

U. S. Egg Production

U.S. egg production totaled 7.41 billion during March 2002, up 1 percent from last year. Production included 6.31 billion table eggs and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 64.0 million were egg-type.

The total number of layers during March 2002 averaged 337 million, slightly higher than the average number of layers during March 2001. March egg production per 100 layers was 2,197 eggs, up 1 percent from the 2,178 eggs in March 2001.

All layers in the U.S. on April 1, 2002, totaled 338 million, slightly higher than a year ago. The 338 million layers consisted of 278 million layers producing table or commercial type eggs, 58.0 million layers producing broiler-type hatching eggs, and 2.60 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2002, averaged 71.0 eggs per 100 layers, unchanged from a year ago.

Laying flocks in the 30 major egg producing States produced 6.94 billion eggs during March 2002, up 1 percent from a year ago. The average number of layers during March , at 316 million, was slightly higher than year earlier.

Montana April 1 Potato Stocks Down 14 Percent, U.S. Stocks Down 16 Percent

Montana potato producers held 1.9 million cwt. of potatoes in storage on April 1, 2002, down 14 percent from the previous year. The stocks represent 63 percent of the total 2001 production matching last year's April 1 stocks as a percent of the 2000 harvest.

Nationally, the 15 major potato States held 129 million cwt of potatoes in storage April 1, 2002, down 16 percent from last year but less than 1 percent above 2000. Storage accounts for 33 percent of the 2001 fall storage States' production, the same as a year ago. Disappearance of 265 million cwt, is down 13 percent from last year and the lowest since 1993. Processors in the 9 major States used 131 million cwt of potatoes this season, down 13 percent from a year ago.

Western States held 95.9 million cwt of potatoes in storage on April 1, 2002, down 19 percent from last year and 1 percent below 2000. Idaho's potato stocks are down 14 percent from a year ago, while Washington is down 15 percent and Oregon is off 37 percent. Colorado's stocks are down 29 percent and California's potato holdings are down 85 percent from a year ago.

Montana's Rank in the Nation's Agriculture

	UNIT		PERIOD OR DATE	RANK	% U.S. Total
Land in farms and ranches	56,500,000	acres	2001	2	6.0
Number of farms and ranches	26,600	farms/ranches	2001	31	1.2

Montana Quarterly Milk Production Unchanged, U.S. Milk Production Up

During the January-March 2002 quarter, Montana milk cows produced 84 million pounds of milk, unchanged from the same quarter a year ago. Montana milk cows numbered 18,000 head, down 1,000 from last year.

The quarterly production of milk for the U.S. was 42.3 billion pounds, 2.4 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.11 million head, 38,000 head less than the same period last year.

Milk production in the 20 major States during March totaled 12.8 billion pounds, up 3.2 percent from March 2001. February revised production, at 11.4 billion pounds, was up 2.3 percent from February 2001. The February revision represented a decrease of 0.5 percent or 56 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,650 pounds for March, 51 pounds above March 2001. The number of cows on farms in the 20 major States was 7.75 million head, 2,000 head more than March 2001, and 1,000 head more than February 2002.

Milk Production and Income up in Montana for 2001

Montana's dairies produced 346 million pounds of milk in 2001, up 2 percent from 2000. There was an average of 19,000 milk cows on farms and ranches during the year, unchanged from the previous year. The average number of pounds produced per cow was 18,211 pounds, 422 pounds more than 2001.

Cash receipts from marketings of milk during the year in Montana were 50.9 million dollars, up 22 percent from 2000. Producers received an average of $15.10 per cwt, an increase of $2.30 from last year. Total marketings of milk, at 337 million pounds, were up 3 percent from a year ago. A total of 9 million pounds of milk were used on farms and ranches where produced, 5 million pounds fed to calves, and 4 million pounds consumed as milk, cream, and butter.

Nationally, milk production decreased 1 percent in 2001 to 165 billion pounds. The rate per cow, at 18,139 pounds, was 62 pounds below 2000. The annual average number of cows on farms, at 9.12 million head, was 91,000 head less than 2000.

Cash receipts from marketings of milk during 2001, at $24.7 billion, was 20 percent above 2000. Producer returns averaged $15.05 per hundredweight, 21 percent above 2000. Marketings totaled 164 billion pounds, 1 percent below 2000. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers. An estimated 1.26 billion pounds of milk were used on farms where produced, 3 percent less than 2000. Calves were fed 86 percent of this milk with the remainder consumed in producer households.

2001 Poultry Production and Value

Montana's value of egg production in 2001 was $3.2 million, up slightly from last year. Egg production in 2001 totaled 95 million eggs, up 13 percent from the previous year. The average price for eggs was 41 cents per dozen, down 5 cents from last year.

Nationally, the combined value of production from broilers, eggs, turkeys and the value of sales from chickens in 2001, was $24.0 billion, up 13 percent from the $21.2 billion in 2000. Of the combined total, 70 percent was from broilers, over 18 percent from eggs, over 11 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced in the United States during 2001 was $16.7 billion, up 19 percent from 2000. The total number of broilers produced in 2001 was 8.39 billion, up 1 percent from 2000. The total amount of live weight broilers produced in 2001 was 42.4 billion pounds, up 2 percent from 2000. The 2001 average price per pound on a live weight equivalent basis was 39.3 cents per pound, compared to 33.6 cents per pound in 2000.

The value of all U.S. egg production in 2001 was $4.44 billion, up 2 percent from the $4.35 billion in 2000. Egg production totaled 85.7 billion eggs, up 2 percent from the 84.4 billion eggs produced in 2000. In 2001, all eggs averaged 62.2 cents per dozen, compared with 61.8 cents in 2000. The value of sales from chickens (excluding broilers) in 2001 was $46.0 million, down 28 percent from the $63.9 million a year ago. Prices averaged 4.5 cents per pound, compared with 5.7 cents in 2000. The number of chickens sold in 2001 totaled 200 million, down 8 percent from the total sold during the previous year.

The value of turkeys produced in the United States during 2001 was $2.79 billion, down 1 percent from the $2.82 billion the previous year. Turkey production in 2001 totaled 7.15 billion pounds, compared with 6.94 billion pounds in 2000. The average price received by producers during 2001 was 39.0 cents per pound, compared with 40.7 cents in 2000.

The value of U.S. sales from chickens (excluding broilers) in 2001 was $46.0 million, down 28 percent from the $63.9 million a year ago. Prices averaged 4.5 cents per pound, compared with 5.7 cents in 2000. The number of chickens sold in 2001 totaled 200 million, down 8 percent from the total sold during the previous year.

Red Meat Production for 2001

Montana slaughter plants produced 16.4 million pounds, dressed weight, of red meat during 2001, compared with 21.5 million pounds in 2000. There were 19,900 cattle slaughtered during 2001, down 23% from the previous year. The total live weight of 22.8 million pounds was down 21% from a year earlier. The average live weight was up 29 pounds to 1,149 pounds.

There were 13,700 hogs slaughtered in Montana, a decrease of 6,600 head from 2000. Total live weight at 3.3 million pounds was down 37% from the last year. The average live weight was 244 pounds per head compared with 258 the previous year. Sheep slaughter amounted to 3,600 head, a decrease of 1,200 head from a year earlier. The average live weight at 120 pounds was 6 pounds lighter than the previous year. Total live weight of all sheep and lambs slaughtered in 2001 decreased 30% from 2000 to 427,000 pounds.

The number of Montana federally inspected slaughter plants on January 1, 2002 was 11, unchanged from 2001. There were 139 non-federally inspected plants on January 1, 2002, down 1 from the same date a year ago.

United States red meat production in commercial plants and on farms totaled 45.8 billion pounds in 2001, slightly lower than the record high set in 2000. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 45.7 billion pounds. Iowa, Kansas, Nebraska, and Texas accounted for over 51% of the United States commercial red meat production in 2001.

Beef production, at 26.2 billion pounds, fell 3% below the record high set last year. Veal production totaled 204 million pounds, down 9% from last year and a new record low. Pork production, at 19.2 billion pounds, was slightly below the record high set in 1999. Lamb and mutton production totaled 228 million pounds, fell 3% below a year ago and a new record low.

Commercial cattle slaughter during 2001 totaled 35.4 million head, down 2% from 2000, with federal inspection comprising 98.3% of the total. The average live weight was 1,221 pounds, up 2 pounds from a year ago. Steers comprised 49.2% of the total federally inspected slaughter, heifers 32.7 percent, dairy cows 7.4 percent, other cows 8.9 percent, and bulls 1.8 percent.

Commercial calf slaughter totaled 1.01 million head, down 11% from a year ago with 97.4% under federal inspection. The average live weight was 320 pounds, up 4 pounds from a year earlier. Commercial hog slaughter totaled 98.0 million head, virtually unchanged from 2000 with 98.5% of the hogs slaughtered under federal inspection. The average live weight was up 2 pounds from last year, at 264 pounds. Barrows and gilts comprised 96.6% of the total federally inspected slaughter.

Commercial sheep and lamb slaughter, at 3.22 million head, was down less than 7% from 2000 with 95.1% comprised by federal inspection. The average live weight rose 5 pounds from 2000 to 140 pounds.

There were 881 slaughtering plants under federal inspection on January 1, 2002, compared with 910 last year. Of these, 723 slaughtered at least one head of cattle during 2001 with 15 slaughtering almost 57% of the total cattle killed. There were 699 plants that slaughtered hogs, with 12 accounting for 53% of the total. Likewise, 7 of the 310 plants that slaughtered calves accounted for over 56% of the total and 5 of the 538 plants that slaughtered sheep or lambs in 2001 comprised 70% of the total head.

February Red Meat Production

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during February 2002, down 2% from February 2001 and down 12% from the previous month. Cattle slaughter totaled 1,500 head, the same number as a year ago. The average live weight, at 1,133 pounds, increased 7 pounds from last year.

During February there were 1,000 hogs slaughtered, which is 100 less than a year ago. The average live weight, at 242 pounds, was 5 pounds less than last year. The number of sheep slaughtered, at 300 head, was 100 more than in 2001. The average live weight was up 8 pounds from the previous year to 124 pounds.

Commercial red meat production for the United States totaled 3.50 billion pounds in February, up 3% from the 3.40 billion pounds produced in February 2001. Beef production, at 1.99 billion pounds, was 6% above the previous year. Cattle slaughter totaled 2.61 million head, up 1% from February 2001. The average live weight was 1,255 pounds, up 38 pounds from February a year ago.

Veal production totaled 14 million pounds, 8% below February a year ago and a new record low for February. Calf slaughter totaled 73,000 head, down 7% from February 2001. The average live weight was 326 pounds, down 2 pounds from February a year ago. Pork production totaled 1.48 billion pounds, virtually unchanged from the previous year. Hog kill totaled 7.50 million head, 1% below February 2001. The average live weight was 267 pounds, up 3 pounds from February a year ago. Lamb and mutton production, at 18 million pounds, was up 1% from February 2001. Sheep slaughter totaled 256,100 head, 4% above last year. The average live weight was 138 pounds, down 5 pounds from February a year ago.

National Agriculture Week, March 17-23, is a good time to say thanks to all of Montana's agricultural producers that supply food and fiber to people in Montana, across the country and around the world. Thank you!

Montana March Potato Stocks Down 9 Percent, U.S. Up 15 Percent

Montana potato producers held 2.55 million cwt. of potatoes in storage on March 1, 2002, down 9 percent from last year. The stocks represent 84 percent of the total 2001 production. Last year's March 1 stocks represented 80 percent of the harvest.

The 15 major potato States held 168 million cwt of potatoes in storage March 1, 2002, down 15 percent from last year and 1 percent below 2000. Storage accounts for 43 percent of the 2001 fall storage States' production, the same percentage as a year ago. Disappearance of 226 million cwt, is down 13 percent from last year and the lowest since 1993. Processors in the 9 major States used 114 million cwt of potatoes this season, down 13 percent from a year ago.

U.S. Cattle on Feed Down 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.52 million head on March 1, 2002. The inventory was down 2 percent from the 11.70 million head on March 1, 2001 but 2 percent above March 1, 2000.

Placements in feedlots during February totaled 1.81 million, 14 percent above 2001 but 4 percent below 2000. Net placements were 1.74 million. During February, placements of cattle and calves weighing less than 600 pounds were 260,000, 600-699 pounds were 410,000, 700-799 pounds were 662,000, and 800 pounds and greater were 473,000.

Marketings of fed cattle during February totaled 1.80 million, 3 percent above 2001 but 12 percent below 2000. Other disappearance totaled 63,000 during February, 22 percent below 2001 and 19 percent below 2000.

Cattle on Feed in Historic 7 States Down 1 Percent

Cattle on feed March 1, 2002, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.91 million, down 1 percent from the previous year but 2 percent above March 1, 2000.

Placements in feedlots during February totaled 1.54 million, 16 percent above 2001 but 4 percent below 2000. Marketings during February totaled 1.53 million, 4 percent above 2001 but 12 percent below 2000. Other disappearance during February was 52,000 head, 19 percent below 2001 but 11 percent above 2000.

February Milk Production Up 2.8 Percent

Milk production in the 20 major States during February totaled 11.4 billion pounds, up 2.8 percent from February 2001. January revised production, at 12.3 billion pounds, was up 1.8 percent from January 2001. The January revision represented an increase of 1 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,474 pounds for February, 43 pounds above February 2001.

The number of milk cows on farms in the 20 major States was 7.75 million head, 18,000 head less than February 2001, but 1,000 head more than January 2002.

February Egg Production Up 1 Percent

U.S. egg production totaled 6.56 billion during February 2002, up 1 percent from last year. Production included 5.57 billion table eggs and 987 million hatching eggs, of which 929 million were broiler-type and 58.0 million were egg-type. The total number of layers during February 2002 averaged 337 million, slightly higher than the average number of layers during February 2001. February egg production per 100 layers was 1,946 eggs, up slightly from the 1,943 eggs in February 2001. February 2002 contained 20 weekdays, one holiday and four Saturdays, equal to February 2001.

All layers in the U.S. on March 1, 2002, totaled 336 million, slightly lower than a year ago. The 336 million layers consisted of 277 million layers producing table or commercial type eggs, 56.9 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2002, averaged 70.5 eggs per 100 layers, up 1 percent from the 69.5 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.15 billion eggs during February 2002, up 1 percent from a year ago. The average number of layers during February , at 316 million, was slightly higher than year earlier.

2000 Agricultural Postharvest Chemical Use Estimates for Wheat

Montana Agricultural Statistics Service contacted 75 commercial grain storage or grain processing facilities during the summer of 2001 to determine the types and amounts of chemicals applied to wheat and to determine pest management practices used in off-farm storage. On-farm postharvest applications were beyond the scope of this survey. The time frame for these applications was June 1, 2000 to May 31, 2001. Wheat storage facilities in Montana and thirteen other wheat States (CO, ID, KS, MN, MO, NE, ND, OH, OK, OR, SD, TX and WA) were surveyed.

Based on total pounds applied, **silicon dioxide** and **aluminum phosphide** were the most commonly used postharvest chemicals applied to wheat in Montana and the other states surveyed. Silicon dioxide is an insecticide. Montana's commercial grain storage facilities operators applied 2,700 pounds of silicon dioxide to control insects in wheat, which made up 2.4% of total pounds applied in the fourteen states surveyed. Although aluminum phosphide is commonly referred to as a fumigant, it is used to kill insects, insect larvae, and mites, and is classified as an insecticide by the EPA. Montana commercial grain storage facility operators applied 1,100 pounds aluminum phosphide to control insects in wheat, making up only 1% of total pounds applied in the fourteen states surveyed. Commercial grain storage operators in all States applied 115,400 pounds of aluminum phosphide treating 539.7 million bushels of wheat.
(Continued on back page)

Montana Sheep and Lamb Losses for 2001

Montana sheep and lamb producers lost 66,000 animals to weather, predators, disease and other causes during 2001, representing a total value of more than $3.2 million. While the total number of sheep and lambs lost remained the same as last year, the total value of inventory lost was 22 percent lower than a year ago. Lower average market prices this past year resulted in a decrease of sheep and lamb values. Total inventory is 3 percent lower than the previous year. Sheep and lamb deaths amounted to 9.1 percent of the January 1 inventory and lambs born -- slightly more than the previous year.

The number of sheep and lambs lost to all predators totaled 19,900 head, up 1,000 head from last year. Lamb losses by all predators amounted to 16,800 head, up 6 percent from last year. The number of sheep lost to all predators totaled 3,100, up 100 head from a year ago. Predators caused an estimated $0.9 million in losses in 2001, down from the previous year. Losses due to predators amounted to 2.7 percent of the January 1 inventory and lambs born and 30 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 72 percent of the predator caused losses and 22 percent of all death losses in the state. The value of losses attributed to coyotes was $0.6 million.

The total value of non-predatory losses was $2.0 million in 2001, 18 percent less than the previous year. Non-predatory losses accounted for 58 percent of all losses. The largest non-predatory cause of losses was disease at 10,500 head. Sheep lost to non-predatory factors totaled 13,500 head, 2 percent higher than 2000.

Non-predatory lamb losses came in at 25,100 head, 1,000 head higher than a year ago.

Producers reported less sheep and lambs lost to unknown causes this past year. This resulted in a 23 percent decrease in the number of sheep and lambs lost to unknown causes from last year. Lambs lost to unknown causes totaled 5,100 head, compared with 7,000 head last year. Unknown causes claimed 2,400 sheep, 400 head less than last year. The value of sheep and lambs lost to unknown causes declined to $0.4 million.

2000 Agricultural Postharvest Chemical Use Estimates for Wheat (continued from page two)

Operators in all States applied 112,600 pounds of silicon dioxide treating 9.4 million bushels of wheat. The most widely used fungicide in all states surveyed was **tebuconazole**. Commercial grain storage facilities operators in all States applied 200 pounds of tebuconazole treating only 293,000 bu of wheat. Data is not available at the state level.

Montana grain storage operators used one or more of the following strategies in determining their treatment schedules. About two-thirds relied on **visual grain inspection**; 13% on **preset calendar dates**; 13% on **bin samples** and 13% on **scheduled fumigation with other handling operations**. No operators used **insect traps** to determine schedules. Seven percent of operators based fumigation on customers requests.

When considering all States almost three-fourths of the grain storage operators based treatment schedules on **visual grain inspections**. Forty-three percent of operators in all states surveyed relied on **bin samples**, 15% **scheduled fumigation with other handling activities**, 9% relied on **preset calendar dates**, 3% relied on **customers requests** and 6% relied on **insect traps** to determine treatment schedules.

Fourteen percent of Montana commercial grain storage facilities operators use an **aeration controller system** to determine the optimum running time (considering humidity and temperature) for aeration fans, while 43% of operators in all states surveyed used an aeration controller. Seven percent of Montana operators use **temperature cables in bins** to monitor grain temperature in bins compared to an average of 46% of operators in all states surveyed. Ten percent of operators use a **deep bin sampler** which allows one to reach deeply into a grain bin and sample grain that is normally out of reach to typical probe samplers. When considering all States, 10% of operators used a deep bin sampler. Sixteen percent of Montana's operators use **power probes** to sample grain, compared to 29% of operators in all States. Most of Montana's operators (79%) use a **protein analyzer** to determine the protein of grain while less than half of operators in all states (40%) use a protein analyzer. Only about one-sixth of Montana grain storage operators use a **phosphine pellet dispenser** to apply chemicals, compared to more than one-quarter of the operators in all States.

Picking up spilled grain around bins is the most common cleaning activity in Montana and all other States, with 97% of Montana operators and 98% of operators in all States reporting the activity. **Controlling vegetation** around bins was the second most common activity with 95% of Montana operators and 97% all State operators reporting the activity. **Sweeping empty bins** was the third most common cleaning activity for Montana operators and all other states with 94% of operators participating in the activity. About one-fourth of the Montana operators and half of operators in all States surveyed **applied fumigants to empty bins**.

2002 Planting Intentions

Montana small grain producers intend on planting more wheat than last year. Intended all wheat seedings are estimated to be 5.43 million acres, up 1% from last year. Even though seedings are expected to be up from last year, there is a lot of uncertainty regarding this spring's actual planting of small grain crops. Intended acreage may change based on the condition of the winter wheat crop this spring and precipitation received through planting. **Winter wheat** seedings remained unchanged from the December estimate at 1.40 million acres, up 8% from last year. Producers are concerned about the emergence of winter wheat planted last fall, as much of it was planted in dry soils and freeze and wind damage during the winter may cause some producers to abandon acreage. **Spring wheat** producers expect to seed 3.5 million acres in 2002, down 1% from last year, but acreage could change if a large amount of winter wheat is abandoned and replanted to spring wheat. **Durum wheat** seedings, at 530,000 acres, are expected to be up 4% from a year ago. If realized, this would be the largest durum wheat seedings since 1957 when 600,000 acres were seeded.

Montana **barley** producers intend to plant an estimated 1.25 million acres, up 14% from last year. The intended seeded acreage for **oats** is expected to be 135,000 acres, up 5,000 acres from the previous year. Growers intend to harvest 65,000 acres of the 2002 oat crop for grain, 5,000 acres more than a year ago. **Corn** growers intend to plant 65,000 acres, unchanged from last year. Farmers intend to plant an estimated 59,500 acres of **sugar beets**, up 4% from 2001. The area planted to **dry beans** is expected to be 30,000 acres, down 22% from last year. An estimated 2.2 million acres of **hay** are expected to be harvested, which is 250,000 acres less than last year. Acreage cut for hay may change significantly if drought conditions continue and CRP land is opened for haying and small grains are harvested for hay due to abandonment.

United States all wheat planted area is expected to total 59.0 million acres in 2002. This is down 1% from 2001 and the lowest level since 1972. Area planted to **durum wheat** is intended to total 2.84 million acres, down 2% from 2001. The 2002 **other spring wheat** planted acreage is estimated at 15.1 million acres, down 3% from last year. Of the total, about 14.2 million acres are Hard Red Spring wheat. **Winter wheat** planted area for the 2002 crop is 41.1 million acres, nearly identical to the previous year's acreage. This is the lowest acres seeded to winter wheat since 1971. Of the total, about 29.3 million acres are Hard Red Winter, 8.4 million acres Soft Red Winter, and 3.4 million acres White Winter.

Barley growers in the United States intend to seed 5.08 million acres for 2002, up 2% from the record low of 4.97 million acres seeded a year ago. Increases in 11 States were partially offset by declines in 8 States.

Acres of **oats** seeded and to be seeded for the 2002 crop year in the United States is expected to total 5.13 million acres, up 16%, or 726,000 acres, from last year's final planted acres. Growers expect to harvest 2.53 million acres for grain, 33% more than the final 2001 harvested acreage of 1.91 million. If intentions are realized, planted and harvested acres would be the highest since 1995. Planting intentions for 2002 are higher than last year's final planted acreage in 17 States.

Hay producers expect to harvest 63.7 million acres of hay in 2002, up less than 1% from 2001. Increases in 21 States are expected to offset declines in 18 States. Area planted to **sugar beets** for the 2002 crop year is expected to total 1.42 million acres, 3% above the 2001 planted acres. If intentions are realized, acreage will increase in 8 of the 12 sugarbeet producing States, especially in Idaho and Minnesota, where acreage is expected to be up 14,000 and 12,000 acres, respectively.

Area planted to **dry beans** for the 2002 crop year is expected to total 1.77 million acres, up 24% from last year and less than 1% above 2000. U.S. **corn** growers intend to plant 79.0 million acres of corn for all purposes in 2002, up 4% from 2001 but down 1% from 2000. Expected acreage is up in many areas of the United States and in virtually all areas of the Corn Belt.

March 1, 2002 Grain Stocks

Stocks of all wheat in Montana on March 1, 2002 were 82.9 million bushels, down 11 percent from a year ago. All wheat stocks stored on the farm amounted to 62.0 million bushels, down 13 percent from a year ago. All wheat stored off-farm amounted 20.9 million bushels, down 5 percent from a year ago. All spring wheat stocks, at 60.6 million bushels, were down 1 percent from last year and accounted for 73 percent of the total wheat stocks. Winter wheat stocks were down 30 percent from a year ago to 22.3 million bushels and is the lowest March 1 stocks since 1995. Durum wheat stocks were estimated at 6.6 million bushels, down 8 percent from last year. All wheat disappearance for the December - February 2002 quarter was down 36 percent from the same quarter last year to 26.0 million bushels. This is compared with 40.9 million last year.

Barley stocks in all positions on March 1, 2002 were 15.0 million bushels, down 11 percent from a year ago. Barley stored on-farm was 8.0 million bushels, down 11 percent from last year. Off-farm storage of barley was down 12 percent a year ago to 7.0 million bushels. Oats stocks in all positions were estimated at 1.9 million bushels, down 3 percent from last year. On-farm stocks of oats were 1.7 million bushels down 6 percent from 1.8 million stored a year ago. Oats stored off-farm were up 36 percent from last year to 0.15 million bushels.

United States, all wheat stored in all positions on March 1, 2002 totaled 1.21 billion bushels, down 10 percent from a year ago. On-farm stocks are estimated at 339 million bushels, down 12 percent from last year. Off-farm stocks, at 872 million bushels, are down 9 percent from a year ago. The indicated December 2001 - February 2002 disappearance is 413 million bushels, down 12 percent from the same period a year earlier. Durum wheat stocks in all positions on March 1, 2002 totaled 51.9 million bushels, down 29 percent from a year ago. On-farm stocks, at 30.2 million bushels, are down 32 percent from March 1, 2001. Off-farm stocks totaled 21.7 million bushels, down 24 percent from a year ago. The indicated December 2001 - February 2002 disappearance of 24.7 million bushels is down 22 percent from the same period a year earlier.

Barley stocks in all positions in the United States on March 1, 2002 totaled 142 million bushels, down 13 percent from March 1, 2001. On-farm stocks are estimated at 46.0 million bushels, 22 percent below a year ago. Off-farm stocks, at 95.7 million bushels, are 8 percent below March 2001. Indicated disappearance during the December 2001 - February 2002 quarter totaled 53.4 million bushels, down 20 percent from the same period a year earlier.

Oats stored in all positions on March 1, 2002 totaled 92.8 million bushels, 16 percent below the stocks on March 1, 2001. Of the total stocks on hand, 39.8 million bushels were stored in on-farm facilities, 29 percent below the previous year. Off-farm stocks totaled 53.0 million bushels, 2 percent below a year earlier. Indicated disappearance during the December 2001 - February 2002 quarter totaled 21.4 million bushels, 37 percent less than the same period a year ago.

1/ Terminals, mills, interior elevators. 2/ Montana stocks for winter wheat and all spring wheat are made possible through funds provided by the Montana Wheat & Barley Committee. 3/ Included in all spring wheat and all wheat. 4/ Not included in order to avoid disclosing individual operations. * Revised.

February Agricultural Prices Received

February full month crop prices were lower compared with January 2002, except for oats and feed barley. Montana's winter wheat average price was $3.03 per bushel, down $0.07 from January; spring wheat was $0.06 lower at $2.98 per bushel; and durum wheat prices fell $0.08 to $3.92 per bushel. The average price received for oats rose $0.20 to $2.16 per bushel. Feed barley prices were up $0.03 from the previous month to $1.97, while malt barley prices were down $0.03 to $2.97 per bushel.

The mid-March price for alfalfa hay was down $2.00 to $92.00 per ton and all other hay decreased $5.00 to $85.00 per ton. The mid-March winter wheat price averaged $3.00 per bushel; spring wheat was $3.10; durum wheat was $3.95; oats was $2.15; feed barley was $2.00; and malt barley averaged $3.05.

Livestock prices for the full month of February were mixed compared with the previous month. Steer and heifer prices were down $0.40 to $83.80 per cwt, but cows were up $2.30 to $39.50. The average price for calves rose $1.00 to $102.00 per cwt. Sheep prices decreased $1.00 to $31.50 per cwt and lamb prices were down $0.20 to $69.70 per cwt. Milk prices were down $1.10 per cwt from last month to $13.20 per cwt. Steer and heifer prices for mid-March averaged $86.00 per cwt.; cows averaged $43.60 per cwt.; calves averaged $104.00 per cwt.; and milk prices averaged $13.60 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $2.75, down $0.06, spring wheat was $2.85, down $0.03; durum wheat was $3.49, unchanged; the all barley price was $2.21 up $0.11, and steer and heifer prices were $73.60, up $2.40 per cwt.

The U.S. mid-March winter wheat price was $2.76 per bushel, spring wheat was $2.87 per bushel, durum wheat was $3.11 per bushel, all wheat was $2.81 per bushel, malt barley was $2.67 per bushel, feed barley was $1.77 per bushel, and all barley was $2.26. Steer and heifer prices were $ 75.30 per cwt, cow prices were $42.40, calves were $104.00 per cwt., all hog prices were $36.30 per cwt, and all egg prices were $0.685 per dozen.

The preliminary Prices Received by Farmers Index for All Farm Products in March was 106, using a 1990-92=100 base period, up 7 points (7.1 percent) from the February index. A record price for lettuce, along with other increases for eggs, cattle, and tomatoes, more than offset decreased prices for broilers, milk, hogs, and broccoli. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for strawberries, lettuce, milk, and tomatoes more than offset decreased marketings of cattle, oranges, corn, and cotton. Compared with March 2001, the Prices Received Index was up 2 points (1.9 percent). Higher prices for lettuce, strawberries, potatoes, and apples more than offset lower prices for broilers, hogs, cattle, and tomatoes.

United States Index Summary

U.S. Hog Inventory

U.S. inventory of all hogs and pigs on March 1, 2002, was 58.7 million head. This was 2% above March 2001, but 1% below December 1, 2001. Breeding inventory, at 6.24 million head, was up slightly from both March 1, 2001, and last quarter. Market hog inventory, at 52.5 million head, was 2% above last year but 1% below last quarter.

The December 2001-February 2002 U.S. pig crop, at 24.7 million head, was 3% more than 2001, and 1% more than 2000. Sows farrowing during this period totaled 2.83 million head, 3% above last year. The sows farrowed during this quarter represented 46% of the breeding herd. The average pigs per litter was 8.73 pigs saved per litter for the December 2001-February 2002 period, compared to 8.72 pigs last year. Pigs saved per litter by size of operation ranged from 7.30 for operations with 1-99 hogs to 8.80 for operations with more than 5,000 hogs.

U.S. hog producers intend to have 2.90 million sows farrow during the March-May 2002 quarter, 1% above the actual farrowings during the same period in 2001, and slightly above 2000. Intended farrowings for June-August 2002, at 2.90 million sows, are 1% above the same period in 2001, and up slightly from 2000.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 31% of the total U.S. hog inventory, down from 32% last year.

All inventory and pig crop estimates for March 2001 through December 2001 were reviewed using final pig crop, official slaughter, death loss, import, and export data in U.S. level balance sheets. Based on the findings of this review, adjustments of one% were made to the September 1, 2001 inventory, two% to the June-August 2001 pig crop, and one half% to the December 1, 2001 inventory.

Land in Farms 2001

The number of farms and ranches in Montana declined to 26,600 during 2001, 1,000 less than a year earlier. The farms and ranches are sub-grouped by economic sales classes which give a clearer picture of where the changes occurred. There were 11,000 farms in the $1,000 to $9,999 economic sales class, up from 10,400 farms last year. Although many producers in this class left agriculture altogether, the total number of operators increased due to poor economic conditions in 2001. The next economic sales class, $10,000 to $99,999, shows 9,200 farms in 2001 compared with 10,800 in 2000 and the largest economic sales class of $100,000 or more was unchanged from 2000 with 6,400 farms.

The land in farms and ranches is estimated at 56.5 million acres, down 0.2 million acres from 2000. The economic sales breakdown of land in farm and ranches follows: $1,000 to $9,999 - 3.9 million acres compared with 4.3 million in 2000; $10,000 to $99,999 - 14.0 million acres, down from 16.4 million last year; $100,000 or more of sales - 38.6 million acres, up significantly from the 36.0 million acres in 2000. These numbers show that very small producers became less common and that the value of sales declined significantly in all groups which moved producers into lower economic sales classes. The acreage increase in the largest economic sales class reflects the consolidation of operations that were necessary to compete in today's agricultural environment. (Continued on back page)

Wheat & Barley Movement

Montana wheat shipped to out-of-state destinations during the June- November 2001 period, at 34.3 million bushels, was 44% lower than a year ago.

Over 83% of wheat shipped during this period headed west, totaling 28.6 million bushels, down 48% from a year earlier. Movements to eastern destinations also dropped during this period, totaling 1.7 million bushels compared with 2.5 million a year ago. Other and unknown destinations totaled 4.0 million bushels, unchanged from year ago.

Wheat shipped by rail, amounted to 31.2 million bushels, 91% of total shipments. Wheat trucked during this period was 3.1 million bushels compared with 5.2 million bushels last year. The percentage of wheat shipped by truck was 9% of the total, slightly higher than a year ago.

Montana barley shipped to out-of-state destinations during the June - November 2001 period was 8.7 million bushels, down only 3% from the same period last year.

Shipments of barley out of Montana headed for eastern destinations rose from 2.0 million bushels last year to 5.0 million bushels this year. Shipments to western destinations were down from the same period last year, at 2.6 million bushels. Shipments to other and unknown destinations were down 0.9 million bushels from last year to 1.1 million bushels this year.

Barley shipped by rail amounted to 7.3 million bushels, down 0.8 million bushels from last year. Barley hauled by rail was 84% of total movement, down from 90% for the same period last year.

2/ Planted acres less winter wheat replanted to spring wheat.

Agricultural Prices Received for January

January full month crop prices were generally lower compared with December 2001. Montana's winter wheat average price was $3.10 per bushel, down $0.04 from December; spring wheat was $0.09 lower at $3.04 per bushel; and durum wheat prices fell $0.03 to $4.00 per bushel. The average price received for oats fell $0.09 to $1.96 per bushel. Feed barley prices were down $0.02 from the previous month to $1.94, and malt barley prices were up $0.01 to $3.00 per bushel.

The mid-February price for alfalfa hay and all other hay both decreased $1.00 per ton to $94.00 and $90.00 per ton, respectively. The mid-February winter wheat price averaged $3.00 per bushel; spring wheat was $2.98; durum wheat was $3.90; oats was $1.95; feed barley was $1.90; and malt barley averaged $3.00.

Livestock prices for the full month of January were mixed compared with the previous month. Steer and heifer prices were down $1.80 to $84.20 per cwt, but cows were up $2.40 to $37.20. The average price for calves rose $5.60 to $101.00 per cwt. Sheep prices decreased $0.80 to $32.50 per cwt and lamb prices rose $6.20 to $69.90 per cwt. Milk prices were down $0.70 per cwt from last month to $14.30 per cwt. Steer and heifer prices for mid-February averaged $83.20 per cwt.; cows averaged $40.00 per cwt.; calves averaged $101.00 per cwt.; and milk prices averaged $13.80 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $2.81, up $0.02 , spring wheat was $2.88, down $0.08; durum wheat was $3.49, up $0.04; the all barley price was $2.10 down $0.06, and steer and heifer prices were $71.20, up $2.60 per cwt.

The U.S. mid-January winter wheat price was $2.82 per bushel, spring wheat was $2.84 per bushel, durum wheat was $3.26 per bushel, all wheat was $2.85 per bushel, malt barley was $2.57 per bushel, feed barley was $1.76 per bushel, and all barley was $2.19. Steer and heifer prices were $ 74.10 per cwt, cow prices were $40.70, calves were $104.00 per cwt., all hog prices were $38.40 per cwt, and all egg prices were $0.559 per dozen.

United States Index Summary

INDEX (1990-92=100)	January 2001	February 2001	January 2002	February 2002

Land in Farms
(continued from front page)

The number of farms and ranches in the United States in 2001 is estimated at 2.16 million, down 0.7 percent from 2000. The decline in farms and ranches occurred primarily in agricultural operations with sales in the $10,000-$99,999 economic class. This is the second largest decline in farms and ranches since the 1.4% drop in 1991. Total land in farms, at 941.2 million acres, declined 0.2 percent or 1.9 million acres from last year. The average size of farm increased 2 acres from 434 acres in 2000 to 436 acres in 2001. The U.S. number of agricultural operations in the economic sales class $1,000-$9,999 declined 0.6 percent to 1,166,590 in 2001. Farms and ranches with sales in the $10,000-$99,999 economic class decreased 1.2% from 2000 to 642,010 operations. The number of farms and ranches with sales over $100,000 remained unchanged at 349,180. Adverse weather, lower commodity prices, and competition for land continued to contributed to the overall reduction and consolidation of farms and ranches during 2001.

The North Central Region's loss of farms was the largest with a decline of 9,500 operations, 1.2% less than was estimated in 2000. The West Region lost 2,600 farms and ranches, 0.9% fewer than the previous year. The number of farms and ranches declined 1,600 or 0.2% in the South Region and 800 or 0.6% in the Northeast Region. The number of farms and ranches during 2001 declined in 23 States, remained unchanged in 22 States, and increased in five States.

2001 Montana and U.S. Honey Production

Honey produced in Montana by producers with five or more colonies during 2001 was 13.9 million pounds of honey, up 3.0 million pounds from the revised 2000 production. The amount of honey production and colonies includes production by colonies that were in the state for part of the year. There were 136,000 colonies producing honey in 2001, compared with 124,000 colonies in 2000. The honey yield per colony was 102 pounds, up 14 pounds from a year ago. While honey yields by smaller producers were affected by the drought, larger producers and producers in the state part of the year did much better resulting in higher yields. Stocks on hand on December 15, 2001 totaled 4.6 million pounds, down 0.1 million pounds from 2000. The improved honey prices resulted in lower percentage of the honey crop on hand December 15, 2001.

Prices for Montana honey increased 6 cents per pound from last year to 65 cents per pound in 2001. The increased prices and production resulted in the value of honey production in 2001 rising 40 percent from last year to 9.0 million dollars.

U.S. honey production in 2001 from producers with five or more colonies totaled 186 million pounds, down 16 percent from 2000. Honey production in 2001 was the lowest since 1989, when 181 million pounds was produced with a yield per colony of only 51.2 pounds. There were 2.51 million colonies producing honey in 2001, down 4 percent from 2000. Yield per colony averaged 74.0 pounds, down 10.1 pounds from the 84.1 pounds in 2000. Colonies which produced honey in more than one State were counted in each State and yields per colony may therefore be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 64.8 million pounds on December 15, 2001, down 24 percent from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

Prices for the 2001 U.S. crop averaged 66.9 cents per pound, up 12 percent from 59.7 cents in 2000. Prices are based on retail sales by producers and sales to private processors and cooperatives. State level honey prices reflect the portions of honey sold through retail, co-op and private channels. U.S. honey prices for each color class are derived by weighing quantities sold for each marketing channel at the U.S. level. Honey prices for 2001 were higher than the previous year for all marketing channels and all color classes except All Other Honey, Area Specialties.

2001 Crop Values

The value of Montana's 2001 **all wheat** crop fell 23% from 2000 to $316.7 million. Total production was down 29%, while the season average price increased 28 cents per bushel. The 2001 season average price for all wheat was $3.30 per bushel compared with $3.02 last season.

The estimated value of Montana's **winter wheat** crop decreased 52% from last year to $61.2 million. The preliminary season average price was up 33 cents to $3.20 per bushel. **Spring wheat's** value of production was estimated at $209.8 million, down 11% from 2000. The season average price increased 17 cents to $3.20, but with 2001 production being the smallest since 1990 the overall crop value was reduced. **Durum wheat's** season average price increased 33 cents from 2000 to $3.85. The total crop value of $45.7 million was down 1% from 2000 and is the second highest durum wheat value of production on record.

Total value of production for **barley** was estimated at $79.7 million, down 12% from the previous year. The 2001 season average price, at $2.70, was up 32 cents from 2000, but significantly lower production in 2001 resulted in the lower production value.

The season average price for **all hay** increased $5.00 from last year to $90.50 per ton. The value of production was up 33% to $397.2 million. **Alfalfa hay's** 2001 season average price was estimated at $92.50, up $6.00 from last year while **other hay's** season average price increased $4.50 to $82.50.

Alfalfa Seed Production Down 36 Percent From 2000

Alfalfa seed production for 2001 was estimated at 3.30 million pounds, down 1.88 million pounds from 2000. Harvested acreage, at 9,000 acres, was down from 19,000 acres in 2000. The state average yield was estimated at 373 pounds per acre, up from 273 pounds per acre a year ago. Irrigated yields averaged 477 pounds per acre, up from 391 pounds per acre in 2000 and non-irrigated yields averaged 44 pounds per acre, down 47 pounds per acre from last year.

Producers used an average 2.1 gallons of leaf cutter bees per acre on all acres harvested for alfalfa seed in 2001, compared with 1.5 gallons per acre in 2000. Leaf cutter bees were used on 84% of the reported irrigated acres at the rate of 3.1 gallons per acre and 21% of the reported non-irrigated acres at the rate of 2.7 gallons per acre. Alfalfa seed growers who utilized leaf cutter bees to pollinate their crops produced an average of 52% more seed per acre than those that did not.

Proprietary varieties made up 88% of this year's production, the same as last year. Common uncertified varieties accounted for 11% of the production and common certified varieties represented 1%.

The average price received for the 2001 crop was $1.27 per pound, up 8 cents from 2000's average price.

Montana's south-central district continued to produce most of the state's alfalfa seed with 51.3% of total production and the north-central district is the second largest production area with 26.7%.

U.S. Cattle on Feed Down 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.6 million head on February 1, 2002. The inventory was 3% below February 1, 2001 and slightly below February 1, 2000.

Placements in feedlots during January totaled 2.17 million, 4% below 2001 and 2% below 2000. Net placements were 2.08 million. During January, placements of cattle and calves weighing less than 600 pounds were 381,000, 600-699 pounds were 614,000, 700-799 pounds were 734,000, and 800 pounds and greater were 437,000.

Marketings of fed cattle during January totaled 2.08 million, up 2% from both 2001 and 2000. Other disappearance totaled 89,000 during January, 14% above 2001 and 29% above 2000.

Wheat, Barley, and Oat County Estimates for 2001 Now Available

County estimates for barley, oats, all wheat, winter wheat, durum wheat and spring wheat are now available. Estimates are made for acres planted, acres harvested for grain, average yield per harvested acre and production. Estimates are made by practices for irrigated crops and non-irrigated crops as well as crops that were re-cropped or continuously cropped and non-irrigated crops harvested from previously fallowed acres. Oats county estimates are estimated by practice of irrigated and non-irrigated only. These estimates are available on our website http:// www.nass.usda.gov/mt/ or they can be requested by calling or writing our office.

U.S. and Canadian January Cattle Inventory Down 1 Percent

This data is a result of a joint effort by Statistics Canada and NASS to release the number of cattle and calves by class and calf crop for both countries within one publication. This information was requested by the U.S. cattle industry to provide producers additional information about potential beef supplies. U.S. inventory numbers were previously released on February 1, 2002.

All cattle and calves in the **U.S. and Canada combined** totaled 109.7 million head on January 1, 2002, 1 percent below a year earlier. All cows and heifers that have calved, at 47.6 million head, were 1 percent below a year ago.

All cattle and calves in the **United States** as of January 1, 2002, totaled 96.7 million head, 1 percent below the 97.3 million head on January 1, 2001 and 2 percent below the 98.2 million head two years ago. All cows and heifers that have calved, at 42.2 million head, were 1 percent below both the 42.6 million head on January 1, 2001 and the 42.8 million head two years ago.

All cattle and calves in **Canada** as of January 1, 2002, totaled 13.0 million head, down slightly from the 13.0 million head on January 1, 2001, but 1 percent above the 12.8 million head two years ago. All cows and heifers that have calved, at 5.4 million head, were 1 percent above the 5.3 million head on January 1, 2001, and 2 percent above two years ago.

January 2002 Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during January 2002, down 16 percent from January 2001 and up 1 percent from the previous month. Cattle slaughter totaled 1,700 head, down 300 head from a year ago. The average live weight, at 1,138 pounds, increased 12 pounds from last year.

During January, there were 1,100 hogs slaughtered, 300 less than a year ago. The average live weight, at 252 pounds, was 1 pound less than last year. The number of sheep slaughtered, at 300 head, was the same as January 2001. The average live weight was also unchanged from last year at 125 pounds.

Commercial red meat production for the United States totaled 4.08 billion pounds in January, up 4 percent from the 3.93 billion pounds produced in January 2001 and a new record high for January.

Beef production, at 2.33 billion pounds, was 6 percent above the previous year and a new record for January. Cattle slaughter totaled 3.06 million head, up 2 percent from January 2001. The average live weight was up 34 pounds from the previous year, at 1,260 pounds.

Veal production totaled 17 million pounds, 5 percent below January a year ago. Calf slaughter totaled 87,400 head, down 4 percent from January 2001. The average live weight was 1 pound below last year, at 321 pounds.

Pork production totaled 1.72 billion pounds, up 1 percent from the previous year and a new record for January. Hog kill totaled 8.66 million head, virtually unchanged from January 2001. The average live weight was 3 pounds above the previous year, at 268 pounds.

Lamb and mutton production, at 18 million pounds, was down 7 percent from January 2001. Sheep slaughter totaled 255,900 head, 5 percent below last year. The average live weight was 140 pounds, down 3 pounds from January a year ago.

Montana February 1 Potato Stocks Down 8 Percent, U.S. Down 14 Percent

Montana potato producers held 2.75 million cwt. of potatoes in storage on February 1, 2002, down 8 percent from a year ago. The stocks represent 90 percent of the total 2001 production, compared with last year's stocks representing 86 percent of the 2000 total production.

The 15 major potato States held 202 million cwt of potatoes in storage February 1, 2002, down 14 percent from last year and 3 percent below 2000. Storage accounts for 51 percent of the 2001 fall storage States' production, the same percentage as a year ago. This year's storage holds more russets, but fewer round and whites than a year earlier. Disappearance of 192 million cwt, is down 14 percent from last year. Processors in the 9 major States used 96.5 million cwt of potatoes this season, down 15 percent from a year ago.

Western States held 144 million cwt of potatoes in storage on February 1, 2002, down 16 percent from last year and 4 percent below 2000. Idaho's potato stocks are down 13 percent from a year ago, while Washington is down 10 percent and Oregon is off 30 percent. Colorado's stocks are down 27 percent and Montana's dipped 8 percent from a year ago. California's potato holdings are down 59 percent from a year ago.

January Pig Crop Up 4 Percent

The January 2002 U.S. pig crop at 8.17 million head, was 4 percent more than the previous year. Sows farrowing during this period totaled 929 thousand head, 3 percent above last year. The average pigs per litter for January rose to 8.80, compared to 8.71 last year.

The U.S. inventory of sows and gilts on February 1, 2002, was 6.00 million head, 1 percent below February 1, 2001. U.S. sows and gilts bred during January totaled 1.19 million head, up 2 percent from the previous year.

January Milk Production in 20 Major States Up 1.8 Percent

Milk production in the 20 major States during January totaled 12.3 billion pounds, up 1.8% from January 2001. December revised production, at 12.0 billion pounds, was up 1.2% from December 2000. The December revision represented an increase of 0.3% or 34 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,585 pounds for January, 36 pounds above January 2001. The number of cows on farms in the 20 major States was 7.74 million head, 44,000 head less than January 2001, and 10,000 head less than December 2001. 2001

The annual production of milk for the U.S. during 2001 was 165.3 billion pounds, 1.3% below 2000. This was the first year of decreased milk production since 1996. Revisions to 2000 production decreased the annual total by less than 0.1%. Revised 2001 production was virtually unchanged from last month's publication. Production per cow in the U.S. averaged 18,139 pounds for 2001, 62 pounds below 2000. Average annual rate of milk production per cow has increased 16% since 1992. The average number of milk cows on farms in the U.S. during 2001 was 9.12 million head, down 1.0% from 2000. Average number of milk cows was revised down 4,000 head for 2000, and 5,000 head for 2001 from the previous estimate.

Hired Workers Up 7 Percent, Wage Rates Up Over 3 Percent From a Year Ago

There were 914,000 hired workers on the Nation's farms and ranches the week of January 6-12, 2002, up 7% from a year ago. Of these hired workers, 731,000 workers were hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 183,000 workers. Migrant workers accounted for 7.6% of the January hired workforce compared with 9.6% last year.

Farm operators paid their hired workers an average wage of $8.96 per hour during the January 2002 survey week, up 30 cents from a year earlier. Field workers received an average of $8.25 per hour, up 49 cents from last January, while livestock workers earned $8.25 per hour compared with $8.07 a year earlier. The field and livestock worker combined wage rate at $8.25 was up 38 cents from last year. The number of hours worked averaged 38.6 hours for hired workers during the survey week compared with 37.3 hours a year ago.

The largest increases in number of hired farm workers over last year occurred in the Corn Belt II (Iowa and Missouri), Delta (Arkansas, Louisiana, and Mississippi), Appalachian I (North Carolina and Virginia), and Southeast (Alabama, Georgia, and South Carolina) regions.

The largest decreases in number of hired farm workers from a year ago were in the Northern Plains (Kansas, Nebraska, North Dakota, and South Dakota), Corn Belt I (Illinois, Indiana, and Ohio), Appalachian II (Kentucky, Tennessee, and West Virginia), and Southern Plains (Oklahoma and Texas) regions.

Montana and United States Grazing Rates Increase

The average grazing fees paid by Montana producers for grazing livestock on privately owned, non-irrigated grazing land rose significantly for all methods in 2001. The shortage of pasture and the effects of the prolonged drought was a big factor in the increases this year. The average amount paid for grazing livestock on an AUM (animal unit month) basis was $14.90 per month, up 80 cents from last year. Cattle producers paid $16.70 per cow-calf pair in 2001, up $1.10 from the previous year. The average per head rate was $16.00 per month, up $1.30 from last year.

In the 17 States that estimate grazing fees in the United States, the average charge on an AUM basis was $11.90 per month in 2001, up 40 cents from the previous year. Cow-calf rates averaged $13.90 per month, up 20 cents and per head rates averaged $12.40 per month, up 50 cents from 2000.

All grazing fees are for privately, owned non-irrigated grazing land. Rates charged for public land, irrigated land, and harvested cropland were excluded. The average AUM rate includes reported AUM rates plus reported cow-calf rates that were converted to an AUM basis. The cow-calf rate was converted to AUM basis using the following formula (1 AUM=cow-calf *0.833).

January Egg Production Up 2 Percent

U.S. egg production totaled 7.25 billion during January 2002, up 2 percent from last year. Production included 6.16 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 63.0 million were egg-type. The total number of layers during January 2002 averaged 338 million, up 1 percent from the total average number of layers during January 2001. January egg production per 100 layers was 2,143 eggs, up one percent from the 2,128 eggs in January 2001.

Cattle and Calf Inventory

Montana's cattle and calf inventory was down 4% from a year ago to 2.45 million head on January 1, 2002. Prolonged drought, poor pasture and range conditions, and continued tight feed supplies have caused producers to cut back their herds and, in many cases, to liquidate the entire herd. Inventories of beef cows that have calved, beef cow replacements, and calves weighing less than 500 lbs were all significantly reduced this year.

The inventory of beef cows that had calved on January 1, 2002 was down 5% from a year ago to 1.451 million head. This is the lowest inventory of beef cows since 1991 when there were 1.396 million beef cows on hand. The number of milk cows in the state was unchanged from a year ago at 19,000 head. There were 1.55 million calves born during 2001, down 4% from the previous year.

Beef heifer replacements, weighing 500 pounds or more, were down 8% from the previous year to 370,000 head. Milk heifer replacements increased 3,000 head from last year to 13,000 head. The number of other heifers weighing 500 lbs or more, increased 1% from last year to 177,000 head.

The inventory of steers weighing 500 lbs or more, rebounded 17% from last year's low inventory to 245,000 head. The inventory of calves weighing less than 500 lbs, at 75,000 head, was down 17% from last year. This is the lowest inventory of calves weighing less than 500 lbs on record for January 1. Inventory of bulls, weighing 500 pounds or more, dropped 9% from last year to 100,000 head. The number of cattle and calves on full feed that will be sent directly to slaughter rebounded from last year's low inventory. The inventory of cattle on feed was up 17% from a year ago to 70,000 head.

There were 13,300 operations in Montana during 2001 with one or more head, down 8% from last year. The number of beef cow operations with one or more beef cows decreased 7% to 11,900, while the number of operations with one or more milk cows remain unchanged at 650.

All cattle and calves in the United States as of January 1, 2002, totaled 96.7 million head, 1% below the 97.3 million on January 1, 2001 and 2% below the 98.2 million two years ago. All cows and heifers that have calved, at 42.2 million, were 1% below both the 42.6 million on January 1, 2001 and the 42.8 million two years ago. Beef cows, at 33.1 million, were down 1% from both January 1, 2001 and January 1, 2000. Milk cows, at 9.11 million, were down 1% from both January 1, 2001 and two years ago.

Other class estimates on January 1, 2002 and the change from January 1, 2001, are as follows: All heifers 500 pounds and over, 19.7 million, down slightly; Beef replacement heifers, 5.56 million, down slightly; Milk replacement heifers, 4.06 million, up slightly; Other heifers, 10.1 million, down 1%; Steers weighing 500 pounds and over, 16.8 million, up 2%; Bulls weighing 500 pounds and over, 2.24 million, down 1%; Calves under 500 pounds, 15.8 million, down 3%; Cattle and calves on feed for slaughter in all feedlots, 13.9 million, down 2%.

The 2001 United States calf crop was estimated at 38.3 million head, down 1% from both 2000 and 1999. Calves born during the first half of the year are estimated at 28.1 million, down 1% from both 2000 and 1999.

The number of operations in United States with cattle totaled 1.05 million during 2001, down 2% from 2000 and 4% below 1999. Beef cow operations in 2001 were down 2% from 2000 and 4% below 1999. Milk cow operations were 7% below last year and 12% below two years ago.

Sheep Inventory and Wool Production

Montana's sheep and lamb inventory set a new record low at 335,000 head on January 1, 2002, down 7% from last year. Drought, unstable prices, and predators in 2001 were key factors in the continued decline.

Breeding sheep and lamb numbers decreased 30,000 head from last year to 300,000 head. Ewes one year and older were down 12% to 232,000 head. Rams one year and older, at 8,000 head, were down 1,000 head from the previous year. Replacement lambs, at 60,000 head, were up 4,000 head from a year ago. The 2001 lamb crop was 340,000 head, a decrease of 7% from the 2000 lamb crop.

There were 35,000 market sheep and lambs on hand January 1. There were 1,800 sheep and lamb operations with 1 or more head in Montana during 2001, 200 less than a year ago.

Montana wool growers produced 3.0 million pounds of wool during 2001, down 10% from 2000. The 2001 average price per pound of wool increased 8 cents to 45 cents per pound, which increased the value of all wool produced by 9% for a total value of $1.3 million dollars. The total head shorn decreased 8% from 2000 to 318,000 head. The average fleece weight decreased from 9.6 pounds in 2000 to 9.4 pounds in 2001.

All sheep and lamb inventory in the United States on January 1, 2002, totaled 6.69 million head, down 4% from 2001 and 5% below two years ago. The inventory has trended down since peaking at 56.2 million head in 1942. Breeding sheep inventory declined to 4.91 million head on January 1, 2002, down 1% from 4.97 million head on January 1, 2001. Ewes one year old and older, at 3.98 million head, were 3% below last year. Market sheep and lambs on January 1, 2002, totaled 1.77 million head, down 11% from January 1, 2001. Market lambs comprised 96% of the total. Twenty-five perent were lambs under 65 pounds, 17% were 65 - 84 pounds, 23% 85 - 105 pounds, 31% were over 105 pounds, and 4% were market sheep.

The 2001 lamb crop of 4.50 million head was down 3% from 2000 and established a new record low. The 2001 lambing rate was 110 per 100 ewes one year old and older on January 1, 2001, compared with 109 in 2000. The number of operations with sheep during 2001 totaled 65,120, down 1% from 2000 and 3% from 1999.

Shorn wool production in the United States during 2001 was 43.0 million pounds, down 7% from 2000. Sheep and lambs shorn totaled 5.69 million head, down 7% from 2000. The average price paid for wool sold in 2001 was $0.36 per pound for a total value of $15.3 million dollars, down slightly from $15.4 million dollars in 2000.

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys.

Agricultural Prices Received for December

December full month crop prices were generally higher compared with November 2001. Montana's winter wheat average price was $3.14 per bushel, up $0.02 from November; spring wheat was $0.02 lower at $3.13 per bushel; and durum wheat prices rose $0.06 to $4.03 per bushel. The average price received for oats rose $0.06 to $2.05 per bushel. Feed barley prices were up $0.01 from the previous month to $1.96, and malt barley prices were up $0.07 to $2.99 per bushel.

The mid-January price for alfalfa hay was $95.00 per ton, unchanged from the previous month, but all other hay increased $4.00 per ton to $91.00 per ton. The mid-January winter wheat price averaged $3.10 per bushel; spring wheat was $3.16; durum wheat was $3.95; oats was $2.05; feed barley was $1.92; and malt barley averaged $3.08.

Livestock prices for the full month of December were mostly higher compared with the previous month. Steer and heifer prices were down $3.50 to $86.00 per cwt, but cows were up $0.90 to $34.80. The average price for calves rose $1.20 to $95.40 per cwt. Sheep prices increased $7.70 to $33.30 per cwt and lamb prices rose $12.00 to $63.70 per cwt. Milk prices were down $0.60 per cwt from last month to $15.00 per cwt. Steer and heifer prices for mid-January averaged $85.60 per cwt.; cows averaged $35.80 per cwt.; calves averaged $102.00 per cwt.; and milk prices averaged $14.30 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $2.79, down $0.02; spring wheat was $2.96, up $0.05; durum wheat was $3.45, up $0.37; the all barley price was $2.16, up $0.15, and steer and heifer prices were $68.60, up $0.80 per cwt.

The U.S. mid-January winter wheat price was $2.89 per bushel, spring wheat was $2.96 per bushel, durum wheat was $3.28 per bushel, all wheat was $2.94 per bushel, malt barley was $2.56 per bushel, feed barley was $1.77 per bushel, and all barley was $2.06. Steer and heifer prices were $ 70.50 per cwt, cow prices were $37.10, calves were $100.00 per cwt., all hog prices were $36.50 per cwt, and all egg prices were $0.623 per dozen.

The preliminary All Farm Products Index of Prices Received by Farmers in January was 96, using a 1990-92=100 base period, up 1 point (1.0 percent) from the December Index. Price increases for tomatoes, lettuce, cattle, and hogs more than offset decreased prices for cotton, broccoli, turkeys, and milk. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher marketings for cattle, corn, soybeans, and hogs more than offset decreased marketings of tobacco, grapes, cotton, and milk. Compared with January 2001, the All Farm Products Index was unchanged. Higher prices for lettuce, broilers, oranges, and potatoes offset lower prices for cattle, soybeans, rice, and onions.

United States Index Summary

INDEX (1990-92=100)	December 2000	January 2001	December 2001	January 2002
Prices Received	99	96	95	96

December Egg Production

U.S. egg production totaled 7.40 billion during December 2001, up 2 percent from last year. Production included 6.33 billion table eggs and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 62.0 million were egg-type. The total number of layers during December 2001 averaged 339 million, up 2 percent from the total average number of layers during December 2000. December egg production per 100 layers was 2,187 eggs, slightly below the 2,193 eggs in December 2000.

December Pig Crop

The December 2001 U.S. pig crop at 8.07 million head, was 3 percent more than the previous year. Sows farrowing during this period totaled 917 thousand head, 2 percent above last year. The average pigs per litter for December rose to 8.80, compared to 8.66 last year. The U.S. inventory of sows and gilts on January 1, 2002, was 6.02 million head, slightly below January 1, 2001. U.S. sows and gilts bred during December totaled 1.19 million head, up slightly from the previous year.

Chicken Inventory and Egg Production

There were 480,000 total chickens on Montana farms and ranches on December 1, 2001, up 4 percent from last year. The December 1, 2001 inventory included 340,000 layers 20 weeks old and older, 72,000 pullets between 13 and 20 weeks old, and 67,000 pullets 13 weeks and under. The total value of all chickens on December 1, 2001 was $1.44 million, up 4 percent from last year. The average value per bird, at $3.00, remained unchanged from last year.

Montana chickens produced 95 million eggs during the year, up 13 percent from last year. The state had an average of 321,000 layers in 2001, up 10 percent from a year ago. The average production per layer on hand was 296 eggs, up 2 percent from the previous year.

The U.S. total number of chickens on hand on December 1, 2001 (excluding commercial broilers) was 441 million birds, up 1 percent from last year. Egg production during the year ending November 30, 2001 totaled a record high 85.6 billion eggs, up 1 percent from the previous year's total of 84.4 billion eggs. Table egg production, at 72.7 billion eggs, increased 2 percent from 2000. Hatching egg production, at 12 billion eggs, decreased slightly.

Layer numbers during 2001 averaged 335 million, up 2 percent from the year earlier. The annual average production per layer on hand in 2001 was 256 eggs, down slightly from the 2000 average of 257. Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 2001, totaled 381 million, up 3 percent from December 1, 2000. Of the 381 million potential layers, 89 percent were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks.

The total value of all chickens on December 1, 2001 was $1.07 billion, up 1 percent from December 1, 2000. The average value decreased from $2.44 per bird on December 1, 2000, to $2.42 per bird on December 1, 2001.

Small Grain Summary

Montana's 2001 winter wheat production was estimated at 19.14 million bushels, down 57% from last year's crop. This is the smallest winter wheat crop produced in the state since 1940, when just 17.46 million bushels were harvested. Producers seeded 1.3 million acres, but harvested only 870,000 acres, 480,000 acres less than were harvested in 2000. The 2001 average yield was 22.0 bushels per acre, which is 11 bushels lower than last year's average. The final yield was moved up 2 bushels from the August 1 forecast because more acres were abandoned than expected which had the effect of raising the average yield of the acres harvested. Hard red winter represented 99% of the acreage for 2000 and 98% for 2001 crop years, the balance was white wheat.

Spring wheat production in Montana was estimated at 65.55 million bushels, down 15% from 2000. The 2001 crop was the smallest since 53.9 million bushels were produced in 1990. Final seeded acreage was 3.55 million acres, 200,000 acres more than 2000 and 150,000 more than earlier forecast. Producers harvested 2.85 million acres, down 400, 000 acres from the earlier forecast and 250,000 acres less than last year. Abandonment was much higher than anticipated especially in the north central region. Yields averaged 23.0 bushels per acre, down 2 bushels from 2000 because of the drought conditions that persisted for much of the growing season across the state. Hard red spring represented 99% of the acreage for 2000 and 2001 crop years, the balance was white wheat.

Montana **durum wheat** growers seeded 510,000 acres and harvested 495,000 acres in 2001. With the lack of spring precipitation in the Northeastern part of the state where a majority of the durum wheat is grown, producers saw poor yields. The average yield for Montana was 24.0 bushels per acre, 4 bushel less than 2000. Total production was estimated at 11.88 million bushels, down 9% from last year.

Barley planted acreage in Montana decreased to 1.10 million acres, 150,000 acres less than 2000. Producers harvested 720,000 acres, 230,000 acres less than were harvested for grain in 2000. Final yields averaged 41.0 bushels per acre, up 1 bushel from last year, as well as from our previous forecast. Production was estimated at 29.5 million bushels, down 22% from last year. The 2001 production is the smallest crop since 1961 when 26.4 million bushels was realized.

Oat production in Montana was estimated at 2.40 million bushels, down 8% from last year. Planted acreage was estimated at 130,000 acres, equal with last year. Harvested acreage was set at 60,000 acres, up 10,000 from 2000. Yields averaged 40.0 bushels per acre, 12.0 bushels below last year.

U.S. Cattle on Feed Down 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.6 million head on January 1, 2002. The inventory was 2 percent below January 1, 2001 but 1 percent above January 1, 2000. The inventory included 7.10 million steers and steer calves, up 1 percent from the previous year. This group accounted for 61 percent of the total inventory. Heifers and heifer calves accounted for 4.38 million head, down 7 percent from January 1, 2001.

Placements in feedlots during December totaled 1.58 million, 7 percent below 2000 and 4 percent below 1999. Net placements were 1.49 million. During December, placements of cattle and calves weighing less than 600 pounds were 418,000, 600-699 pounds were 475,000, 700-799 pounds were 413,000, and 800 pounds and greater were 272,000.

Marketings of fed cattle during December totaled 1.81 million, 3 percent above 2000 but 2 percent below 1999.

Other disappearance totaled 93,000 during December, 2 percent below 2000 but 3 percent above 1999.

Cattle on Feed in Historic 7 States Down 2 Percent

Cattle on feed January 1, 2002, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.9 million, down 2 percent from the previous year but 2 percent above January 1, 2000. The inventory included 6.08 million steers and steer calves, up 2 percent from the previous year. This group accounted for 61 percent of the total inventory. Heifers and heifer calves accounted for 3.77 million head, down 8 percent from January 1, 2001.

Placements in feedlots during December totaled 1.33 million, 8 percent below 2000 and 6 percent below 1999.

Marketings during December totaled 1.55 million, 3 percent above 2000 but 3 percent below 1999.

Other disappearance during December was 78,000 head, up 1 percent from 2000 and 4 percent above 1999.

December 2001 Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during December 2001, down 13 percent from December 2000 and unchanged from the previous month. Cattle slaughter totaled 1,600 head, down 200 head from a year ago. The average live weight, at 1,138 pounds, increased 10 pounds from last year.

During December, there were 1,200 hogs slaughtered, 200 less than a year ago. The average live weight, at 254 pounds, was 4 pounds less than last year. The number of sheep slaughtered, at 400 head, was up 100 head from the previous year. The average live weight decreased 1 pound from last December to 123 pounds.

December 2001 Red Meat Production (continued)

Commercial red meat production for the United States totaled 3.81 billion pounds in December, up 5 percent from the 3.61 billion pounds produced in December 2000. Beef production, at 2.11 billion pounds, was 6 percent above the previous year. Cattle slaughter totaled 2.78 million head, up 2 percent from December 2000. The average live weight was up 31 pounds from the previous year, at 1,255 pounds.

Veal production totaled 16 million pounds, 12 percent below December a year ago and a new record low for December. Calf slaughter totaled 84,300 head, down 8 percent from December 2000. The average live weight was 10 pounds below last year, at 309 pounds.

Pork production totaled 1.67 billion pounds, up 6 percent from the previous year. Hog kill totaled 8.42 million head, 4 percent above December 2000. The average live weight was 3 pounds above the previous year, at 268 pounds. Lamb and mutton production, at 19 million pounds, was down 8 percent from December 2000 and a new record low for December. Sheep slaughter totaled 279,100 head, 7 percent below last year. The average live weight was 138 pounds, down 2 pounds from December a year ago.

January - December red meat production was 45.6 billion pounds, 1 percent below the previous year. Accumulated beef production was down 3 percent from last year, veal was down 10 percent, pork was up 1 percent, and lamb and mutton production was down 4 percent.

Montana January Potato Stocks Down 12 Percent, U.S. Down 15 Percent

Montana potato producers held 2.85 million cwt. of potatoes in storage on January 1, 2002, down 12 percent from a year ago. The stocks represent 94 percent of the total 2001 production, compared with last year's stocks representing 93 percent of the 2000 total production.

The 15 major potato States held 233 million cwt of potatoes in storage January 1, 2002, down 15 percent from last year and 3 percent below 2000. Storage accounts for 59 percent of the 2001 fall storage States' production, down 1 percentage point from a year ago. This year's storage holds more russets, but fewer round and long whites than a year earlier. Disappearance of 161 million cwt, is off 12 percent from last year. Processors in the 9 major States used 81.0 million cwt of potatoes this season, down 15 percent from a year ago.

Western States held 164 million cwt of potatoes in storage on January 1, 2002, down 18 percent from last year and 4 percent below 2000. Idaho's potato stocks are down 15 percent from a year ago, while Washington and Montana are down 12 percent each. Oregon's stocks are off 33 percent and California's potato holdings are off 57 percent from a year ago. Colorado is down 25 percent from 2001.

Montana and U.S. Quarterly Milk Production Up

During the October-December quarter, Montana milk cows produced 87 million pounds of milk, 8 million pounds more than the same quarter a year ago, but 1 million pounds less than the previous quarter. Montana milk cow numbers, at 19,000 head were unchanged from a year ago.

The U.S. quarterly production of milk for the was 40.8 billion pounds, 0.2 percent above the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 9.10 million head, 113,000 head less than the same period last year.

Milk production in the 20 major States during December totaled 12.0 billion pounds, up 1.0 percent from December 2000. November revised production, at 11.5 billion pounds, was up 0.8 percent from November 2000. The November revision represented an increase of 0.3 percent or 38 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,547 pounds for December, 28 pounds above December 2000. The number of cows on farms in the 20 major States was 7.74 million head, 62,000 head less than December 2000, but 10,000 head more than November 2001.

Ag Prices Received

Winter Wheat Seedings

Montana producers seeded 1.4 million acres of winter wheat this fall for the 2002 crop year, up 100,000 acres from the 2001 crop. While the acres seeded are up from the 2001 crop, acreage is down 100,000 acres from 2000 and is down 370,000 acres or 21% from the 10 year average of 1.77 million acres planted.

Winter wheat seeding progressed rapidly as dry conditions this fall were favorable for getting into fields. By the end of October, 98% of the winter wheat acres were seeded. Emergence was very slow after planting and progressed to 74% emerged by the end of October. There are reports that some winter wheat didn't come up at all or was spotty. Producers are optimistic that adequate moisture will come either during winter or this spring or else conditions will be similar to last year's crop disaster. Moisture received in the North Central and Central areas of the state since October 1 has been very poor with most all stations receiving less than 50% of normal moisture. Many stations have received 25% or less of normal precipitation.

The United States winter wheat planted area for harvest in 2002 is estimated at 41.0 million acres. This is down fractionally from 2001 and is the lowest level since 1971. Hard Red Winter wheat seeded area is about 29.3 million acres, up 1% from 2001. Significant acreage increases in Texas, Oklahoma, and Montana more than offset a large acreage decline in Kansas. Texas and Oklahoma are rebounding from lower acreages last year when dry conditions reduced seedings. This is the first time since 1990 that wheat acreage has increased in Oklahoma. Acreage continues to decline in Kansas, where seedings have not increased since 1996, and is currently at the lowest level since 1957.

Late Season Crops

Montana producers planted 65,000 acres of **corn** in 2001, up 5,000 acres from last year. Due to the lack of feed supplies in the state, producers planted more corn acres for silage this year. Acres **harvested for grain** was 13,000 acres, down 3,000 acres from last year's revised estimate. The average yield was 148.0 bushels per acre, up 8 bushels from last year. Grain production declined 14% from a year ago to 1.924 million bushels due to fewer acres harvested for grain. Acres for **silage of corn** harvested rose 9,000 acres from last year to 51,000 acres. Yield averaged 22 tons per acre, up 1 ton from a year ago.

Sugar beet producers in Montana planted 57,400 acres and harvested 53,500 acres in 2001. Harvested acres is down 1,700 acres from last year's crop. There was a large number of acres unharvested this year due to acres being enrolled in the PIK program. Yields decreased 2.4 tons from last year to average 21.5 tons per acre. Total production was estimated at 1.15 million tons, down 13% from the previous year.

Fall potato production in Montana totaled 3.04 million cwt, down 13% from last year. Producers harvested 9,500 acres compared with 11,300 in 2000. Yields increased 10 cwt. per acre from a year ago to 320 cwt. per acre.

All hay harvested in Montana was up 450,000 acres from last year, to 2.45 million acres. All hay production was 4.45 million tons, up 25% or 890,000 tons from a year ago. Even with the increase in harvested acreage due to CRP and grain crops being cut for hay, this is the second lowest production in Montana since 1988. The 2000 harvest was the lowest since 1988. **Alfalfa hay** harvested acreage was 1.45 million acres, up 250,000 acres from last season. The average yield was 2.1 tons per acre, which is unchanged from the previous year. **Other hay** harvested acreage was 1.0 million, up 200,000 acres from 2000. The average yield was 1.4 tons per acre compared with 1.3 tons per acre last year. Montana **hay stocks** were estimated at 3.60 million tons on December 1, up 14% from last year. Montana hay producers **seeded** an estimated 120,000 acres of **alfalfa and alfalfa mixtures** during 2001, 10,000 acres less than last year. New seedings include those mixed with a nurse crop, other forage, or direct seedings.

U.S. corn grain production is estimated at 9.51 billion bushels, down 4% from the revised 9.92 billion bushels in 2000. This is the fourth largest crop behind 1994's record production of 10.1 billion bushels followed by 2000's and 1998's production. The U.S. grain yield of 138.2 bushels per acre, the second highest yield on record, is up 0.2 bushel from November and 1.3 bushels from 2000.

U.S. **sugar beet** production is estimated at 25.8 million tons, 1% below the November 1 forecast and 21% below last year's production. Growers in the 12 sugarbeet-producing States harvested 1.24 million acres, slightly less than the November estimate and 9% below last year's 1.37 million acres. The yield is estimated at 20.7 tons per acre, equal to the November forecast, but 3.0 tons below the 2000 yield.

U.S. production of **fall potatoes** for 2001 is estimated at 401 million cwt, down 14% from 2000 and the smallest fall crop since 1993. Area harvested, at 1.09 million acres, is down 8% from 2000. The average yield is estimated at 367 cwt per acre, a drop of 25 cwt from last year.

Growers in the U.S. seeded 3.26 million acres of **alfalfa** and **alfalfa mixtures** during 2001. This is up 6% from the 2000 seeded acreage of 3,065,000 acres. The new seedings of alfalfa and alfalfa mixtures will normally be harvested for dry hay for the first time in the year following the planting. **All hay** production for 2001 is estimated at 157 million tons, down 3% from the October 1 forecast but up 3% from the 2000 total. **Alfalfa and Alfalfa Mixtures** production in 2001 totaled 80.3 million tons, down 2% from the October forecast and fractionally below the 2000 total. Harvested acreage, at 23.8 million acres, is up less than 1% from October 1 and up 3% from the previous year. Yields averaged 3.37 tons per acre, down 0.07 ton from the October 1 forecast and 0.11 ton below the 2000 yield. U.S. **all other hay** production in 2001 totaled 76.4 million tons, down 5% from the October 1 forecast but up 7% from the 2000 total. Area for harvest, at 39.7 million acres, is down 1% from the October 1 forecast but 8% above last year. Average yield, at 1.93 tons per acre, is down from 1.95 tons per acre in 2000. Stocks of **all hay** farms December 1, 2001 totaled 111 million tons, 5% above the stocks on farms December 1, 2000.

(Continued on back page)

December 1, 2001 Grain Stocks

Montana all wheat stocks on December 1, 2001 were 108.9 million bushels, down 19% from a year earlier. Stocks stored on the farm amounted to 86.0 million bushels, with 22.9 million bushels stored off-farm. All spring wheat stocks, at 79.1 million bushels, were down 14% from last year and accounted for 73% of the total wheat stocks. Winter wheat stocks were estimated at 29.8 million bushels, down 39% from last year. Durum wheat stocks were estimated at 11.4 million bushels, unchanged from last year. Barley stocks in all positions on December 1, 2001 were 23.6 million bushels, down 8% from a year ago. Barley stored on-farm was 17.0 million bushels and off-farm storage was 6.6 million bushels. Oats stocks in all positions were estimated at 2.0 million bushels, down 21% from last year. On-farm stocks 1.9 million bushels and off-farm stocks were 0.09 million bushels.

In the U.S., all wheat stored in all positions on December 1, 2001 totaled 1.62 billion bushels, down 10% from a year ago. On-farm stocks are estimated at 518 million bushels and off-farm stocks were 1.11 billion bushels. Durum wheat stocks in all positions on December 1, 2001 totaled 75.7 million bushels, down 27% from a year ago. On-farm stocks were 49.6 million bushels and off-farm stocks totaled 26.1 million bushels. U.S. barley stocks in all positions totaled 195 million bushels . On-farm stocks are estimated at 92.4 million bushels and off-farm stocks were 103 million bushels Oats stored in all U.S. positions on December 1, 2001 totaled 114 million bushels. Of the total stocks on hand, 58.1 million bushels were stored in on-farm facilities and stocks held in off-farm storage facilities totaled 56.1 million bushels.

Agricultural Prices Received for November

November full month crop prices were generally higher compared with October 2001. Montana's winter wheat average price was $3.12 per bushel, up $0.03 from October; spring wheat was $0.03 lower at $3.15 per bushel; and durum wheat prices rose $0.19 to $3.97 per bushel. The average price received for oats rose $0.12 to $1.99 per bushel. Feed barley prices were up $0.10 from the previous month to $1.95, and malt barley prices were up $0.09 to $2.92 per bushel.

The mid-December price for alfalfa hay was down $4.00 per ton from a last month to $95.00 per ton, and all other hay was unchanged at $87.00 per ton. The mid-December winter wheat price averaged $2.95 per bushel, spring wheat was $3.20, durum wheat was $4.00, oats was $1.95, feed barley was $1.95, and malt barley averaged $3.05.

Livestock prices for the full month of November were mostly lower compared with the previous month. Steer and heifer prices were down $5.20 to $89.50 per cwt and cows were down $5.30 to $33.90. The average price for calves was dropped $4.80 to $94.20 per cwt. Sheep prices dropped $0.50 to $25.60 per cwt, while lamb prices rose $0.10 to $51.70 per cwt. Milk prices were down $1.60 per cwt from last month to $15.60 per cwt. Steer and heifer prices for mid-December averaged $86.80 per cwt., cows averaged $34.60 per cwt., calves averaged $94.40 per cwt., and milk prices averaged $14.40 per cwt.

Nationally, prices for November and changes from October were as follows: winter wheat was $2.81, unchanged , spring wheat was $2.91, down $0.06; durum wheat was $3.08, up $0.19; the all barley price was $2.31 up $0.01, and steer and heifer prices were $67.80, down $2.40 per cwt.

The U.S. mid-December winter wheat price was $2.84 per bushel, spring wheat was $2.91 per bushel, durum wheat was $3.13 per bushel, all wheat was $2.89 per bushel, malt barley was $2.56 per bushel, feed barley was $1.74 per bushel, and all barley was $2.19. Steer and heifer prices were $ 68.30 per cwt, cow prices were $35.60, calves were $100.00 per cwt., all hog prices were $33.60 per cwt, and all egg prices were $0.590 per dozen

Products Index of Prices Received by Farmers in December was 93, based on 1990-92=100, unchanged from the November index. Higher prices for lettuce, corn, broccoli, and strawberries offset lower prices for milk, broilers, turkeys, and eggs. The seasonal changes in the mix of commodities farmers sell also effects the overall index. Higher seasonal marketings of tobacco, wheat, milk, and oranges offset lower marketings of cattle, grapes, soybeans, and corn. Compared with last year the current All Farm Products Index was six points (6.1 percent) lower. Price decreases from December 2000 for cotton (lowest December price since 1973), cattle, eggs, and soybeans more than offset increases in milk, broilers, oranges, and lettuce. Prices Paid Index Unchanged from Last Month and Last Year The December Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) was 122 percent of the 1990-92 average. The index was unchanged from last month and December 2000. Lower prices in December for diesel fuel, nitrogen, hay and forages, complete feeds and gasoline offset higher prices for herbicides, feeder cattle, feeder pigs, feed grains, and trucks in the index.

Pulse Crops

Montana's **dry bean** growers produced 332,000 cwt. in 2001, down 154,000 cwt. from 2000. Growers harvested 24,000 acres with a yield of 13.8 cwt. per acre compared with last year's 34,800 acres harvested with a yield of 14.0 cwt. per acre.

Pinto bean production for Montana in 2001 is set at 200,000 cwt., which is 40% below last year's figure. Harvested acreage, at 10,000, is 24% lower than the previous year. The yield was 2,000 pounds per acre, which is 400 pounds less than last year.

Montana's final production estimate for **garbanzo beans** was 127,000 cwt for 2001, which is 15% lower than last year. Harvested area was 13,500 acres, down 7,000 acres from last year. The yield was 940 pounds per acre, up from last year's estimate of 730 pounds per acre.

Dry pea production for 2001 in Montana was 294,000 cwt., up 26% from 2000. Planted and harvested acreage are estimated at 31,000 and 21,000 acres, respectively. In 2000, growers planted 28,000 acres and harvested 24,000. Average yield is set at 14.0 cwt. per acre, which is 4.3 cwt. better than last year.

Montana's 2001 production of **lentils** was 220,000 cwt., up 5% from 2000. Planted area is 22,000 acres and harvested acres are set at 20,000. The average yield was 11.0 cwt. per acre, or 100 pounds more than in 2000.

U.S. **dry edible bean** production is estimated at 19.5 million cwt for 2001, down 26% from last year and 41% below two years ago. This is the lowest dry bean production since 1988, when production was 19.3 million cwt.

Production of **dry edible peas** in Idaho, Montana, North Dakota, Oregon, and Washington is estimated at 3.78 million cwt for 2001, down 1% from the November 1 forecast but 8% above 2000.

Production of **lentils** in Idaho, Montana, North Dakota, and Washington is estimated at 2.90 million cwt for 2001, down 1% from the November 1 forecast and 4% below 2000.

Oilseeds

Montana's **flaxseed** production for 2001 was 180,000 bushels, 16,000 bushels below last year's figure. Planted and harvested acreage were 14,000 and 12,000, respectively. The average yield for 2001 was 15.0 bushels per acre, one bushel better that the previous year. Production of **mustard seed** in Montana during 2001 was 8.5 million pounds compared with 7.0 million in 2000. Acres planted are set at 11,000 and acres harvested at 10,000. Yields averaged 850 pounds per acre this year, which is 150 pounds per acre better that 2000. Montana **canola** growers planted 58,000 acres in 2001, 7000 acres less than the previous year and harvested 49,500 acres. Total production was 45.1 million pounds, which is 19% less than last year. Growers produced 23.8 million pounds of **safflower** in Montana during 2001. They planted an estimated 31,000 acres and harvested 28,000 acres. Average yields were set at 850 pounds per acre.

Montana's 2001 **all sunflower** production was set at 740,000 pounds this year, well below the 3.0 million pounds produced in 2000. Planted and harvested acreage estimates are 2,500 and 2,000 respectively. The average yield is estimated at 370 pounds per acre, compared to the 740 pounds per acre garnished last year.

U.S. production of **flaxseed** in 2001 totaled 11.5 million bushels, up 7% from the previous year. The yield is estimated at 19.8 bushels, down 1.0 bushel from the record high yield in 2000. **Safflower** production in the U.S., at 242 million pounds, is down 14% from 2000. **Mustard** seed production, at 41.1 million pounds, is 11% above the previous year. **Rapeseed** production totaled 4.05 million pounds, down 30% from 2000.

U.S. **Canola** production in 2001 reached a record high, at 2.0 billion pounds, up slightly from the previous record in 2000. The 2001 **sunflower** production totaled 3.48 billion pounds nationally, 2% below the 2000 production.

HIGHLIGHTS:

Cattle on Feed
November Milk Production
Red Meat Production
Potato Stocks
Hog & Pig Inventory
November Egg Production

U.S. Cattle on Feed Down Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.9 million head on December 1, 2001. The inventory was slightly below December 1, 2000 but 1 percent above December 1, 1999.

Placements in feedlots during November totaled 1.91 million, 5 percent below 2000 and 12 percent below 1999. Net placements were 1.83 million. During November, placements of cattle and calves weighing less than 600 pounds were 655,000, 600-699 pounds were 588,000, 700-799 pounds were 381,000, and 800 pounds and greater were 284,000.

Marketings of fed cattle during November totaled 1.80 million, 1 percent below 2000 and 1,000 head below 1999. Other disappearance totaled 80,000 during November, 24 percent below 2000 and 4 percent below 1999.

Cattle on Feed in Historic 7 States Down Slightly

Cattle on feed December 1, 2001, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 10.2 million, down slightly from the previous year but 2 percent above December 1, 1999. Placements in feedlots during November totaled 1.58 million, 6 percent below 2000 and 13 percent below 1999. Marketings during November totaled 1.54 million, 2 percent below 2000 but 1 percent above 1999. Other disappearance during November was 68,000 head, 24 percent below 2000 but 10 percent above 1999.

November Milk Production Up 0.4 Percent

Milk production in the 20 major States during November totaled 11.4 billion pounds, up 0.4 percent from November 2000. October revised production, at 11.7 billion pounds, was down 0.7 percent from October 2000. The October revision represented a decrease of 0.4 percent or 53 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,480 pounds for November, 21 pounds above November 2000. The number of milk cows on farms in the 20 major States was 7.73 million head, 78,000 head less than November 2000, but 8000 head more than October 2001.

November Red Meat Production in Montana Down 19 Percent From the Previous Year

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during November 2001. Red meat production was down 12 percent from the previous month and 16 percent from the previous year.

Cattle slaughtered statewide totaled 1,600 head, which is 300 head less than a year ago. The average live weight, at 1,127 pounds, was up 10 pounds from the previous year. During November there were 1,200 hogs slaughtered in Montana, 300 less than a year ago. The average live weight, at 251 pounds, was down 11 pounds from a year ago. The number of sheep slaughtered, at 300 head, is unchanged from the previous year. The average live weight was up 4 pounds from last year, to 126 pounds.

Commercial red meat production for the United States totaled 3.97 billion pounds in November, up 1 percent from the 3.92 billion pounds produced in November 2000 and a new record high for November.

Beef production, at 2.20 billion pounds, was 1 percent above the previous year and a new record high for November. Cattle slaughter totaled 2.90 million head, down 1 percent from November 2000. The average live weight was up 25 pounds from the previous year, at 1,255 pounds. Veal production totaled 16 million pounds, a new record low for November and 10 percent below November a year ago. Calf slaughter totaled 87,000 head, down 6 percent from November 2000. The average live weight was 12 pounds below last year, at 309 pounds.

Pork production totaled 1.73 billion pounds, a new record high for November and up 1 percent from the previous year. Hog kill totaled 8.72 million head, slightly below November 2000. The average live weight was 4 pounds above the previous year, at 269 pounds.

Lamb and mutton production, at 20 million pounds, was down 3 percent from November 2000. Sheep slaughter totaled 287,000 head, 3 percent below last year. The average live weight was 138 pounds, unchanged from November a year ago.

January - November red meat production was 41.8 billion pounds, 2 percent below the previous year. Accumulated beef production was down 3 percent from last year, veal was down 10 percent, pork was up 1 percent, and lamb and mutton was down 3 percent.

Potato Production Down 13 Percent, December 1 Stocks Down 12 Percent

Montana potato growers produced 3,040,000 cwt of potatoes in 2001, down 13 percent from the previous year. Acres planted and harvested were down 1,900 and 1,800 acres, respectively, from the 2000 crop year. There were 9,600 acres planted and 9,500 acres harvested, with an average yield of 320 cwt per acre. This yield is up 10 cwt per acre from last year.

Producers in Montana held 2,950,000 cwt in storage on December 1, 2001. This is 12 percent less than was on hand in 2000 and represents 97 percent of the total 2001 potato production in Montana.

December 1 potato stocks in the 15 storage States, at 267 million cwt, are down 14 percent from last year and 3 percent below 1999. This is the lowest December 1 stocks level since 1995. Seasonal disappearance of 127 million cwt in the 15 States is down 14 percent from last year. Processors used 64.9 million cwt so far this season, down 17 percent from last year. The December 1 fall potato production is forecast at 400 million cwt in the 22 fall States, down 14 percent from a year ago and 7 percent below 1999.

The 15 major potato States held 267 million cwt of potatoes on December 1, 2001, down 14 percent from last year and 7 percent below 1999. Storage accounted for 68 percent of the fall storage States 2001 production, the same percentage as last year. Stocks by type were 3 percent red, 9 percent round white, 4 percent long white (Shepody) and 84 percent russet; with a lower percentage of round whites and a higher percentage of russets than a year ago. Disappearance, at 127 million cwt, from the start of harvest to December 1, is down 14 percent from the same period last year and 13 percent less than two years ago. Shrink and loss, at 14.8 million cwt, is down 21 percent from last year and 25 percent below two years ago.

Western States held 185 million cwt of potatoes in storage on December 1, a drop of 16 percent from last year and 4 percent below two years ago. The 2001 water shortage helped reduce California's potato stocks 63 percent and Oregon's 30 percent below last year. Colorado farmers stored 23 percent fewer potatoes this year than last. Idaho's potato stocks dropped 14 percent, while Washington's storage fell 10 percent from last year. Montana's seed storage decreased 12 percent.

Production of fall potatoes for 2001 is forecast at 400 million cwt, down 14 percent from last year and the smallest fall crop since 1993. Area harvested, at 1.09 million acres, is down 8 percent from last season. The average yield is forecast at 366 cwt per acre, a drop of 26 cwt from last year.

Ten Western States produced 272 million cwt of potatoes in 2001, down 17 percent from last year. Acreage harvested, at 664,300 acres, is down 12 percent while the average yield, at 410 cwt per acre, fell 26 cwt from a year ago. The lack of irrigation water dropped California fall potato production by 70 percent and Oregon by 34 percent from last year. Fall potato production in New Mexico fell 47 percent, with a sharp drop in acreage and yield. Idaho's production is 16 percent below last year's record high crop. Washington's potato crop declined 10 percent. Fall production in Colorado fell 24 percent, while Nevada dropped 26 percent. Utah's production is down 21 percent from a year ago and Montana's production is trimmed by 13 percent.

1/ Stocks include processor holdings and most of the seed to plant following year's crop. Seed usage for all seasons in 2001 totaled 27.4 million cwt.

December 1, 2001 Hogs & Pigs Inventory up 10 Percent

The inventory of all hogs and pigs in Montana on December 1, 2001 was 170,000 head, 10 percent above a year ago. Breeding stock was up 6 percent from last December to 19,000 head. Market hog numbers increased to 151,000 head, up 10 percent from last year.

There were 37,500 sows farrowed in Montana during the period of December 2000 to November 2001. This was an increase of 12 percent from a year earlier. The number of pigs saved per litter increased slightly to 9.09 and resulted in an annual pig crop of 341,000 head, a 12 percent increase from last year. There were 550 farms with one or more hogs in Montana in 2001, down from 650 farms last year.

U.S. inventory of all hogs and pigs on December 1, 2001, was 58.8 million head. This was 1 percent below December 2000, and slightly below September 1, 2001. Breeding inventory, at 6.21 million head, was down 1 percent from December 1, 2000, but 1 percent above last quarter. Market hog inventory, at 52.6 million head, was 1 percent below both last year and last quarter.

The September-November 2001 U.S. pig crop, at 25.0 million head, was 1 percent less than 2000, and slightly less than 1999. Sows farrowing during this period totaled 2.85 million head, slightly above last year. The sows farrowed during this quarter represented 46 percent of the breeding herd. The average pigs per litter was 8.78 pigs saved per litter for the September - November 2001 period, compared with 8.85 pigs last year. Pigs saved per litter by size of operation ranged from 7.40 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.84 million sows farrow during the December 2001-February 2002 quarter, 3 percent above the actual farrowings during the same period in 2001, and 2 percent above 2000. Intended farrowings for March-May 2002, at 2.90 million sows, are 1 percent above the same period in 2001, and up 1 percent from 2000.

The number of hog operations with hogs totaled 81,130 during 2001, down 6 percent from last year and 18 percent below 1999. Places with 2,000 or more hogs on hand accounted for 9 percent of the operations and 75 percent of the inventory. This is the sixth time operations with inventories over 2,000 head have controlled over 50 percent of the total inventory. The number of operations with over 5,000 head of inventory at, 2,204, accounted for 52.5 percent of the total inventory, up from 50.5 percent a year ago. The total number of hogs under contract, owned by these over 5,000 head operations, but raised by contractees, accounted for 33 percent of the total U.S. hog inventory, up from 30 percent last year.

November Egg Production Up 2 Percent

U.S. egg production totaled 7.17 billion during November 2001, up 2 percent from last year. Production included 6.14 billion table eggs and 1.04 billion hatching eggs, of which 977 million were broiler-type and 60.0 million were egg-type. The total number of layers during November 2001 averaged 337 million, up 2 percent from the total average number of layers during November 2000. November egg production per 100 layers was 2,128 eggs, slightly above the 2,125 eggs in November 2000. November 2001 contained 22 weekdays, two holidays and four Saturdays, equal to November 2000.

All layers in the U.S. on December 1, 2001, totaled 338 million, up 2 percent from a year ago. The 338 million layers consisted of 279 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.61 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 2001, averaged 71.2 eggs per 100 layers, down slightly from the 71.0 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.73 billion eggs during November 2001, up 2 percent from November 2000. The average number of layers during November, at 316 million, was up 2 percent from a year earlier.

"The Year 2001 Will Go Down in the Record Books"

Best wishes for a joyous holiday season from all of us at Montana Agricultural Statistics Service! As 2001 comes to a close and we approach the year 2002 we should take a minute to look back on what has happened this year. Not many Americans will forget what happened on September 11, 2001. The terrorist attacks on the World Trade Center in New York City and the Pentagon in Washington, D.C. impacted everyone across America. While these shocking acts took thousands of lives, they also united Americans with a newfound sense of patriotism. Montanans collected money for the victims and flew American flags showing support for our country.

This outpouring of support took place while Montana farmers and ranchers were struggling with a third year of drought. It was a heck of a year! Neighbors helped neighbors get through one more year of drought, living up to the saying that "Montana is the Last, Best Place." Drought conditions hit livestock producers hard creating shortages of feed and water, and forcing many ranchers to market livestock earlier than normal at lighter weights. In many cases, ranchers had to find additional sources of feed, haul water to livestock, cull herds heavily and in some cases liquidate herds because of feed and water shortages. Farmers had to abandon record numbers of seeded acres due to the drought. However, people who make their living from the land continue to be filled with optimism that the future will be better and the cycle of drought will be broken in 2002. Farmers and ranchers are infinitely optimistic that the snow and rain will fall and resupply the reservoirs and aquifers.

Montana Agricultural Statistics Service is also optimistic about the future of Montana agriculture because of the extraordinary people who make a living from the land. Agricultural organizations, governmental agencies, agricultural extension, Montana universities and individuals across the state are working together to make sure that agriculture continues to grow and thrive in Montana.

To everyone involved in Montana's agriculture, thank you for your continued support. With your help, we can provide sound statistical facts that you can use to chart the future course of **Montana's Number One Industry--Agriculture**. We sincerely hope that you and your family have a joyous and safe holiday season. We hope that 2002 will be a great year for Montana agriculture!

2001 Dry Edible Bean Production

Production for Montana's **dry edible bean** crop was estimated at 409,000 cwt, down16% from the 2000 crop. Planted acreage for 2001 was estimated at 38,500 acres, down 5% from last year's estimate. Harvested area for this year is 31,800 acres, 9% below 2000. The yield is forecast at 1,290 pounds per acre, 110 pounds less than last year. Three main factors contributing to the large decreases in production were widespread disease, continued drought, and producers grazing acres.

Pinto bean production for Montana is estimated to be 204,000 cwt, which is 38% below last year's estimate. Acres planted are estimated at 11,500 acres, down 21% from 2000. Harvested acreage, at 10,300, is 25% lower than the previous year. The yield is forecast at 1,980 pounds per acre, 420 pounds less than last year. A lack of irrigation water led to fewer acres seeded and lower yields across the state.

The largest increase in production, for the third year in a row, occurred with the **garbanzo bean** crop. Montana's third production forecast was 200,000 cwt for 2001, compared with 150,000 cwt for last year and 133,000 cwt in 1999. Planted acreage was set at 26,500 acres, up 5% from last year. Harvested area is estimated at 21,000 acres. The yield is forecast at 950 pounds per acre, up 30% from last year's estimate of 730 pounds per acre. Although yields are expected to be higher than last year, fungal blight and haying or grazing of the acres for feed will result in yields lower than in 1999.

U.S. **dry edible bean** production is estimated at 19.6 million cwt for 2001, up 1% from the October 1 forecast but 26% below a year ago. This is the lowest dry bean production since 1988, when production was 19.3 million cwt. Area for harvest is estimated at 1.25 million acres, 5% below the previous estimate and 22% below a year ago. The average yield is estimated at 1,568 pounds per acre, down 75 pounds from last year.

Of the 18 dry bean States, 14 expect lower production than a year ago. Production is down 81% in Michigan and off 46% in New York from a year ago. Minnesota's farmers harvested 34% fewer beans than last year, while Wisconsin's output fell 29%, and Wyoming's production is cut by 39%. Reductions from last year also came in California, Colorado, Idaho, Kansas, Montana, Nebraska, North Dakota, Oregon, and Washington. Dry summer weather and water shortages hurt dry bean growth in the North East, Midwest, parts of the Western Plains, and the West.

ERS Economist Says Beef Situation Unsettled

Dry weather reduced forage supplies, and uncertain domestic and international demand for beef have plagued the industry this fall. Another year of drought throughout much of the traditional grazing areas has forced adjustments in the beef sector. Poor overwintering forage prospects have resulted in large beef cow slaughter as producers in many areas are faced with inadequate grazing conditions and heavier demands on hay stocks. Producers in many of the drier areas have already fed large quantities of hay from this year's crop.

Weaker beef demand from slowing domestic and international economies continues to result in reduced cattle slaughter levels even as slaughter weights break last year's record by sizeable margins. The latest *Cattle on Feed* report indicated reduced feedlot placements, but also a much slower marketing pattern. Although slaughter weights are setting records, the industry continues to have problems getting cattle into the Choice grade. Consequently, overfinished cattle are not likely to become a major problem. However, although steer and heifers slaughter numbers are below expectations, larger marketings would likely force market prices even lower. Although boxed beef prices have been erratic since early September, varying from $120 a cwt to a recent low near $107, prices in late November had strengthened to near $115 a cwt.

Retail prices for Choice beef were 26 cents above a year earlier, and down only 10 cents from the June record of $3.48 a pound. While retail demand for beef seems to be holding up well, reduced travel and hotel-restaurant trade as well as weaker export demand are forcing more beef into the retail market at lower wholesale prices, which should support increased movement. Large supplies of market ready cattle at record weights are likely to burden the industry well into the winter quarter. Winter weather conditions again likely will play a major role in determining feedlot performance and marketings over the next six months. Stocker-feeder cattle supplies continue to be buffeted as much by uncertain forage-overwintering prospects as fed cattle prices or the cost of gain.

SOURCE for the above information: Livestock, Dairy and Poultry Situation and Outlook, ERS, November 28, 2001.

Agricultural Prices Received for October

October full month crop prices were higher compared with September 2001. Montana's winter wheat average price was $3.09 per bushel, up $0.13 from September; spring wheat was $0.20 higher at $3.18 per bushel; and durum wheat prices rose $0.22 to $3.78 per bushel. The average price received for oats rose $0.43 to $1.87 per bushel for oats. Feed barley prices were up $0.12 from the previous month to $1.85, while malt barley prices dropped $0.09 to $2.83 per bushel.

The mid-November price for alfalfa hay was up $13.00 per ton from a year ago to $99.00 per ton and other hay was up $6.00 per ton to $87.00 per ton. The mid-November winter wheat price averaged $2.90 per bushel, spring wheat was $3.25, durum wheat was $3.90, oats was $1.75, feed barley was $1.80, and malt barley averaged $2.95.

Livestock prices for the full month of October were mixed compared with the previous month. Steer and heifer prices were up $6.70 to $91.20 per cwt and cows were down $3.50 to $39.20. The average price for calves was dropped $2.00 to $99.00 per cwt. Sheep prices dropped $2.50 to $26.10 per cwt, while lamb prices rose $2.00 to $51.60 per cwt. Milk prices rose $1.10 per cwt from last month to $17.20 per cwt. Steer and heifer prices for mid-November averaged $91.20 per cwt., cows averaged $35.00 per cwt., calves averaged $97.00 per cwt., and milk prices averaged $17.40 per cwt.

Nationally, prices for October and changes from September were as follows: winter wheat was $2.81, unchanged, spring wheat was $2.97, up $0.10; durum wheat was $2.98, down $0.13; the all barley price was $2.30, up $0.06, and steer and heifer prices were $70.20, down $1.90 per cwt.

The U.S. mid-November winter wheat price was $2.90 per bushel, spring wheat was $2.98 per bushel, durum wheat was $2.97 per bushel, all wheat was $2.94 per bushel, malt barley was $2.71 per bushel, feed barley was $1.83 per bushel, and all barley was $2.31. Steer and heifer prices were $ 66.60 per cwt, cow prices were $35.30, all hog prices were $34.90 per cwt, and all egg prices were $0.658 cents per dozen

The preliminary All Farm Products Index of Prices Received by Farmers in November was 93, based on 1990-92=100, down 1 point (1.0 percent) from the October Index. Lower prices for milk, cattle, hogs, broilers, cotton, and apples more than offset higher prices for soybeans, potatoes, eggs, strawberries, and wheat. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of milk, cotton, cattle, cottonseed, and broilers more than offset lower marketings of soybeans, peanuts, and potatoes. Compared with November 2000, the current All Farm Products Index was 5 points (5.1 percent) lower. Price decreases from November 2000 for cattle, lettuce, soybeans, eggs, and rice more than offset increases in potatoes, hay, broilers, and wheat.

United States Index Summary

Cattle on Feed
Red Meat Production
Egg Production
Milk Production
Farm Labor
Wheat Supply & Demand Estimates

U.S. Cattle on Feed Virtually Unchanged

U.S. cattle and calves on feed for slaughter market in feedlots with capacity of 1,000 or more head totaled 11.9 million head on November 1, 2001. The inventory was 1,000 head below November 1, 2000, but 3% above November 1, 1999.

Placements in feedlots during October totaled 2.69 million, 5% below 2000 and 14% below 1999. Net placements were 2.62 million. During October, placements of cattle and calves weighing less than 600 pounds were 889,000, 600-699 pounds were 755,000, 700-799 pounds were 589,000, and 800 pounds and greater were 459,000. Marketings of fed cattle during October totaled 1.89 million, 2% below 2000 but 3% above 1999. Other disappearance totaled 68,000 during October, 3% above 2000, but 15% below 1999.

Cattle on Feed in Historic 7 States

Cattle on feed November 1, 2001, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 10.2 million, up 39,000 head from the previous year and 5% above November 1, 1999.

Placements in feedlots during October totaled 2.31 million, 3% below 2000 and 12% below 1999. Marketings during October totaled 1.63 million, 1% below 2000 but 4% above 1999. Other disappearance during October was 57,000 head, 14% above 2000 but 10% below 1999.

October Red Meat Production in Montana Down 19 Percent From the Previous Year

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during October 2001. Red meat production was up 24% from the previous month, but down 19% from the previous year.

Cattle slaughtered statewide totaled 1,800 head, which is 500 head less than a year ago. The average live weight, at 1,134 pounds, was up 28 pounds from the previous year. During October there were 1,000 hogs slaughtered in Montana, 300 less than a year ago. The average live weight, at 251 pounds, was down 10 pounds from a year ago. The number of sheep slaughtered, at 400 head, is even with the previous year. The average live weight was up 2 pounds from last year, to 127 pounds.

Commercial red meat production for the United States totaled 4.26 billion pounds in October, up 4% from the 4.10 billion pounds produced in October 2000 and 164 million pounds above the previous record high set in 2000.

Beef production, at 2.39 billion pounds, was 2% above the previous year and 43 million pounds above the previous record high set in 2000. Cattle slaughter totaled 3.16 million head, up 1% from October 2000. The average live weight was up 16 pounds from the previous year, at 1,247 pounds. Veal production totaled 18 million pounds, 2% below October a year ago. Calf slaughter totaled 93,700 head, down 3% from October 2000. The average live weight was 5 pounds above last year, at 317 pounds. Pork production totaled 1.84 billion pounds, up 7% from the previous year and also 121 million pounds above the previous record high set in 2000. Hog kill totaled 9.33 million head, 5% above October 2000. The average live weight was 5 pounds above the previous year, at 267 pounds. Lamb and mutton production, at 20 million pounds, was up 6% from October 2000. Sheep slaughter totaled 288,500 head, 3% above last year. The average live weight was 137 pounds, up 3 pounds from October a year ago.

January - October red meat production was 37.9 billion pounds, 2% below the previous year. Accumulated beef production was down 4% from last year, veal was down 10%, pork was up 1% from last year, and lamb and mutton was down 3%.

October Egg Production Up 3 Percent

U.S. egg production totaled 7.33 billion during October 2001, up 3% from last year. Production included 6.24 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 61.0 million were egg-type. The total number of layers during October 2001 averaged 336 million, up 2% from the total average number of layers during October 2000. October egg production per 100 layers was 2,179 eggs, slightly above the 2,173 eggs in October 2000.

All layers in the U.S. on November 1, 2001, totaled 337 million, up 2% from a year ago. The 336 million layers consisted of 278 million layers producing table or commercial type eggs, 56.2 million layers producing broiler-type hatching eggs, and 2.68 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 2001, averaged 70.5 eggs per 100 layers, down slightly from the 70.6 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.89 billion eggs during October 2001, up 3% from October 2000. The average number of layers during October, at 316 million, was up 3% from a year earlier.

October Milk Production Down 0.2 Percent

Milk production in the 20 major producing States during October totaled 11.8 billion pounds, down 0.2 percent from October 2000. September revised production, at 11.4 billion pounds, was down 0.6 percent from September 2000. The September revision represented an increase of 0.1 percent or 15 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,526 pounds for October, 15 pounds above October 2000.

The number of milk cows on farms in the 20 major States was 7.72 million head, 95,000 head less than October 2000, and 1,000 head less than September 2001.

Reduced Placements, Slaughter Hold Up Beef Prices

Amid much uncertainty, the beef sector continues to make progress in reducing cattle on feed inventories. Drought in many areas forced cattle into feedlots earlier this year. Also prospects for improved winter and small grain grazing will result in increased stocker demand for a reduced number of weaned calves this fall. Placements in feedlots with more than 1,000 head of capacity in the 7-monthly reporting States were well above a year earlier in May, June, and July as worsening drought conditions forced early weaning of calves and reduced heifer retention for the breeding herd. Reduced feeder cattle supplies outside feedlots and improved grazing prospects resulted in a nearly 10-percent decline in net feedlot placements in August and a 21-percent decline in September. Consequently, the seasonal fall build up in feedlot inventories has been muted; feedlot inventories on July 1 were nearly 6 percent above a year earlier but were up only 1 percent on October 1. On-feed inventories are expected to decline to below year-earlier levels by the first of the year.

Feeder cattle supplies outside feedlots on October 1 were about unchanged from a last year's low inventory. The decline in supplies began in the mid 1990's with herd liquidation. Supplies were supported to some extent by a 13-percent third quarter decline in calf slaughter. So far this year, calf slaughter is down 13 percent from a year earlier. Calf slaughter almost certainly will decline even further in 2002 as feeder cattle supplies get even tighter, particularly if forage conditions improve supporting heifer retention and herd expansion.

Third quarter data point to increasingly tight heifer inventories in 2002. Slaughter slowed in the third quarter due to lingering effects of winter weather impact on feedlot performance in early summer and in September due to a slowdown in product movement. Although steer slaughter was down 6 percent, heifer slaughter was down only 1 percent. The number of heifers on feed on October 1 were up marginally from the large year-earlier levels and up 12 percent from 1999. Heifer slaughter will remain large this fall as dry conditions forced large numbers of heifers that had been retained for breeding 2001 were placed on feed. In addition, larger numbers of heifers that might have been bred in 2002 were also forced into feedlots. Beef cow slaughter this summer was up 14 percent from a year ago reflecting continued concern over forage supplies for over wintering programs particularly in the Great Plains and Pacific Northwest.

Although prices have declined from the severe winter tight beef scenario of this past winter and spring they have remained near to above year-earlier levels. Retail prices for Choice beef in September declined modestly from the June record for the third consecutive month. However, prices remain nearly 8 percent above a year earlier. Prices are likely to decline further as potential beef supplies and slaughter weights remain well above year-earlier levels. Fed cattle prices in October were about unchanged from a year earlier, while stocker/feeder cattle and cull prices remain well above last year's levels. Favorable grain (and thus feedlot ration cost) and improving grazing prospects amid tightening feeder cattle supplies will keep prices strong for the next several years. Increasing numbers of heifers retained from next year's calf crop to be bred in 2003, will result in sharply tighter feeder cattle supplies.

Beef Exports Down

Beef exports have declined broadly as a result of tighter U.S. supplies and higher prices, and an appreciating dollar. After ending the first quarter down 12 percent (or 7.6 percent excluding last year's food aid to Russia), year-over-year exports dropped 16 percent in the second quarter. The 7-percent weather-induced decline in first quarter U.S. beef supplies was the major driving force behind the broad decline. The reduced supplies pushed the ERS Choice beef price and the Choice steer price up 12 percent and 14 percent, respectively. Price increases passed on to importers limited U.S. beef buying, particularly as foreign economic conditions slowed, and consumers shifted to lower valued products.

In Japan and Korea, higher U.S. prices were exacerbated by a 10-15-percent increase in the value of the dollar against their currencies, which may add to the price of imported U.S. beef in those countries. Moreover, the U.S. dollar also appreciated against the Australian dollar, increasing the competitiveness of Australian beef. Total Japanese beef imports decreased about 1.5 percent in the first eight months of 2001, according to Japanese trade statistics. The Australian share of the Japanese market increased enough that U.S. exports to Japan dropped by 9 percent, as Japanese consumers switched to relatively lower priced, lower valued cuts.

In addition to broad price-induced decreases in demand for U.S. beef, overall demand for beef may be weakening in some markets. In Korea, generalized consumer fear of BSE, a slowing economy, and higher prices played a major role in reducing imports of U.S. beef by 40 percent during January-August. Downward shifts in demand for U.S. beef were evident in Canada, partly as a result of increased drought-related slaughter of Canadian cattle, with U.S. beef exports to Canada down 12 percent. In Mexico, already highly indebted consumers have also been affected by slower economic growth tied to the U.S. economy, and beef exports slowed from robust growth earlier in the year to finish the first 6 months down about 1 percent. (Continued on next page.)

Beef Exports (continued from page 2)

Slower economic growth in Japan, together with BSE concerns, point to lower demand for U.S. beef in that market. While Japanese consumer pessimism remains high after a 0.8 percent decline in second quarter GDP and concerns about BSE, U.S. prices remain relatively high and the dollar remains strong against the yen. Total Japanese beef imports in August were above August of last year, but that was before concerns about BSE emerged following discovery of a BSE infected dairy cow in September. Weakness in Japanese beef demand may affect U.S. beef, despite the potential for imports to displace domestic product. Increased import share could be more than offset by decreased demand.

National Farm Worker Numbers Down 2 Percent, Wage Rates Up Over 3 Percent From a Year Ago

There were 1.22 million hired workers on the Nation's farms and ranches the week of October 7-13, 2001, 2 percent fewer than a year ago. There were 959,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 262,000 workers. Migrant workers accounted for 12.1 percent of the October hired workforce, compared with 11.3 percent in October 2000.

Farm operators paid their hired workers an average wage rate of $8.58 per hour during the October 2001 survey week, up 29 cents from a year earlier. Field workers received an average of $8.01 per hour, up 27 cents from last October. Livestock workers earned $8.36 per hour compared with $7.84 a year earlier. The field and livestock worker combined wage rate, at $8.08, was up 32 cents from last year. Number of hours worked averaged 41.5 hours per week for hired workers during the survey week compared with 41.2 hours a year ago.

Hired Workers: Annual Average Wage Rates By State, 2000-01 1/ 2/

1/ Excludes Agricultural Service Workers. 2/ Annual rates are averages of the published wage rates for each survey week weighted by the number of hours worked during the week. The annual average for all States, Regions, and the U.S. is based on data collected for January. 3/ Excludes AK.

Wheat Supply and Demand Estimates

U.S. 2001/02 supply and use projections for total wheat are unchanged from last month, although there are changes in projected imports, exports, and ending stocks by class of wheat. The projected price range is unchanged at $2.70 to $3.00 per bushel.

Projected global 2001/02 production, use, and ending stocks are up from last month, led by increases for Kazakstan, Australia, and Russia. Prospective Argentine production is reduced 500,000 tons because prolonged excessively wet conditions are expected to reduce harvested area. The larger crops in Kazakstan and Russia are largely reflected in higher prospective ending stocks and account for much of the rise in global ending stocks. The larger Australian crop, however, impacts global trade. Australia's 2001/02 wheat production is projected up 1.5 million tons due to an 800,000-hectare increase in area. The larger area is in response to the official estimates of crop production and livestock numbers for the 2000/01 season recently released by the Australian Bureau of Statistics (ABS). The estimates placed last year's Australian wheat crop at 23.8 million tons from an area of 13.0 million hectares. This is 2.6 million tons and 1 million hectares above last month's USDA estimates, which were the same as data published by the Australian Bureau of Agricultural and Resource Economics. The larger prospective 2001/02 crop and increased carry in stocks (due to the bigger 2000/01 production) results in a 1.5-million-ton rise in projected exports, which is offset by reductions in projected exports for Argentina and the EU.

See table on back page.

Sheep County Estimates
Hog and Pig County Estimates
Red Meat Production

October 1, 2001 All Hay Production Forecasted to be up 9 Percent From Last Year

Forecasted **alfalfa hay** yield for Montana remains unchanged from the August forecast of 2.20 tons per acre. If realized this would be 0.1 ton per acre better than last year. Total production of alfalfa hay is estimated to be 2.64 million tons, up 5 percent from last year. The harvested acreage of 1.2 million acres for alfalfa also remained unchanged from August and last year's final estimate. **Other hay** yield was lowered from August and is now estimated at 1.5 tons per acre, down 0.1 tons per acre from August, but up 0.2 tons per acre from 2000. Other hay production is expected to be 1.28 million tons, down 6 percent from August, but up 23 percent from last year. Many producers are having to harvest their drought-affected grain crops for hay this year. Harvested acreage is unchanged from August at 850,000 acres, and up 50,000 acres from last year. **All hay** production is estimated at 3.92 million tons, up 9 percent from last year.

Montana **sugar beet** production is forecast at 1.24 million tons, unchanged from last month's forecast, but down 6 percent from last year. Forecasted yield, 21.7 tons per acre, is unchanged from last month, but is down 2.2 tons per acre from last year. Harvested acreage is forecast to be 57,500 acres, but is expected to change due to sugar beet acreage being enrolled in this year's PIK program. Sugar beet harvest is well underway with 48 percent of the beets pulled compared with the 5-year average of 29 percent.

Nationally, alfalfa hay production is forecast at 81.6 million tons, up 2 percent from both August and last year. Yields are expected to average 3.44 tons, up 0.06 ton from August, but down 0.04 ton from last year. Harvested area is 23.8 million acres, unchanged from August, but up 3 percent from 2000. The increase in yields over the August forecast is due to late rains in the southern Great Plains States, and the Pacific Northwest, which helped the final cuttings in these areas.

Other hay production for the U.S. is forecast at a record high 80.7 million tons, 3 percent above the August forecast, and 12 percent above last year's production. Yields are expected to average a record high 2.01 tons per acre, up 0.06 ton above both the August forecast and last year. Harvested area is estimated at 40.1 million acres, unchanged from the last forecast, but up 9 percent from 2000. This year's acreage will be the highest since 1958.

In the U.S. **sugar beet** production is forecast at 28.3 million tons, 1 percent above the September 1 forecast, but 13 percent below last year's production. Growers in the 12 sugar beet-producing states expect to harvest 1.33 million acres. This is unchanged from the September estimate, but 3 percent below last year. The yield is forecast at 21.3 tons per acre, 0.2 ton above September, but 2.3 tons below 2000.

Montana July - September Quarterly Milk Production Up, U.S. Milk Production Down

During the July - September 2001 quarter, Montana milk cows produced 87 million pounds of milk, up 9 percent from the same quarter a year ago. Montana milk cows numbered 19,000 head, up 1,000 from last year.

The United States July - September quarterly production of milk was 40.6 billion pounds, 1.3 percent below the same period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.10 million head, 128,000 head less than the same period last year.

Milk production in the 20 major States during the month of September totaled 11.4 billion pounds, down 0.7 percent from September 2000. August revised production, at 11.8 billion pounds, was down 1.3 percent from August 2000. The August revision represented a decrease of 0.5 percent or 56 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,471 pounds for September, 7 pounds above September 2000. The number of cows on farms in the 20 major States was 7.73 million head, 91,000 head less than September 2000, and 8,000 head less than August 2001.

September Pig Crop Down Slightly

The September 2001 **U.S.** pig crop at 8.56 million head, was slightly less than the previous year. Sows farrowing during this period totaled 964 thousand head, 1 percent below last year. The average pigs per litter for September rose to 8.88, compared to 8.84 last year.

The **U.S.** inventory of sows and gilts on October 1, 2001, was 5.99 million head, 1 percent below October 1, 2000. U.S. sows and gilts bred during September totaled 1.17 million head, up 1 percent from September 2000.

U.S. Cattle on Feed Up 1 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.1 million head on October 1, 2001. The inventory was 1% above October 1, 2000 and 8% above October 1, 1999. The inventory included 6.63 million steers and steer calves, up 1% from the previous year. This group accounted for 60% of the total inventory. Heifers and heifer calves accounted for 4.45 million head, up 1% from 2000.

Placements in feedlots during September totaled 2.14 million, 20% below 2000 and 23% below 1999. Net placements were 2.09 million. During September, placements of cattle and calves weighing less than 600 pounds were 528,000, 600-699 pounds were 447,000, 700-799 pounds were 559,000, and 800 pounds and greater were 602,000. Marketings of fed cattle during September totaled 1.82 million, 9% below 2000 and 7% below 1999. Other disappearance totaled 46,000 during September, 15% below 2000 and 26% below 1999.

September Egg Production Up 3 Percent

U.S. egg production totaled 7.04 billion during September 2001, up 3% from last year. Production included 5.99 billion table eggs and 1.05 billion hatching eggs, of which 993 million were broiler-type and 59.0 million were egg-type. The total number of layers during September 2001 averaged 335 million, up 3% from the total average number of layers during September 2000. September egg production per 100 layers was 2,104 eggs, slightly above the 2,101 eggs in September 2000.

All layers in the U.S. on October 1, 2001, totaled 336 million, up 3% from a year ago. The 336 million layers consisted of 278 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 2001, averaged 69.9 eggs per 100 layers, up 1% from the 69.5 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.59 billion eggs during September 2001, up 3% from September 2000. The average number of layers during September, at 314 million, was up 3% from a year earlier.

September Red Meat Production in Montana Down 25 Percent From the Previous Month

Montana slaughter plants produced 1.2 million pounds, dressed weight, of red meat during September 2001. Red meat production was down 25 percent from the previous month, and down 37 percent from the previous year.

Cattle slaughtered statewide totaled 1,500 head, which is 800 head less than a year ago. The average live weight, at 1,116 pounds, was up 8 pounds from the previous year. During September there were 900 hogs slaughtered in Montana, 700 less than a year ago. The average live weight, at 250 pounds, was down 8 pounds from a year ago. The number of sheep slaughtered, at 400 head, is the same as the previous year. The average live weight was down 3 pounds from last year, to 124 pounds.

Commercial red meat production for the United States totaled 3.66 billion pounds in September, down 5 percent from the 3.86 billion pounds produced in September 2000. Beef production, at 2.12 billion pounds, was 7 percent below the previous year, a record September tonnage. Cattle slaughter totaled 2.81 million head, down 7 percent from September 2000. The average live weight was up 9 pounds from the previous year, at 1,240 pounds.

Veal production totaled 15 million pounds, 10 percent below September a year ago. Calf slaughter totaled 78,600 head, down 16 percent from September 2000. The average live weight was 20 pounds above last year, at 313 pounds.

Pork production totaled 1.51 billion pounds, down 3 percent from the previous year. Hog kill totaled 7.81 million head, 4 percent below September 2000. The average live weight was 3 pounds above the previous year, at 262 pounds.

Lamb and mutton production, at 16 million pounds, was down 6 percent from September 2000. Sheep slaughter totaled 243,300 head, 10 percent below last year. The average live weight was 135 pounds, up 5 pounds from September a year ago.

January - September red meat production was 33.6 billion pounds, 3 percent below the previous year. Accumulated beef production was down 4 percent to last year, veal was down 11percent, pork was virtually unchanged, and lamb and mutton was down 4 percent.

Small Grain Summary

Montana's 2001 winter wheat production was estimated at 19.14 million bushels, down 57% from last year's crop. This is the smallest winter wheat crop produced in the state since 1940, when just 17.46 million bushels were reaped. Producers seeded 1.3 million acres, but harvested only 870,000 acres, 480,000 acres less than were harvested in 2000. The 2001 average yield was 22.0 bushels per acre, which is 11 bushels lower than last year's average. The final yield was moved up 2 bushels from the August 1 forecast because more acres were abandoned than expected which had the effect of raising the average yield of the acres harvested. Hard red winter represented 99% of the acreage for 2000 and 98% for 2001 crop years, the balance was white wheat.

Spring wheat production in Montana was estimated at 65.55 million bushels, down 15% from 2000. The 2001 crop was the smallest since 53.9 million bushels were produced in 1990. Final seeded acreage was 3.55 million acres, 200,000 acres more than 2000 and 150,000 more than earlier forecast. Producers harvested 2.85 million acres, down 400, 000 acres from the earlier forecast and 250,000 acres less than last year. Abandonment was much higher than anticipated especially in the north central region. Yields averaged 23.0 bushels per acre, down 2 bushels from 2000 because of the drought conditions that persisted for much of the growing season across the state. Hard red spring represented 99% of the acreage for 2000 and 2001 crop years, the balance was white wheat.

Montana **durum wheat** growers seeded 510,000 acres and harvested 495,000 acres in 2001. With the lack of spring precipitation in the Northeastern part of the state where a majority of the durum wheat is grown, producers saw poor yields. The average yield for Montana was 24.0 bushels per acre, 4 bushel less than 2000. Total production was estimated at 11.88 million bushels, down 9% from last year.

Barley planted acreage in Montana decreased to 1.10 million acres, 150,000 acres less than 2000. Producers harvested 720,000 acres, 230,000 acres less than were harvested for grain in 2000. Final yields averaged 41.0 bushels per acre, up 1 bushel from last year, as well as from our previous forecast. Production was estimated at 29.5 million bushels, down 22% from last year. The 2001 production is the smallest crop since 1961 when 26.4 million bushels was realized.

Oat production in Montana was estimated at 2.40 million bushels, down 8% from last year. Planted acreage was estimated at 130,000 acres, equal with last year. Harvested acreage was set at 60,000 acres, up 10,000 from 2000. Yields averaged 40.0 bushels per acre, 12.0 bushels below last year.

Nationally, the 2001 **winter wheat** production is estimated at 1.36 billion bushels, the lowest level since 1978. This is down 2% from the August forecast and 13% below the 2000 level. The U.S. yield decreased 0.3 bushel from August to 43.5 bushels per acre. This is 1.2 bushels below last year's final yield. Acreage for grain is estimated at 31.3 million acres, down 1% from the last forecast. This is the smallest harvested area since 1933. Planted area is 41.1 million acres, down 1% from the last forecast. Hard red winter production totals 769 million bushels, down 9% from last year. Soft red winter production is down 15% from 2000 and totals 400 million bushels. White winter production, at 193 million bushels, registered the sharpest decline and is down 22% from last year.

Other spring wheat production in 2001 is estimated at 513 million bushels, down 1% from the last forecast and 8% below 2000. Harvested area is 14.6 million acres, up 1% from last year. The U.S. yield is 35.2 bushels per acre, down 0.1 bushel from the last forecast but 3.2 bushels below last season.

Nationally, **durum wheat** production for 2001 totaled 83.6 million bushels, down 3% from September 1 and 24% less than last year. Grain area totals 2.79 million acres, down 6% from the last forecast and 22% below a year ago. The U.S. yield is estimated at 30.0 bushels per acre, up 0.9 bushel from the last forecast but 0.7 bushel per acre below 2000.

Barley production is estimated at 250 million bushels, down 5% from the last forecast and down 22% from last year's estimate. This year's production is the lowest since 1953. Average yield per acre, at 58.2 bushels, is down 2.9 bushels from 2000. The area harvested for grain is estimated at 4.29 million acres, 18% below a year ago. U.S. **oats** production is estimated at 117 million bushels, 14% below the August 1 forecast and 22% below last year's 150 million bushels. This is the lowest production on record. The estimated yield is 61.3 bushels per acre, down 0.7 from August 1 and 2.9 bushels below 2000. Area for harvest is estimated at a record low 1.91 million acres, 13% below the August 1 estimate and 18% below last year.

U.S. Hog Inventory Down

U.S. inventory of all hogs and pigs on September 1, 2001, was 58.6 million head. This was 1% below September 2000, but 1% above June 1, 2001. Breeding inventory, at 6.16 million head, was down 1% from September 1, 2000, and down slightly from June 1, 2001. Market hog inventory, at 52.5 million head, was 1% below last year, but 1% above last quarter.

The June-August 2001 U.S. pig crop, at 25.0 million head, was 2% less than 2000, and 3% less than 1999. Sows farrowing during this period totaled 2.84 million head, 2% below last year. The sows farrowed during this quarter represented 46% of the breeding herd. The average pigs per litter was 8.82 pigs saved per litter for the June-August 2001 period, compared to 8.84 pigs last year. Pigs saved per litter by size of operation ranged from 7.40 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

The Montana crop production and grain stocks estimates in this issue are the result of surveying approximately 1,500 Montana farmers and ranchers in September. Names were selected on a statistical probability basis.

SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

September, 2001 Grain Stocks

Stocks of all wheat in Montana on September, 2001 were 129.8 million bushels, down 23% from September 1, 2000. All wheat stocks were at their lowest level since the 119.2 million bushels were in storage on September 1, 1988. All wheat stocks stored on the farm accounted for 104.0 million bushels and there were 25.8 million bushels stored off farm. All spring wheat stocks, at 94.6 million bushels, were down 17% from last year and accounted for 73% of the total wheat stocks. Winter wheat stocks were estimated at 35.3 million bushels, down 36% from last year and the smallest September 1 stocks since records began in 1971. Durum wheat stocks were estimated at 13.8 million bushels, down 5% from last year. All wheat disappearance for the June 2001 - August 2001 quarter was 18.2 million bushels, compared with 26.7 million for the same quarter last year. Barley stocks in all positions on September 1, 2001 were 31.3 million bushels, down 14% from a year ago. Oats stocks in all positions were estimated at 2.8 million bushels, down 22% from last year.

Nationally, all wheat stored in all positions on September 1, 2001 totaled 2.16 billion bushels, down 8% from a year ago. On-farm stocks are estimated at 697 million bushels, down 14% from last year. Off-farm stocks, at 1.46 billion bushels, are down 6% from a year ago. The indicated June - August 2001 disappearance is 678 million bushels, down 18% from the same period a year earlier.

Durum wheat stocks in all positions on September 1, 2001 totaled 94.4 million bushels, down 23% from a year ago. On-farm stocks, at 60.3 million bushels, are down 30% from September 1, 2000. Off-farm stocks totaled 34.1 million bushels, down 9% from a year ago. The indicated June - August 2001 disappearance of 34.3 million bushels is down 6% from the same period a year earlier.

Barley stocks in all positions on September 1, 2001 are estimated at 245 million bushels, down 17% from September 2000. On-farm stocks are 135 million bushels, 11% below a year ago. Off-farm stocks are 111 million bushels, 22% below September 2000. Indicated disappearance during the June - August 2001 quarter totaled 110 million bushels, down 19% from the same period a year earlier.

Oats stored in all positions on September 1, 2001 totaled 116 million bushels, 23% below the stocks on September 1, 2000. Of the total stocks on hand, 74.8 million bushels were stored on farms, 26% less than a year ago. Off-farm stocks totaled 40.9 million bushels, 17% below a year earlier. Indicated disappearance during June - August 2001 totaled 73.9 million bushels, 2% less than the same period a year ago.

Old crop corn stocks in all positions on September 1, 2001 totaled 1.90 billion bushels, up 11% from September 1, 2000 and the highest level since September 1993. Of the total stocks, 753 million bushels are stored on farms, down 5% from a year earlier. Off-farm stocks, at 1.15 billion bushels, are up 24% from the previous year. The June - August 2001 indicated disappearance is 2.03 billion bushels, compared with 1.87 billion bushels during the same period last year.

Agricultural Prices Received for August

August full month crop prices were mostly lower compared with July 2001. Montana's winter wheat average price was $3.06 per bushel, down $0.04 from July, and spring wheat was $0.14 lower at $3.02 per bushel. Durum wheat prices dropped $0.29 to $3.51 per bushel. Producers received $1.28 per bushel for oats. There was not enough movement of oats during July to establish a price. Feed barley prices were up $0.06 from the previous month to $1.70 and malt barley prices rose $0.06 cents to $3.09 per bushel.

The mid-September price for alfalfa hay was up $17.00 per ton from the previous month to $97.00 per ton and other hay was also up $17.00 per ton to $89.00 per ton. The mid-September winter wheat price averaged $2.90 per bushel, spring wheat was $3.00, durum wheat was $3.80, feed barley was $1.80, and malt barley averaged $2.95.

Livestock prices for the full month of August were mostly lower compared with the previous month. Steer and heifer prices were up $2.00 to $89.50 per cwt and cows were down $0.40 to $45.40. The average price for calves was unchanged at $107.00 per cwt. Sheep prices dropped $0.30 to $36.00 per cwt, while lamb prices continued to plummet as prices dropped another $8.00 to $55.00 per cwt. Milk prices rose $0.90 per cwt from last month to $16.50 per cwt. Steer and heifer prices for mid-September averaged $89.30 per cwt., cows averaged $42.50 per cwt., calves averaged $102.00 per cwt., and milk prices averaged $16.90 per cwt.

Nationally, prices for August and changes from July were as follows: winter wheat was $2.71, up $0.10, spring wheat was $2.84, up $0.03; durum wheat was $2.38, down $0.36; the all barley price was $2.42, up $0.42, and steer and heifer prices were $73.60, down $1.40 per cwt.

The U.S. mid-September winter wheat price was $2.77 per bushel, spring wheat was $2.89 per bushel, durum wheat was $2.71 per bushel, all wheat was $2.80 per bushel, and all barley was $2.21. Steer and heifer prices were $73.00 per cwt, cow prices were $41.60, all hog prices were $45.80 per cwt, and all egg prices were $0.567 cents per dozen.

The Preliminary All Farm Products Index of Prices Received in September was 106 based on 1990-92=100, down 3 points (2.8 percent) from the August Index. Higher prices for lettuce, milk, broilers, and wheat were partially offset by lower prices for hogs, soybeans, strawberries, and cattle. The seasonal change in the mix of commodities farmers sell often affects the overall index. Lower seasonal marketings of cattle, broilers, wheat, and milk were partially offset by higher marketings of soybeans, peanuts, corn, and potatoes.

Compared with September 2000, the All Farm Products Index was 9 points (9.3 percent) higher. Price increases from September 2000 for milk, corn, broilers, and cattle were partially offset by lower prices for cotton, apples, tomatoes, and turkeys.

United States Index Summary

Montana's Spring Wheat Yield Unchanged From Last Month, Durum and Barley Down

Based on September 1 conditions, **spring wheat** production is forecast to be 74.75 million bushels, down 4 percent from last year's drought-reduced production and the smallest crop since 1990. The expected yield of 23.0 bushels per acre is unchanged from last month, but down 2 bushels per acre from last year. The lack of rainfall early in the growing season significantly impacted yields in the Central portion of the state while the rainfall during June and July benefitted the spring wheat crop particularly in Eastern Montana. Hot, dry conditions during August resulted in rapid harvest progress with 89 percent of the spring wheat acreage harvested by the week ending September 9th.

Durum wheat production is forecast to be 13.25 million bushels, down 7 percent from last month, but up 1 percent from last year due to more acres harvested. The expected yield of 25.0 bushels per acre is down 2 bushels from last month and down 3 bushels from last year. Yields in the North Central portion of the state have been significantly impacted by the lack of rainfall while yield prospects in the Northeast were not as good as producers had originally thought.

As of September 1, 2001, **barley** yields are expected to average 40.0 bushels per acre in 2001, down 1 bushel from the previous month's forecast. This revised estimate is now equal to last year's average for Montana. Consequently, barley production is now forecast to be 34.0 million bushels, compared with the 38.0 million bushels produced last year. Growers expect to harvest 850,000 acres, which is 100,000 fewer than harvested in 2000. For the week ending September 9, barley acreage was 90 percent harvested.

Sugar beet production is expected to be 1.235 million tons, down 6 percent from last year. Yields are expected to average 21.7 tons per acre down 2.2 tons from last year. Sugar beet harvesting has not begun yet, however, early harvesting of sugar beets was expected to begin September 17th for Holly Sugar in the Sidney area.

Nationally, **corn** production is forecast at 9.24 billion bushels, down less than one percent from last month and 7 percent from 2000. Based on conditions as of September 1, yields are expected to average 133.5 bushels per acre, down 0.4 bushel from August. If realized, this would be the lowest yield and production since 1997. Forecast yields are down in the northwest Corn Belt due to early-August hot, dry weather during critical reproductive and grain-filling stages.

Other spring wheat production is forecast at 520 million bushels nationally, up 2 percent from last month, but down 6 percent from last season. The final forecast of U.S. average yield is 35.3 bushels per acre. This is 0.8 bushels per acre higher than a month ago. Acreage for harvest is unchanged from last month. Hard Red Spring production is up 3 percent from August at 480 million bushels, while White Spring production is down 3 percent from last month.

Durum wheat production for the U.S. is forecast at 86.5 million bushels, down 6 percent from last month and 21 percent less than 2000. The U.S. yield is now forecast at 29.1 bushels per acre, down 1.8 bushels from August. Acreage for harvest is unchanged from last month.

U.S. **barley** production for 2001 is forecast at 262 million bushels, 2 percent lower than the August forecast and 18 percent below the 2000 production. If realized, this will be the lowest production since 1953. Based on September 1 conditions, producers expect to average 57.9 bushels per acre, down 0.9 bushel from last month and 3.2 bushels below last year's yield. Area harvested, at 4.51 million acres, is unchanged from August but down 13 percent from the previous year. September yields are down for Minnesota, Montana, Oregon, and Washington. The largest yield decreases are in the barley-producing areas of the Pacific Northwest where drought conditions prevailed. Yields in the remaining barley producing States are unchanged from last month except in South Dakota where grower expectations are up 2 bushels.

July Pig Crop Down 1 Percent

The July 2001 U.S. pig crop, at 8.50 million head, was 1 percent less than the previous year. Sows farrowing during this period totaled 955 thousand head, 2 percent below last year. The average pigs per litter for July rose to 8.91, compared to 8.85 last year.

The U.S. inventory of sows and gilts totaled 6.02 million head on August 1, 2001. U.S. sows and gilts bred during the month of July totaled 1.16 million head.

Wheat and Barley Movement

Montana **wheat** shipped to out-of-state destinations during the December 2000-May 2001 period, at 71.98 million bushels, was 7% lower than last year. Over 91% of wheat shipped during this period headed west, totaling 65.6 million bushels, down 4% from a year earlier. Movements to eastern destinations dropped significantly for this period, totaling 2.8 million bushels. Other destinations, mostly to the south, received 3.5 million bushels down 24% from last year. Most of Montana's wheat is shipped by rail, totaling 67.9 million bushels, 94% of total shipments. Just over four million bushels of wheat were trucked during this period significantly below the 4.8 million during this period a year earlier. Wheat shipped by truck accounted for just over 6% of total shipments.

1/ District data funded by the Montana Wheat & Barley Committee. 2/ Preliminary.

Agricultural Prices Received for July

The July full month crop prices were mostly lower compared with June 2001. Montana's winter wheat average price was $3.10 per bushel, up $0.02 from June, but spring wheat was $0.13 lower at $3.16 per bushel. Durum wheat prices rose $0.09 to $3.80 per bushel. There was not enough movement of oats during July to establish a price. Feed barley prices were down $0.15 from the previous month to $1.64 while malt barley prices rose $0.34 cents to $3.03 per bushel.

The mid-August price for alfalfa hay was down $12.00 per ton from the previous month to $80.00 per ton and other hay was down $10.00 per ton to $72.00 per ton. The mid-August winter wheat price averaged $2.93 per bushel, spring wheat was $3.12, durum wheat was $3.70, feed barley was $1.65, malt barley averaged $2.95.

Livestock prices for the full month of July were mixed compared with the previous month. Steer and heifer prices were down $2.70 to $87.50 per cwt and cows were down $0.40 to $45.80. The average price for calves was up $2.00 to $107.00 per cwt. Sheep prices increased $5.70 to $36.30 per cwt, while lamb prices continued to plummet as prices dropped another $12.00 to $63.00 per cwt. Milk prices rose $0.20 per cwt from last month to $15.60 per cwt. Steer and heifer prices for mid-August averaged $86.70 per cwt., cows averaged $45.40 per cwt., calves averaged $110.00 per cwt., and milk prices averaged $16.00 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $2.61, down $0.07, spring wheat was $2.81, down $0.22; durum wheat was $2.74, down $0.63; the all barley price was $2.00, up $0.02, and steer and heifer prices were $75.00, down $1.80 per cwt.

The U.S. mid-August winter wheat price was $2.67 per bushel, spring wheat was $2.78 per bushel, durum wheat was $2.74 per bushel, all wheat was $2.70 per bushel, and all barley was $2.08. Steer and heifer prices were $73.70 per cwt, cow prices were $43.40, all hog prices were $51.70 per cwt, and all egg prices were $0.576 cents per dozen.

The Preliminary All Farm Products Index of Prices Received in August was 109 based on 1990-92=100, up 2 points (1.9 percent) from the July Index. Higher prices for lettuce, strawberries, cantaloupes, and wheat were partially offset by lower prices for cattle, onions, peaches, and celery. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of tobacco, cattle, grapes, and sweet corn were offset by lower marketings of wheat, hay, strawberries, and milk.

Compared with August 2000, the All Farm Products Index was 13 points (14 percent) higher. Price increases from August 2000 for milk, broilers, cattle, and corn were partially offset by lower prices for eggs, turkeys, tomatoes, and cotton.

United States Index Summary

Wheat and Barley Movement (continued)

Montana **barley** shipped to out-of-state destinations during December 2000-May 2001 was 10.967 million bushels, down 14% from the same period last year. Fifty-seven percent of barley shipped out of Montana headed for destinations other than the west coast. Shipments to western destinations were down from the same period last year, at 4.8 million bushels. Eastern destination shipments totaled 4.8 million bushels down 16% from last year. Shipments to other destinations were down from last year to 1.4 million bushels this year. Barley hauled by rail was 90% of total movement, up from 84% for the same period last year.

HIGHLIGHTS:

U.S. Mushroom Sales
Ag Labor
July Milk Production
Cattle on Feed
Egg Production
Cattle & Beef Cow County Estimates
All Hay County Estimates
Red Meat Production
U.S. and Canadian Cattle

U.S. All Mushroom Sales Down 2 Percent, Value Down 1 Percent

Sales of the 2000-01 U.S. mushroom crop were 853 million pounds, 2% below 1999-2000 and down 1% from two seasons ago. Value of sales of the U.S. mushroom crop was $863 million, down 1% from 1999-2000 and slightly below two seasons ago. The number of growers, at 264, is down 40 from last season. Average price was $1.01 per pound, up 1 cent from the previous season.

Sales of Agaricus mushrooms for fresh market were a record high 687 million pounds, up 3% from the previous record high set last season. Sales of Agaricus mushrooms for processing were 152 million pounds, 18% below last season and the lowest since 1970-71 when 149 million pounds were processed. Value of sales of specialty mushrooms, at $42.7 million, was up 10% from last season.

Hired Workers Unchanged, Wage Rates Up 5 Percent From A Year Ago

There were 1.37 million hired workers on the Nation's farms and ranches the week of July 8-14, 2001, virtually the same as a year ago. There were 1.04 million workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 335,000 workers. Migrant workers accounted for 11.1% of the July hired workforce compared with 11.5% in July 2000.

Farm operators paid their hired workers an average wage rate of $8.29 per hour during the July 2001 survey week, up 36 cents from a year earlier. Field workers received an average of $7.70 per hour, up 33 cents from last July. Livestock workers earned $7.89 per hour compared with $7.68 a year earlier. The Field and Livestock worker combined wage rate at $7.75 was up 32 cents from last year. The number of hours worked averaged 39.9 hours for hired workers during the survey week compared with 40.0 hours a year ago.

July Milk Production Down 1.2 Percent In 20 Major States

Milk production in the 20 major States during July totaled 12.1 billion pounds, down 1.2% from July 2000. June revised production, at 12.1 billion pounds, was down 0.2% from June 2000. The June revision represented an increase of 0.3% or 34 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,555 pounds for July, 6 pounds below July 2000. The number of milk cows on farms in the 20 major States was 7.75 million head, 72,000 head less than July 2000, but unchanged from June 2001.

U.S. Cattle On Feed Up 7 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.89 million head on August 1, 2001. The inventory was 7% above August 1, 2000 and 18% above August 1, 1999.

Placements in feedlots during July totaled 1.99 million, 4% above 2000 and 10% above 1999. Net placements were 1.93 million. During July, placements of cattle and calves weighing less than 600 pounds were 469,000, 600-699 pounds were 444,000, 700-799 pounds were 606,000, and 800 pounds and greater were 467,000.

Marketings of fed cattle during July totaled 2.05 million, 2% below 2000 and 3% below 1999. Other disappearance totaled 59,000 during July, 34% above 2000 and 13% above 1999.

July Egg Production Up 2 Percent

U.S. egg production totaled 7.18 billion during July 2001, up 2% from last year. Production included 6.09 billion table eggs and 1.10 billion hatching eggs, of which 1.03 billion were broiler-type and 66.0 million were egg-type. The total number of layers during July 2001 averaged 332 million, up 2% from the total average number of layers during July 2000. July egg production per 100 layers was 2,165 eggs, slightly below the 2,169 eggs in July 2000.

July 2001 contained 22 weekdays, one holiday and four Saturdays, compared to 21 weekdays, one holiday and five Saturdays in July 2000.

All layers in the U.S. on August 1, 2001, totaled 332 million, up 2% from a year ago. The 332 million layers consisted of 273 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.77 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 2001, averaged 69.8 eggs per 100 layers, down slightly from the 70.1 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.72 billion eggs during July 2001, up 2% from July 2000. The average number of layers during July, at 311 million, was up 2% from a year earlier.

July Red Meat Production In Montana Down 19 Percent From The Previous Month

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during July 2001. Red meat production was down 19 percent from the previous month, and 35 percent from the previous year.

Cattle slaughtered statewide totaled 1,600 head, which is 800 head less than a year ago. The average live weight, at 1,141 pounds, was up 14 pounds from the previous year. (Continued on back page.)

Combined U.S. and Canadian July 1, 2001 Cattle Inventory Down Slightly

All cattle and calves in the U. S. and Canada combined totaled 120.4 million head on July 1, 2001, slightly below a year earlier. All cows and heifers that have calved, at 48.7 million head, were slightly below a year ago. All cattle and calves in the United States as of July 1, 2001, totaled 105.8 million head, slightly below the 106.3 million head on July 1, 2000 and 1% below the 107.0 million head two years ago. All cows and heifers that have calved, at 43.0 million head, were slightly below the 43.2 million head on July 1, 2000 and 1% below the 43.3 million head two years ago.

All cattle and calves in Canada as of July 1, 2001, totaled 14.6 million head, 2% above the 14.4 million head on July 1, 2000, and 1% above the 14.5 million head two years ago. All cows and heifers that have calved, at 5.7 million head, were 2% above the 5.6 million head on July 1, 2000, but slightly below two years ago.

Red Meat Production (continued from front page)

During July there were 1,100 hogs slaughtered in Montana, 800 less than a year ago. The average live weight, at 247 pounds, was down 14 pounds from a year ago. The number of sheep slaughtered, at 300 head, is unchanged from the previous year. The average live weight was down 30 pounds from last year, to 95 pounds.

Commercial red meat production for the **United States** totaled 3.64 billion pounds in July, down slightly from the 3.65 billion pounds produced in July 2000. Beef production, at 2.18 billion pounds, was 1% below the previous year. Cattle slaughter totaled 2.94 million head, down 1% from July 2000. The average live weight was 1,216 pounds, down 4 pounds from the previous year.

Veal production totaled 16 million pounds, 14% below July a year ago. Calf slaughter totaled 83,200 head, down 16% from July 2000. The average live weight was 311 pounds, 6 pounds above last year. Pork production totaled 1.43 billion pounds, up 2% from the previous year. Hog kill totaled 7.45 million head, 1% above July 2000. The average live weight was 260 pounds, 1 pound above the previous year. Lamb and mutton production, at 17 million pounds, was up 8% from July 2000. Sheep slaughter totaled 242,200 head, slightly below last year. The average live weight was 140 pounds, up 10 pounds from July a year ago.

January - July red meat production was 25.9 billion pounds, 2% below the previous year. Accumulated beef production was 4% below last year, veal production was 12% below last year, pork was up 1%, and lamb & mutton was down 5%.

Egg Production

Montana's July Cattle Inventory Drops 7 Percent

Montana's cattle and calf inventory was 3.5 million head on July 1, 2001, dropping 7% or 250,000 head from a year ago. This is the largest drop in inventory since the 1985 drought that caused the January 1, 1986 inventory to drop 510,000 head. The main reasons for large drop in inventory were lack of hay and shortage of pasture due to the drought that has plagued the state. Many producers have been forced to sell all or parts of their herd or have moved their cattle to other pastures in the state or out of Montana.

The beef cow inventory dropped 4% to 1.551 million head compared with 1.612 million head a year ago. Milk cow inventory rose 1,000 head from a year ago to 19,000 head. The 2001 calf crop is expected to be 1,550,000 million head, down 4% from last year.

All cattle and calves in the United States as of July 1, 2001, totaled 105.8 million head, slightly below the 106.3 million on July 1, 2000 and 1% below the 107.0 million two years ago. All cows and heifers that have calved, at 43.0 million, were slightly below the 43.2 million on July 1, 2000 and 1% below the 43.3 million two years ago. Beef cows, at 33.9 million, were down slightly from July 1, 2000 and 1% below two years ago. Milk cows, at 9.15 million, were down 1% from July 1, 2000 but was unchanged from two years ago.

Other United States class estimates on July 1, 2001, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 16.4 million, down 1% from both years.
- Beef replacement heifers, 4.6 million, down 2% and down 4%.
- Milk replacement heifers, 3.6 million, down 3% from both years.
- Other heifers, 8.2 million, up 1% for both years.
- Steers weighing 500 pounds and over, 14.6 million, up 2% and up 1%.
- Bulls weighing 500 pounds and over, 2.1 million, unchanged and down 5%.
- Calves under 500 pounds, 29.7 million, down 2% and down 3%.
- All cattle and calves on feed for slaughter, 13.1 million, up 7% and up 14%.

The U.S. 2001 calf crop is expected to be 38.4 million, down 1% from 2000 and 1999. Calves born during the first half of the year are estimated at 28.2 million, down 1% from both years.

U.S. All Sheep and Lamb Inventory Down 2 Percent

All sheep and lamb inventory in the United States on July 1, 2001, totaled 8.30 million head, 2% below July 1, 2000. Breeding sheep inventory declined to 4.90 million head on July 1, 2001, 3% below July 1, 2000. Market sheep and lambs (including newborn lambs), at 3.40 million head, were 2% below last July.

Of the July 1, 2001 breeding herd, 4.07 million head were ewes one year old and older, 195,000 head were rams one year old and older, and 640,000 head were replacement lambs (including newborn lambs).

Region 3 (CO, MT, SD, UT, & WY) accounted for 34.8% of the total U.S. sheep and lambs. Region 2 (NM & TX) accounted for 21.4%, Region 1 (AZ, CA, ID, NV, OR, & WA) for 17.2%, Region 4 (IA, KS, MN, MO, NE, ND, & OK) for 15.4%, and Region 5 (all other states) accounted for 11.2%.

The 2001 lamb crop in the United States is expected to total 4.42 million head, down 4% from the 2000 lamb crop of 4.62 million head. Lambs born during January through June 2001 totaled 3.94 million head or 89% of the yearly total. An additional 480,000 head are expected to be born during the period July through December 2001.

U.S. Cattle on Feed Up 6 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.01 million head on July 1, 2001. The inventory was 6% above July 1, 2000 and 15% above July 1, 1999. The inventory included 6.50 million steers and steer calves, up 4% from the previous year. This group accounted for 59% of the total inventory. Heifers and heifer calves accounted for 4.45 million head, up 7% from 2000.

Placements in feedlots during June totaled 1.97 million, 18% above 2000 and 10% above 1999. Net placements were 1.89 million. During June, placements of cattle and calves weighing less than 600 pounds were 419,000, 600-699 pounds were 442,000, 700-799 pounds were 631,000, and 800 pounds and greater were 475,000. Marketings of fed cattle during June totaled 2.12 million, 2% below 2000 and 1% below 1999. Other disappear-ance totaled 77,000 during June, 35% above 2000 and 22% above 1999.

U. S. June Pig Crop Up 3 Percent

The June 2001 U.S. pig crop at 8.71 million head, was 3% more than the previous year. Sows farrowing during this period totaled 972 thousand head, 1% above last year. The average pigs per litter for June rose to 8.96, compared to 8.83 last year. The U.S. inventory of sows and gilts totaled 6.02 million head on July 1, 2001. U.S. sows and gilts bred during the month of June totaled 1.20 million head.

June Red Meat Production

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during June 2001. Red meat production is at the same level as it was the previous month, but down 24% from the previous year.

Cattle slaughtered statewide totaled 1,900 head, which is 500 head less than a year ago. The average live weight, at 1,148 pounds, was up 5 pounds from the previous year. During June there were 1,300 hogs slaughtered in Montana, 700 less than a year ago. The average live weight, at 262 pounds, was the same as a year ago. The number of sheep slaughtered, at 200 head, was 200 less than the previous year. The average live weight was down 3 pounds from last year, to 124 pounds.

Commercial red meat production for the **United States** totaled 3.76 billion pounds in June, down 5% from the 3.94 billion pounds produced in June 2000. Beef production, at 2.27 billion pounds, was 4% below the previous year. Cattle slaughter totaled 3.12 million head, down 4% from June 2000. The average live weight was down 7 pounds from the previous year, at 1,198 pounds.

Veal production totaled 16 million pounds, 16% below June a year ago. **Calf** slaughter totaled 77,000 head, down 19% from June 2000. The average live weight was 10 pounds above last year, at 332 pounds. **Pork** production totaled 1.46 billion pounds, down 5% from the previous year. **Hog** kill totaled 7.48 million head, 6% below June 2000. The average live weight was 1 pound above the previous year, at 263 pounds. **Lamb and mutton** production, at 16 million pounds, was down 5% from June 2000. **Sheep** slaughter totaled 233,000 head, 11% below last year. The average live weight was 141 pounds, up 8 pounds from June a year ago.

January-June red meat production was 22.2 billion pounds, 3% lower than the comparable figure a year earlier. Accumulated beef production was 5% below last year, veal was down 12%, pork was equal to a year ago, and lamb & mutton was down 7%.

U.S. Mink Pelt Production

Mink pelt production in the United States in 2000 totaled 2.67 million pelts, down 5% from 1999. Wisconsin, the major mink producing state, produced 680,100 pelts. By color class, the number of pelts as a percent of the total U.S. production is as follows: Standard - 35.7%; Mahogany - 26.6%; Gunmetal - 17.3%; Ranch Wild - 5.1%; Sapphire - 5.0%. The remaining color classes accounted for 10.3%.

Mink pelts produced during the 2000 crop year were valued at $90.6 million dollars, down 4% from $94.8 million a year ago. The average price per pelt for the 2000 crop year was $34.00, up from $33.70 in 1999.

Female mink bred to produce kits in 2001 totaled 630,200, down 5% from the previous year. Percent of total females bred to produce kits in 2001 by color class are: Standard - 39.5%; Mahogany - 22.2%; Gunmetal - 17.6%; Sapphire - 5.6%;. The remaining color classes accounted for 15.1%.

There were 351 mink farms producing pelts in 2000, down 12% from a year ago. Leading states were Utah with 90 farms, Wisconsin with 70 farms, and Minnesota with 37. There were 24 mink farms which also raised fox in 2000, down from 27 the previous year.

Montana Wheat & Barley Varieties Seeded in 2001

Neeley remained the leading variety of **winter wheat** seeded in Montana for the fourteenth consecutive year, with over 273 thousand acres, 5% less than last year. **Rampart** remained in second position in 2001, with almost 187 thousand acres seeded. **Tiber** remained in third place with just over 132 thousand acres seeded. **Morgan** replaces Vanguard this year as the number four variety in Montana, with over 118 thousand acres planted, close to 10% of the total. These top four varieties accounted for 59.2% of the winter wheat acreage seeded in 2001. In 2000, these same four varieties accounted for 52.6% of the total acreage for the state.

McNeal was the leading **spring wheat** variety planted for the forth consecutive year, accounting for over 48% of the seeded acreage, with more than 1.65 million acres planted. **Ernest** moved into second place with 349 thousand acres planted this year. Last year Ernest was the third most popular variety with nearly 342 thousand acres. **Amidon** fell to third place in ranking this year with 255 thousand acres planted. **Fortuna** took over fourth place from Westbred Rambo this year with over 185 thousand acres planted statewide. The top four varieties accounted for nearly 71.8% of the spring wheat acreage seeded in 2001. These same four varieties accounted for 71.8% in 2000 as well.

Kyle continued to be the leading **durum** variety for the fifth consecutive year. There were over 236 thousand acres planted in Montana, accounting for 43.7% of the total seeded acres. **Mountrail** moved up from fourteenth position to become the second most popular variety of durum wheat in the state. Almost 50 thousand acres were planted or 9.2% of the state's durum wheat. **Ben** took third place ranking this year with over 44 thousand acres planted or 8.2% of the state total for durum wheat. **Utopia** fell one place to become the fourth most popular variety of durum wheat. Nearly 41 thousand acres were planted or 7.6% of the state's durum wheat. These top four varieties account for 68.7% of total acres seeded to durum wheat. This is comparable to the 67.1% reported in 2000 for the same varieties.

Harrington remained the top **barley** variety planted in the state for the eighth year in a row. It was seeded on over 500 thousand acres or 45.5% of Montana's barley acreage. **B 1202** maintained the second place malting variety position for the sixth consecutive year with 60 thousand acres or 5.5% of the barley planted. **Moravian 37** moved up to rank third among malting barley varieties with a significant increase in seeded acreage to 40.7 thousand, or 3.7% of the state's acreage. **B Merit** rounds out the top four malting varieties again in 2001, with 12.4 thousand acres seeded statewide.

Haybet remained in the lead position for feed barley for the second year in a row, with almost 113 thousand acres planted this year, which accounted for 10.2% of the total barley acres seeded in Montana for 2001. This is 31.1 thousand more acres than the 81.5 thousand acres planted in 2000. **Baronesse** remains the second most popular feed barley in 2001. It represents 5.2% of the total acreage or 57.6 thousand acres for feed barley seeded in Montana for 2001. This is compared to the 77.0 thousand acres planted last year. **Gallatin** became the third place choice for feed barley this year with 34.2 thousand acres seeded or 3.1% of the barley acreage state-wide. This is compared to the 27.4 thousand acres planted in 2000. **Westford** is the fourth leading feed-type variety this year with over 30 thousand acres or 2.8% of the state-wide barley acres seeded in 2001. This is compared to the 15,400 acres planted in 2000, which accounted for 1.2% of the total barley acres planted last year.

* American Malting Barley Association, Inc. recommended for malting and brewing for Montana.

This report was made possible by funds provided by the Montana Wheat and Barley Committee.

Montana Quarterly Milk Production Up, U.S. Down

During the April-June quarter, Montana milk cows produced 87 million pounds of milk, 7 million pounds more than the same quarter a year ago. Montana milk cow numbers, at 19,000 head were up 1,000 head from a year ago.

Milk production in the 20 major States during June totaled 12.0 billion pounds, down 0.5 percent from June 2000. May revised production, at 12.6 billion pounds, was down 0.9 percent from May 2000. The May revision represented a increase of 0.2 percent or 24 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,552 pounds for June, 5 pounds above June 2000. The number of cows on farms in the 20 major States was 7.75 million head, 61,000 head less than June 2000, but 2,000 head more than May 2001.

The April-June quarterly production of milk for the U.S. was 42.6 billion pounds, 1.3 percent below the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.12 million head, 89,000 head less than the same period last year.

U.S. Egg Production Up 3 percent in June

U.S. egg production totaled 6.97 billion during June 2001, up 3 percent from last year. Production included 5.89 billion table eggs and 1.08 billion hatching eggs, of which 1.02 billion were broiler-type and 67.0 million were egg-type. The total number of layers during June 2001averaged 332 million, up 2 percent from the total average number of layers during June 2000. June egg production per 100 layers was 2,099 eggs, slightly above the 2093 eggs in June 2000.

All layers in the U.S. on July 1, 2001, totaled 331 million, up 2 percent from a year ago. The 331 million layers consisted of 272 million layers producing table or commercial type eggs, 56.5 million layers producing broiler-type hatching eggs, and 2.84 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 2001, averaged 69.9 eggs per 100 layers, up slightly from the 69.7 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.53 billion eggs during June 2001, up 3 percent from June 2000. The average number of layers during June, at 311 million, was up 2 percent from a year earlier.

July 1 Crop Production

Montana's **all wheat production** is expected to be 17% smaller than last year's drought reduce crop and the smallest crop since 1988. As of July 1, producers expect to harvest 111.86 million bushels of all wheat, down from the 135.21 million bushels harvested last year. The area for harvest is expected to be 4.73 million acres, 190,000 less than were harvested in 2000.

The forecasted **winter wheat** yield, at 24.0 bushels per acre, is down 5 bushels per acre from June and 9 bushels per acre below last year as the lack of rain and heat are taking a toll on yields. Production is forecast to be 22.80 million bushels, down a whopping 49% from last year and is the smallest crop since 1985. Despite receiving significant rainfall throughout the state the first half of June, the lack of rain earlier in the growing season and since mid-June has significantly reduced yield potential. While yields have been bad throughout the state, the winter wheat crop in the North Central Montana has been hit the hardest. Winter wheat conditions in the state slid more this month as conditions for the week ending July 1st were rated 42% very poor, 38% poor, 15% fair, 4% good and only 1% excellent. For the week ending July 8th, 61% of the winter wheat crop had turned color compared with the 5 year average of 41%.

The first **spring wheat** production forecast is 74.75 million bushels, down 4% from last year's drought-reduced production and is the smallest crop since 1990. The harvested acres are expected to be 3.25 million, up 5% due to more acres being planted this year. However, the expected yield of 23.0 bushels per acre is down 2 bushels per acre from last year. Spring wheat conditions are also poor with the crop being rated for the week ending July 1st, 17% very poor, 19% poor, 29% fair, 31% good, and 4% excellent. Conditions are likely to continue to deteriorate if no significant rains are received and the hot, dry weather continues through the rest of the growing season. **Durum wheat** production is forecast to be 14.31 million bushels, up 9% from last year due to a 13% increase in harvested acreage. The expected yield of 27.0 bushels per acre would be down 1 bushel from last year.

Barley yields in Montana are expected to average 41.0 bushels per acre in 2001, 1 bushel more than last year. Barley production is forecast to be 34.85 million bushels compared to the 38.00 million produced last year. Growers expect to harvest 850,000 acres, 100,000 less than were harvested in 2000. **Oats** producers expect to harvest 3.315 million bushels of grain, 28% more than produced last year. The 2001 area for harvest is expected to be 65,000 acres compared with the 50,000 harvested for grain in 2000. The expected yield of 51.0 bushels is one bushel below last year.

Montana **potato** producers planted 9,600 acres in 2001, a decrease of 1,900 acres from last year. Growers expect to harvest 99% of the crop, or 9,500 acres. The first forecast of potato production will be on November 9, 2001. Statewide, planted acreage for **dry edible peas** is estimated to be 25,000 acres, down 3,000 acres from the previous year. Pea growers expect to harvest 24,000 acres, the same area as last year. **Austrian winter peas** growers planted an estimated 6,000 acres, with 5,900 of those expected to be harvested. This is the first year that Austrian winter pea acreage has been estimated. **Lentils** planted in the state are at 15,000 acres, down 7,000 acres from the previous year. Producers expect to harvest 14,000 of those acres, also down 7,000 acres from 2000.

Nationally, winter wheat production is forecast at 1.37 billion bushels. This is up 3% from last month but down 13% from 2000. The U.S. yield is forecast at 43.2 bushels per acre, up 2.0 bushels from last month. Increased yields from last month's forecast were seen in most of the Hard Red Wheat (HRW) States. Head counts were down slightly from last month's Objective Yield survey in the six HRW States (Colorado, Kansas, Montana, Nebraska, Oklahoma, and Texas).
(Continued on next page)

Montana Cash Rents Increase in 2001

The average cash rent for **Montana** cropland went up $0.70 from last year to $24.50 per acre. The average cash rent for irrigated cropland, at $46.00, fell $3.70 per acre from a year ago. The non-irrigated cropland average increased $.70 to $18.00 per acre. Average pasture rents decreased $.30 from 2000 to $4.50 per acre in 2001.

The **U.S.** cropland cash rent in 2001 was up $1.00 from last year at $71.00. The Lake, Corn Belt, and Northern Plains Regions which account for the majority of cash rented acreage, increased less than 2 percent from 2000. The Lake and Northern Plains Regions were up $1.00 to $73.00 and $46.50 respectively while the Corn Belt increased by $2.00 to $105.00. The Southeast Region had the largest increase of $4.00 per acre while the Pacific Region had a decrease of $1.00 per acre.

Cash rents for cropland were mixed with increases for the majority of States. Western States of Arizona, Idaho, California, Oregon, and Washington all showed irrigated cropland exceeding $110 per acre. California again had the highest cash rent for irrigated cropland at $290 per acre. The major corn producing States of Illinois , Indiana, and Iowa were mixed. Illinois and Indiana held at $119.00 and $100.00 per acre respectively while Iowa increased by $2.00 to $117.00. States in the Corn Belt and Northern Plains showed slight increases in cropland cash rents and Nebraska and Indiana remained the same at $88.00 and $100.00 respectively.

Pasture cash rent at the U.S. increased from $8.50 to $9.20. per acre. There were slight increases for the Corn Belt, Northern Plains, Appalachian, Delta and the Southern Plains. Pasture rent in Lake and the Northeast Regions declined to $22.00 and $23.00 respectively.

Texas, Oklahoma, Louisiana and Mississippi pasture rents increased slightly while the Northern Plains held close to the 2000 level. There were slight increases of less than 4 percent in North Dakota, 2 percent in South Dakota and a decrease of less than 2 percent in Kansas. Wisconsin again had the highest pasture rent at $36, a drop of $2.00 from last year.

July 1 Crop Production Forecast
(continued from front page)

U.S. other spring wheat production is forecast at 514 million bushels, down 7% from 2000. The U.S. yield is forecast at 34.9 bushels per acre, 3.3 bushels lower than last year. The Pacific Northwest (Idaho, Oregon, Washington) production forecast is down 22% from a year ago. Durum wheat production is forecast at 94.1 million bushels, down 14% from 2000. The U.S. yield is forecast at 31.6 bushels per acre, 0.9 bushels more than last year.

Barley production in the United States for 2001 is forecast at 264 million bushels, down 17% from 2000. The first forecast for 2001 indicates producers expect to average 58.4 bushels per acre, a decrease of 2.7 bushels from last year's near record high. Area harvested, at 4.51 million acres, is 13% below the 5.20 million acres harvested in 2000, but unchanged from the previous estimate. The combination of lower expected yields and a decrease in harvested acres has reduced forecast production to its lowest level since 1953.

Planted acreage of lentils in Idaho, Montana, North Dakota, and Washington is estimated at 215,000 acres, down 1% from last year but 18% higher than 1999. Harvested acreage is estimated at 212,000. Acreage of dry edible peas planted in Idaho, Montana, North Dakota, Oregon, and Washington is estimated at 215,500 acres, up 15% from last year but 20% below 1999. Planted acreage of Austrian winter peas in Idaho, Montana, and Oregon is estimated at 11,500 acres and harvested acreage is estimated at 10,200 acres.

1/ District estimates of stocks funded by the Montana Wheat & Barley Committee.

Agricultural Prices Received for May

The May full month crop prices were higher, except for barley, compared with April 2001. Montana's winter wheat average price was $3.10 per bushel, up $0.10 from April, spring wheat was $0.07 higher at $3.33 per bushel. Durum wheat prices jumped $0.77 to 3.33 per bushel as less lower quality durum wheat was marketed during the month compared to the previous month. The average price for oats rose $0.54 from last month to $1.57 per bushel due to limited oat volume during the month. Feed barley prices were down $.19 from the previous month to $1.61 and malt barley slipped $0.11 cents to $2.66 per bushel.

The mid-June price for alfalfa hay was up $1.00 per ton from the previous month to $95.00 per ton but other hay was down $4.00 per ton to $82.00 per ton. The mid-June winter wheat price averaged $3.10 per bushel, spring wheat was $3.45, durum wheat was $3.80, feed barley was $1.60, malt barley averaged $2.60 and oats averaged $1.10 per bushel.

Livestock prices for the full month of May were mixed compared to the previous month. Steer and heifer prices were down $0.60 to $86.60 per cwt while cows were up $1.50 to $46.10. The average price for calves was down $2.00 to $103.00 per cwt. Sheep prices dropped $1.00 to $38.50 per cwt, while lamb prices rose $3.00 to $90.50 per cwt. Milk prices rose $.60 per cwt from last month to $14.70 per cwt. Steer and heifer prices for mid-June averaged $89.90 per cwt., cows averaged $44.80 per cwt., calves averaged $105.00 per cwt., and milk prices averaged $16.00 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was $2.93, up $0.16, spring wheat was $3.15, up $0.10; durum wheat was $2.66 , up $0.14; the all barley price was $2.13, up $0.20, and steer and heifer prices were $77.40, down $2.20 per cwt.

The U.S. mid-June winter wheat price was $2.68 per bushel, spring wheat was $3.12 per bushel, durum wheat was $2.61 per bushel, all wheat was $2.76 per bushel, and all barley was $1.89. Steer and heifer prices were $77.50 per cwt, cow prices were $43.60, all hog prices were $52.10 per cwt, and all egg prices were $0.558 cents per dozen.

The Preliminary All Farm Products Index of Prices Received in June was 107 based on 1990-92=100, down 1 point (0.9 percent) from the May Index. Lower prices for cantaloupes, lettuce, sweet corn, and tomatoes were partially offset by higher prices for milk, strawberries, celery, and broilers. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of wheat, grapes, hay, and peaches were offset by lower marketings of strawberries, tomatoes, oranges, and cattle. Compared with June 2000, the All Farm Products Index was 9 points (9.2 percent) higher. Price increases from June 2000 for milk, broilers, cattle, and wheat were partially offset by lower prices for cantaloupes, corn, soybeans, and eggs.

United States Index Summary

INDEX (1990-92=100)	May 2000	June 2000	May 2001	June 2001

June 1, 2001 Crop Acreage

Small Grain Acreage: **All wheat** planted acreage in Montana is estimated to be 5.14 million acres, down 4% from last year and is the lowest acreage planted since 1991. **Spring wheat** producers planted an estimated 3.4 million acres, up 1% from last year. Producers intend to harvest 3.25 million acres of spring wheat this year, up 5% from last year. The lack of moisture and continued dry conditions has caused some spring wheat acres to be already abandoned. **Winter wheat** acreage planted remained unchanged from the March 1 estimate at 1.20 million acres which is down 20% from last year due to the dry fall planting conditions. Winter wheat producers expect to harvest 950,000 acres, down 140,000 acres from the previous forecast and down 400,000 acres from last year. This would be the smallest acreage of winter wheat harvested since 1937. The lack of rainfall this spring has resulted in a significant amount of acreage being abandoned. While winter wheat conditions have improved since June 1, conditions are significantly worse than a year ago. **Durum wheat** acreage, at 540,000 acres, is up 13% from a year ago and is the largest durum wheat planted acreage since 1956. Acreage of durum wheat intended to be harvested is estimated to be 530,00 acres, up 13% from last year.

Montana **barley** producers planted an estimated 1.1 million acres, down 12% from last year. This is the lowest barley acreage planted since 1979. The state's barley growers intend to harvest 850,000 acres for grain this year, 11% less than the previous year's harvest. Planted acreage for **oats**, at 130,000 acres, remains unchanged from the previous year. Growers intend to harvest 65,000 acres of the oat crop for grain, 15,000 acres more than a year ago.

In the U.S., **all wheat** planted area is estimated at 59.6 million acres, down 5% from 2000. Harvested area is expected to total 49.3 million acres, down 7% from last year. **Winter Wheat** area harvested for grain is now expected to total 31.7 million acres, down 1% from the June 1 forecast and 10% below the 2000 total. This is the smallest area for grain since 1933. Planted area is slightly below the previous estimate and 5% below last year's acreage. The **Durum** planted area for 2001 is estimated at 3.04 million acres, down 23% from last year. Area to be harvested for grain is expected to total 2.98 million acres, 17% below last year's level. Acreage planted to other **spring wheat** for 2001 is estimated at 15.2 million, virtually unchanged from the 2000 total. Grain area is expected to total 14.7 million acres, up 2% from last year.

Nationally, **barley** growers seeded 5.09 million acres for 2001, down 13% from the 5.84 million acres seeded a year ago. This is the lowest planted acreage since records began in 1926. The area planted to **oats** in the U.S. last fall and this spring totaled 4.40 million acres, 2% below last year's final seeded acres and the lowest acreage on record. Acreage to be harvested for grain also establishes a new record low, at 2.19 million acres. Acres for harvest are 6% less than the previous record low set last year.

Row Crops, Hay, and Oilseeds: Montana **corn** growers planted 60,000 acres which is unchanged from a year ago. Acreage intended to be harvested for grain, at 13,000 acres, is down 5,000 acres from a year ago. **Sugarbeet** producers planted 57,500 acres, down 5% from 2000. An estimated 2.05 million acres of **all hay** are expected to be harvested, which is 50,000 acres more than last year's drought affected harvest, but 450,000 acres less than was intended to be cut on March 1, 2001. Of the total expected hay harvest, 1.2 million acres are expected to be **alfalfa** hay, which is unchanged from last year's figure, while producers expect to harvest 850,000 acres of **other hay**. Farmers planted 30,000 acres of **dry beans** in 2001, down 26% from last year. Producers are looking to harvest 29,000 acres of dry beans this season, 17% less than last year's number. **Flaxseed** growers in Montana planted 11,000 acres, down 31% from last year's acreage. Producers intend to harvest 10,000 acres of flaxseed this year, 29% less than the previous year.

In the United States, the planted area for **corn** for all purposes is estimated at 76.1 million acres, down 4% from last year. Growers expect to harvest 69.3 million acres for grain, down 5% from 2000. This is the lowest acreage since 1995 when excess rainfall limited plantings. **Sugarbeet** area planted totaled 1.37 million acres in the 12 sugarbeet producing States, down 13% from 2000. The area for harvest is estimated at 1.34 million, 3% lower than last year. Producers expect to harvest 63.8 million acres of **all hay** in the U.S. in 2001, up 7% from the 59.9 million acres harvested in 2000. This is the largest harvested acreage of all hay since 1988. **Alfalfa** and alfalfa mixtures are estimated at 23.8 million acres, up 3% from last year. All **other hay** is estimated at 40.1 million acres, up 9% from last year. U.S. **dry bean** growers planted 1.43 million acres for 2001, down 19% from last year and 30% below comparable states two years ago. This is the lowest dry bean acreage since 1983 when growers planted 1.18 million acres. Harvest is expected from 1.33 million acres, down 17% from last year and 29% below comparable States in 1999. Area planted to **flaxseed** in 2001 is 556,000 acres, up 4% from last year's planted area, and the largest planted area since 1986 when 720,000 acres were planted. Area for harvest, estimated at 545,000, is 5% above the harvested acreage of 2000.

The Montana crop acreage and grain stocks estimates are the result of surveying approximately 2,500 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those who were interviewed and responded. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

Egg Production Up 2 Percent

U.S. egg production totaled 7.23 billion during May 2001, up 2% from last year. Production included 6.11 billion table eggs and 1.13 billion hatching eggs, of which 1.06 billion were broiler-type and 70.0 million were egg-type. The total number of layers during May 2001 averaged 335 million, up 3% from the total average number of layers during May 2000. May egg production per 100 layers was 2,160 eggs, down 1% from 2,177 eggs in May 2000.

U.S. Potato Stocks Record High

June 1, 2001 potato stocks totaled a record high 63.2 million cwt, up 34% from last year and 26% above two years ago. Potatoes in storage accounted for 14% of the fall storage States' production, up 3 percentage points from a year ago.

Disappearance from the start of harvest to June 1 was a record high 399 million cwt, up 7% from last year. During May, disappearance was 48.3 million cwt, up 22% from a year ago. Shrink and loss rose to 39.8 million cwt, up 28% from last year and 29% above two years ago. This total includes potatoes diverted and destroyed by growers. Potatoes sold under a government diversion program are also included in the disappearance.

Sweet Cherry Production Forecast Up

Montana's sweet cherry growers expect to produce 1,700 tons this year, an increase of 55% from last year's 1,100 tons. Growers have had favorable crop conditions, good pollination and more acres reaching bearing age.

U.S. sweet cherry production is forecast at 235,950 tons, up 9% from 2000 and 2% above 1999. This is the highest sweet cherry forecast on record.

The Washington crop, at a record high 100,000 tons, is unchanged from the previous forecast but 5% more than last year. Production in California is forecast at 60,000 tons, the same as the previous forecast but 50% more than last year. Weather conditions in both States have been generally favorable with some localized losses due to wind and cold. Washington's larger crop is mostly due to an increase in bearing acres. The sweet cherry crop in Oregon is forecast at 40,000 tons, unchanged from the previous forecast.

Idaho and Utah are forecasting a decline from last year's crops. Production is down 47 and 54%, respectively, from 2000. A hard frost in Idaho during April and cold, rainy weather during pollination in Utah are the main reasons for these decreases.

U.S. May Milk Production

Milk production in the 20 major States during May totaled 12.6 billion pounds, down 1.1% from May 2000. April revised production, at 12.2 billion pounds, was down 2.0 % from April 2000. The April revision represented a decrease of 0.1% or 14 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,629 pounds for May, 7 pounds below May 2000. The number of milk cows on farms in the 20 major States was 7.74 million head, 55,000 head less than May 2000, but unchanged from April 2001.

June 1, 2001 Grain Stocks

Stocks of **all wheat** in Montana on June 1, 2001 were 51.4 million bushels, down 15 percent from June 1, 2000. All wheat stocks stored on the farm accounted for 34.0 million bushels of the total with the remaining 17.4 million bushels stored off farm. **All spring wheat** stocks, at 34.4 million bushels, were down 21 percent from last year and accounted for 67 percent of the total wheat stocks. **Winter wheat** stocks were estimated at 17.0 million bushels, down 1 percent from last year. **Durum wheat** stocks were estimated at 4.4 million bushels, up 3 percent from last year. **All wheat disappearance** for the March 2001 - May 2001 quarter was 41.6 million bushels, compared with 47.9 million for the same quarter last year. **Barley** stocks in all positions on June 1, 2001 were 10.3 million bushels, down 16 percent from a year ago. **Oats** stocks in all positions were estimated at 1.0 million bushels, down 33 percent from last year.

May Red Meat Production

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during May 2001. Red meat production is at the same level as it was the previous month, but down 20% from the previous year.

Cattle slaughtered totaled 1,900 head, which is 500 head less than a year ago. The average live weight, at 2,201 pounds, was up 32 pounds from the previous year. During May there were 1,200 hogs slaughtered in Montana, 800 less than a year ago. The number of sheep slaughtered, at 200 head, was 300 less than the previous year.

Commercial red meat production for the United States totaled 3.88 billion pounds in May, virtually unchanged from the 3.88 billion pounds produced in May 2000.

U.S. beef production, at 2.29 billion pounds, was slightly below the previous year. Cattle slaughter totaled 3.20 million head, up 1% from May 2000. The average live weight was down 12 pounds from the previous year, at 1,184 pounds.

Nationally, pork production totaled a May record 1.56 billion pounds, up 1% from the previous May record high occurring last year. Hog kill totaled 7.96 million head, slightly above May 2000.

U.S. lamb and mutton production, at 17 million pounds, was down 4% from May 2000 tying a record low. Sheep slaughter totaled 239,000 head, 8% below last year.

U.S. Hog Inventory Down

U.S. inventory of all hogs and pigs on June 1, 2001, was 59.1 million head. This was slightly below June 2000, but 1% above March 1, 2001.

Breeding inventory, at 6.20 million head, was down 1% from June 1, 2000, and down 1% from March 1, 2001. Market hog inventory, at 52.9 million head, was slightly below last year, but 1% above last quarter.

The March-May 2001 U.S. pig crop, at 25.5 million head, was slightly less than 2000, and 3% less than 1999. Sows farrowing during this period totaled 2.88 million head, slightly below last year. The sows farrowed during this quarter represented 46% of the breeding herd. The average pigs per litter was 8.88 pigs saved per litter for the March-May 2001 period, compared to 8.86 pigs last year. Pigs saved per litter by size of operation ranged from 7.60 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.92 million sows farrow during the June-August 2001 quarter, 1% above the actual farrowings during the same period in 2000, and slightly above 1999. Intended farrowings for September-November, at 2.91 million sows, are 2% above the same period in both 2000 and 1999.

U.S. Cattle on Feed Up

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.24 million head on June 1, 2001. The inventory was 2% above June 1, 2000 and 13% above June 1, 1999.

Placements in feedlots during May totaled 2.37 million, 3% above 2000 and 16% above 1999. Net placements were 2.27 million. Marketings of fed cattle during May totaled 2.20 million, 1% above 2000 and 10% above 1999. Other disappearance totaled 101,000 during May, 12% below 2000 but 2% above 1999.

HIGHLIGHTS:

Pest Management Practices
Winter Wheat Production
Barley County Estimates
Ag Prices Received
Wheat Supply & Demand

2000 Pest Management Practices Survey Results

The 2000 Pest Management Practices Summary is based largely on data compiled from a nationwide farmer survey conducted in February 2001. Results refer to responses from sampled producers concerning specific practices. The producers were first asked how many acres of a specific commodity they grew in 2000, followed by questions regarding the use of specific pest management practices, in a yes/no format. Pests were defined as weeds, insects, and diseases. If the respondent used a specific practice on a crop, it was assumed that the practice was used on all acres of that crop. For example, if a producer had 500 acres of wheat, and used field mapping of previous weed problems to assist in making weed management decisions, it was assumed that all 500 acres were mapped.

The data are published in two tables for each crop: percent of acres receiving the specific pest management practice and percent of farms using the specific pest management practice. These percentages are published at the U.S. and regional levels. For barley, corn, soybeans, wheat, fruits and nuts, vegetables, and all other crops, the percentages refer only to farms and planted acres. For alfalfa hay and other hay, the percentages refer to farms and harvested acres. The complete report is available from our office or in the national release located on the Internet at www.usda.gov/nass/pubs/rptscal.htm.

June 1, 2001 Crop Production Forecast

As of June 1, Montana winter wheat producers were expecting a yield of 29 bushels per acre, down 4 bushels from last year and 5 bushels below last month. If realized, total production would be 31.6 million bushels, down 29% from last year. Harvested acreage remains the same as last month at 1.09 million acres, down 260,000 acres from last year. Results from a major acreage survey currently underway will be released on June 29, 2001 and will provide additional insight concerning the amount of winter wheat abandoned since planting last fall.

The winter wheat condition in the state deteriorated during the last month as high winds and little rainfall were received during May. As of June 3, winter wheat condition was rated 77% poor to very poor compared with 20% last month and 55% a year ago. The lack of rain has caused the topsoil moisture rating to drop to 88% short to very short compared with 57% last month and 50% a year ago. Through the end of May, the percentage of normal rainfall received for the growing season across the state is well below normal with the highest percentage of normal, 85%, in the Western and Northeast districts. The two largest winter wheat growing districts, North Central and Central, had received 56% and 69% of normal rainfall, respectively.

The progress of the winter wheat crop is advanced compared to normal. As of the week ending June 3, 24% of the winter wheat crop had headed compared to the 5-year average of 15% and 30% a year ago. The rapid advancement is due to the hot, dry weather. While there has been some rainfall since the beginning of the month, it is too early to tell if it will continue through the critical part of the growing season and what impact it will have on yields.

U.S. winter wheat production is forecast at 1.32 billion bushels, down 2% from the May 1 forecast and 15% below 2000 to the lowest level since 1978. Based on June 1 conditions, the U.S. yield is forecast at 41.2 bushels per acre, down 0.6 bushels from the last forecast. Area for 2001 grain harvest is forecast at 32.1 million acres, unchanged from May 1, but down 8% from 2000. This is the smallest winter wheat area since 1957.

As of June 3, heading had reached 83% in the 18 major States. Harvest progress was at 3%, ranging from none in most States to 26% in Texas. Forecasted head counts from the Objective Yield surveys in the 6 Hard Red Winter States (Colorado, Kansas, Montana, Nebraska, Oklahoma, and Texas) are well below last year's final counts. Indicated average head weights are above last year's level.

WINTER WHEAT: Production Forecast by Districts--June 1, 2001 1/

District	1999	2000	2001	01/00
	1,000 Bushels			% chg.

U. S. Wheat Supply and Demand Estimates

Projected 2001/02 ending stocks of wheat are down 6 million bushels from last month as a smaller crop and increased use more than offset increased carry in stocks. Forecast winter wheat production is down 20 million bushels from last month because of lower yields. Projected food use is up 10 million bushels. The projected 2001/02 price range is unchanged at $2.75 to $3.35 per bushel.

Forecast 2000/01 ending stocks of wheat are up 25 million bushels, with exports down 35 million bushels but food use up 10 million. Expected food use is higher than last month for both 2000/01 and 2001/02 because recently released mill grind estimates by the Bureau of the Census were larger than expected.

(See table on back page)

Agricultural Prices Received for April

April full month crop prices were mostly down compared with March 2001. Montana's winter wheat average price was $3.00 per bushel, down $0.06 from March, but spring wheat was $0.08 higher at $3.26 per bushel. Durum wheat prices fell $0.70 to $2.87 per bushel as more lower quality durum wheat was marketed during the month than normal. The average price for oats was down $0.22 from last month to $1.03 per bushel. Feed barley prices were unchanged from the previous month at $1.80 while malt barley slipped $0.04 cents to $2.77 per bushel.

The mid-May price for alfalfa hay and other hay were unchanged from the previous month at $94.00 per ton and $86.00 per ton, respectively. The mid-May winter wheat price averaged $3.10 per bushel, spring wheat was $3.45, feed barley was $1.70, malt barley averaged $2.80 and oats averaged $1.00 per bushel.

Livestock prices for the full month of April were mostly lower than the previous month. Steer and heifer prices were down $0.60 to $87.20 per cwt while cows were up $0.80 to $44.60. The average price for calves was down $1.00 to $105.00 per cwt. Sheep prices dropped $5.70 to $39.50 per cwt, and lamb prices fell $12.50 to $87.50 per cwt. Milk prices rose $1.20 per cwt from last month to $14.10 per cwt. Steer and heifer prices for mid-May averaged $86.60 per cwt., cows averaged $45.40 per cwt., calves averaged $103.00 per cwt., and milk prices was $14.40 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $2.77, down $0.08, spring wheat was $3.05, up $0.07; durum wheat was $2.52 , up $0.12; the all barley price was $1.93, down $0.14, and steer and heifer prices were $79.60, down $0.90 per cwt.

The U.S. mid-May winter wheat price was $2.94 per bushel, spring wheat was $3.13 per bushel, durum wheat was $2.53 per bushel, all wheat was $2.98 per bushel, and all barley was $1.77. Steer and heifer prices were $76.20 per cwt, cow prices were $43.40, all hog prices were $51.40 per cwt, and all egg prices were $0.553 cents per dozen.

The Preliminary All Farm Products Index of Prices Received in May was 108 based on 1990-92=100, up 2 points (1.9 percent) from the April Index. Higher prices for milk, hogs, tomatoes, and broilers were partially offset by lower prices for strawberries, cattle, eggs, and corn. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of cantaloups, broilers, grapes, and peaches were partially offset by lower marketings of cattle, milk, asparagus, cotton, and hogs. Compared with May 2000, the All Farm Products Index was 8 points (8.0 percent) higher. Price increases from May 2000 for milk, broilers, cantaloups, and cattle were partially offset by lower prices for corn, soybeans, broccoli, and lettuce.

United States Index Summary

INDEX (1990-92=100)	April 2000	May 2000	April 2001	May 2001

April Milk Production Down 1.9 Percent In Major States

Milk production in the 20 major States during April totaled 12.2 billion pounds, down 1.9 percent from April 2000. March revised production, at 12.4 billion pounds, was down 2.3 percent from March 2000. The March revision represented a decrease of 2 million pounds, virtually unchanged from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,572 pounds for April, 21 pounds below April 2000.

The number of milk cows on farms in the 20 major States was 7.74 million head, 45,000 head less than April 2000, and 12,000 head less than March 2001.

U.S. April Egg Production Up 1 Percent

U.S. egg production totaled 7.09 billion during April 2001, up 1 percent from last year. Production included 6.01 billion table eggs and 1.08 billion hatching eggs, of which 1.01 billion were broiler-type and 66.0 million were egg-type. The total number of layers during April 2001 averaged 337 million, up 2 percent from the total average number of layers during April 2000. April egg production per 100 layers was 2,106 eggs, down 1 percent from 2,130 eggs in April 2000.

All layers in the U.S. on May 1, 2001, totaled 337 million, up 3 percent from a year ago. The 337 million layers consisted of 277 million layers producing table or commercial type eggs, 56.9 million layers producing broiler-type hatching eggs, and 2.96 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 2001, averaged 69.4 eggs per 100 layers, down 2 percent from the 70.6 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.65 billion eggs during April 2001, up 1 percent from April 2000. The average number of layers during April, at 316 million, was up 2 percent from a year earlier.

Montana April Red Meat Production Up 14 Percent From March

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during April, 2001. Red meat production is up 14 percent from the previous month but down 6 percent from the previous year. Cattle slaughtered totaled 1,900 head, which is 200 head less than a year ago. The average live weight, at 1,131 pounds, was up 24 pounds from the previous year.

During March there were 1,500 hogs slaughtered in Montana, 300 less than a year ago. The average live weight, at 245 pounds, was 3 pounds less than a year ago. The number of sheep slaughtered, at 400 head, was the same as the previous year. The average live weight was down 3 pounds from last year to 127 pounds.

Commercial red meat production for the United States totaled 3.51 billion pounds in April, up 1 percent from the 3.46 billion pounds produced in April 2000.

Beef production, at 1.94 billion pounds, was 4 percent below the previous year. Cattle slaughter totaled 2.71 million head, down 2 percent from April 2000. The average live weight was down 16 pounds from the previous year, at 1,186 pounds.

Veal production totaled 15 million pounds, 9 percent below April a year ago which was the previous record low of 17 million pounds. Calf slaughter totaled 74,000 head, down 8 percent from April 2000. The average live weight was 3 pounds below last year, at 340 pounds.

Pork production totaled 1.53 billion pounds, up 10 percent from the previous year. Hog kill totaled 7.83 million head, 8 percent above April 2000. The average live weight was 2 pounds above the previous year, at 265 pounds.

Lamb and mutton production, at 20 million pounds, was down 14 percent from April 2000 and 1 million pounds below previous low from 1999. Sheep slaughter totaled 290,000 head, 16 percent below last year. The average live weight was 140 pounds, up 4 pounds from April a year ago.

January - April red meat production was 14.6 billion pounds, 3 percent below the comparable figure a year ago. Using comparable figures from last year, beef production was 6 percent lower, veal production was 7 percent lower, pork production was up 2 percent, and lamb and mutton production was 8 percent lower.

U.S. Cattle on Feed Up 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.17 million head on May 1, 2001. The inventory was 2 percent above May 1, 2000 and 11 percent above May 1, 1999.

Placements in feedlots during April totaled 1.55 million, 9 percent below 2000 and 8 percent below 1999. Net placements were 1.46 million. During April, placements of cattle and calves weighing less than 600 pounds were 334,000, 600-699 pounds were 384,000, 700-799 pounds were 494,000, and 800 pounds and greater were 339,000.

Marketings of fed cattle during April totaled 1.82 million, 3 percent below 2000 and 7 percent below 1999.

Other disappearance totaled 89,000 during April, 1 percent below 2000 and 14 percent below 1999.

U.S. April Pig Crop Up 1 Percent

The April 2001 U.S. pig crop, at 8.52 million head, was 1 percent more than the previous year. Sows farrowing during this period totaled 953 thousand head, slightly below last year. The average pigs per litter for April rose to 8.94, compared to 8.85 last year.

The U.S. inventory of sows and gilts totaled 5.99 million head on May 1, 2001. Nationally, sows and gilts bred during the month of April totaled 1.17 million head.

Montana May 1 Potato Stocks Up 150 Percent, U.S. Up Record High 28 Percent

Montana potato producers held 750,000 cwt. of potatoes in storage on May 1, 2001, up 450,000 cwt. from the previous year. This is the highest level in the last ten years. The stocks represent 21 percent of the total 2000 production. Last year's May 1 stocks represented just 9 percent of the harvest.

In the U.S., May 1, 2001 potato stocks totaled a record high 111 million cwt., up 28 percent from last year and 27 percent above two years ago. Potatoes in storage accounted for 24 percent of the fall storage States' production, up 3 percentage points from a year ago. This year's record high stocks exceeded the previous record set May 1, 1997 by 8 percent.

Nationally, disappearance from the start of harvest to May 1 was a record high 350 million cwt. This disappearance was up 5 percent from last year and 3 percent above the previous record set during the 1996 season. The disappearance during April was 42.6 million cwt., up 3 percent from last year but 4 percent below the record in April 1997. Shrink and loss, to this point in the season, was 37.6 million cwt., up 29 percent from the last two years. Disappearance and loss total includes potatoes diverted and destroyed by growers under a cooperative program to reduce surpluses. Potatoes sold and disposed of under a government program are included in the disappearance.

Processing of 2000 crop potatoes totaled 170 million cwt. to May 1, up 1 percent from last year in comparable States. In April, processors used 18.7 million cwt. of potatoes, a gain of 2 percent from last year in comparable States.

Western States held 90.0 million cwt of potatoes in storage on May 1, 2001, up 32 percent from the last year and 36 percent above two years ago. Washington's potato stocks were up 79 percent from a year ago, while Idaho's were up 25 percent. Oregon's stocks were up 11 percent and Montana's swelled 150 percent. Colorado's stocks were equal to last year but California's were down 27 percent.

2000 Agricultural Chemical Use Estimates for Sheep and Sheep Facilities

The agricultural chemical use estimates in this report are based on data compiled from a survey conducted in late December 2000 through January 2001 in 22 selected States by National Agricultural Statistics Service (NASS). These States account for approximately 87% of the U.S. sheep inventory as published by NASS. Only those States with published sheep inventory for January 1, 2001 were used for this calculation, however State level agricultural chemical use data was not published. All data refer to the on-farm use of chemical active ingredients contained in insecticides which were applied during the 2000 calendar year. Insecticides are defined as chemical products used for the control of insects. Insecticides are regulated by the Environmental Protection Agency (EPA) and the Food and Drug Administration (FDA). Insecticides are applied to sheep and sheep facilities to control mange, mites, lice, flies, keds, bots, and other external pests.

All Sheep: Agricultural producers applied 14,191 pounds of insecticides to sheep and lambs during 2000 in the 22 surveyed States. Fenvalerate, at 5,444 pounds, was the top active ingredient used on sheep with respect to total quantity used, followed by malathion, at 3,940 pounds, and permethrin, at 1,749 pounds. These three active ingredients accounted for 78 percent of the total pounds of active ingredients applied to sheep and lambs in the surveyed States during 2000. Of the total chemical applications made to sheep in 2000 in the 22 selected States, 46 percent were applied as a pour-on, 25 percent by injection, 11 percent by hand spray, 10 percent by power spray, and 5 percent through oral drench. Insecticide applications made to sheep through mineral or feed block and dust bags each accounted for 1 percent. All other methods accounted for the remaining 1 percent of the chemical applications.

All Sheep Facilities: In the 22 surveyed States, a total of 4,984 pounds of insecticides was applied to sheep and lamb facilities in 2000. Petroleum distillate had the highest quantity used at 3,180 pounds. Malathion had the second highest quantity used at 935 pounds, followed by permethrin at 248 pounds. These three active ingredients accounted for 88 percent of the total pounds of active ingredients applied to sheep facilities in the surveyed States during 2000.

The full report is available at www.usda.gov/nass/pubs/rptscal.htm or for more information call the Montana Agricultural Statistics Service at 1-800-835-2612

U.S. Hired Workers Down 4 Percent, Wage Rates Up 3 Percent From a Year Ago

There were 1.02 million hired workers on the Nation's farms and ranches the week of April 8-14, 2001, down 4 percent from a year ago. There were 804,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 215,000 workers. Migrant workers accounted for 8.9 percent of the April hired workforce compared with 8.5 percent in April 2000.

Farm operators paid their hired workers an average wage rate of $8.31 per hour during the April 2001 survey week, up 22 cents from a year earlier. Field workers received an average of $7.61 per hour, up 7 cents from last April. Livestock workers earned $8.01 per hour compared with $7.58 a year earlier. The Field and Livestock worker combined wage rate was up 16 cents from last year. Number of hours worked averaged 40.2 hours for hired workers during the survey week compared with 40.4 hours a year ago.

2000 Agricultural Chemical Use Estimates for Winter and Spring Wheat and Sugar Beets

Montana winter wheat producers applied nitrogen fertilizer to 82 percent of the acreage planted for the 2000 crop. A total of 74.2 million pounds of nitrogen fertilizer was applied to the 1.50 million acres of winter wheat planted in Montana. Of the planted area, 77 percent received phosphate fertilizer while potash was used on 43 percent of the acres. Total application of phosphate was 34.0 million pounds and potash was 8.2 million pounds. Winter wheat producers applied 745,000 pounds of herbicides to 91 percent of the planted winter wheat acres in 2000. The most common herbicide used was 2, 4-D with 58 percent of the acreage sprayed. Glyphosate and Dicamba were the next popular herbicides used at 39 and 36 percent respectively, of the planted acreage covered.

Spring wheat producers in Montana planted 3.35 million acres of spring wheat in 2000. Ninety percent of these acres had nitrogen fertilizer applied to them. A total of 167.6 million pounds of nitrogen was applied. Phosphate was applied to 84 percent and potash to 36 percent of the planted spring wheat acreage. Total application of phosphate was 75.5 million pounds and potash was 15.6 million pounds. Producers applied 2.96 million pounds of herbicides to 92 percent of the total spring wheat acres planted in 2000. The most widely used herbicide was 2, 4-D with 63 percent of the acreage sprayed. Glyphosate was the second most common herbicide used at 42 percent. Triasulfuron was used on 39 percent of the planted acres. (Continued on next page)

(Continued from 3rd page)

Sugar beet producers in Montana applied 8.9 million pounds of nitrogen fertilizer to 100 percent of the 60,700 acres planted in Montana for the 2000 crop. Of the planted area, 99 percent received phosphate fertilizer while potash was used on 66 percent of the acreage. Total application of phosphate was 5.5 million pounds and potash was 1.7 million pounds. The entire planted acreage of sugar beets had some type herbicide used. Desmedipham was the most commonly applied. Eighty-nine percent of the acreage had insecticides applied with Terbufos being the most common and 61 percent of the acreage had fungicides applied. The most common fungicide used was Benomyl with 49 percent of the acreage covered.

Nationally, winter wheat producers applied nitrogen fertilizer to 87 percent of the area planted for 2000 harvest in the surveyed States. Phosphate fertilizers were applied to 54 percent of the collective acreage, ranging from just 11 percent in Oregon to Illinois's 82 percent. All surveyed States treated at least a portion of the acreage with herbicides; 2,4-D was again the most prevalent in terms of area and total application.

Nitrogen fertilizer was applied to 95 percent of the spring wheat acreage in states surveyed (MN, MT, ND, SD) and ND durum producers applied 86 percent to their acreage. Phosphate coverage shows 84 percent for other spring and 66 percent for durum. The three most popular herbicides for the durum area covered were 2,4-D, Trifluralin, and Tribenuron-methyl in that order. However, MCPA and Fenoxaprop were second and third behind 2,4-D on other spring wheat fields.

Sugar beet producers applied nitrogen fertilizer to 98 percent of the area planted for 2000 harvest in the surveyed States. Phosphate fertilizers were applied to 92 percent of the collective acreage, and 50 percent of planted area received potash. All surveyed States treated at least a portion of the acreage with herbicides; insecticides and fungicides.

The agricultural chemical use estimates in this report refer to on-farm use of commercial fertilizers and pesticides on the targeted crops for the 2000 crop year. Farm and ranch operators were enumerated late in the growing season or after the farm operator had indicated that planned applications were completed. The data was compiled from the Agricultural Resources Management Study (ARMS) conducted in the Fall of 2000.

- Ag Prices

May 1 Crop Production and Hay Stocks

As of May 1, **Montana winter wheat** producers were expecting a yield of 34 bushels per acre, up 1 bushel from last year. If realized, total production of 37.1 million bushels would be down 17 % from a year ago due to decreased acreage. In the fall of 2000, Montana producers seeded 1.2 million acres of winter wheat, down 300,000 acres from the previous year. Producers expect to harvest 1.09 million acres, 260,000 acres less than that was harvested last year. For the week ending May 7, the condition of the winter wheat crop was rated at 13 % very poor, 26 % poor, 38 % fair, 20 % good, and 3 % excellent.

United States winter wheat production is forecast at 1.34 billion bushels, down 14 % from 2000 to the lowest level since 1978. All classes of winter wheat are down from the previous year. Based on May 1 conditions, the U.S. yield is forecast at 41.8 bushels per acre, 2.8 bushels less than last year. Grain area totals 32.1 million acres, down 8 % from last season. The portion of the U.S. winter wheat crop rated good to excellent on April 29, at 41 %, was 20 percentage points lower than last year. The Kansas, Oklahoma, and Texas good to excellent ratings were only 28 %, 25%, and 26 %, respectively. April 1 conditions were the lowest since 1989, when just 29 % was rated good and 3 % was excellent.

Montana hay producers had an estimated 427 thousand tons of hay on hand as of May 1, which is down 58 % from last year. This is the lowest May 1 hay stocks on hand since 1989, when there were 307 thousand tons of hay on hand, and the seventh lowest stocks since 1945 when records were started . Lower hay production during 2000 and increased feeding of hay due to last years drought conditions contributed to the lower hay stocks. Disappearance from December 2000 to May 1, 2001 totaled 2.74 million tons.

Stocks of all hay in the United States on farms totaled 21.1 million tons on May 1, 2001, down 27 % from May 1 of the previous year. This reduction reflects a return to near normal stock levels following last year's near record high. Disappearance of hay from December 1, 2000 - May 1, 2001, totaled 82.6 million tons, 3 % higher than the 1999-2000 crop disappearance of 80.1 million tons. The increased disappearance was due to severe early winter weather in the northern Plains and Midwest, and a late spring across much of the country.

Twenty-seven of the 48 States had lower hay stocks. Most of the States reporting stock declines were located west of the Mississippi River. In these States stock levels were low due to dry conditions during the growing season which caused low production and hay land to be utilized for supplemental pasture. Also, severe winter weather extended the feeding season and increased hay usage.

2000 Cash Receipts for Meat Animals in Montana and the U.S.

Cash receipts from the 2000 marketings of cattle, hogs, and sheep in Montana totaled $1.02 billion, up 20 percent from 1999. Cash receipts from the sales of cattle and calves were up 20 percent in 2000. They increased from $806 million in 1999, to $966 million, which is a historic high for Montana. Increased calf marketings and higher prices contributed to the increase in cash receipts. Marketings of cattle weighing 500 lbs. or more, at 1.37 million head, were up slightly from 1999. Marketings of calves weighing less than 500 lbs. increased 22 percent from the previous year to 365,000 head. The average price received in 2000 for cattle weighing over 500 lbs. rose $10.60 per cwt to $78.20 per cwt. Season average prices for calves weighing less than 500 lbs. increased $13.10 per cwt to $103 per cwt.

Cash receipts from the sales of hogs in Montana rose 28 percent from 1999 to $30.5 million dollars. While the marketings of hogs decreased 14 percent from 1999 to 311,000 head, prices for hogs rose dramatically from the previous year as the season average price was up $9.00 to $39.80 per cwt. Sheep and lamb cash receipts rose 17 percent from 1999 to $24.2 million dollars. Marketings of sheep and lambs in 2000 were 53,000 and 285,000 head, respectively. Both sheep and lamb marketings were up from 1999. The average price for lambs rose $7.70 per cwt to $84.50 per cwt and sheep were up $2.30 per cwt from 1999 to $31.40 per cwt.

The United States 2000 gross income from cattle and calves, hogs and pigs, and sheep and lambs totaled $53.4 billion, up 16 percent from 1999. Gross income rose for all three species. Hogs and pigs increased the most, at 36 percent, cattle and calves increased 12 percent, and sheep and lambs increased slightly from the previous year.

In the U.S., total 2000 cash receipts from marketings of meat animals increased 16 percent to $53.0 billion. Cattle and calves accounted for 77 percent of this total, hogs and pigs 22 percent, and sheep and lambs 1 percent. Production increased for cattle and calves, but declined for both hogs and pigs and sheep and lambs. Average prices were up from 1999 levels for all three species.

Nationally, cash receipts from marketings of cattle and calves increased from $36.5 billion in 1999 to $40.8 in 2000, a 12 percent increase. All cattle and calf marketings totaled 57.5 billion pounds in 2000, up 1 percent from last year. The U.S. annual average price per cwt. live weight for cattle was $68.60, an increase of $5.20 from 1999. For calves, the annual average price increased $16.30 to $104.00.

Cash receipts from hogs and pigs totaled $11.8 billion in the U.S. during 2000, up 37 percent from 1999. Marketings decreased to 26.7 billion pounds in 2000, down 1 percent from 1999. The U.S. annual average price per cwt. live weight increased $12.00 to $42.30 in 2000.

Nationally, cash receipts from marketings of sheep and lambs in 2000 were $469 million, up slightly percent from 1999. Marketings declined 5 percent to 653 million pounds. The U.S. annual average price per cwt. live weight for sheep increased from $31.10 in 1999 to $34.20 in 2000 while for lambs, the annual average price increased $4.90 to $79.40.

U.S. Pig Crop Up 2 Percent

The March 2001 U.S. pig crop at 8.78 million head, was 2 percent more than the previous year. Sows farrowing during this period totaled 988 thousand head, 1 percent above last year. The average pigs per litter for March rose to 8.89, compared to 8.87 last year.

The U.S. inventory of sows and gilts totaled 6.00 million head on April 1, 2001. U.S. sows and gilts bred during the month of March totaled 1.20 million head.

U.S. Wheat Supply and Demand Estimates

This report presents USDA's initial assessment of U.S. and world crop supply and demand prospects and U.S. price prospects for the 2001/02 season. Projections are based on economic analysis, normal weather, trends and judgement.

The 2001/02 outlook for U.S. wheat is for a smaller crop, reduced use, declining stocks, and higher prices. Total production is projected down 12 percent from 2000/01 to 1,96 1million bushels. The survey-based forecast of winter wheat production is 14 percent below last year because of lower area and yields. Using planting intentions and average harvested-to-planted ratios and yields results in lower spring wheat (including durum) production. The smaller crop and reduced carry in stocks drops total 2001/02 supplies almost 12 percent below a year earlier to the lowest level since 1996/97.

Projected 2001/02 use is down from a year earlier. Domestic use is expected to drop as feed and residual use declines in response to smaller wheat supplies and more attractive corn prices. Exports are expected to drop because of strong competition from foreign exporters. Nevertheless, use is projected to exceed production and 2001/02 ending stocks are projected down around 240 million bushels from the forecast carry in level. Given the lower ending stocks, the projected price range for 2001/02 is $2.75 to $3.35 per bushel, compared with an estimated $2.63 for 2000/01.

Projected 2001/02 global wheat production and stocks are down from a year earlier. Foreign wheat production is down slightly as smaller crops in the EU, India, Pakistan, and several other countries more than offset bigger prospective crops in Russia, Ukraine, Eastern Europe, Australia, Argentina, and a number of other countries. Global imports are projected up slightly because of relatively small increases in a number of countries, especially in Asia. Partially offsetting these gains are lower expected imports by North Africa, Brazil, and Eastern Europe because of larger crops. Exportable supplies in the major foreign exporters will be down only slightly as bigger carry in stocks for Canada and the EU and bigger crops in Argentina and Australia will largely offset the sharply lower EU crop. In addition, India is expected to continue to export in order to reduce burdensome stocks. Thus, the higher priced U.S. wheat is expected to face intense competition in a continued weak global market.

(Continued on the back)

Agricultural Prices Received for April

March full month crop prices were slightly higher for most crops compared with February 2001. Montana's winter wheat average price was $3.06 per bushel, up 8 cents from February; durum wheat was $3.57 per bushel, down 10 cents; and spring wheat was 5 cents higher at $3.18 per bushel. The average price for oats was $1.15 per bushels, up 12 cents from last month. Feed barley average price was $1.80 and malt barley was $2.81 per bushel, up 2 and down 2 cents respectively.

The mid-April price for alfalfa hay was $94.00 per ton, up $2.00 from last month. Other hay, at $86.00 per ton, was also up $2.00 from March's mid-month price. The mid-April winter wheat price averaged $3.00 per bushel, spring wheat was $3.25, feed barley was $1.70, malt barley averaged $2.80 and oats averaged $1.10 per bushel.

Livestock prices for the full month of March were mostly higher than the previous month. Steer and heifer prices increased $.50 to $87.80 per cwt. Cows were up $.30 to $43.80, and the average price for calves was down $1.00 to $106.00 per cwt. Sheep prices increased $.20 to $45.20 per cwt, and lamb prices increased $2.00 to $100.00 per cwt. Milk prices dropped $.80 per cwt from last month to $12.90 per cwt. Steer and heifer prices for mid-April averaged $88.00 per cwt., cows averaged $43.50 per cwt., calves averaged $105.00 per cwt., and milk prices were $14.00 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $2.85, up 11 cents; spring wheat was $2.99, unchanged, durum wheat was $2.40; the all barley price was $2.07, unchanged, and steer and heifer prices were $80.50, up $1.60 per cwt.

The U.S. mid-April winter wheat price was $2.79 per bushel, spring wheat was $2.98 per bushel, all wheat was $2.84 per bushel, and all barley was $1.96. Steer and heifer prices were $80.70 per cwt, cow prices were $42.70, all hog prices were $46.70 per cwt, and all egg prices were 66.5 cents per dozen.

The Preliminary All Farm Products Index of Prices Received in April was 107 based on 1990-92=100, up 4 points (3.9 percent) from the March Index. Higher prices for strawberries, milk, oranges, and hay were partially off set by lower prices for tomatoes, broilers, soybeans, and corn. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of cattle, milk, cucumbers, and broilers were partially offset by lower marketings of soybeans, corn, cotton, and hogs.

Compared with April 2000, the All Farm Products Index was 7 points (7.0 percent) higher. Price increases from April 2000 for milk, strawberries, cattle, and broilers were partially offset by lower prices for lettuce, soybeans, corn, and tomatoes.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.52 million head on April 1, 2001. The inventory was 3 percent above April 1, 2000 and 11 percent above April 1, 1999. The inventory included 6.96 million steers and steer calves, up 2 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.49 million head, up 3 percent from 2000.

Placements in feedlots during March totaled 1.85 million, 9 percent below both 2000 and 1999. Net placements were 1.75 million. During March, placements of cattle and calves weighing less than 600 pounds were 330,000, 600-699 pounds were 416,000, 700-799 pounds were 618,000, and 800 pounds and greater were 488,000.

Marketings of fed cattle during March totaled 1.93 million, 6 percent below 2000 and 3 percent below 1999.

Other disappearance totaled 98,000 during March, 5 percent below 2000 but 38 percent above 1999.

Montana's March Red Meat Production Unchanged from Last Month, Down from Last Year

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during March, 2001. Red meat production is unchanged from the previous month and down 7 percent from the previous year. Cattle slaughtered totaled 1,800 head, which is the same amount as a year ago. The average live weight, at 1,140 pounds, was down 3 pounds from the previous year.

During March there were 1,200 hogs slaughtered in Montana, 100 less than a year ago. The average live weight, at 243 pounds, was 10 pounds less than a year ago. The number of sheep slaughtered, at 300 head, was 100 less than the previous year. The average live weight was up 5 pounds from last year to 133 pounds.

Commercial red meat production for the United States totaled 3.78 billion pounds in March, down 7 percent from the 4.05 billion pounds produced in March 2000.

U.S. beef production, at 2.12 billion pounds, was 8 percent below the previous year. Cattle slaughter totaled 2.92 million head, down 7 percent from March 2000. The average live weight was down 6 pounds from the previous year, at 1,209 pounds.

Veal production totaled 16 million pounds nationally, 17 percent below the previous March record low set last year. Calf slaughter totaled 84,000 head, down 18 percent from March 2000. The average live weight was 3 pounds above last year, at 323 pounds.

Pork production in the U.S. totaled 1.63 billion pounds, down 5 percent from the previous year. Hog kill totaled 8.33 million head, 6 percent below March 2000. The average live weight was 2 pounds above the previous year, at 264 pounds.

U.S. lamb and mutton production, at 23 million pounds, was down 3 percent from March 2000, which was also the previous March record low. Sheep slaughter totaled 326,000 head, 6 percent below last year. The average live weight was 143 pounds, up 3 pounds from March a year ago.

January - March red meat production was 11.1 billion pounds nationally, 4 percent below the comparable figure a year ago. Using comparable figures from last year, beef production was 7 percent lower, veal production was 10 percent lower, pork production was down 1 percent, and lamb and mutton production was 5 percent lower.

March Egg Production Up 1 Percent

U.S. egg production totaled 7.33 billion during March 2001, up 1 percent from last year. Production included 6.22 billion table eggs and 1.11 billion hatching eggs, of which 1.05 billion were broiler-type and 67.0 million were egg-type.

The total number of layers during March 2001 averaged 337 million, up 2 percent from the total average number of layers during March 2000. March egg production per 100 layers was 2,178 eggs, down slightly from 2,186 eggs in March 2000.

All layers in the U.S. on April 1, 2001, totaled 337 million, up 2 percent from a year ago. The 337 million layers consisted of 278 million layers producing table or commercial type eggs, 56.4 million layers producing broiler-type hatching eggs, and 2.80 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2001, averaged 70.9 eggs per 100 layers, down slightly from the 71.2 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.87 billion eggs during March 2001, up 1 percent from March 2000. The average number of layers during March, at 315 million, was up 2 percent from a year earlier.

Montana April 1 Potato Stocks Up 27 Percent, U.S. Up 20 Percent To Set New Record High

Montana potato producers held 2.1 million cwt. of potatoes in storage on April 1, 2001, up 27 percent from the previous year. This is the highest level in the last ten years. The stocks represent 60 percent of the total 2000 production. Last year's April 1 stocks represented 50 percent of the production.

Nationally, April 1, 2001 potato stocks totaled a record high 154 million cwt, up 20 percent from last year and 17 percent above two years ago. Potatoes in storage accounted for 33 percent of the fall storage States' production, up 2 percentage points from a year ago. This year's record high stocks exceeded the previous record set April 1, 1997 by 4 percent.

Disappearance from the start of harvest to April 1 was a record high 308 million cwt. Disappearance was up 5 percent from the last two years and 4 percent above the previous record set during the 1996 season. The disappearance during March was 44.3 million cwt., up 7 percent from last year. Shrink and loss, to this point in the season, was 35.4 million cwt., up 31 percent from last year and 32 percent above two years ago. This disappearance and loss total includes potatoes diverted and destroyed by growers under a cooperative program to reduce surpluses.

Processing of 2000 crop potatoes totaled 151 million cwt. to April 1, up 1 percent from last year in comparable States. In March, processors used 19.9 million cwt. of potatoes, down 5 percent from last year in comparable States.

Western States held 120 million cwt. of potatoes in storage on April 1, 2001, up 24 percent from the last two years. Washington's potato stocks were up 61 percent from a year ago, while Idaho's stocks increased 19 percent, and Oregon's were up 5 percent. Colorado's stocks increased 2 percent from last year and Montana's were up 27 percent. California's potato stocks were down 29 percent from a year ago.

Montana Quarterly Milk Production Up, U.S. Milk Production Down

During the January-March 2001 quarter, Montana milk cows produced 84 million pounds of milk, up 9 percent from the same quarter a year ago. Montana milk cows numbered 19,000 head, up 1,000 from last year.

The quarterly production of milk for the U.S. was 41.3 billion pounds, 3.1 percent below the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.16 million head, 33,000 head less than the same period last year.

Milk production in the 20 major States during March totaled 12.4 billion pounds, down 2.2 percent from March 2000. February revised production, at 11.1 billion pounds, was down 5.0 percent from February 2000. However, adjusting production for leap year would put February milk production down 1.6 percent. The February revision represented a decrease of 0.7 percent or 82 million pounds from last month's preliminary production estimate. Production per cow in the 20 major States averaged 1,599 pounds for March, 33 pounds below March 2000. The number of cows on farms in the 20 major States was 7.76 million head, 18,000 head less than March 2000, and 9,000 head less than February 2001.

2000 Milk Production, Disposition, and Income

Montana's 2000 milk production, of 315 million pounds increased 4 percent from 1999. An average of 18,000 milk cows were on farms and ranches during the year, unchanged from a year ago. The rate per cow averaged 17,500 pounds, 667 pounds more than 1999.

Cash receipts from marketings of milk during the year in Montana were 38.7 million dollars, 9 percent lower than 1999. Producer returns averaged $12.80 per cwt, a decrease of $1.80 from last year. Marketings totaled 302 million pounds, up 4 percent from a year ago. A total of 13 million pounds of milk were used on farms and ranches where produced, 8 million pounds were fed to calves, and 5 million were consumed as milk, cream, and butter.

Nationally, milk production increased 3 percent in 2000 to 168 billion pounds. The rate per cow, at 18,204 pounds, was 432 pounds above 1999. The annual average number of milk cows on farms, at 9.21 million head, was 54,000 head more than 1999.

Cash receipts from marketings of milk during 2000, at $20.6 billion, was 11 percent below 1999. Producer returns averaged $12.40 per hundredweight, 14 percent below 1999. Marketings totaled 166 billion pounds, 3 percent above 1999. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.31 billion pounds of milk were used on farms where produced, 1 percent less than 1999. Calves were fed 84 percent of this milk with the remainder consumed in producer households.

2000 Poultry Production and Value

Montana's value of egg production in 2000 was $3.2 million, down 4 percent from 1999. Egg production in 2000 totaled 84 million eggs, down 11 percent from the previous year. The average price for eggs was 46 cents per dozen, up 3 cents from 1999.

Montana's value of sales from chickens in 2000, excluding broilers, was $25,000. Value of sales increased 47 percent from 1999. Chickens sold for an average price of 2.5 cents per pound, up a half cent from the previous year.

The U.S. combined value of production from broilers, eggs, turkeys and the value of sales from chickens in 2000, was $21.2 billion, down 5 percent from the $22.3 billion in 1999. Of the combined total, 66 percent was from broilers, 20 percent from eggs, 13 percent from turkeys, and less than 1 percent from other chickens.

Nationally, the value of broilers produced during 2000 was $14.0 billion, down 8 percent from 1999. The total number of broilers produced in 2000 was 8.26 billion, up 1 percent from 1999. The total amount of live weight broilers produced in 2000 was 41.5 billion pounds, up 2 percent from 1999. The 2000 average price per pound on a live weight equivalent basis was 33.6 cents per pound, compared to 37.1 cents per pound in 1999.

U.S. value of egg production in 2000 was $4.35 billion, up 1 percent from the $4.29 billion in 1999. Egg production totaled 84.4 billion eggs, up 2 percent from the 82.7 billion eggs produced in 1999. In 2000, eggs averaged 61.8 cents per dozen, compared with 62.2 cents in 1999.

The value of turkeys produced in the U.S. during 2000 was $2.84 billion, up 1 percent from the $2.81 billion the previous year. Turkey production in 2000 totaled 6.99 billion pounds live weight, compared with 6.89 billion pounds in 1999. The average price received by producers during 2000 was 40.7 cents per pound, compared with 40.8 cents in 1999.

The national value of sales from chickens (excluding broilers) in 2000 was $64.7 million, down 12 percent from the $73.2 million a year ago. Prices averaged 5.8 cents per pound, compared with 7.1 cents in 1999. The number of chickens sold in 2000 totaled 218 million, up 4 percent from the total sold during the previous year.

Montana Intends to Seed Less Wheat; Nationally Seedings are Down

Montana **spring wheat** producers expect to seed 3.25 million acres in 2001. If these expectations hold, spring wheat seedings would be down 3 percent from 2000 and would be the smallest acreage since 1993. **Winter wheat** seedings remained unchanged from the December estimate at 1.20 million acres, down 20 percent from last year due to the dry fall planting conditions. **Durum wheat** acreage, at 470,000 acres, would be down percent from a year ago. Adding the winter wheat seeded last fall to the other spring and durum wheat intended seedings shows 4.92 million acres of **all wheat** would be planted, down 8 percent from 2000. There is a lot of uncertainty regarding this spring's planting of crops due to the current dry conditions, lack of snowfall, and predicted precipitation that the state may receive this growing season. Producers are also concerned about the availability and cost of fertilizers and electricity for irrigation.

Montana **barley** producers intend to plant an estimated 1.2 million acres, down 4 percent from last year. The intended seeded acreage for **oats** is expected to be 150,000 acres, up 20,000 acres from the previous year. Growers intend to harvest 55,000 acres of the 2001 oat crop for grain, 5,000 acres less than a year ago. **Corn** growers intend to plant 55,000 acres, down 5,000 acres from last year. Farmers intend to plant an estimated 60,000 acres of **sugar beets**, down 1 percent from 2000. Sugar beet acreage may change from this intention as changes in ownership of the sugar beet factories has resulted in the contracting for this year's acreage to be behind and not completed at this point. The area planted to **dry beans** is expected to be 50,000 acres, up 23 percent from last year. An estimated 2.5 million acres of **hay** are expected to be harvested, which is 500,000 acres more than last year's drought affected harvest. This increase reflects farmers' intentions to replenish low hay stocks due to increased demand for supplemental feeding. Whether or not producers will be able to harvest all the intended acreage is dependent on weather conditions.

Nationally, growers of **other spring wheat** intend to plant 15.5 million acres this year, up 2 percent from 2000. Of the total, about 14.6 million acres are Hard Red Spring wheat. The largest acreage increases are expected in Idaho, Minnesota, North Dakota, and Washington.

Growers in Montana, Oregon, and South Dakota intend to plant fewer acres than a year ago. **Winter wheat** planted area for the 2001 crop is 41.3 million acres, down 5 percent from 2000. This is the lowest acres seeded to winter wheat since 1971. Of the total, about 29.1 million acres are Hard Red Winter, 8.8 million acres Soft Red Winter, and 3.4 million acres White Winter. Area seeded to **Durum wheat** is expected to total 3.46 million acres, down 12 percent from 2000. Poor growing and harvest conditions during the last several seasons have contributed to the sharp decline in North Dakota.

U.S. **Barley** growers intend to seed 5.32 million acres in 2001, down 9 percent from the 5.84 million acres seeded in 2000. North Dakota, with 1.60 million acres, is down 16 percent from last year and Montana is down 4 percent from a year ago. Of the 27 barley producing States only 5 plan to increase acreage.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 1,900 Montana farmers and ranchers during March. Names were selected on a statistical probability basis. **Special thanks** to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

Planted Acreage, 1999-2000 and Intended 2001 Montana and United States

	Montana				United States

(Continued from front page.)

Oats acres seeded and to be seeded by U.S. farmers for the 2001 crop year is expected to total 4.43 million acres, down 52,000 acres from last year's final planted acres. Growers expect to harvest 2.2 million acres for grain, 120,000 acres less than the final 2000 harvested acreage.

Nationally, the area planted to **dry beans** for the 2001 crop year is expected to total 1.45 million acres, down 17 percent from last year and 28 percent below 1999. This is the lowest U.S. acreage since 1983, when 1.18 million acres were planted. U.S. **corn** growers intend to plant 76.7 million acres of corn for all purposes in 2001, down 4 percent from 2000 and down 1 percent from 1999.

Producers expect to harvest 63.8 million acres of **hay** in 2001, up 7 percent from the 59.9 million acres harvested in 2000. Increases are intended in 26 States across the nation. The greatest increase in acreage is planned in the Great Plains States where 2000 acreage was down due to dry conditions.

March 1, 2001 Grain Stocks

All wheat stocks in Montana on March 1, 2001 were 98.0 million bushels, down 10 percent from March 1, 2000. Stocks stored on the farm accounted for 76.0 million bushels of the total with the remaining 22.0 million bushels stored off farm. All spring wheat stocks, at 66.1 million bushels, were down 22 percent from last year and accounted for 67 percent of the total wheat stocks. Winter wheat stocks were estimated at 31.9 million bushels, up 31 percent from last year. Durum wheat stocks were estimated at 7.2 million bushels, down 21 percent from last year. All wheat disappearance for the December 2000 - February 2001 quarter was 35.9 million bushels, compared with 53.1 million for the same quarter last year. Barley stocks in all positions on March 1, 2001 were 16.9 million bushels, down 23 percent from a year ago. Oats stocks in all positions were estimated at 1.91 million bushels, down 15 percent from last year.

Nationally, all wheat stored in all positions on March 1, 2001 totaled 1.34 billion bushels, down 5 percent from a year ago. The indicated December 2000 - February 2001 quarter disappearance is 466 million bushels, down slightly from the same period a year earlier. Durum wheat stocks in all positions on March 1, 2001 totaled 72.9 million bushels, down 10 percent from a year ago. The indicated December 2000 - February 2001 quarter disappearance of 31.4 million bushels was up 10 percent from the same period a year earlier.

Agricultural Prices Received for March

February full month crop prices were mostly higher compared with January 2001. Montana's spring wheat average price was $3.13 per bushel, up 8 cents from January; while durum wheat was $3.67 per bushel, down 14 cents; and winter wheat was 4 cents lower at $2.98 per bushel. Feed barley average price was $1.78 and malt barley, at $2.83 per bushel, were up 2 and 20 cents, respectively.

The mid-March price for alfalfa hay was $92.00 per ton and other hay, at $84.00 per ton, were both unchanged from the previous month. The mid-March winter wheat price, at $3.05 per bushel and spring wheat, at $3.30, were both higher than February's prices. Both feed barley, at $1.60, and malt barley, at $2.65, were lower than February.

Livestock prices for the full month of February were mostly higher than the previous month. While steer and heifer prices fell $3.70 to $87.30 per cwt , cows were up $4.90 to $43.50 and the average price for calves was unchanged at $107.00 per cwt. Sheep prices jumped $6.00 to $45.00 per cwt, and lamb prices increased $8.30 to $98.00 per cwt. Milk prices decreased $.60 per cwt from last month to $13.70 per cwt. Steer and heifer prices for mid-March were slightly higher than February's price, at $87.70 per cwt. and milk prices were lower at $13.10 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $2.74, down 3 cents; spring wheat was $2.99, up 3 cents; the all barley price was $2.07, up 11 cents; and steer and heifer prices were $78.90, down $.40 per cwt.

The U.S. mid-March winter wheat price was $2.86 per bushel, spring wheat was $2.99 per bushel, all wheat was $2.89 per bushel, and all barley was $2.16. Steer and heifer prices were $81.10 per cwt, cow prices were $43.20, all hog prices were $45.10 per cwt, and all egg prices were 69.1 cents per dozen.

The Preliminary All Farms Products Index of Prices Received in March was 104 based on 1990-92=100, up 4 points (4.0 percent) from the February Index. Higher prices for hogs, broilers, milk, and cattle were partially offset by lower prices for apples, lettuce, strawberries, and corn. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of strawberries, asparagus, milk, and broilers were partially offset by lower marketings of cattle, cotton, oranges, and corn.

Compared with March 2000, the All Farm Products Index was 8 points (8.3 percent) higher. Price increases from March 2000 for milk, cattle, broilers, and strawberries were partially offset by lower prices for soybeans, corn, apples, grapefruit, and potatoes.

United States Index Summary

(Continued from 2nd page)

U.S. barley stocks in all positions on March 1, 2001 are estimated at 162 million bushels, down nearly 5 percent from March 2000.

Oats stored in all positions on March 1, 2001 totaled 102 million bushels, slightly above the stocks on March 1, 2000. Corn stocks in all positions on March 1, 2001 totaled 6.04 billion bushels, up 8 percent from March 1, 2000 and the highest level since 1987.

U.S. Hog Inventory Up

U.S. inventory of all hogs and pigs on March 1, 2001, was 58.8 million head. This was 2 percent above March 2000, but 1 percent below December 1, 2000.

Breeding inventory, at 6.24 million head, was up 1 percent from March 1, 2000, but down slightly from December 1, 2000. Market hog inventory, at 52.5 million head, was 2 percent above last year, but 1 percent below last quarter.

The December 2000-February 2001 U.S. pig crop, at 24.9 million head, was 2 percent more than 2000, but 1 percent less than 1999. Sows farrowing during this period totaled 2.84 million head, 1 percent above last year. The sows farrowed during this quarter represented 45 percent of the breeding herd. The average pigs per litter was 8.78 for the December 2000-February 2001 period, compared to 8.76 pigs last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.91 million sows farrow during the March-May 2001 quarter, 1 percent above the actual farrowings during the same period in 2000. Intended farrowings for June-August, at 2.92 million sows, are 1 percent above the same period in 2000, but slightly below 1999.

Annual Red Meat Production for 2000

Montana slaughter plants produced 21.5 million pounds, dressed weight, of red meat during 2000, compared with 22.2 million pounds in 1999. There were 25,700 cattle slaughtered during 2000, up 5 percent from the previous year. The total live weight of 28.8 million pounds was up 6 percent from a year earlier. The average live weight was up 12 pounds to 1,120 pounds.

There were 20,300 hogs slaughtered in Montana, a decrease of 11,500 head from 1999. Total live weight at 5.2 million pounds was 67 percent of the 1999 weight. The average live weight was 258 pounds per head compared with 244 the previous year. Sheep slaughter amounted to 4,800 head, an increase of 1,300 head from a year earlier. The average live weight at 126 pounds was 2 pounds lighter than the previous year. Total live weight of all sheep and lambs slaughtered in 2000 increased 160,000 pounds from 1999 to 606,000 pounds.

The number of Montana federally inspected slaughter plants on January 1, 2001 was 11, down 1 from 2000. There were 140 non-federally inspected plants on January 1, 2001, down 4 from the same date a year ago.

U.S. Red meat production in commercial plants and on farms totaled 46.3 billion pounds in 2000, slightly higher than the previous record high set in 1999. Red meat includes beef, veal, pork, lamb and mutton. Red meat production in commercial plants totaled 46.2 billion pounds.

Beef production, at 26.9 billion pounds, was up 1 percent from the previous record high set last year. Veal production totaled 225 million pounds, down 3 percent from the previous record low set last year. Pork production, at 19.0 billion pounds, was down almost 2 percent from the previous record high set last year. Lamb and mutton production totaled 236 million pounds, falling 4 percent below the previous record low set a year ago.

Commercial cattle slaughter during 2000 totaled 36.2 million head, up less than 1 percent from 1999, with federal inspection comprising 98.3 percent of the total. The average live weight was 1,219 pounds, up 9 pounds from a year ago. Steers comprised 49.8 percent of the total federally inspected slaughter, heifers 33.2 percent, dairy cows 7.4 percent, other cows 7.8 percent, and bulls 1.7 percent.

Commercial calf slaughter totaled 1.13 million head, down almost 12 percent from a year ago, with 96.2 percent under federal inspection. The average live weight was 316 pounds, up 25 pounds from a year earlier. Commercial hog slaughter totaled 98.0 million head, down over 3 percent from 1999, with 98.4 percent of the hogs slaughtered under federal inspection. The average live weight was up 3 pounds from last year, at 262 pounds. Barrows and gilts comprised 96.6 percent of the total federally inspected slaughter. Commercial sheep and lamb slaughter at 3.46 million head was down over 6 percent from 1999, with 95.6 percent comprised by federal inspection. The average live weight rose 2 pounds from 1999 to 135 pounds.

There were 910 slaughtering plants under federal inspection on January 1, 2001, compared with 908 last year. Of these, 738 slaughtered at least one head of cattle during 2000, with 16 slaughtering over 59 percent of the total cattle killed. There were 721 plants that slaughtered hogs, with 12 accounting for 52 percent of the total. Likewise, 8 of the 314 plants that slaughtered calves accounted for over 59 percent of the total, and 5 of the 541 plants that slaughtered sheep or lambs in 2000 comprised over 70 percent of the total head.

February Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during February, 2001. Red meat production is down 11 percent from the previous month and down 6 percent from the previous year. Cattle slaughtered totaled 1,800 head, 100 head less than a year ago. The average live weight, at 1,127 pounds, was up 8 pounds from the previous year.

During February there were 1,300 hogs slaughtered in Montana, 100 less than a year ago. The average live weight, at 247 pounds, was 8 pounds less than a year ago. The number of sheep slaughtered, at 300 head, was 100 less than the previous year. The average live weight was the same as last year at 126 pounds.

Commercial red meat production for the United States totaled 3.40 billion pounds in February, down 10 percent from the 3.77 billion pounds produced in February 2000. Beef production, at 1.88 billion pounds, was 13 percent below the previous year. Cattle slaughter totaled 2.58 million head, down 12 percent from February 2000. The average live weight was down 7 pounds from the previous year, at 1,218 pounds.

Veal production totaled 16 million pounds, 14 percent below February a year ago and 6 percent below the record low for February set in 1999. Calf slaughter totaled 79,000 head, down 17 percent from February 2000. The average live weight was 10 pounds above last year, at 328 pounds.

(Continued on next page)

(Continued from front)

Pork production totaled 1.49 billion pounds, down 5 percent from the previous year. Hog kill totaled 7.60 million head, 6 percent below February 2000. The average live weight was 2 pounds above the previous year, at 264 pounds.

Lamb and mutton production, at 17 million pounds, was down 13 percent from February 2000. Sheep slaughter totaled 245,000 head, 16 percent below the same time last year. The average live weight was 143 pounds, up 5 pounds from February a year ago.

January - February red meat production was 7.34 billion pounds, 3 percent below the comparable figure a year ago. Using comparable figures from last year, beef and veal production were each 6 percent lower, pork production was 2 percent higher, and lamb & mutton production was 7 percent lower.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.70 million head on March 1, 2001. The inventory was up 3 percent from the 11.33 million head on March 1, 2000 and 12 percent above March 1, 1999.

Placements in feedlots during February totaled 1.58 million, 16 percent below 2000 and 13 percent below 1999. Net placements were 1.50 million. During February, placements of cattle and calves weighing less than 600 pounds were 336,000, 600-699 pounds were 402,000, 700-799 pounds were 517,000, and 800 pounds and greater were 325,000.

Marketings of fed cattle during February totaled 1.75 million, 15 percent below 2000 and 5 percent below 1999. Other disappearance totaled 81,000 during February, 4 percent above 2000 and 25 percent above 1999.

Cattle on Feed in Historic 7 States Up 3 Percent

Cattle on feed March 1, 2001, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 10.01 million, up 3 percent from the previous year and 13 percent above March 1, 1999.

Placements in feedlots during February totaled 1.33 million, 17 percent below 2000 and 15 percent below 1999.

Marketings during February totaled 1.48 million, 16 percent below 2000 and 5 percent below 1999. Other disappearance during February was 64,000 head, 36 percent above 2000 and 52 percent above 1999.

Montana March Potato Stocks Up 11 Percent, U.S. Up a Record 17 Percent

Montana potato producers held 3.0 million cwt. of potatoes in storage on March 1, 2001, up 11 percent from last year. The stocks represent 86 percent of the total 2000 production. Last year's March 1 stocks represented 81 percent of the harvest.

Nationally, March 1, 2001 potato stocks totaled a record high 198 million cwt, up 17 percent from last year and 14 percent above two years ago. Potatoes in storage accounted for 43 percent of the fall storage States' production, up 3 percentage points from a year ago. This year's record high stocks exceeded the previous record set March 1, 1997 by 5 percent.

Disappearance from the start of harvest to March 1 was a record high 264 million cwt. This disappearance was up 5 percent from last year and 4 percent above the previous record set during the 1996 season. Disappearance during February was 36.7 million cwt, down 2 percent from the record high February disappearance established last year. Shrink and loss to this point in the season was 31.5 million cwt, up 26 percent from last year and 27 percent above two years ago. This disappearance and loss total includes potatoes diverted and destroyed by growers under a cooperative program to reduce surpluses.

Processing of 2000 crop potatoes totaled 132 million cwt to March 1, up 2 percent from the 1999 crop and 1 percent above two years ago in comparable States. In February, processors used 18.6 million cwt of potatoes, down 8 percent from last year in comparable States.

Western States held 150 million cwt of potatoes in storage on March 1, 2001, up 19 percent from last year and 20 percent above 1999. Washington's potato stocks were up 43 percent from a year ago, while Idaho's stocks increased 15 percent, and Oregon's were up 12 percent. Colorado's stocks were up 1 percent from last year and Montana was up 11 percent. California's potato stocks were down 28 percent from a year ago.

February Milk Production in Major States Down 4.3 Percent

Milk production in the 20 major States during February totaled 11.2 billion pounds, down 4.3 percent from February 2000. Most of the decline is due to an extra day of production in February 2000, because of leap year. Adjusting production for the additional day would put February 2001 milk production down 0.9 percent from last year. January revised production, at 12.1 billion pounds, was down 1.6 percent from January 2000. The January revision represented a decrease of 0.1 percent or 11 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,440 pounds for February, 66 pounds below February 2000. The number of cows on farms in the 20 major States was 7.77 million head, 7,000 head more than February 2000, but 10,000 head less than January 2001.

February Egg Production Down 2 Percent

U.S. egg production totaled 6.52 billion during February 2001, down 2 percent from last year. Production included 5.51 billion table eggs and 1.01 billion hatching eggs, of which 947 million were broiler-type and 60.0 million were egg-type. The total number of layers during February 2001 averaged 336 million, up 2 percent from the total average number of layers during February 2000. February egg production per 100 layers was 1,943 eggs, down 4 percent from 2,016 eggs in February 2000.

February 2001 contained 20 weekdays, 1 holidays and four Saturdays, compared to 21 weekdays, 1 holidays and 4 Saturdays in February 2000.

(Continued on back page)

Montana Sheep and Lamb Losses for 2000

Montana sheep and lamb producers lost 3,000 animals to weather, predators, disease and other causes during 2000, representing a total value of more than $4.1 million. The total number of sheep and lambs lost rose 3 percent from 1999 and the total value of inventory lost in 2000 increased 11 percent. Higher average market prices this past year resulted in the increased sheep and lamb values. The total January 1, 2000 sheep and lamb inventory is 3 percent lower than the previous year. Sheep and lamb deaths amounted to 8.7 percent of the January 1 inventory plus lambs born -- slightly higher than the previous year.

Predators caused an estimated $1.1 million in losses in 2000, down 1 percent from the previous year. Losses due to predators amounted to 2.5 percent of the January 1 inventory plus lambs born and 29 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 68 percent of the predator caused losses and 20 percent of all death losses in the state. The value of losses attributed to coyotes was $0.7 million. The number of sheep and lambs lost to all predators totaled 18,900 head, down 1,400 head from last year. Lamb losses by all predators amounted to 15,900 head, down 4 percent from last year. The number of sheep lost to all predators totaled 3,000, down 800 head from a year ago.

The total value of non-predatory losses was $2.4 million in 2000, 10 percent more than the previous year. Non-predatory losses accounted for 57 percent of all losses. The largest non-predatory cause of losses were diseases at 9,900 head. Sheep lost to non-predatory factors totaled 13,200 head, 10 percent higher than 1999. Non-predatory lamb losses came in at 24,100 head, 700 head lower than a year ago.

Producers reported more sheep and lambs lost to unknown causes this past year. This resulted in a 42 percent increase in the number of sheep and lambs lost to unknown causes from last year. Lambs lost to unknown causes totaled 7,000 head, compared with 4,700 head last year. Unknown causes claimed 2,800 sheep, 600 more head than last year. The value of sheep and lambs lost to unknown causes rose to $0.6 million.

(Continued from 2nd page)

All layers in the U.S. on March 1, 2001, totaled 336 million, up 2 percent from a year ago. The 336 million layers consisted of 276 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.78 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2001, averaged 69.5 eggs per 100 layers, down slightly from the 69.8 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.11 billion eggs during February 2001, down 2 percent from February 2000. The average number of layers during February, at 315 million, was up 1 percent from a year earlier.

Producers Can Find Assistance on the Web as They Brace for Drought

Montana Drought Monitoring 2001 web site http://nris.state.mt.us/Drought/ is up and running. The state of Montana has created the web site to support proactive drought management at the local level to protect the natural resources, economic base, and lifestyles of Montana citizens. All the early indications point to a more severe drought in 2001 than Montana experienced in 2000. Examples of the type of valuable information that can be found on the web site are: USDA's assistance programs, drought strategies for beef producers, natural disaster determination procedures and setting up a local drought management program in your area.

USDA-NASS

Issue: 01-05 (0279-0394) Released: March 14, 2001

HIGHLIGHTS:

Farms & Land in Farms
Wheat & Barley Movement
All Wheat County Estimates
Honey
Ag Prices

Farm Numbers Decline Slightly

The number of farms and ranches in Montana declined to 27,600 during 2000, 400 less than a year earlier mostly because of the drop in smaller farms. The Montana 2000 & 1999 farm and ranch numbers were also sub-grouped by economic sales classes. There were 10,400 farms compared with 11,500 in 1999 in the economic sales class of $1,000 to $9,999; 10,800 farms in 2000 up from 10,700 last year in the economic sales class of $10,000 to $99,999 and 6,400 farms this year in the economic sales class of $100,000 or more compared with 5,800 in 1999. The land in farms and ranches is estimated at 56.7 million acres, down .3 million from 1999. The economic sales breakdown of land in farm and ranches follows: $1,000 to $9,999 - 4.3 million acres and 4.1 million in 1999; $10,000 to $99,999 - 16.4 million acres, down from 17.0 million last year; $100,000 or more - 36.0 million acres, slightly more than the 35.9 million acres in 1999.

The number of farms and ranches in the United States in 2000 is estimated at 2.17 million, down 0.9 percent from 1999.
(Continued on back page.)

Wheat & Barley Movement

Wheat shipped to out-of-state destinations during the June-November 2000 period, at 73.2 million bushels, was 3% higher than the same period last year.

Shipments to eastern destinations totaled 3.2 million bushels, down 22% from the 4.1 million bushels last year. Movement to the west was 65.1 million bushel, up 3% from the 63.2 million bushels a year earlier. Other destinations, mostly to the south, received 4.9 million bushels up 27% from last year.

Rail movement amounted to 66.4 million bushels, 91% of total shipments, the same as last year.

Barley shipped to out-of-state destinations, June-November 2000, was 10.8 million bushels, down 19% from the same period last year.

Eastern destination shipments totaled 2.7 million bushels down 42% from last year. Shipments to western destinations at 5.9 million bushels down 18% from last year. Shipments to other destinations were up from last year's 1.5 million bushels to 2.2 million bushels this year.

Barley hauled by rail was 89% of total movement, up from 88% for the same period last year

1/ Counties with less than 500 acres planted are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

Agricultural Prices Received for February

January full month crop prices were mostly down compared with December 2000. Montana's winter wheat average price was $3.02 per bushel, up 3 cents from December; durum wheat was $3.81 per bushel, down 7 cents; and spring wheat was 9 cents lower at $3.05 per bushel. Feed barley average price was $1.76 and malt barley was $2.63 per bushel, up 7 and down 10 cents respectively.

The mid-February price for alfalfa hay was $92.00 per ton, up $2.00 from last month. Other hay, at $84.00 per ton, was also up $2.00 from January's mid-month price. The mid-February winter wheat price averaged $2.90 per bushel, spring wheat was $3.20, feed barley was $1.70, and malt barley averaged $2.65.

Livestock prices for the full month of January were significantly higher than the previous month. Steer and heifer prices increased $.40 to $91.00 per cwt. Cows were up $3.20 to $38.60, and the average price for calves was up $6.00 to $107.00 per cwt. Sheep prices increased $2.50 to $39.00 per cwt, and lamb prices increased $1.30 to $89.70 per cwt. Milk prices increased $1.30 per cwt from last month to $14.30 per cwt. Steer and heifer prices for mid-February averaged $87.70 per cwt. and milk prices were $14.80 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $2.77, up 1 cent; spring wheat was $2.96, down 2 cents; the all barley price was $1.96, down 23 cents; and steer and heifer prices were $79.30, up $2.50 per cwt.

The U.S. mid-February winter wheat price was $2.73 per bushel, spring wheat was $2.97 per bushel, all wheat was $2.83 per bushel, and all barley was $1.98. Steer and heifer prices were $78.40 per cwt, cow prices were $41.50, all hog prices were $38.60 per cwt, and all egg prices were 68.2 cents per dozen.

The Preliminary All Farms Products Index of Prices Received in February was 99 based on 1990-92=100, up 2 points (2.1 percent) from the January Index. Higher prices for lettuce, broilers, oranges, and hogs were partially offset by lower prices for strawberries, soybeans, corn, and tomatoes. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of milk, cattle, broilers, and strawberries were partially offset by lower marketings of corn, soybeans, tobacco, and cotton.

Compared with February 2000, the All Farm Products Index was 6 points (6.5 percent) higher. Price increases from February 2000 for cattle, lettuce, milk, and broilers were partially offset by lower prices for soybeans, corn, grapefruit, and potatoes.

United States Index Summary

Farm Numbers Decline Slightly

(continued from front page.)

The decline in farms and ranches occurred primarily in agricultural operations with less than $10,000 in sales. This is the largest decline in farms and ranches since 1991 when just over 29,000 operations were lost. Total land in farms, at 943.0 million acres, declined 0.5 percent or 4.4 million acres from last year. The average size of farm increased 2 acres from 432 acres in 1999 to 434 acres in 2000.

The U.S. number of agricultural operations in the economic sales class $1,000-$9,999 declined 1.8 percent to 1,173,650 in 2000. Farms and ranches with sales in the $10,000- $99,999 economic class increased slightly from 1999 to 649,350 operations while the number of farms and ranches with sales over $100,000 rose 0.1% to 349,080. The impact of adverse weather, lower commodity prices, and competition for land contributed to the overall reduction and consolidation of farms and ranches during 2000. The number of farms and ranches during 2000 declined in 27 States, remained unchanged in 19 States, and increased in 4 States. Overall, farm and ranch acreage declined in 20 States, remained unchanged in 29 States, and increased in1 State.

Montana and U.S. Honey Production Up in 2000

Honey produced in Montana by producers with five or more colonies during 2000 was 12.7 million pounds of honey, up 4.2 million pounds from 1999. The amount of honey production and colonies includes production by colonies that were in the state for part of the year. Drought conditions and wildfires resulted in movement of colonies around and out of the state. There were 148,000 colonies producing honey in 2000, compared with 122,000 colonies in 1999. The honey yield per colony was 86 pounds, up 16 pounds from a year ago. Stocks on hand on December 15, 2000 totaled 6.0 million pounds, up 3.9 million pounds from 1999.

Prices for Montana honey averaged 59 cents per pound in 2000 compared with 60 cents per pound in 1999. Honey prices are the lowest in the past 5 years which is causing more honey to be stored compared to previous years. The value of honey production in 2000 was 7.5 million dollars, up 47 percent from the 1999 honey crop.

U.S. Honey production in 2000 from producers with five or more colonies totaled 221 million pounds, up 8 percent from 1999. There were 2.63 million colonies producing honey in 2000, down 2 percent from 1999. Yield per colony averaged 83.9 pounds, up 7.5 pounds from the 76.4 pounds in 1999. Colonies which produced honey in more than one State were counted in each State and yields per colony may therefore be understated. Colonies were not included if honey was not harvested. Producer honey stocks were 86.2 million pounds on December 15, 2000, up 9 percent from a year earlier.

Prices for the 2000 crop averaged 59.4 cents per pound, down 1 percent from 60.1 cents in 1999. Prices are based on retail sales by producers and sales to private processors and cooperatives. State level honey prices reflect the portions of honey sold through retail, co-op and private channels. U.S. honey prices for each color class are derived by weighing quantities sold for each marketing channel at the U.S. level. Co-op and private prices were lower for all color classes except 'Other Honey' in 2000.

Ag Prices
Chicken Inventory & Annual Egg Production
Hogs & Pigs

Cattle and Calf Inventory Down

Montana's cattle and calf inventory was down 2 percent from a year ago to 2.55 million head on January 1, 2001. Drought, poor pasture and range conditions, tight feed supplies, and higher cattle prices all contributed to this year's lower inventory.

The inventory of beef cows that had calved on January 1, 2001 were down 3 percent from year ago to 1.531 million head. The number of milk cows in the state increased 1,000 head from a year ago to 19,000 head, reversing a 20 year decline in milk cow inventories. There were 1.62 million calves born during 2000, up 3 percent from the 1999 calf crop of 1.57 million. Favorable calving conditions, higher beginning-year cow inventories, and more heifer replacements that calved during 2000 contributed to the increase in the calf crop.

Beef heifer replacements, weighing 500 pounds or more, were up 7 percent from the previous year to 405,000 head. Milk heifer replacements were the same as the previous year at 10,000 head. The number of other heifers weighing 500 lbs or more, decreased 3 percent from last year to 175,000 head.

The inventory of steers weighing 500 lbs or more, dropped 9 percent from the previous year to 210,000 head. Calves weighing less than 500 lbs, at 90,000 head, were down 5 percent from last year's record low calf inventory of 95,000 head. Inventory of bulls weighing 500 pounds or more set a new record high at 110,000 head, up 5 percent from a year ago. The number of cattle and calves on full feed that will be sent directly to slaughter was down 14 percent from a year ago to 60,000 head. More custom feeding and backgrounding resulted in fewer cattle and calves on full feed.

In the **United States**, all cattle and calves on January 1, 2001, totaled 97.3 million head, 1 percent below the 98.2 million on January 1, 2000 and 2 percent below the 99.1 million two years ago. All cows and heifers that have calved, at 42.6 million, were slightly below the 42.8 million on January 1, 2000 and 1 percent below the 42.9 million two years ago. Beef cows, at 33.4 million, were down 1 percent from both January 1, 2000 and January 1, 1999. Milk cows, at 9.20 million, were up slightly from January 1, 2000 and 1 percent above two years ago.

Other class estimates on January 1, 2001 and the change from January 1, 2000, are as follows; All heifers 500 pounds and over, 19.8 million, up 1 percent; Beef replacement heifers, 5.59 million, up 2 percent; Milk replacement heifers, 4.05 million, up 1 percent; Other heifers, 10.1 million, down slightly; Steers weighing 500 pounds and over, 16.4 million, down 1 percent; Bulls weighing 500 pounds and over, 2.27 million, down 1 percent; Calves under 500 pounds, 16.2 million, down 4 percent; Cattle and calves on feed for slaughter in all feedlots, 14.2 million, up 1 percent.

Data for beef cow and milk cow replacement heifers expected to calve in the coming year is published in this issue for the first time. This data will be published on an annual basis in the January release. Beef replacement heifers expected to calve during 2001 totaled 3.14 million, which is 57 percent of the January 1, 2001 beef replacement heifers in the inventory. Milk replacement heifers expected to calve during 2001 totaled 2.54 million, which is 63 percent of the milk heifer replacements.

The 2000 United States calf crop was estimated at 38.6 million head, down slightly from both 1999 and 1998. Calves born during the first half of the year are estimated at 28.4 million, down slightly from both 1999 and 1998.

Sheep Inventory & Wool Production

Montana's sheep and lamb inventory set a new record low at 360,000 head on January 1, 2001, down 3 percent from last year. Drought, unstable prices, and predators in 2000 were key factors in the continued decline.

Breeding sheep and lamb numbers decreased 10,000 head from last year to 330,000 head. Ewes one year and older were down 3 percent to 265,000 head. Rams one year and older, at 9,000 head, were unchanged from the previous year. Replacement lambs, at 56,000 head, were down 1,000 head from a year ago. The 2000 lamb crop was 365,000 head, an increase of 7 percent from the 1999 lamb crop.

There were 30,000 market sheep and lambs on hand January 1. Only 2,000 head were market sheep. Of the 28,000 total market lambs, 7 percent weighed less than 65 pounds, 22 percent weighed 65-84 pounds, 57 percent were in the 85-105 pound category, and 14 percent were over 105 pounds.

Montana wool growers produced 3.3 million pounds of wool during 2000, up 4 percent from 1999. The 2000 average price per pound of wool decreased 13 cents to 37 cents per pound, causing the value of all wool produced to decrease 23 percent for a total value of $1.2 million dollars. The total head shorn increased 3 percent in 2000 to 347,000 head. The average fleece weight increased from 9.5 pounds in 1999 to 9.6 pounds in 2000.

In the **United States**, all sheep and lamb inventory on January 1, 2001, totaled 6.92 million head, down 2 percent from 2000 and 4 percent below two years ago. The inventory has trended down since 1942 when it reached a peak of 56.2 million head.

Breeding sheep inventory declined to 4.93 million head on January 1, 2001, down 5 percent from 5.16 million head on January 1, 2000. Ewes one year old and older, at 4.06 million head, were 4 percent below last year. The 2000 lamb crop of 4.62 million head was down 2 percent from 1999 to a new record low. The 2000 lambing rate was 109 per 100 ewes one year old and older on January 1, 2000, compared with 110 in 1999.

(Continued on page two)

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys. Interviewers contacted about 2,000 Montana farmers and ranchers in early January.

Sheep Inventory and 2000 Wool Production (Cont.)

Market sheep and lambs on January 1, 2001, totaled 1.99 million head, up 6 percent from January 1, 2000. Market lambs comprised 96 percent of the total.

Twenty-four percent were lambs under 65 pounds, 18 percent were 65-84 pounds, 24 percent were 85-105 pounds, 30 percent were over 105 pounds, and 4 percent were market sheep.

Shorn wool production in the United States during 2000 was 46.4 million pounds, down slightly from 1999. Sheep and lambs shorn totaled 6.14 million head, down slightly from 1999. The average price paid for wool sold in 2000 was $0.33 per pound for a total value of $15.5 million dollars, down 13 percent from $17.9 million dollars in 1999.

Agricultural Prices Received for January

December full month crop prices were mixed compared with November 2000. Montana's winter wheat average price was $2.99 per bushel, up 8 cents from November; durum wheat was $3.88 per bushel, down 19 cents; and spring wheat was 3 cents lower at $3.14 per bushel. Feed barley average price was $1.69 and malt barley was $2.73 per bushel, up 13 and 1 cent respectively.

The mid-January price for alfalfa hay was $90.00 per ton, down $2.00 from last month. Other hay, at $82.00 per ton, was down $1.00 from December's mid-month price. The mid-January winter wheat price averaged $3.00 per bushel, spring wheat was $3.15, feed barley was $1.75, and malt barley averaged $2.80.

Livestock prices for the full month of December were also mixed compared with the previous month. Steer and heifer prices decreased $3.70 to $90.60 per cwt. Cows were down $2.00 to $35.40, and the average price for calves was down $1.00 to $101.00 per cwt. Sheep prices increased $5.50 to $36.50 per cwt, and lamb prices increased $10.30 to $88.40 per cwt. Milk prices were 70 cents below last month at $13.00 per cwt. Steer and heifer prices for mid-January averaged $91.70 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $2.76, up 6 cents; spring wheat was $2.98, up 1 cent; the all barley price was $2.19, up 7 cents; and steer and heifer prices were $76.80, up $3.00.

The U.S. mid-January winter wheat price was $2.82 per bushel, spring wheat was $2.99 per bushel, all wheat was $2.88 perbushel, and all barley was $2.09. Steer and heifer prices were $79.30 per cwt, cow prices were $38.40 percent, all hog prices were $37.10 per cwt, and all egg prices were 67.2 cents per dozen.

The Preliminary All Farms Products Index of Prices Received in January was 96 based on 1990-92=100, down 2 points (2.0 percent) from the December Index. Lower prices for eggs, cotton, hogs, and soybeans were partially offset by higher prices for cattle, tomatoes, milk, and strawberries. The seasonal change in the mix of commodities farmers sell often affects the overall index. Lower seasonal marketings of cotton, tobacco, grapes, and cottonseed were partially offset by higher marketings of cattle, corn, and soybeans.

Compared with January 2000, the All Farm Products Index was 5 points (5.5 percent) higher. Price increases from January 2000 for cattle, milk, cotton, and strawberries were partially offset by lower prices for oranges, apples, potatoes, and lettuce.

Chicken Inventory

There were 460,000 total chickens on Montana farms and ranches on December 1, 2000, compared with 410,000 on hand last year. The December 1, 2000 inventory included 320,000 layers 20 weeks old and older, 58,000 pullets between 13 and 20 weeks old, and 81,000 pullets 13 weeks old and under. The total value of all chickens on December 1, 2000 was $1.4 million, up 14 percent from the previous December. The average value per bird, at $3.00, was up 10 cents from last year.

Montana chickens produced 84 million eggs during the year ending November 30, 2000, down 11 percent from last year. The state had an average of 291,000 layers in 2000, up slightly from last year's average of 290,000. The average production per layer on hand was 289 eggs, down 11 percent from the previous year.

The U.S. total number of chickens on hand on December 1, 2000 (excluding commercial broilers) was 435 million birds, down slightly from last year. Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 2000, totaled 371 million, up 1 percent from December 1, 1999. Of the 371 million potential layers, 90 percent were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks. The total value of all chickens on December 1, 2000 was $1.06 billion, down 8 percent from December 1,1999. The average value decreased from $2.65 per bird on December 1, 1999, to $2.43 per bird on December 1, 2000.

U.S. egg production during the year ending November 30, 2000 totaled a record high 84.4 billion eggs, up 2 percent from the previous year's total of 82.7 billion eggs. Table egg production, at 71.4 billion eggs, increased 2 percent from 1999. The annual average production per layer on hand in 2000 was 257 eggs, unchanged from the 1999 average.

December Egg Production Down Slightly

U.S. egg production totaled 7.28 billion during December 2000, down slightly from last year. Production included 6.20 billion table eggs and 1.08 billion hatching eggs, of which 1.02 billion were broiler-type and 63.0 million were egg-type. The total number of layers during December 2000 averaged 332 million, up 1 percent from the total average number of layers during December 1999. December egg production per 100 layers was 2,192 eggs, down 1 percent from 2,214 eggs in December 1999.

All layers in the U.S. on January 1, 2001, totaled 332 million, up 1 percent from a year ago. The 332 million layers consisted of 274 million layers producing table or commercial type eggs, 55.2 million layers producing broiler-type hatching eggs, and 2.85 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 2001, averaged 70.3 eggs per 100 layers, down 1 percent from the 71.0 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 6.81 billion eggs during December 2000, down 1 percent from December 1999. The average number of layers during December, at 311 million, was up 1 percent from a year earlier.

U.S. December Pig Crop Up 3 Percent

The December 2000 U.S. pig crop at 8.35 million head, was 3 percent more than the previous year. Sows farrowing during this period totaled 940 thousand head, 2 percent above last year. The average pigs per litter rose to 8.89 pigs saved per litter for December, compared to 8.77 pigs last year.

The U.S. inventory of sows and gilts totaled 6.03 million head on January 1, 2001. U.S. sows and gilts bred during the month of December totaled 1.19 million head.

Small Grains Summary

Montana's 2000 winter wheat production was estimated at 44.55 million bushels, up 21 percent from 1999. The 2000 average yield was 33 bushels per acre, which is 5 bushels lower than last year's average.

Spring wheat production in Montana for 2000 was estimated at 77.5 million bushels, down 28 percent from 1999. Seeded acreage was 3.35 million acres, 800,000 acres less than 1999. Producers harvested 3.1 million acres, 900,000 acres less than a year earlier. Yields averaged 25 bushels per acre, down 2 bushels from 1999, in part due to lack of precipitation in many areas of the state.

Montana's 2000 durum wheat production was estimated at 13.16 million bushels, up 39.3 percent from 1999. Harvested acreage was estimated at 470,000, up 120,000 acres from last year. The average yield was 28.0 bushels per acre, up one bushel from 1998.

Barley planted acreage for 2000 in Montana decreased to 1.25 million acres, 50,000 acres less than 1999. Producers harvested 950,000 acres, 200,000 acres less than were harvested for grain in 1999. Yields averaged 40 bushels per acre, down 10 bushels from last year. Production was estimated at 38.0 million bushels, down sharply from last year.

Montana's oats production for 2000 is estimated at 2.6 million bushels, down 620,000 bushels from 1999. Planted acreage was estimated at 130,000 acres, 40,000 acres less than last year. Harvested acreage was set at 50,000 acres, down 20,000 from 1999. Yields averaged 52.0 bushels per acre, 6 bushels higher last year.

All wheat production in the U.S. for 2000 is estimated at 2.22 billion bushels, down 1 percent from the level published in the "Small Grains 2000 Summary," and 3 percent below the 1999 level. U.S. durum wheat production is down 5 percent from the last estimate, other spring wheat is down 2 percent, and all winter wheat is unchanged.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.8 million head on January 1, 2001. The inventory was 3 percent above January 1, 2000 and 11 percent above January 1, 1999. The inventory included 7.02 million steers and steer calves, up 3 percent from the previous year. This group accounted for 59 percent of the total inventory. Heifers and heifer calves accounted for 4.70 million head, up 3 percent from January 1, 2000.

Placements in feedlots during December totaled 1.70 million, 3 percent above 1999 and 12 percent above 1998. Net placements were 1.60 million. During December, placements of cattle and calves weighing less than 600 pounds were 504,000, 600-699 pounds were 516,000, 700-799 pounds were 406,000, and 800 pounds and greater were 273,000.

Marketings of fed cattle during December totaled 1.75 million, 5 percent below 1999 and 4 percent below 1998. December 2000 had two less slaughter days than December 1999 which limited slaughter and affected the year-to-year relationship for marketings. Other disappearance totaled 95,000 during December, 6 percent above 1999 and 12 percent above 1998.

December Red Meat Production Down

Montana slaughter plants produced 1.8 million pounds, dressed weight, of red meat during December, 2000, down 3 percent from December 1999 and down slightly from the previous month. Cattle slaughter totaled 2,100 head, the same as a year ago. The average live weight, at 1,148 pounds, was down 31 pounds from last year.

During December, there were 2,000 hogs slaughtered, 200 less that a year ago. The average live weight, at 275 pounds was 11 pounds higher than last year. The number of sheep slaughtered, at 400 head was up 100 head from the previous year. The average live weight decreased 4 pounds from last December to 122 pounds.

The United States commercial red meat production totaled 3.62 billion pounds in December, down 6 percent from the 3.86 billion pounds produced in December 1999. Beef production, at 2.00 billion pounds, was 5 percent below the previous year. Cattle slaughter totaled 2.72 million head, down 5 percent from 1999. The average live weight was down 1 pound from the previous year, at 1,224 pounds.

Pork production totaled 1.58 billion pounds, down 7 percent from the previous year. Hog kill totaled 8.09 million head, 9 percent below 1999. The average live weight was 4 pounds above the previous year, at 265 pounds. Lamb and mutton production, at 21 million pounds, was down 12 percent from December 1999 and down 5 percent from the previous record low for December set in 1996.

January - December red meat production was 46.1 billion pounds, just below the comparable figure a year earlier. Accumulated beef production was 1 percent higher than last year, veal was down 4 percent, pork was down 2 percent, and lamb & mutton was down 5 percent.

Milk Production Up

During the October-December quarter, Montana milk cows produced 79 million pounds of milk, 3 million pounds more than the same quarter a year ago. Montana milk cow numbers, at 19,000 head were up 1,000 head from a year ago.

Milk production in the 20 major States during December totaled 11.9 billion pounds, virtually unchanged from production in these same States in December 1999. November revised production, at 11.4 billion pounds was up 1.1 percent from November 1999. The November revision represented a decrease of 0.5 percent or 52 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,522 pounds for December, 16 pounds below December 1999. The number of cows on farms in the 20 major States was 7.84 million head, 81,000 head more than December 1999, but 4,000 head less than November 2000.

During the October-December period, milk produced in the U.S. was 40.9 billion pounds, 1.2 percent above the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 9.25 million head, 80,000 head more than the same period last year

Montana January Potato Stocks Up 5 Percent, U.S. Up Record 14 Percent

Montana potato producers held 3.25 million cwt. of potatoes in storage on January 1, up 5 percent from a year ago. The stocks represent 93 percent of the total 2000 production, compared with last year's stocks representing 94 percent of the 1999 total production.

Nationally, January 1, 2001 potato stocks totaled a record high 273 million cwt, up 14 percent from last year and 4 percent above the previous record set in January 1997. Potatoes in storage accounted for 59 percent of the fall storage States' production, up 2 percent age points from a year ago. Stocks by type were 2 percent reds, 8 percent round whites, 4 percent long white, and 86 percent russets, with more russets but fewer reds and round whites than a year ago.

Disappearance from the start of harvest to January 1, at 189 million cwt, was record high. This disappearance was up 5 percent from last year and 4 percent above the previous record set during the 1996 season. December disappearance of 36.6 million cwt was also record high for the month. Shrink and loss to this point in the season was 22.5 million cwt, up 7 percent from last year and 9 percent above two years ago.

Processing of 2000 crop potatoes totaled a record high 97.1 million cwt to January 1, up 5 percent from the 1999 crop and 2 percent above the previous record set during the 1996 season for comparable States. In December, processors claimed a record high 18.5 million cwt of potatoes, up 11 percent from a year ago and 8 percent above the previous high in December 1995 for comparable States.

Western States held 200 million cwt of potatoes in storage on January 1, 2001, up 17 percent from last year and 16 percent above 1999. Washington's potato stocks were up 32 percent from a year ago, while Idaho's stocks were up 16 percent, and Oregon's were up 12 percent. Colorado was up 2 percent and Montana gained 5 percent. California's potato stocks were down 22 percent from a year ago.

HIGHLIGHTS:

Winter Wheat Seedings
Late Season Crops
Hay and Hay Stocks
Pulse Crops; Grain Stocks
Prices Received for December

Seeding Down 20 Percent

In the fall of 2000 Montana producers seeded 1.2 million acres of **winter wheat**, 300,000 acres less than the acreage seeded the previous year. During the last 10 years producers planted an average of 1.9 million acres, so the seeded acres for the 2001 crop are 37 percent below this average.

The major winter wheat production areas in Montana are the North Central, Central, South Central, and Southeast districts. Precipitation amounts since October 1 in these four districts has been mixed. The North Central and South Central districts have received mostly below normal precipitation, while the Central and Southeast have received mostly above normal amounts. However, moisture across the entire state before October 1 has been sparse for the last 1 ½ years. There has been good snowfall amounts so far this winter to protect the crop from weather's harsh elements. As of January 2, the winter wheat condition was rated at 0 percent very poor, 11 percent poor, 38 percent fair, 51 percent good, and 0 percent excellent.

Nationally, winter wheat seeded area for 2001 is expected to total 41.3 million acres, down 5 percent from 2000. This is the smallest area since 1971. Class acreage breakdowns are estimated to be: Hard Red Winter, 28.9 million; Soft Red Winter, 8.9 million; and White Winter, 3.5 million.

LATE SEASON CROPS

Montana producers harvested 18,000 acres of **corn for grain** in 2000, unchanged from last year's estimate. The average yield was 140.0 bushels per acre, up 30 bushels from last year. Production rose 27 percent from 1999 to 2.52 million bushels. **Corn for silage** acreage was estimated at 40,000 acres, down 5,000 acres from 1999. Yields averaged 21 tons per acre, up one ton from a year ago.

Sugarbeet producers in Montana planted 60,700 acres and harvested an estimated 53,900 acres in 2000, down 7,800 acres from a year ago. Heavy frosts and freeze damage can be blamed for the high levels of crop abandonment in the state. Yields increased 0.7 tons from last year to average 24.5 tons per acre. Total production was estimated at 1.32 million tons, down 10 percent from the previous year.

Fall potato production in Montana totaled 3.50 million cwt, up 5.4 percent from last year. Producers harvested 11,300 acres compared with 10,900 in 1999. Yields increased 5 cwt per acre from a year ago to 310 cwt.

U.S. **corn grain** production is estimated at 9.97 billion bushels, up 6 percent from 1999, and is the second largest crop behind 1994's record production of 10.1 billion bushels.

U.S. **sugarbeet** production is estimated at 32.5 million tons from 1.38 million acres. Harvested acres are 10 percent below last year, mainly due to PIK reductions.

Fall potato production for 2000 in the U.S. is a record high 471 million cwt, up 9 percent from comparable estimates last year, and 4 percent above the previous record in 1996. Area harvested, at 1.20 million acres, is up a comparable 2 percent from last year. The average yield is a record high 393 cwt per acre, a jump of 24 cwt from the previous record high last year and 36 cwt above two years ago for comparable States.

Hay and Hay Stocks

All hay harvested in Montana was down 600,000 acres from last year, to 2.0 million acres. All hay production was 3.56 million tons, down 29.6 percent or 1,495,000 tons from a year ago. This is the lowest production in Montana since 1988. **Alfalfa hay** harvested acreage was 1.2 million acres, down 450,000 acres from last season. The average yield was 2.1 tons per acre, which is 0.1 ton less than last year. **Other hay** harvested acreage was 800,000, down 150,000 acres from 1999. The average yield was 1.3 tons per acre compared with 1.5 tons per acre last year. Montana **hay stocks** were estimated at 3.17 million tons on December 1, down 29 percent from last year. This represents the lowest hay stocks since 1988. Montana hay growers **seeded** an estimated 130,000 acres of **alfalfa and alfalfa mixtures** during 2000, 70,000 acres less than last year. New seedings include those mixed with a nurse crop, other forage, or direct seedings.

In the U.S. **all hay** production for 2000 is estimated at 152 million tons, down slightly from the October 1 forecast and down 5 percent from the 1999 total.

U.S. **all hay** stocks on farms December 1, 2000 totaled 104 million tons, 5 percent below the stocks on farms December 1, 1999. Stocks decreases occurred in 23 of the 48 contiguous States.

Growers in the U.S. seeded **alfalfa** and **alfalfa mixtures** totaling 3,065,000 acres during 2000. This is down 11 percent from the 1999 seeded acreage of 3,436,000 acres.

PULSE CROPS

Montana's **dry bean** growers produced an estimated 486,000 cwt in 2000, up 45,000 cwt from 1999. Growers harvested 34,800 acres with a yield of 14.0 cwt per acre compared with last year's 25,500 acres harvested with a yield of 17.30 cwt per acre.

Pinto bean production for Montana in 2000 is estimated to be 331,000 cwt, which is 11.8 percent above last year's estimate. Harvested acreage, at 13,800, is 4.5 percent higher than the previous year. The yield is estimated at 2,400 pounds per acre, 160 pounds more than last year.

Montana's second production estimate for **garbanzo beans** was 150,000 cwt for 2000, which is 12.8 percent higher than last year. Harvested area is estimated at 20,500 acres, up 8,700 from last year. The yield is estimated at 730 pounds per acre, down from last year's estimate of 1,130 pounds per acre.

(Continued on back page)

Wheat Stocks Down 17 Percent

All wheat stocks in Montana on December 1, 2000 totaled 133.9 million bushels, down 17 percent from December 1, 1999. Stocks stored on the farm accounted for 111.0 million bushels of the total with the remaining 22.9 million bushels stored off farm. All spring wheat stocks, at 91.6 million bushels, were down 25 percent from last year and accounted for 68 percent of the total wheat stocks. Winter wheat stocks were estimated at 42.3 million bushels, up from 38.9 million bushels last year. Durum wheat stocks were estimated at 11.3 million bushels, down 10 percent from last year. All wheat disappearance for the September - November quarter was 35.5 million bushels, compared with 29.0 million for the same quarter last year. Barley stocks in all positions on December 1, 2000 totaled 25.6 million bushels, down 36 percent from a year ago. Oats stocks in all positions were estimated at 2.52 million bushels, down 13 percent from last year.

Nationally, all wheat stored in all positions on December 1, 2000 totaled 1.80 billion bushels, down 4 percent from a year ago. The indicated September - November 2000 quarter disappearance is 551 million bushels, down 2 percent from the same period in 1999. Durum wheat stocks in all positions on December 1, 2000 totaled 104 million bushels, down [illegible] percent from a year ago.

Barley stocks in all positions on December 1, 2000 are estimated at 229 million bushels, less than 1 percent above last year. Oats stored in all positions on December 1, 2000 totaled 144 million bushels, 8 percent above the December 1, 1999 estimate.

Prices Received for December

November full month crop prices improved significantly from October 2000. Montana's winter wheat average price was $2.91 per bushel, up 11 cents from October; durum wheat was $4.07 per bushel, up 53 cents; and spring wheat was 28 cents higher at $3.17 per bushel. Feed barley average price was $1.56 and malt barley was $2.72 per bushel, up 3 and 18 cents respectively.

The mid-December price for alfalfa hay was $92.00 per ton, up $6 from last month. Other hay, at $83.00 per ton, was up 2.00 from November's mid-month price. The mid-December winter wheat price averaged $2.90 per bushel, spring wheat was $3.20, feed barley was $1.70, and malt barley averaged $2.70.

Livestock prices for the full month of November were mixed compared with the previous month. Steer and heifer prices increased 40 cents to $94.30 per cwt. Cows were down 70 cents to $37.40, and the average price for calves was down $2.00 to $102.00 per cwt. Sheep prices increased $4.30 to $31.00 per cwt, and lamb prices dropped $4.90 to $78.10 per cwt. Milk prices were 10 cents above last month at $13.70 per cwt. Steer and heifer prices for mid-December averaged $90.30 per cwt.

Nationally, prices for November and changes from October were as follows: winter wheat was $2.70, up 7 cents; spring wheat was $2.97, up 17 cents; the all barley price was $2.12, up 19 cents; and steer and heifer prices were $73.80, up $3.30.

The U.S. mid-December winter wheat price was $2.67 per bushel, spring wheat was $2.94 per bushel, all wheat was $2.75 per bushel, and all barley was $2.08. Steer and heifer prices were $76.20 per cwt, cow prices were $36.10, all hog prices were $40.60 per cwt, and all egg prices were 83.3 cents per dozen.

The Preliminary All Farms Products Index of Prices Received in December was 98 based on 1990-92=100, unchanged from the November index. Higher prices for soybeans, cattle, hogs, and eggs were offset by lower prices for broilers, lettuce, turkeys, and cauliflower. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of tobacco, wheat, milk, and broilers were offset by lower marketings of cattle, soybeans, grapes, and corn.

Compared with December 1999, the All Farm Products Index was 7 points (7.7 percent) higher. Price increases from December 1999 for cotton, cattle, eggs, and hogs were partially offset by lower prices for broilers, apples, oranges, and lemons.

1/ Composite of steers, heifers, and cows.

Dry peas production for 2000 in Montana is estimated at 233,000 cwt. Planted and harvested acreage is estimated at 28,000 and 24,000 acres, respectively. Average yield is set at 9.7 cwt per acre.

Montana's 2000 production of **lentils** is estimated at 210,000 cwt. Planted area is estimated at 22,000 acres and harvested acres are set at 21,000 acres. The average yield is estimated to be 10.0 cwt per acre.

U.S. dry edible bean production is estimated at 26.4 million cwt for 2000, virtually unchanged from the December 1 forecast but down 21 percent from 1999 for comparable States. Harvested area is estimated at 1.61 million acres, down slightly from the December 1 forecast and 15 percent below last year for comparable States.

Production of **dry edible peas** in Idaho, Montana, North Dakota, Oregon, and Washington is estimated at 3.50 million cwt for 2000, 1 percent above the November 1 forecast but down 28 percent from 1999. This is the lowest production since 1996 when 2.67 million cwt was produced. Area harvested, at 179,000 acres, is 2 percent above the previous forecast but 30 percent below 1999. Average yields, at 1,955 pounds per acre, decreased 8 pounds from the November 1 forecast but increased 73 pounds from 1999.

Lentil production in Idaho, Montana, North Dakota, and Washington is estimated at 3.03 million cwt for 2000, up 2 percent from the November 1 forecast and 27 percent above 1999.

OILSEEDS

Montana's **flaxseed** production for 2000 is estimated to be 196,000 bushels. Planted and harvested acreage estimates are 16,000 and 14,000, respectively. The average yield is set at 14.0 bushels per acre. Production of **mustard seed** in Montana during 2000 is estimated at 7 million pounds. Acres planted are set at 12,000 and acres harvested are 10,000. Yields averaged 700 pounds per acre. Montana **canola** growers planted 65,000 acres in 2000. Out of those that were planted, 58,000 acres were harvested yielding 960 pounds per acre. Total production is estimated to be 55.7 million pounds. Growers produced an estimated 30.03 million pounds of **safflower** in Montana for 2000. They planted an estimated 41,500 acres and harvested 39,000 acres. Average yields were set at 770 pounds per acre.

Montana's 2000 **all sunflower** production estimate was set at 4.3 million pounds this year. Planted and harvested acreage estimates are 7,000 and 5,800, respectively. The average yield is estimated at 744 pounds per acre.

U.S. flaxseed production for 2000 totaled 10.7 million bushels, up 36 percent from the previous year.

U.S. **safflower** production, at 283 million pounds, decreased 30 percent below 1999. **Mustard** seed production, at 37 million pounds was 24 percent below the previous year. Planted acres for safflower and mustard seed were down from 1999.

Canola production in the U.S. for 2000 reached a record high, at 2.02 billion pounds, up 48 percent from 1999. The 1998 production was the previous record high.

The U.S. 2000 **sunflower** production totaled 3.59 billion pounds, 17 percent below the 1999 production and 32 percent below 1998.

Milk Production
Egg Production

U.S. Cattle on Feed Up 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.9 million head on December 1, 2000. The inventory was 2 percent above December 1, 1999 and 8 percent above December 1, 1998. Placements in feedlots during November totaled 2.01 million, 7 percent below 1999 and 2 percent below 1998. Net placements were 1.91 million. During November, placements of cattle and calves weighing less than 600 pounds were 757,000, 600-699 pounds were 559,000, 700-799 pounds were 405,000, and 800 pounds and greater were 293,000. Marketings of fed cattle during November totaled 1.83 million, 1 percent above 1999 and 7 percent above 1998. Other disappearance totaled 105,000 during November, 27 percent above 1999 and 35 percent above 1998

Red Meat Production Up

Montana slaughter plants produced 1.9 million pounds, dressed weight, of red meat during November 2000, up 7 percent from last year. Cattle slaughter totaled 2,100 head, up 100 head from a year ago. The average live weight was 1,120 pounds, 54 pounds heavier than last November.

There were 2,000 hogs slaughtered during November, 500 less than in November 1999. The average live weight was 270 pounds, up 14 pounds from a year earlier. Sheep slaughter was up 100 head from last November to 400 head.

U. S. commercial red meat production totaled 3.92 billion pounds in November, up 1 percent from the previous record high for November of 3.89 billion pounds produced in 1999. Beef production, at 2.17 billion pounds, was 1 percent above the record high for November set last year. Cattle slaughter totaled 2.93 million head, down slightly from 1999. The average live weight was up 14 pounds from last year, at 1,230 pounds.

Pork production totaled 1.71 billion pounds, up slightly from the record high set last year. Hog kill totaled 8.76 million head, 2 percent below 1999. The average live weight was 3 pounds above the previous year, at 265 pounds. Lamb and mutton production, at 20 million pounds, was down 6 percent from November 1999. Sheep slaughter totaled 296 thousand head, 10 percent below last year.

January - November red meat production was 42.5 billion pounds, 1 percent higher than the comparable figure a year earlier. Accumulated beef production was 2 percent higher than last year, veal was down 3 percent, pork was down 1 percent, and lamb & mutton was down 4 percent

Dry Edible Bean Production

Production for Montana's **dry edible bean** crop was estimated at 604,000 cwt, up 37 percent from the 1999 crop. Planted acreage for 2000 was estimated at 40,000 acres, up 51 percent from last year's estimate because of a another significant increase in garbanzo beans. Harvested area for this year is 36,500 acres, up 43 percent from 1999. The yield is forecast at 1,650 pounds per acre, 80 pounds less than last year. Yield results were mixed in Montana. Some growers had excellent growing conditions and produced a favorable crop, while other areas were impacted by drought conditions or a fungal leaf blight.

Pinto bean production for Montana is estimated to be 311,000 cwt, which is 5 percent above last year's estimate. Acres planted are estimated at 14,500 acres, up 4 percent from 1999. Harvested acreage, at 13,700, is 4 percent higher than the previous year. The yield is forecast at 2,270 pounds per acre, 30 pounds more than last year.

The biggest increases, for the second year in a row, occurred with the **garbanzo bean** crop. Montana's second production forecast was 290,000 cwt for 2000, compared with 133,000 cwt for last year. Planted acreage was set at 25,000 acres which is more than double the 1999 planted acres. Harvested area is estimated at 22,500 acres. The yield is forecast at 1,290 pounds per acre, up 14 percent from last year's estimate of 1,130 pounds per acre.

U.S. **dry edible bean** production is estimated at 26.4 million cwt for 2000, down 21 percent from 1999 and 13 percent below two years ago for comparable States. Harvested acres are estimated at 1.61 million acres, 15 percent below last year and down 16 percent from 1998 for comparable States. Production is down in 2000 for all estimating States except Montana, Oregon, and Wisconsin. Production for all classes except for garbanzo is below 1999. **Pinto and navy**, the two largest varieties, decreased 2 percent and 35 percent, respectively from 1999.

Potato Production Up 5 Percent, December 1 Stocks Up 4 Percent

Montana potato growers produced 3,503,000 cwt of potatoes in 2000, 5 percent more than the previous year. Area planted and harvested was up 500 and 400 acres respectively for the 2000 crop year. There were 11,500 acres planted and 11,300 acres harvested, having an average yield of 310 cwt per acre. This yield is 5 cwt higher than last year's.

Producers held 3,350,000 cwt in storage on December 1, 2000. This is 4 percent more than was on-hand the prior year. December 1 stocks represent 96 percent of the total 2000 potato production in Montana.

Production of fall potatoes is a record high 471 million cwt in the 22 fall States this year, up 9 percent from a year ago and 8 percent above 1998. December 1 stocks in the 15 storage States are also at a record high 310 million cwt, up 13 percent from last year and 10 percent above 1998. The previous record highs were in 1996 when fall production was 454 million cwt and stocks were 295 million cwt. Seasonal disappearance of 152 million cwt in the 15 States is up 5 percent from last year. Processors used 78.5 million cwt so far this season, up 5 percent from last year.

The 15 major potato States held a record high 310 million cwt of potatoes on December 1, 2000, up 13 percent from last year and 10 percent above 1998. Potatoes in storage accounted for 67 percent of the 2000 fall storage States production, 2 percentage points above last year. Stocks by type were 3 percent red, 10 percent round white, 4 percent long white (Shepody) and 83 percent russet; with fewer whites, and more reds and russets than a year ago.

Disappearance in the 15 States from the start of harvest to December 1, at 152 million cwt of potatoes, was up 5 percent from the same period last year and 7 percent more than two years ago. Shrink and loss, at 16.5 million cwt so far this year, was down 9 percent from last year and 10 percent less than two years ago. Processors used 78.5 million cwt of 2000 crop potatoes so far this season, up 5 percent from a year ago and 6 percent above two years ago.

Western States held 223 million cwt of potatoes in storage on December 1, a jump of 16 percent above last year and 15 percent above two years ago. Washington's storage increased 27 percent from last year, Idaho rose 15 percent, and Oregon was up 14 percent. Colorado gained 3 percent and Montana increased 5 percent. California's stocks were down 16 percent.

Production of fall potatoes for 2000 is a record high 471 million cwt, up 9 percent from comparable estimates last year, and 4 percent above the previous record in 1996. Area harvested, at 1.20 million acres, is up a comparable 2 percent from last year. The average yield is a record high 393 cwt per acre, a jump of 24 cwt from the previous record high last year and 36 cwt above two years ago for comparable States. Comparability is achieved by combining Nebraska's previous summer and fall crops and dropping Wyoming's estimates.

Record large crops were produced in Idaho, Montana, Oregon, and Washington. Yields were record high in 12 States. Hot weather during the summer growing months pushed size profiles and yields to high levels in many of the western States.

Ten Western States produced 333 million cwt of potatoes in 2000, up 12 percent from the last year and 13 percent above two years ago. Acreage harvested, at 760,400 acres, was up 4 percent, as the average yield jumped 32 cwt. Idaho potato farmers produced a record high 152 million cwt, up 14 percent from a year ago. Washington hit a record high 108 million cwt, with a gain of 13 percent from last year. Oregon's potato crop topped off at a record 30.7 million cwt, up 10 percent from last year.

2/ Summer estimates included with fall in 2000.

December 1 Hog and Pig Inventory

The inventory of all hogs and pigs in Montana on December 1, 2000 was 155,000 head, unchanged from a year ago. Breeding stock was up 6 percent from last December to 18,000 head. Market hog numbers decreased to 137,000 head, down 1 percent from last year.

There were 33,500 sows farrowed in Montana during the period of December 1999 to November 2000. This was a decrease of 7 percent from a year earlier. The number of pigs saved per litter increased slightly to 9.07 and resulted in an annual pig crop of 304,000 head, a 6 percent decrease from last year. There were 650 farms with one or more hogs in Montana in 2000, up 8 percent from last year.

U.S. inventory of all hogs and pigs on December 1, 2000, was 59.8 million head. The inventory was 1 percent above December 1999, but slightly below September 1, 2000.

Breeding inventory, at 6.28 million head, was up 1 percent from December 1, 1999, and up slightly from September 1, 2000. Market hog inventory, at 53.6 million head, was 1 percent above last year, but slightly below last quarter.

The September-November 2000 U.S. pig crop, at 25.5 million head, was 2 percent more than 1999, but 1 percent less than 1998. Sows farrowing during this period totaled 2.88 million head, 1 percent above last year. The sows farrowed during this quarter represented 46 percent of the breeding herd. The average number of pigs saved per litter was 8.88 for the September-November period, compared to 8.78 pigs last year. Pigs saved per litter by size of operation ranged from 7.60 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.91 million sows farrow during the December 2000-February 2001 quarter, 4 percent above the actual farrowings during the same period in 2000, and 1 percent above 1999. Intended farrowings for March-May 2001, at 2.92 million sows, are 1 percent above the same period in 2000 but down 2 percent from 1999.

The number of hog operations with hogs totaled 85,760 during 2000, down 13 percent from last year and 25 percent below 1998. Places with 2,000 or more hogs on hand accounted for 8 percent of the operations and 72 percent of the inventory. This is the fifth time operations with inventories over 2,000 head have controlled over 50 percent of the total inventory. The number of operations with over 5,000 head of inventory at, 2,095, accounted for 50.5 percent of the total inventory, up from 46.5 percent a year ago. The total number of hogs under contract, owned by these over 5,000 head operations, but raised by contractees, accounted for 30 percent of the total U.S. hog inventory, down from 32 percent last year.

U.S. November Production Up 1.5 Percent

Milk production in the 20 major States during November totaled 11.5 billion pounds, up 1.5 percent from production in these same States in November 1999. October revised production, at 11.9 billion pounds was up 2.7 percent from October 1999. The October revision represented a decrease of 0.2 percent or 29 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,463 pounds for November, 4 pounds above November 1999. The number of cows on farms in the 20 major States was 7.85 million head, 95,000 head more than November 1999 and 1,000 head more than October 2000.

U.S. Egg Production Up For November

U.S. egg production totaled 7.03 billion during November 2000, up slightly from the 7.02 billion produced in 1999. Production included 5.99 billion table eggs and 1.04 billion hatching eggs, of which 981 million were broiler-type and 58.0 million were egg-type. The total number of layers during November 2000 averaged 330 million, up 1 percent from the total average number of layers during November 1999. November egg production per 100 layers was 2,126 eggs, down 1 percent from 2,137 eggs in November 1999.

All layers in the U.S. on December 1, 2000, totaled 332 million, up one percent from a year ago. The 332 million layers consisted of 275 million layers producing table or commercial type eggs, 53.8 million layers producing broiler-type hatching eggs, and 2.59 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 2000, averaged 70.9 eggs per 100 layers, down 1 percent from the 71.5 eggs a year ago. Laying flocks in the 30 major egg producing States produced 6.58 billion eggs during November, down slightly from November 1999.

2000 Sugar Beet and Hay Production

Montana **sugar beet** production for October 2000 is forecast at 1.38 million tons, down 3 percent from last month's forecast and down 6 percent from last year. Forecasted yield, at 23.9 tons per acre, is 0.2 tons above last month and 0.1 tons per acre higher than 1999. Because of an oversupply of sugar, producers this year were given the option of entering their sugar beet acres into a PIK program. By doing this, producers would receive a payment for not harvesting their sugar beets and plowing them up. Some producers took advantage of this program and therefore, revisions were required to the harvested acres. Harvested acreage is now 57,900 acres, which is 2,100 acres less than last month and 3,800 acres less than last year. Sugar beets are 20 percent harvested as of October 1. This is on pace with last year, but 5 percentage points higher than the five-year average.

Forecasted **alfalfa hay** yield for Montana was lowered from the August forecast by 0.1 ton per acre to 1.6 tons per acre. If realized this would be 0.6 ton per acre lower than last year. Total production of alfalfa hay is estimated at 1.76 million tons, down a third from the August forecast and down nearly 52 percent from last year. This is the lowest production since 1985. Harvested acres for all types of hay were revised based on data received from a Drought Survey that was completed in September. Agricultural producers from around the state were contacted to determine how this year's drought affected their crops and livestock. Based on this information, harvested acreage was revised from August and is now estimated at 1.10 million acres, down 450,00 acres from August and down 550,000 acres from last year. **Other hay** yields were also lowered from August and is now estimated at 1.2 tons per acre, down 0.2 tons per acre from August and down 0.3 tons per acre from 1999. Total production is set at 840,000 tons, down 29 percent from August and down 41 percent from last year. Harvested acreage is lowered from August and is now 700,000 acres, down 250,000 acres from last year. **All hay** production is estimated at 2.60 million tons, down 49 percent from last year. If realized, all hay production would be the lowest total since 1961 when 2.5 million tons were produced.

U.S. **sugar beet** production is forecast at 32.3 million tons from just over 1.4 million acres. This reflects preliminary acreage and production reductions due to the government PIK program announced in July. Harvested acres are 8 percent below last year and 7 percent below the September 1 forecast. The production forecast is down 6 percent from September and 3 percent below last year. The yield is forecast at 23.0 tons per acre, 1.1 tons above 1999 and 0.2 tons above the September forecast.

Nationally, production for **alfalfa and alfalfa mixtures** is forecast at 80.0 million tons, up 1 percent from August, but 5 percent below 1999. Yields are expected to average 3.43 tons per acre, up 0.11 tons from August, but down 0.07 tons from 1999. Harvested area is 23.3 million acres, down 2 percent from August, and down 3 percent from 1999.

U.S. production of **other hay** is forecast at 72.7 million tons, 3 percent below last year's record production of 75.2 million tons. Yields are expected to average 1.90 tons per acre, slightly below the August forecast of 1.94 tons and last year's yield of 1.92 tons. Harvested area is estimated at 38.3 million acres, down less than 1 percent from the August forecast, and down 2 percent from the 39.2 million acres harvested in 1999. This year's acreage will be the second highest since 1962.

Montana Quarterly Milk Production and U.S. September Milk Production Up

During the July-September quarter, Montana milk cows produced 78 million pounds of milk, 2 million pounds more than the same quarter a year ago. Montana milk cow numbers, at 18,000 head were unchanged from a year ago.

Milk production in the 20 major States during September totaled 11.5 billion pounds, up 2.8 percent from production in these same States in September 1999. The August revision represented a decrease of 0.3 percent or 32 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,467 pounds for September, 22 pounds above September 1999. The number of cows on farms in the 20 major States was 7.85 million head, 98,000 head more than September 1999 and 11,000 head more than August 2000.

During the July-September period, milk produced in the U.S. was 41.3 billion pounds, 4.0 percent above the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.25 million head, 81,000 head more than the same period last year.

U.S. Cattle on Feed Up 7 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.0 million head on October 1, 2000. The inventory was 7 percent above October 1, 1999 and 13 percent above October 1, 1998. The inventory included 6.56 million steers and steer calves, up 6 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.40 million head, up 9 percent from 1999. Placements in feedlots during September totaled 2.69 million, 3 percent below 1999 but 1 percent above 1998. Net placements were 2.63 million. During September, placements of cattle and calves weighing less than 600 pounds were 775,000, 600-699 pounds were 612,000, 700-799 pounds were 681,000, and 800 pounds and greater were 618,000. Marketings of fed cattle during September totaled 1.99 million, 2 percent above 1999 and 7 percent above 1998. Other disappearance totaled 54,000 during September, 13 percent below 1999 and 11 percent below 1998.

September Egg Production Down Slightly

U.S. egg production totaled 6.84 billion during September 2000, down slightly from the 6.86 billion produced in 1999. Production included 5.80 billion table eggs and 1.03 billion hatching eggs, of which 973 million were broiler-type and 61.0 million were egg-type. The total number of layers during September 2000 averaged 325 million, up 1percent from the total average number of layers during September 1999. September egg production per 100 layers was 2,101 eggs, down 1 percent from 2,128 eggs in September 1999. September 2000 contained 21 weekdays and five Saturdays, compared to 22 weekdays and four Saturdays in September 1999. All layers in the U.S. on October 1, 2000, totaled 326 million, up 1 percent from a year ago. The 326 million layers consisted of 270 million layers producing table or commercial type eggs, 53.5 million layers producing broiler-type hatching eggs, and 2.67 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 2000, averaged 69.2 eggs per 100 layers, down 2 percent from the 70.6 a year ago. Laying flocks in the 30 major egg producing States produced 6.40 billion eggs during September, down 1 percent from September 1999. The average number of layers during September, at 305 million, was up 1 percent from a year earlier.

September Red Meat Production Up in Montana

Montana slaughter plants produced 1.8 million pounds, dressed weight, of red meat during September 2000, up 9 percent from September 1999, but down 14 percent from last month. Cattle slaughter totaled 2,100 head, up 200 head from a year ago. The average live weight was 1,110 pounds, 36 pounds heavier than last September.

There were 1,700 hogs slaughtered during September, 400 less than in September 1999. The average live weight was 267 pounds, up 13 pounds from a year earlier. Sheep slaughtered were up 100 head from last September to 500 head. The average live weight decreased 3 pounds from last September to 127 pounds.

Commercial red meat production for the United States totaled 3.86 billion pounds in September, down 2 percent from the 3.93 billion pounds produced in September 1999. September 1999 contained 22 weekdays (including one holiday) and 4 Saturdays. September 2000 contained 21 weekdays (including one holiday) and 5 Saturdays. Beef production, at 2.28 billion pounds, equaled the previous record high for September set last year. Cattle slaughter totaled 3.03 million head, down 2 percent from 1999. The average live weight was up 21 pounds from the previous year, at 1,231 pounds. Veal production totaled 17 million pounds, 18 percent below the previous record low for September set a year ago. Calf slaughter totaled 93 thousand head, down 22 percent from September 1999. The average live weight was 13 pounds above last year, at 293 pounds.

Pork production totaled 1.55 billion pounds, down 4 percent from the previous year. Hog kill totaled 8.12 million head, 6 percent below 1999. The average live weight was 4 pounds above the previous year, at 259 pounds. Lamb and mutton production, at 17 million pounds, was down 10 percent from September 1999 and down 9 percent from the previous record low for September set in 1998. Sheep slaughter totaled 269 thousand head, 13 percent below last year. The average live weight was 130 pounds, up 3 pounds from September a year ago. January - September red meat production was 34.5 billion pounds, just above the comparable figure a year earlier. Accumulated beef production was 2 percent higher than last year, veal was down 3 percent, pork was down 2 percent, and lamb & mutton was down 3 percent.

Small Grains Summary
Grain Stocks

September 2000 Small Grain Summary

Montana's 2000 winter wheat production was estimated at 44.55 million bushels, up 21% from 1999. This increase from last year is mainly attributed to an increase in acres. Producers harvested 1,350,000 acres, up 380,000 acres from the 1999 harvest. The 2000 average yield was 33.0 bushels per acre, which is five bushels lower than last year's average. The yield was lowered 2 bushels from the August 1, 2000 forecast.

Spring wheat production was estimated at 77.5 million bushels, down 28% from 1999. The 2000 crop would be the smallest since 1990 when realized production was 53.9 million bushels. The seeded acreage was 3.35 million acres, 800,000 acres less than 1999. Producers harvested 3.1 million acres, 900,000 acres less than a year earlier. Yields averaged 25.0 bushels per acre, down 2 bushels from 1999 in part due to lack of precipitation in many areas of the state. Drought conditions existed for much of the growing season across the state. The only exception was the Northeast part of the state where adequate precipitation allowed for a good crop.

Montana **durum wheat** growers planted 480,000 acres and harvested or expect to harvest 470,000 acres in 2000. With good precipitation in the Northeastern part of the state where a majority of the durum wheat is grown, producers obtained good yields. The average yield was 28.0 bushels per acre, 1 bushel more than 1999. Total production was estimated at 13.16 million bushels, up 39 percent from last year. The 2000 production is the second highest on record, below only the 18.09 million bushels achieved in 1956.

Barley planted acreage in Montana decreased to1.25 million acres, 50,000 acres less than 1999. Producers harvested 950,000 acres, 200,000 acres less than were harvested for grain in 1999. Yields averaged 40.0 bushels per acre, down 10 bushels from last year and down 2 bushels from our previous forecast. Production was estimated at 38.0 million bushels, down 34% from last year. The 2000 production is the smallest crop since 1988 when 30.0 million bushels was realized. The main reason for the decrease is attributed to drought conditions during much of the growing season.

Oat production in Montana was estimated at 2.60 million bushels, down 19 percent from last year. Planted acreage was estimated at 130,000 acres, 40,000 acres lower than last year. Harvested acreage was set at 50,000 acres, down 20,000 from 1999. Yields averaged 52.0 bushels per acre, 6 bushels above last year.

Nationally, the 2000 **winter wheat** production is estimated at 1.56 billion bushels. This is down 2 percent from the August forecast and 8 percent below 1999. The U.S. yield dropped 0.4 bushels from August to 44.6 bushels per acre, 3.2 bushels below last year's yield. Acreage for grain is estimated at 35.0 million acres, down 1 percent from both last month and last year. Most of the decrease in grain area from August comes from Nebraska, Oklahoma, and Texas.

Other spring wheat production in 2000 is estimated at 561 million bushels, down 5 percent from the last forecast, but 12 percent more than in 1999. Harvested area is now 14.5 million acres, down 3 percent from the last forecast and 2 percent from last year. The U.S. yield is 38.6 bushels per acre, down 0.6 bushels from the last forecast, but 4.5 bushels higher than in 1999.

Durum wheat production for 2000 totaled 116 million bushels, down 2 percent from September 1, but 16 percent higher than last year. Grain area now totals 3.67 million acres, up 3 percent from last year. The U.S. yield, at 31.5 bushels per acre is up 1.9 bushels from the last forecast and 3.7 bushels above last year's yield. North Dakota's durum harvest was only 89 percent complete by September 24, four points behind the 5-year average. Sprouting and other moisture related damage has lowered the quality of the remaining wheat.

U.S. **barley** production in 2000 was estimated at 320 million bushels, up 3 percent from the September forecast and 14 percent above last year's estimate. Average yield per acre, at 61.4 bushels, was up 2.2 bushels from 1999. The area harvested for grain is estimated at 5.21 million acres, 10 percent above a year ago. This year's harvested acreage is the second lowest on record, following last year's record low.

U.S. **oats** production for the 2000 crop year is estimated at 150 million bushels, 2 percent below the August forecast, but 3 percent above the 1999 production. The estimated yield, at 64.4 bushels per acre, is 2.1 bushels above the August forecast and 4.8 bushels higher than last year. Area harvested for grain in 2000 is 2.33 million acres, 5 percent below the August forecast and 1999. This continues the steady downward trend and breaks last year's record as the smallest acreage harvested for grain on record. Compared with the August forecast, reductions in acres harvested for grain due to drought in Texas, Nebraska, and South Dakota, more than offset higher yielonremainin acres.

The Montana crop production and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during September. Names were selected on a statistical probability basis.

SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accuate, reliable statistics.

Agricultural Prices Received for September

Crop prices for the full month of August 2000 were mostly lower than the July 2000 prices. Montana's winter wheat average price was $2.44 per bushel, down 11 cents from July; durum wheat was $3.20 per bushel, up 2 cents; and spring wheat was 29 cents lower at $2.64 per bushel. Feed barley average price was $1.41 and malt barley was $2.96 per bushel.

The mid-September price for alfalfa hay was $83.00 per ton, up $4.00 from last month. Other hay, at $74.00 per ton, was up $2.00 from August's mid-month price. The mid-September winter wheat price averaged $2.60 per bushel, spring wheat was $2.85, feed barley was $1.40, and malt barley averaged $3.00.

Livestock prices for the full month of August were mixed compared with the previous month. Steer and heifer prices decreased $1.00 to $82.80 per cwt. Cows were down $1.60 to $40.70, and the average price for calves was up $9.00 to $110.00 per cwt. Sheep prices decreased $6.50 to $28.70 per cwt, and lamb prices decreased $2.90 to $85.10 per cwt. Milk prices increased 20 cents from last month to $13.30 per cwt. Steer and heifer prices for mid-September averaged $82.20 per cwt.

Nationally, prices for August and changes from July were as follows: winter wheat was $2.31, up 8 cents; spring wheat was $2.59, down 15 cents; the all barley price was $2.30, down 40 cents; and steer and heifer prices were $68.00, down $2.40.

The U.S. mid-September winter wheat price was $2.38 per bushel, spring wheat was $2.57 per bushel, all wheat was $2.43 per bushel, and all barley was $2.08. Steer and heifer prices were $68.70 per cwt, cow prices were $37.30, all hog prices were $41.60 per cwt, and all egg prices were 60.3 cents per dozen.

The preliminary All Farm Products Index of Prices Received in September was 99 based on 1990-92=100, up 1 point (1.0 percent) from the August index.. The seasonal change in the mix of commodities farmers sell often affects the overall index. Lower seasonal marketings of cattle, broilers, grapes, and wheat were partially offset by higher marketings of soybeans, peanuts, corn, apples and potatoes. These marketing changes kept the index from increasing more than 1 point.

The September Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) was 118 percent of the 1990-92 average. The index is down 1 point (0.8 percent) from August but was 3 points (2.6 percent) greater than September 1999. Lower prices in September for complete feeds, feed concentrates, feeder cattle, and gasoline more than offset higher prices for diesel fuel, hay and forages, nitrogen fertilizers, and feed grains.

United States Index Summary

September 1, 2000 Grain Stocks

All wheat stocks in Montana on September 1, 2000 totaled 169.4 million bushels, down 11 percent from the same quarter last year. Stocks stored on the farm accounted for 143.0 million bushels and off farm stocks accounted for 26.4 million bushels. All **spring wheat** stocks, at 113.91 million bushels, were down 20 percent from last year and accounted for 67 percent of the total wheat stocks. **Winter wheat** stocks were estimated at 55.49 million bushels, up 16 percent from last year. **Durum wheat** stocks were estimated at 14.56 million bushels, down 11 percent from last year. All wheat disappearance for the June-August quarter was 26.66 million bushels, compared with 34.16 million for the same quarter last year.

Barley stocks in all positions on September 1, 2000 were down 27 percent from last year and were set at 41.16 million bushels. **Oat** stocks were up 9 percent from a year ago and were estimated at 3.32 million bushels.

Nationally, all wheat stored in all positions on September 1, 2000 totaled 2.37 billion bushels, down 3 percent from a year ago. On-farm stocks are estimated at 823 million bushels, down 7 percent from last year. Off-farm stocks, at 1.54 billion bushels, are down 1 percent from a year ago. The indicated June - August 2000 quarter disappearance is 823 million bushels, up 3 percent from the same period in 1999.

U.S. **durum wheat** stocks in all positions on September 1, 2000 totaled 130 million bushels, down 5 percent from a year ago. On-farm stocks, at 91.7 million bushels, are down 5 percent from 1999. Off-farm stocks totaled 38.0 million bushels also down 5 percent from a year ago. The indicated June - August 2000 quarter disappearance of 35.7 million bushels is up 205 percent from the same period a year earlier.

U.S. **barley** stocks in all positions on September 1, 2000 are estimated at 294 million bushels, less than 1 percent below last year. On-farm stocks are 152 million bushels, 8 percent below a year ago. Off-farm stocks are 142 million bushels, 9 percent above 1999. Indicated disappearance during the June - August 2000 quarter totaled 138 million bushels, up 9 percent from the same period a year earlier.

U.S. **oats** stored in all positions on September 1, 2000 totaled 151 million bushels, 2 percent above the stocks on September 1, 1999. Of the total stocks on hand, 102 million bushels were stored on farms, 5 percent more than this time last year. Off-farm stocks totaled 49.2 million bushels, 4 percent below a year earlier. Indicated disappearance during June - August 2000 totaled 75.3 million bushels, 5 percent less than the same period a year ago.

August Red Meat Production Up in Montana

Montana slaughter plants produced 2.1 million pounds, dressed weight, of red meat during August 2000, up 5 percent from August 1999 and up 13 percent from last month. Cattle slaughter totaled 2,400 head, up 200 head from a year ago. The average live weight was 1,109 pounds, 24 pounds heavier than last August.

There were 2,100 hogs slaughtered during August, 600 less than in August 1999. The average live weight was 267 pounds, up 13 pounds from a year earlier. Sheep slaughtered were up 100 head from last August to 500 head. The average live weight increased 3 pounds from last August to 124 pounds.

United States commercial red meat production totaled 4.11 billion pounds in August, up 5 percent from the previous record high for August of 3.91 billion pounds produced in 1999. Beef production, at 2.44 billion pounds, was 6 percent above the previous year and 5 percent above the previous record high for August set in 1995. Cattle slaughter totaled 3.26 million head, up 3 percent from 1999. The average live weight was up 20 pounds from the previous year, at 1,226 pounds.

Veal production totaled 17 million pounds, 11 percent below the previous record low for August set a year ago. Calf slaughter totaled 100 thousand head, down 16 percent from August 1999. The average live weight was 12 pounds above last year, at 289 pounds. Pork production totaled 1.64 billion pounds, up 5 percent from the previous record high for August set last year. Hog kill totaled 8.62 million head, 3 percent above 1999. The average live weight was 4 pounds above the previous year, at 258 pounds. Lamb and mutton production, at 18 million pounds, was down 3 percent from August 1999. Sheep slaughter totaled 283 thousand head, 4 percent below last year. The average live weight was 128 pounds, up 1 pounds from August a year ago.

January - August red meat production was 30.6 billion pounds, 1 percent higher than the comparable figure a year earlier. Accumulated beef production was 2 percent higher than last year, veal was 1 percent lower, pork was 2 percent lower, and lamb & mutton was down 3 percent.

U.S. Cattle on Feed Up 9 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.38 million head on September 1, 2000. The inventory was 9 percent above September 1, 1999 and 15 percent above September 1, 1998. Placements in feedlots during August totaled 2.44 million, slightly above 1999 and 18 percent above 1998. Net placements were 2.39 million. During August, placements of cattle and calves weighing less than 600 pounds were 573,000,600-699 pounds were 504,000, 700-799 pounds were 691,000, and 800 pounds and greater were 672,000. Marketings of fed cattle during August totaled 2.19 million, 7 percent above 1999 and 11 percent above 1998. Other disappearance totaled 49,000 during August, 11 percent below 1999 and 6 percent below 1998.

Cattle on Feed in Historic 7 States Up 10 Percent

Cattle on feed September 1, 2000, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 8.98 million, up 10 percent from the previous year and 16 percent above September 1, 1998. Placements in feedlots during August totaled 2.09 million, slightly above 1999 and 18 percent above 1998. Marketings during August totaled 1.89 million, 8 percent above 1999 and 12 percent above 1998. Other disappearance during August was 36,000 head, 14 percent below 1999 and 1998.

Maltsters and Brewers Purchased 19.4 Million Bushels of the 1999 Barley Crop

Maltsters and brewers purchased 19.4 million bushels of Montana's 1999 barley crop to make malt, up 8 percent from 1998, but down nearly 19 percent from the 1997 crop year. The survey was requested and funded by the Montana Wheat and Barley Committee. The average protein of the 1999 malting crop was 12.6 percent, which is the same average protein obtained from the 1998 crop.

Montana growers planted 1.30 million acres of barley in 1999, down 50,000 acres from 1998. Of the total, about 780,000 acres were planted to malting type varieties. If the yield of malting varieties equaled the state average yield per planted acre for all barley, then approximately 34.5 million bushels of malting type would be produced. Since only 19.4 million bushels were used for malt, the remaining 15.1 million bushels did not make the malting grade or exceeded demand for malting barley. The barley utilized for malt represented nearly 34 percent of the 1999 total barley crop compared with 31 percent in 1998 and 39 percent in 1997.

Harrington was the variety most frequently purchased by maltsters and brewers and represented 52 percent of the total purchases. Anheuser Busch varieties were the second most commonly purchased. Seventy-six percent of all malt barley purchased was grown in North Central Montana. South Central Montana growers produced nearly 13 percent of the total.
(See Back Page)

U.S. August Egg Production Up 2 Percent

U.S. egg production totaled 7.10 billion during August 2000, up 2 percent from the 6.97 billion produced in 1999. Production included 6.01 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 65.0 million were egg-type. The total number of layers during August 2000 averaged 325 million, up 2 percent from the total average number of layers during August 1999. August egg production per 100 layers was 2,181 eggs, up slightly from 2,177 eggs in August1999. August 2000 contained 23 week days and four Saturdays, compared to 22 week days and four Saturdays in August 1999.

All layers in the U.S. on September 1,2000, totaled 325 million, up 1 percent from a year ago. The 325 million layers consisted of 268 million layers producing table or commercial type eggs, 54.3 million layers producing broiler-type hatching eggs, and 2.81 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 2000, averaged 70.2 eggs per 100 layers, down 1 percent from the 70.9 a year ago.

Laying flocks in the 30 major egg producing States produced 6.66 billion eggs during August, up 2 percent from August 1999. The average number of layers during August, at 305 million, was up 1 percent from a year earlier.

U.S. August Milk Production Up 4.0 Percent

Milk production in the 20 major States during August totaled 12.0 billion pounds, up 4.0 percent from production in these same States in August 1999. July revised production, at 12.2 billion pounds was up 5.4 percent from July 1999. The July revision represented an increase of 0.3 percent or 37 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,530 pounds for August, 43 pounds above August 1999. The number of cows on farms in the 20 major States was 7.84 million head, 89,000 head more than August 1999 and 10,000 head more than July 2000.

1999 Potato Production and Disposition

Montana's 1999 potato production was 3.33 million cwt, 5 percent above last year and just slightly below 1997. Producers harvested 10,900 acres, 300 more than a year ago and 500 acres more than two years ago. Potato yields averaged 305 cwt per acre compared with 300 cwt in 1998.

Value of production from the 1999 crop was $29.3 million, up 16 percent from 1998. The average price was $8.80 per cwt, up 85 cents from the previous year's crop. Sales of Montana's 1999 potato crop totaled $26.1 million, which was 18 percent higher than last year's crop. Producers sold 3.0 million cwt from the 1999 crop compared with 2.8 million cwt a year ago.

Total U.S. potato production for 1999 is estimated at 478 million cwt, up 1 percent from 1998, but 4 percent below the record high in 1996. Harvested area, at 1.33 million acres, was down 4 percent from 1998 and 2 percent below 1997. The average yield of 359 cwt per acre was a record high, up 16 cwt from 1998 and 14 cwt above 1997. Seasonal production was above last year for winter, spring, and summer but fall potatoes were down slightly. Winter production jumped 37 percent, spring increased 20 percent, summer gained slightly, but fall potatoes were down 1 percent. This is the second largest total potato production on record in the United States.

Summer potato production was revised to 19.0 million cwt for 1999, up slightly from 1998 and 4 percent above 1997. Harvested area of 64,000 acres was down 6 percent from 1998, while the average yield of 296 cwt per acre for 1999 was 18 cwt above the previous year.

Fall potato production was finalized at 430 million cwt, down 1 percent from 1998 but 2 percent above 1997. This is the third largest fall potato production on record, after the 1996 and 1998 seasons. Area harvested in 1999 was estimated at 1.17 million acres, down 4 percent from 1998 and 2 percent below two years earlier. The average yield was a record high, averaging 369 cwt per acre, up 13 cwt from a year ago. Final production of fall potatoes was 1 percent below the first forecast made in November 1999.

Value of all potato production was estimated at $2.75 billion, up 4 percent from last year and 5 percent above 1997. The average price, at $5.77 per cwt gained 21 cents from a year earlier and was 13 cents above 1997.

Sales from the 1999 potato crop totaled 437 million cwt, up 1 percent from 1998 and 2 percent above 1997. Sales accounted for 91 percent of 1999 production. Non sales accounted for 41.1 million cwt of 1999 potatoes, down fractionally from 1998 and 9 percent below 1997. Over the past five years, an average of 91 percent of the potatoes grown have been sold. The other 9 percent was either lost (shrinkage and loss) or used on farms where grown (seed, home use, and livestock feed).

Processors used 274 million cwt of raw potatoes from the 1999 crop, down 3 percent from 1998 but 2 percent above 1997. Table stock sales totaled 134 million cwt, 7 percent above last year. Seed sales of 25.5 million cwt were up 2 percent. Sales for livestock feed, at 3.14 million cwt gained 1 percent from 1998 but was 13 percent below 1997.

Chip potato use totaled 52.8 million cwt, 3 percent above last year. Freezers took 163 million cwt of raw potatoes, down 3 percent, while dehydrating totaled 51.7 million cwt, a drop of 9 percent. Canning use, at 5.71 million cwt, was up 22 percent. Starch, flour and other products were made from 1.31 million cwt of potatoes, down 17 percent from last year.

Shrinkage and loss was estimated at 35.6 million cwt, up fractionally from last year and 10 percent above 1997. Livestock feed and home use totaled 1.29 million cwt, down 9 percent. Growers kept an additional 4.25 million cwt for seed on their own farms, down 2 percent from the previous year.

U.S. Hog Inventory Down 1 Percent

U.S. inventory of all hogs and pigs on September 1, 2000, was 60.2 million head. This was 1 percent below September 1999, but 1 percent above June 1, 2000.

Breeding inventory, at 6.27 million head, was down 1 percent from September 1,1999, but up 1 percent from June 1, 2000. Market hog inventory, at 53.9 million head, was 1 percent below last year, but 1 percent above last quarter.

The June-August 2000 U.S. pig crop, at 25.7 million head, was 1 percent less than 1999, and 4 percent less than 1998. Sows farrowing during this period totaled 2.90 million head, 1 percent below last year. The sows farrowed during this quarter represented 47 percent of the breeding herd. The average pigs per litter was 8.85 pigs saved per litter for the June-August period, compared to 8.86 pigs last year. Pigs saved per litter by size of operation ranged from 7.40 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.88 million sows farrow during the September-November 2000 quarter, 1 percent above the actual farrowings during the same period in 1999, but 4 percent below 1998. Intended farrowings for December 2000-February 2001, at 2.89 million sows, are 3 percent above the same period in 2000 and up slightly from 1999.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 33 percent of the total U.S. hog inventory, up from 31 percent last year.

Spring Wheat Forecast Down from Last Month

Montana's September 1, 2000 **other spring wheat** production forecast is 82.35 million bushels, down 4 percent from last month. If realized, this would be 24 percent lower than last year because of a decrease in harvested acres. The average yield, at 27.0 bushels per acre, is down 1 bushel from the August 1, 2000 forecast and is unchanged from last year. Harvested acres are unchanged from last month and are forecast at 3.05 million acres. Harvest progress is ahead of both last year and the 5-year average. As of September 10, 2000, spring wheat is 94 percent harvested compared with 78 percent last year and 82 percent for the average.

Durum wheat production as of September 1, 2000 is forecast at 15.66 million bushels, down 3 percent from last month, but 66 percent above last year because of an increase in harvested acres. Yields are expected to average 29.0 bushels per acre which is down 1 bushel from last month, but 2 bushels more than last year. Harvested acreage remained unchanged from last month at 540,000 acres compared with 350,000 acres in 1999.

Winter wheat production is not forecast on September 1. However, if we added the August winter wheat production forecast with current spring wheat and durum wheat forecasts, the total wheat crop would be estimated at 145.26 million bushels, down 6 percent from 1999.

The September 1, 2000 forecast for **barley** remains unchanged from last month and is set at 44.10 million bushels, down 23 percent from last year. Yields are forecast at 42.0 bushels per acre compared with 50.0 bushels per acre for1999. Harvested acreage is unchanged from August and is forecast at 1.05 million acres which is 100,000 acres lower than 1999.

Sugar beet yield is unchanged from last month at 23.7 tons per acre. Harvested acreage also remains unchanged at 60,000 acres. Total production is forecast at 1.42 million tons, down 3 percent from last year.

Note: The small grains annual crop summary, which includes data from the September Agricultural Survey and final Objective Yield Survey, will be published on September 29.

At the U.S. level, **all wheat** production for September 1, 2000 is placed at 2.30 billion bushels, up 2 percent from the August forecast but down fractionally from 1999. The U.S. yield is forecast at 42.3 bushels per acre. This is up 0.7 bushels from last month. **Other spring wheat** production is forecast at 590 million bushels, up 7 percent from last month and 17 percent from last season. The final forecast of U.S. average yield is 39.2 bushels per acre. This is 2.4 bushels per acre higher than a month ago. There were no acreage changes. Hard red spring production is up 7 percent from August, at 535 million bushels, while white spring production is virtually unchanged from last month. As of September 3, harvest was 14 points ahead of average in the major producing States. The South Dakota harvest was complete.

U.S. **durum wheat** production for September 1, 2000 is forecast at 118 million bushels, up 2 percent from last month and 19 percent more than 1999. The U.S. yield is now forecast at 29.6 bushels per acre, up 0.7 bushels from August 1. Area for harvest is unchanged from last month. As of September 3, forty-eight percent of the North Dakota crop was harvested, six points better than the 5-year average.

U.S. **barley** production for 2000 is forecast at 310 million bushels, less than 1 percent higher than the August forecast and 10 percent above the 1999 production. Area harvested and to be harvested is unchanged from August, at 5.24 million acres but up 10 percent from the previous year. Yields are expected to average 59.2 bushels per acre, up 0.4 bushels from last month and equal to last year's yield.

Nationally, **sugar beet** production is forecast at 34.3 million tons from just over 1.5 million acres. The yield is forecast at 22.8 tons per acre, 0.9 tons above 1999. This production forecast does not reflect expected reductions due to the government PIK program announced in July. Acreage and production adjustments due to the program will not be known until all bids are reviewed and either accepted or rejected.

Corn production at the U.S. level is forecast at 10.4 billion bushels, unchanged from the last forecast, but up 10 percent from 1999. Based on September 1 conditions, yields are expected to average 141.8 bushels per acre, down 0.1 bushel per acre from August, but up 8.0 bushels from a year ago. If realized, this would be the largest production and yield on record. Acreage for grain harvest is estimated at 73.1 million acres, unchanged from August.

Red Meat Production Up

Montana slaughter plants produced 1.8 million pounds, dressed weight, of red meat during July 2000, up 4 percent from a year ago and down 1 percent from the previous month. Cattle slaughter, at 2,200 head, was up 200 head from last year. The average live weight of 1,128 pounds was up 64 pounds from a year ago.

There were 1,600 hogs slaughtered in Montana during July, 1,000 head fewer than the previous year. Average live weight of 265 pounds was up 11 pounds from July 1999. Sheep slaughter, at 400 head, was up 100 head from last year. The average live weight of 125 pounds was down 3 pounds from a year ago

United States commercial red meat production totaled 3.64 billion pounds in July, down 4 percent from the 3.78 billion pounds produced in July 1999. Beef production, at 2.20 billion pounds, was 2 percent below the previous year. Cattle slaughter totaled 2.96 million head, down 4 percent from 1999. The average live weight was up 14 pounds from the previous year, at 1,220 pounds.

Veal production totaled 18 million pounds, 2 percent below the previous record low for July set a year ago. Calf slaughter totaled 99 thousand head, down 11 percent from July 1999. The average live weight was 26 pounds above last year, at 305 pounds. Pork production totaled 1.41 billion pounds, down 5 percent from the previous year

Hog kill totaled 7.36 million head, 7 percent below 1999. The average live weight was 3 pounds above the previous year, at 259 pounds. Lamb and mutton production, at 16 million pounds, was down 9 percent from the previous record low for July set last year.

Sheep slaughter totaled 243 thousand head, 8 percent below last year. The average live weight was 130 pounds, down 2 pounds from July a year ago. January - July red meat production was 26.5 billion pounds, just below the comparable figure a year earlier. Accumulated beef production was 2 percent higher than last year, veal was up 1 percent, pork was down 3 percent, and lamb & mutton was down 2 percent.

1/ District data funded by the Montana Wheat & Barley Committee. 2/ Preliminary.

Agricultural Prices Received for August

Crop prices for the full month of July 2000 were mixed compared with June 2000 prices. Montana's winter wheat average price was $2.55 per bushel, same as June's level; durum wheat was $3.18 per bushel, down 24 cents; and spring wheat was 3 cents lower at $2.93 per bushel. Feed barley average price was $1.61 and malt barley was $3.18 per bushel.

The mid-August price for alfalfa hay was $79.00 per ton, same as last month. Other hay, at $72.00 per ton, was up $1.00 from July's mid-month price. The mid-August winter wheat price averaged $2.40 per bushel, spring wheat was $2.65, feed barley was $1.40, and malt barley averaged $3.00.

Livestock prices for the full month of July were mixed compared with the previous month. Steer and heifer prices decreased $3.20 to $83.80 per cwt. Cows were up 10 cents to $42.30, and the average price for calves was up $1.00 to $101.00 per cwt. Sheep prices increased $6.50 to $35.20 per cwt, but lamb prices decreased $3.90 to $88.00 per cwt. Milk prices increased 80 cents from last month to $13.10 per cwt. Steer and heifer prices for mid-August averaged $83.10 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $2.23, down 20 cents; spring wheat was $2.74, down 14 cents; the all barley price was $2.70, up 63 cents; and steer and heifer prices were $70.40, down $1.10.

The U.S. mid-August winter wheat price was $2.21 per bushel, spring wheat was $2.51 per bushel, all wheat was $2.30 per bushel, and all barley was $2.13. Steer and heifer prices were $67.70 per cwt, cow prices were $38.60, all hog prices were $44.40 per cwt, and all egg prices were 68.1 cents per dozen.

The preliminary All Farm Products Index of Prices Received in August was 97 based on 1990-92=100, down 1 point (1.0 percent) from the July index. Lower prices for broilers, cattle, hogs, and corn more than offset price increases for eggs, tomatoes, sweet corn, and grapes. The seasonal change in the mix of commodities farmers sell often affects the overall index. Higher seasonal marketings of cattle, tobacco, grapes, and sweet corn more than offset lower marketings of wheat, hay, milk, and broilers. These marketing changes kept the index from falling one more point.

The August Index of Prices Paid for Commodities and Services, Interest, Taxes, and Farm Wage Rates (PPITW) was 119 percent of the 1990-92 average. The index was down 0.8 percent from July but 4 points (3.5 percent) above August 1999. Lower prices in August for feeder cattle, feed concentrates, feed grains, and feeder pigs more than offset higher prices for nitrogen fertilizers, diesel fuel, LP gas, and other chemicals.

United States Index Summary

INDEX (1990-92=100)	July 1999	August 1999	July 2000	August 2000
Prices Received	95	99	98	97

Wheat and Barley Movement

Montana wheat shipped to out-of-state destinations during the December 1999 - May 2000 period, at 77.1 million bushels, was 5% higher than last year. Over 88% of wheat shipped during this period headed west, totaling 67.9 million bushels, down 2% from a year earlier. Movements to eastern destinations increased significantly for this period, totaling 4.8 million bushels. Most of Montana's wheat is shipped by rail, totaling 69.1 million bushels, 90% of total shipments. Over two million more bushels of wheat were trucked during this period than last year. Wheat shipped by truck accounted for just over 10% of total shipments.

Montana barley shipped to out-of-state destinations during December 1999 - May 2000 was 12.5 million bushels, down 5% from the same period last year. Fifty-seven percent of barley shipped out of Montana headed for destinations other than the west coast. Shipments to western destinations were down from the same period last year, at 5.4 million bushels. Eastern destination shipments totaled 5.4 million bushels up 40% from last year. Barley hauled by rail was 83% of total movement, down from 84% for the same period last year.

Cattle on Feed
Milk Production
Mushrooms
Egg Production
Farm Labor
All Hay County Estimates
Cattle County Estimates
Beef Cow County Estimates

U.S. Cattle on Feed Up 11 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.18 million head on August 1, 2000. The inventory was 11 percent above August 1, 1999 and 13 percent above August 1, 1998. Placements in feedlots during July totaled 1.92 million, 6 percent above 1999 but 1 percent below 1998. Net placements were 1.87 million. During July, placements of cattle and calves weighing less than 600 pounds were 424,000, 600-699 pounds were 366,000, 700-799 pounds were 597,000, and 800 pounds and greater were 530,000. Marketings of fed cattle during July totaled 2.08 million, 2 percent below 1999 but 1 percent above 1998. July 2000 had one less slaughter day than July 1999,which limited slaughter and affected the year-to-year relationship for marketings. Other disappearance totaled 44,000 during July, 15 percent below 1999 and 12percent below 1998.

U.S. July Milk Production Up 5.0 Percent

Milk production in the 20 major States during July totaled 12.2 billion pounds, up 5.0 percent from production in these same States in July 1999. This increase is magnified by unusually hot temperatures during July 1999 which lowered milk production per cow. June revised production, at 12.1 billion pounds was up [illegible] percent from June 1999. The June revision represented an increase of 0.1 percent or 13 million pounds from last months preliminary production estimate. Production per cow in the 20 major States averaged 1,557 pounds for July, 59 pounds above July 1999. The number of cows on farms in the 20 major States was 7.83 million head, 83,000 head more than July 1999 and 24,000 head more than June 2000.

Record High Levels Continue in US for Volume and Value of Sales of All Mushrooms

Sales of the 1999-2000 U.S. mushroom crop were a record high 867 million pounds, 1 percent above 1998-99 and up 6 percent from two years ago. Value of sales of the U.S. mushroom crop was a record high $867 million, up slightly from 1998-99 and 8 percent above two years ago. The number of growers, at 304, are down 37 from last year. Average price was $1.00 per pound, down one cent from the previous season.

Sales of Agaricus mushrooms for fresh market were a record high 669 million pounds, up 2 percent from last season. Sales of Agaricus mushrooms for processing were 186 million pounds, 2 percent below last season and the lowest since 1988-89 when 183 million pounds were produced. Value of sales of specialty mushrooms, at $38.8 million was up fractionally from last season and 35 percent above 1997-98

July US Egg Production Up 2 Percent

U.S. egg production totaled 7.06 billion during July 2000, up 2 percent from the 6.90 billion produced in 1999. Production included 5.95 billion table eggs and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 65.0 million were egg-type. The total number of layers during July 2000 averaged 326 million, up 2 percent from the total average number of layers during July 1999.

July egg production per 100 layers was 2,167 eggs, up slightly from 2,158 eggs in July 1999. July 2000 contained 21 weekdays and five Saturdays, compared to 22 weekdays and five Saturdays in July 1999. All layers in the U.S. on August 1, 2000, totaled 326 million, up 2 percent from a year ago. The 326 million layers consisted of 267 million layers producing table or commercial type eggs, 56.3 million layers producing broiler-type hatching eggs, and 2.77 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 2000, averaged 70.0 eggs per 100 layers, up 1 percent from the 69.2 a year ago. Laying flocks in the 30 major egg producing States produced 6.63 billion eggs during July, up 2 percent from July 1999. The average number of layers during July, at 306 million, was up 2 percent from a year earlier.

Hired Workers Down 7 Percent, Wage Rates up 4 Percent From a Year Ago

There were 1.37 million hired workers on the Nation's farms and ranches during the week of July 9-15, 2000, down 7 percent from a year ago. There were 1.08 million workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 289,000 workers. Migrant workers accounted for 11.1 percent of the July hired workforce compared to 12.4 percent last year.

Farm operators paid their hired workers an average wage rate of $7.89 per hour during the July 2000 survey week, up 31 cents from a year earlier. Field workers received an average of $7.32 per hour, up 27 cents from last July. Livestock workers earned $7.65 per hour compared with $7.22 a year earlier. The field and livestock workers combined wage rate was up 31 cents from last year.

Hired farm worker wage rates were above a year ago in most regions. The largest increases occurred in the Southern Plains, Mountain I, and Mountain II regions. An increasingly competitive economic environment, coupled with a need to attract more skilled farm labor, continued to push hired farm wage rates higher in the above regions and nationwide.

August 1 Crop Production
Agricultural Prices
Farm Production Expenditures

Heat and Dry Weather Takes Toll on Montana Crop Production

Montana **winter wheat** producers expect to harvest 47.25 million bushels in 2000. The expected yield of 35.0 bushels per acre is unchanged from last month, but down 3 bushels per acre from last year. If realized, total production would be up nearly 28 percent from last year due to increased harvested acreage. Hot, dry weather has reduced the yield, but many producers are harvesting a better crop than previously expected. Crop progress shows 88 percent of the winter wheat harvested by August 6 compared with 19 percent for the 5-year average. **Other spring wheat** production is forecast at 85.4 million bushels with an expected yield of 28.0 bushels per acre. If realized, the yield would be 2 bushels above last month's forecast and 1 bushel per acre above last year. Total production would be 21 percent below 1999 because of a decrease in harvested acres. As of August 6, spring wheat harvest was 17 percent complete compared with 2 percent for the average, and 38 percent of the crop was rated in good to excellent condition compared with 32 percent a month ago. The **durum wheat** yield estimate was unchanged from last month at 30.0 bushels per acre. Durum production of 16.2 million bushels is 71 percent above last year's estimate due to a significant increase in harvested acres.

Barley producers are also expecting a smaller crop with anticipated yields averaging 42.0 bushels per acre, unchanged from last month's estimate. Total production is forecast to be 44.1 million bushels, unchanged from last month, but down nearly 23 percent from last year. As of August 6, the barley crop was rated at 22 percent in good to excellent condition compared with 41 percent the first week in July. **Oat** production is forecast at 2.6 million bushels, unchanged from last month, but down 19 percent from last year. The expected yield of 40.0 bushels per acre is unchanged from last month, but down 6 bushels from last year. Harvested acreage is down 5,000 acres from 1999 to 65,000 acres.

At 1.7 tons per acre, Montana **alfalfa hay** producers are expecting the lowest yield since 1961, significantly less than last year's estimate of 2.2 tons per acre. Expected yields for **other hay**, at 1.4 tons per acre, are lower than last year. Both types of hay are expected to have less harvested acres than last year. Total production for **all hay** is forecast at 3.83 million tons compared with 5.06 million tons last year.

Montana **sugar beet** production is estimated at 1.42 million tons, down 3 percent from last year. Yields are expected to average 23.7 tons per acre, down slightly from last year's average of 23.8 tons per acre. Forecasted **dry bean** yield is 1,700 pounds per acre with total production of 476,000 cwt, up 8 percent from last year due to an increase in harvested acres. If realized, this would be the second largest dry bean crop on record, exceeded only by the record production achieved in 1943.

At the U.S. level, **all wheat** production is placed at 2.26 billion bushels, up 1 percent from the July forecast but down 2 percent from 1999. Based on August 1 conditions, the U.S. yield is forecast at 41.6 bushels per acre, up 0.4 bushels from last month. The **winter wheat** production forecast is 1.59 billion bushels. This is up slightly from last month, but down 6 percent from 1999. The U.S. yield is forecast at 45.0 bushels per acre, up 0.1 bushels from last month. **Durum wheat** production is forecast at 115 million bushels, down 10 percent from last month, but 16 percent above 1999. This decline is the result of reduced yield expectations in North Dakota. The U.S. yield is forecast at 28.9 bushels per acre, 3.3 bushels less than last month. There were no changes in acreage intended for harvest. **Other spring wheat** production is forecast at 554 million bushels, up 5 percent from last month and 10 percent above 1999. Acreage intended for harvest is unchanged from last month. The U.S. yield is forecast at 36.8 bushels per acre, 1.9 bushels more than the July 1 forecast. Of the production total, 499 million is hard red spring wheat, up 6 percent from last month.

U. S. **barley** harvested acreage for 2000 was unchanged from July. Acreage expected to be harvested for grain in 2000, at 5.24 million acres, is 10 percent more than the 1999 harvested grain acreage. Production for 2000 is forecast at 308 million bushels, slightly up from July and up 9 percent from 1999. Yields are expected to average 58.8 bushels per acre, an increase of 0.1 bushels from July and 0.4 bushels from last year. Yields decreased only in Utah while increases were in Colorado, Pennsylvania, and Wyoming.

Nationally, **dry bean** production is forecast at 25.8 million cwt for 2000, down 22 percent from last year and 15 percent below two years ago. Harvested acreage is estimated at 1.6 million acres, down 16 percent from 1999.

U.S. **all hay** production for 2000 is forecast at 153.3 million tons, down 4 percent from 1999 but 1 percent higher than 1998. The all hay yield is forecast at 2.46 tons per acre, down from last year's yield of 2.52 tons per acre. Acreage for harvest of all hay is estimated at 62.2 million acres, 2 percent lower than 1999.

At the U.S. level, **sugar beet** production is forecast at 34.1 million tons, up 2 percent from last year and 5 percent higher than 1998. Based on August 1 conditions, yields are expected to average 22.7 tons per acre, up 0.8 tons from a year ago. Harvested acreage is estimated at 1.50 million acres, down 2 percent from last year's estimate of 1.53 million acres.

1/ District data funded by the Montana Wheat & Barley Committee. 2/ Preliminary.

Agricultural Prices Received for July

Crop prices for the full month of June 2000 were mostly lower compared with May 2000 prices. Montana's winter wheat average price was $2.55 per bushel, down 9 cents from May's level; durum wheat was $3.42 per bushel, also down 9 cents; spring wheat was 4 cents lower at $2.96 per bushel. Feed barley was $1.64 and malt barley was $2.52 per bushel.

The mid-July price for alfalfa hay was $79.00 per ton, up $4.00 from last month. Other hay, at $71.00 per ton, was up $6.00 from June's mid-month price. The mid-July winter wheat price averaged $2.50 per bushel, spring wheat was $2.90, feed barley was $1.60, and malt barley averaged $2.50.

Livestock prices for the full month of June were mixed compared with the previous month. Steer and heifer prices increased $2.50 to $87.00 per cwt. Cows were up 70 cents to $42.20, but the average price for calves was down $2.00 to $100.00 per cwt. Sheep prices decreased $3.20 to $28.70 per cwt, and lamb prices decreased $4.10 to $91.90 per cwt. Milk prices were unchanged from last month at $12.30 per cwt. Steer and heifer prices for mid-July averaged $86.50 per cwt.

Nationally, prices for June and changes from May were as follows: winter wheat was $2.43, down 1 cent; spring wheat was $2.88, down 4 cents; the all barley price was $2.07, down 12 cents; and steer and heifer prices were $71.50, down $1.70.

The U.S. mid-July winter wheat price was $2.29 per bushel, spring wheat was $2.85 per bushel, all wheat was $2.34 per bushel, and all barley was $1.87. Steer and heifer prices were $71.00 per cwt, cow prices were $39.80, all hog prices were $49.20 per cwt, and all egg prices were 57.2 cents per dozen.

The preliminary All Farm Products Index of Prices Received in July was 98 based on 1990-92=100, down 1 point (1.0 percent) from the June index. Lower prices for corn, wheat, soybeans, and eggs more than offset price increases for milk, potatoes, cucumbers, and onions. The seasonal change in the mix of commodities farmers sell often affects the overall index; however, these changes were essentially offsetting in July. Compared with July 1999, the All Farm Products Index was 3 points (3.2 percent) higher. Price increases from July 1999 for hogs, cattle, wheat, and soybeans more than offset price decreases for milk, corn, grapes, and oranges.

United States Index Summary

INDEX (1990-92=100)	June 1999	July 1999	June 2000	July 2000

U.S. Farm Production Expenditures Up Slightly in 1999

U.S. farm production expenditures totaled $184.3 billion in 1999, up 0.6 percent from the revised 1998 total of $183.2 billion. The largest contributors to the increase were; livestock and poultry purchases, up 15.9 percent; farm improvements and construction, up 10.1 percent; labor, up 3.7 percent; and farm supplies and repairs, up 3.3 percent. These increases were partially offset by decreases in; tractors and self-propelled machinery, down 10.0 percent; rent, down 8.1 percent; and fertilizer, down 6.6 percent. The largest two expenditure categories were farm services which accounted for 13.9 percent of the U.S. total production expenses, and feed which accounted for 13.3 percent of the U.S. total production expenses. The farm services category includes expense items such as custom work, utilities, marketing charges, veterinary services, transportation costs, and miscellaneous business expenses.

The average expenditures per U.S. farm in 1999 were $84,209 compared to $83,810, as revised for 1998. On the average, U.S. farm operations in 1999 spent $11,746 on farm services; $11,197 on feed; $9,004 on labor; $7,678 for livestock and poultry purchases; and $7,267 on rent. Revised estimates for 1998 indicated that U.S. farms spent an average of $11,440 on farm services; $11,440 on feed; $8,694 on labor; $6,635 for livestock and poultry purchases; and $7,917 on rent.

The Farm Production Region contributing most to the total 1999 U.S. farm production expenditures was the Corn Belt with expenses of $34.4 billion, 18.6 percent of the U.S. total. Expenditures in the Corn Belt were down 1.2 percent from the 1998 level of $34.8 billion. In total expenditures, the Corn Belt was followed by the Pacific Region at $30.9 billion (1998 - $29.0 billion); Northern Plains $23.2 billion (1998 - $22.6 billion); Lake States $18.3 billion (1998 - $19.0 billion); and the Southern Plains at $15.9 billion (1998 - $15.6 billion).

U.S. Sheep Inventory
Montana & U.S. Cattle Inventory
Cattle on Feed
Red Meat Production
Mink
Wheat & Barley Varieties
Quarterly Milk Production
Egg Production

July 1, 2000 U.S. Sheep Inventory

All sheep and lamb inventory in the United States on July 1, 2000, totaled 8.50 million head, 6 percent below July 1, 1999. Breeding sheep inventory declined to 5.03 million head on July 1, 2000, 6 percent below July 1999. Market sheep and lambs (including newborn lambs), at 3.47 million head, were 6 percent below last July. Of the July 1, 2000 breeding herd, 4.12 million head were ewes one year old and older, 205,000 head were rams one year old and older, and 710,000 head were replacement lambs (including newborn lambs).

Comparing July 1999 and July 2000 market lambs by weight groups shows lambs under 65 pounds at 2.01 million head, down from 2.12 last July 1; 65 to 84 pound lambs at 710,000 down from 730,000; 85 to 105 pound lambs at 400,000 compare with 465,000; and the lambs over 105 pounds at 280,000 up from 260,000 last July.

Region 3 (CO, MT, SD, UT, & WY) accounted for 34.9 percent of the total sheep and lambs. Region 2 (NM & TX) accounted for 21.2 percent, Region 1 (AZ, CA, ID, NV, OR, & WA) for 16.8 percent, Region 4 (IA, KS, MN, MO, NE, ND, & OK) for 15.3 percent, and Region 5 (all other states) accounted for 11.8 percent.

The 2000 Lamb Crop in the United States is expected to total 4.53 million head, down 4 percent from the 1999 lamb crop of 4.72 million head. Lambs born during January through June 2000 totaled 4.02 million head or 89 percent of the yearly total. An additional 510,000 head are expected to be born during the period July through December 2000.

Montana's July 1, 2000 Cattle Inventory up 1 percent, U.S. Down 1 Percent

Montana's cattle and calf inventory was 3.75 million head on July 1, 2000, 1 percent above last July 1. Beef cow inventory was placed at 1,612,000 head compared with 1,572,000 on hand July 1, 1999. The 2000 calf crop is expected to be 1,620,000, 3 percent larger than the calf crop last year.

All cattle and calves in the United States as of July 1, 2000, totaled 106.4 million head, 1 percent below the 107.0 million on July 1, 1999 and 1 percent below the 107.7 million two years ago. All cows and heifers that have calved, at 43.2 million, were slightly below the 43.3 million on July 1, 1999 and 1 percent below the 43.6 million two years ago. Beef cows, at 34.0 million, were down 1 percent from July 1, 1999 and 1 percent below two years ago. Milk cows, at 9.25 million, were up 1 percent from July 1, 1999 and 1 percent above two years ago.

Other class estimates on July 1, 2000, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 16.5 million, down 1 percent from both years.
- Beef replacement heifers, 4.7 million, down 2 percent and down 6 percent.
- Milk replacement heifers, 3.7 million, unchanged and up 3 percent.
- Other heifers, 8.1 million, unchanged from both years.
- Steers weighing 500 pounds and over, 14.3 million, down 1 percent and down 2 percent.
- Bulls weighing 500 pounds and over, 2.1 million, down 5 percent from both years.
- Calves under 500 pounds, 30.3 million, down 1 percent from both years.
- All cattle and calves on feed for slaughter, 12.3 million, up 7 percent and up 12 percent.

The 2000 calf crop for the U.S. is expected to be 38.9 million, up slightly from 1999 and 1998. Calves born during the first half of the year are estimated at 28.6 million, up slightly from both years.

Special Note: The July 1 U.S. report now includes selected State level estimates for all cattle and calves, all cows, beef cows, milk cows, and calf crop. The eleven selected States include, California, Colorado, Iowa, Kansas, Missouri, Montana, Nebraska, Oklahoma, South Dakota, Texas, and Wisconsin which accounted for 60 percent of the July 1, 2000 all cattle and calf inventory. This is in addition to the U.S. level estimates that have been published in the past. Data from 1999 will reflect this change to provide the user with comparable data for 1999 and 2000. Inventories of the selected states can be found on our website or obtained by calling our office.

U.S. Cattle on Feed Up 9 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.39 million head on July 1, 2000. The inventory was 9 percent above July 1, 1999 and 13 percent above July 1, 1998. The inventory included 6.22 million steer sand steer calves, up 8 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.13 million head, up 9 percent from 1999. Placements in feedlots during June totaled 1.66 million, 7 percent below1999 but 6 percent above 1998. Net placements were 1.61 million. During June, placements of cattle and calves weighing less than 600 pounds were 347,000, 600-699 pounds were 380,000, 700-799 pounds were 498,000, and 800 pounds and greater were 439,000. Marketings of fed cattle during June totaled 2.16 million, slightly above 1999 and 6 percent above 1998. Other disappearance totaled 57,000 during June, 10 percent below 1999 and 21 percent below 1998.

June Red Meat Production For Montana

Montana slaughter plants produced 1.9 million pounds, dressed weight, of red meat during June 2000, down 10 percent from last year, but up 6 percent from last month. Cattle slaughter, at 2,300 head was up 100 head from last year. The average live weight of 1,146 pounds was up 3 pounds from a year ago.

There were 1,200 head of hogs slaughtered in Montana during June, down 1,700 head from a year ago. The average live weight, at 263 pounds, increased 10 pounds from last year. Sheep slaughter amounted to 300 head, the same as last year. The average live weight of 127 remained unchanged from a year ago.

Commercial red meat production for the United States totaled 3.94 billion pounds in June, up slightly from the previous record high for June set in 1999. June 1999 and 2000 both contained 22 week days and 4 Saturdays. Beef production, at 2.37 billion pounds, was 2 percent above the previous record high for June set last year. Cattle slaughter totaled 3.24 million head, up 1 percent from 1999. The average live weight was up 10 pounds from the previous year, at 1,205 pounds. Veal production totaled 19 million pounds, 1 percent below the previous record low for June set a year ago. Calf slaughter totaled 95 thousand head, down 9 percent from June 1999. The average live weight was 25 pounds above last year, at 322 pounds.

Pork production totaled 1.54 billion pounds, down 3 percent from the previous year. Hog kill totaled 7.95 million head, 4 percent below 1999. The average live weight was 3 pounds above the previous year, at 262 pounds. Lamb and mutton production, at 17 million pounds, was down 1 percent from the previous record low for June set in 1999. Sheep slaughter totaled 260 thousand head, 4 percent below last year. The average live weight was 133 pounds, up 3 pounds from June a year ago.

January - June red meat production was 22.9 billion pounds, 1 percent higher than the comparable figure a year earlier. Accumulated beef production was 2 percent higher than last year, veal was up 1 percent, pork was down 2 percent, and lamb & mutton was down 2 percent.

U.S. Mink Pelt Production Down 4 Percent

Mink pelt production in the United States in 1999 totaled 2.81 million pelts, down 4 percent from 1998. Wisconsin, the major mink producing State, produced 731,700 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 37.9 percent; Mahogany - 25.6 percent; Gunmetal - 16.3 percent; Ranch Wild - 6.1 percent; Demi-buff - 3.8 percent. The remaining color classes accounted for 10.3 percent.

Mink pelts produced during the 1999 crop year were valued at $94.8 million dollars, up 30 percent from $72.9 million a year ago. The average price per pelt for the 1999 crop year was $33.70, up from $24.80 in 1998.

Female mink bred to produce kits in 2000 totaled 660,400, down 2 percent from the previous year. Percent of total females bred to produce kits in 2000 by color class are: Standard - 38.5 percent; Mahogany - 23.7 percent; Gunmetal - 17.4 percent; Sapphire - 5.0 percent; Ranch Wild - 4.8 percent. The remaining color classes accounted for 10.6 percent.

There were 404 mink farms producing pelts in 1999, down 8 percent from a year ago. Leading States were Utah with 110 farms, Wisconsin with 82 farms and Minnesota with 40. There were 27 mink farms which also raised fox in 1999, down from 31 the previous year.

Montana Wheat & Barley Varieties Seeded in 2000

Neeley remained the leading variety of **winter wheat** seeded in Montana for the thirteenth consecutive year with 307,000 acres, up from 218,000 seeded last year. **Rampart** moved into second place with 195,000 acres seeded in 2000. **Tiber** dropped into third position with 176,000 acres compared with 182,000 last year. **Vanguard** replaced Rocky this year in the top four with nearly 133,000 acres, or 8.8 percent of the seeded acreage. These top four varieties accounted for 54 percent of the winter wheat acreage seeded in 2000. In 1999, these same four varieties also accounted for 54 percent of the total acreage for the state.

McNeal was the leading **spring wheat** variety seeded for the third consecutive year, accounting for 46.4 percent of the total with nearly 1.49 million acres seeded. **Amidon** remained in second place this year with 323,300 acres seeded, slightly above **Ernest** which remained in third place with 323,000 acres, compared with 390,000 seeded last year. **Westbred Rambo** held fourth place with over 163,000 acres seeded. The top four varieties represented nearly 72 percent of the spring wheat seeded in 2000. These same four varieties accounted for nearly 71 percent in 1999.

Kyle continued to be the leading **durum wheat** variety for the seventh consecutive year. There were 269,000 acres seeded in the state, accounting for 49 percent of the total seeded acres. **Utopia** moved up from tenth position to the second most popular variety of durum wheat. Nearly 46,000 acres were planted or 8.3 percent of the state's durum wheat. **Ben** moved up into third place this year from sixth position last year with 40,000 acres planted or 7.3 percent of the state total. **Renville** maintained fourth place position this year accounting for nearly 28,000 acres. These top four varieties account for 70 percent of total acres seeded to durum wheat. This is comparable to the 66 percent reported in 1999 for the same four varieties.

Montana farmers planted 1.25 million acres of **barley** in 2000, down 50,000 acres from last year. Nearly 61 percent of the acres seeded to barley were malting and brewing varieties recommended by the American Malting Barley Association. The top variety seeded in Montana was Harrington, maintaining its position for the seventh consecutive year. **Harrington** remained the top **malting barley** variety planted in the state. It was seeded on 626,000 acres or 50 percent of Montana's barley acreage. **B 1202** maintained the second place malting variety position for the fifth consecutive year with over 67,0000 acres or 5.4 percent of the barley planted. **Morex** moved up to rank third among AMBA approved malting barley varieties with a slight increase in seeded acreage to 29,000 or 2.3 percent of the seeded acres. **B Merit** moved into the top four malting varieties in 2000 with 20,000 acres planted. **Haybet** moved into the leading position for **feed barley** with 81,000 acres seeded this year, which accounted for 6.4 percent of the total barley acres seeded. **Baronesse** dropped into second as the most popular feed barley. It captured 6.2 percent of the total acreage or 78,000 acres, compared with 98,200 acres last year. **Hector** fell from second to third place in feed barley this year with 46,000 acres seeded or 3.7 percent. **Bowman** jumped from fifth position last year to its 2000 position as the fourth leading feed-type variety with over 34,000 or 2.7 percent state-wide of the barley acres seeded in 2000. This is compared to the 35,500 acres planted in 1999, which also accounted for 2.7 percent of the total barley acres planted last year.

[1] Revised

[2] Amercian Malting Barley Association, Inc. recommended for malting and brewing for Montana.

* White wheat variety

This report was made possible with funds provided by the Montana Wheat & Barley Committee. A more detailed report may be obtained from our office upon request.

Montana and U.S. June Milk Production Up

During the April - June 2000 quarter, Montana milk cows produced 79 million pounds of milk, up 2 million from the same quarter a year ago. Montana milk cows numbered 18,000 head, unchanged from last year.

Milk production in the 20 major States during June totaled 12.1 billion pounds, up 2.8 percent from production in these same States in June1999. The May revision represented a decrease of 0.2 percent or 28 million pounds from last months preliminary production estimate. Production per cow in the 20 major States averaged 1,546 pounds for June, 30 pounds above June 1999. The number of cows on farms in the 20 major States was 7.81 million head, 65,000 head more than June 1999 and 10,000 head more than May 2000.

The quarterly production of milk for the U.S. was 43.1 billion pounds, 2.6 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.21 million head, 58,000 head more than the same period last year.

June Egg Production Up 1 Percent

U.S. egg production totaled 6.80 billion during June 2000, up 1 percent from the 6.74 billion produced in 1999. Production included 5.72 billion table eggs and 1.08 billion hatching eggs, of which 1.02 billion were broiler-type and 65.0 million were egg-type. The total number of layers during June 2000 averaged 325 million, up 1 percent from the total average number of layers during June 1999. June egg production per 100 layers was 2,092 eggs, down 1 percent from 2,104 eggs in June 1999.

All layers in the U.S. on July 1, 2000, totaled 325 million, up 1 percent from a year ago. The 325 million layers consisted of 266 million layers producing table or commercial type eggs, 56.5 million layers producing broiler-type hatching eggs, and 2.72 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 2000, averaged 69.4 eggs per 100 layers, down 1 percent from the 69.8 a year ago.

Laying flocks in the 30 major egg producing States produced 6.66 billion eggs during June, up 2 percent from June 1999. The average number of layers during June, at 306 million, was up 1 percent from a year earlier.

Small Grains Production
Ag Cash Rents
Potato Acreage
Ag Prices Received
Wheat Supply & Demand

Montana's All Wheat Production Smallest Since 1988

Montana's **all wheat crop** is expected to be 7 percent smaller than last year and the smallest crop since 1988. As of July 1, producers expect to harvest 142.75 million bushels of all wheat, down from the 154.31 million harvested last season. The area for harvest is expected to be 4.94 million acres, 380,000 less than were harvested in 1999.

The forecasted **winter wheat** yield was unchanged from June as producers expect to average 35.0 bushels per acre. Production is forecast to be 47.25 million bushels, down nearly 6 percent from the June forecast because of an 80,000 acre reduction in acres for harvest now estimated at 1,350,000 acres.

The first **spring wheat** production forecast is 79.3 million bushels, nearly 27 percent smaller than that produced in 1999. The harvested acres are expected to be 3.05 million, 24 percent smaller than last year and the smallest since 1993. The expected yield of 26.0 bushels compares with 27.0 averaged last year. **Durum wheat** is forecast to be 16.2 million bushels, 71 percent larger than the 1999 crop. If this forecast is realized, 2000 production would be the second largest durum wheat crop on record, exceeded only by the record production achieved in 1956. The acreage for harvest, at 540,000, is 54 percent larger than harvested last year. The expected yield is 30.0 bushels, 3 bushels above last year.

Barley yields are expected to average 42.0 bushels per acre in 2000, 8 bushels less than last year's Montana average. Barley production is forecast to be 44.10 million bushels compared with 57.50 million produced last year. Growers expect to harvest 1.05 million acres, 100,000 fewer than harvested in 1999. **Oats** producers expect to harvest 2.6 million bushels of grain, 19 percent less than produced last year. The 2000 area for harvest is expected to be 65,000 acres compared with 70,000 harvested for grain in 1999. The expected yield of 40.0 bushels is 6 bushels below last year's average.

Nationally, **winter wheat** production is forecast at 1.59 billion bushels. This is down 2 percent from last month and down 7 percent from 1999. The U.S. yield is forecast at 44.9 bushels per acre, down 1.8 bushels from last month. Acres harvested for grain are forecast at 35.4 million, down slightly from 1999. Harvest progress in the 18 major producing States had reached 65 percent completion by July 2. This was more than 20 points ahead of both last year and the normal pace.

U.S. other spring wheat production is forecast at 526 million bushels, up 5 percent from 1999. The U.S. yield is forecast at 34.9 bushels per acre, 0.8 bushels higher than last year. Of this total, 470 million are Hard Red Spring wheat, up 5 percent from last season. Harvested area is forecast at 15.1 million acres, up 2 percent from last year. Acreage was 62 percent headed in the six major producing States, 22 points ahead of normal. The Pacific Northwest (Idaho, Oregon, Washington) production forecast is up slightly from a year ago. Yield increases in all three States offset a decline in acreage in the region. **Durum wheat** production is forecast at 128 million bushels, up 29 percent from 1999. The U.S. yield is forecast at 32.2 bushels per acre, 4.4 bushels more than last year. Area harvested for grain in 2000 is expected to total 3.99 million acres, up 12 percent from last year. The major growing areas of North Dakota have not been affected by the flooding in the Red River Valley.

Barley production in the U.S. for 2000 is forecast at 307 million bushels, up 9 percent from 1999. The first forecast for 2000 indicates producers expect to average 58.7 bushels per acre, a decrease of 0.5 bushel from last year. Area harvested, at 5.24 million acres, is 10 percent above the 4.76 million acres harvested in 1999, unchanged from the June Acreage Report.

National **oats** production is estimated at 151.4 million bushels, 4 percent above last year's 146.2 million bushels. The estimated yield is 61.2 bushels per acre, up 1.6 bushels from 1999. If realized, this would be the third highest yield on record, behind only the record yield of 65.4 bushels per acre in 1992 and the 63.6 bushels per acre produced in 1985. Area for harvest was unchanged from the previous estimate of 2.47 million acres.

Montana Cash Rents Decrease

The average cash rent for Montana cropland went down $1.20 from last year to $23.80 per acre. The average cash rent for irrigated cropland, at $49.70, fell $4.30 per acre from a year ago. The non-irrigated cropland average decreased $.70 to $17.30 per acre. Average pasture rents decreased $.30 from 1999 to $4.80 per acre in 2000.

The average cash rent for U.S. cropland went up $2.50 from last year at $70.00 per acre. The Lake, Corn Belt, and Northern Plains, which account for the majority of cash rented cropland acreage, increased slightly from 1999. The Lake region was up $3.00 per acre while the Corn Belt increased by $2.00 and the Northern Plains was up $1.00. The Pacific region with its diverse agriculture had the largest increase of $14.00 per acre.

Cash rents for cropland were mixed with the majority of States showing increases while other States held at the same level or dropped slightly. Western States of Arizona, Idaho, California, Oregon, and Washington all showed irrigated cropland exceeding $120 per acre. California again had the highest cash rent for irrigated cropland at $300 per acre. The major corn producing States of Illinois, Indiana, and Iowa had all cropland rents rise to $117, $100, and $115 per acre respectively. States in the Cornbelt and Northern Plains all showed slight increases in cropland cash rents or remained about the same.

The average pasture cash rent for the U.S. dropped from $8.90 to $ 8.50 per acre primarily due to drought conditions experienced across the Southwest. Regions most affected by the dry spell were the Southern Plains and Pacific each dropping $1.00 per acre while the Mountain region dropped $0.30. Pasture rents in the Corn Belt, Delta, and Northeast also declined from the previous year. The Southeast and Appalachian regions increased to $17.20 and $18.00.

Texas, Oklahoma, and Louisiana pasture rents declined by $0.90, $0.50 and $1.50 per acre while States in the Northern Plains all showed increases except for Kansas which decreased by $0.50. Wisconsin again had the highest pasture rent at $38, unchanged from last year.

July 1, 2000 Potato Planted and Harvested Acreage

Montana **potato** producers planted 12,000 acres in 2000, an increase of 1,000 acres from last year and the largest acreage planted since 1950. The first forecast of potato production will be on November 9, 2000.

Area planted to **fall potatoes** this year is estimated at 1.22 million acres, up 1 percent on a comparable basis. Harvest is expected from 1.20 million acres, a gain of 3 percent from a year ago. Comparability is achieved by adding Nebraska's summer acreage to their fall total last year and subtracting out Wyoming.

1/ District data funded by the Montana Wheat & Barley Committee. 2/ Preliminary.

Agricultural Prices Received for June

Crop prices for the full month of May 2000 were mostly lower compared with April 2000 prices. Montana winter wheat average price was $2.64 per bushel, down 6 cents from April's level; durum wheat was $3.51 per bushel, down 18 cents; spring wheat was 5 cents higher at $3.00 per bushel. Feed barley was $1.67 and malt barley was $2.65 per bushel.

The mid-June price for alfalfa hay was $75.00 per ton, up $11.00 from last month. Other hay, at $65.00 per ton, was up $9.00 from May's mid-month price. The mid-June winter wheat price averaged $2.65 per bushel, spring wheat was $3.00, feed barley was $1.65, and malt barley averaged $2.60.

Livestock prices for the full month of May were mostly lower compared to the previous month. Steer and heifer prices decreased $3.00 to $84.50 per cwt. Cows were down 70 cents to $41.50 and the average price for calves was down $1.00 to $102.00 per cwt. Sheep prices decreased $7.50 to $31.90 per cwt, but lamb prices increased $5.20 to $96.00 per cwt. Milk prices were up 10 cents from last month at $12.30 per cwt. Steer and heifer prices for mid-June averaged $82.10 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was $2.44, up 12 cents; spring wheat was $2.92, up 3 cents; the all barley price was $2.19, up 10 cents; and steer and heifer prices were $73.20, down $2.00.

The U.S. mid-June winter wheat price was $2.42 per bushel, spring wheat was $2.88 per bushel, all wheat was $2.52 per bushel, and all barley was $2.06. Steer and heifer prices were $71.30 per cwt, cow prices were $39.20, all hog prices were $47.90 per cwt, and all egg prices were 62.9 cents per dozen.

The preliminary All Farm Products Index of Prices Received in June was 99 based on 1990-92=100, down 2 points (2.0 percent) from the May index. Lower prices for lettuce, corn, cattle, soybeans, and broccoli more than offset price increases for eggs, strawberries, milk, and celery. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of wheat, grapes, hay, and cantaloupes more than offset the relatively lower marketings of oranges, tomatoes, strawberries, and cattle. These marketing changes kept the index from falling one more point. Compared with June 1999, the All Farm Products Index was 2 points (2.1 percent) higher. Price increases from June 1999 for hogs, cattle, lettuce, and soybeans more than offset price decreases for milk, oranges, corn, and broilers.

United States Index Summary

INDEX (1990-92=100)	May 1999	June 1999	May 2000	June 2000
Prices Received	98	97	101	99
Prices Paid, Interest, Taxes, & Farm Wage Rages 1/	115	115	120	120
Ratio 2/	85	84	84	83

U.S. June Potato Stocks Down 7 Percent

U.S. potato stocks for June 1, 2000 totaled 46.7 million cwt, down 7 percent from a year ago. Storage accounted for 11 percent of fall production, down 1 percentage point from a year ago. Disappearance from the start of harvest to June 1 totaled 374 million cwt this season, up slightly from last year. May disappearance of 39.0 million cwt was up 9 percent from last year. Shrink and loss of 31.8 million cwt was up 3 percent from last year. Processing of 1999 crop potatoes this season totaled 183 million cwt, down 2 percent from a year earlier. In May, processors in the eight major States used 19.9 million cwt of potatoes, up 4 percent from last year.

Western States held 38.4 million cwt of potatoes in storage on June 1, up 1 percent from last year. Oregon's stocks were up 43 percent from a year ago, Colorado's stocks were up 28 percent, and California's storage gained 17 percent. Fewer stocks in Idaho and Washington nearly offset gains in the other 3 Western States. Stocks in Idaho were down 9 percent and Washington's stocks were off 7 percent. Stocks in the three Northwestern States totaled 34.0 million cwt and accounted for 73 percent of the remaining U. S. stocks.

Montana's Planted Wheat Acreage Smallest Since 1991

All wheat planted acreage in Montana was estimated at 5.25 million, 310,000 acres less than last year and the smallest acreage since 1991. **Spring wheat** producers planted 3.20 million acres of spring wheat this year, down 23% from last year and down 16% from what they intended to plant March 1. Montana had a relatively dry and mild winter across much of the state. Conditions this spring continued to be very dry and precipitation amounts are less than normal which in turn has caused the crop to mature earlier than normal. As of June 25, spring wheat was 59% in boot compared with 47% for the 5-year average. Twenty-eight percent of the spring wheat crop was headed compared with 13% for the 5-year average. Producers intend to harvest 3.05 million acres of spring wheat. **Durum** producers planted 550,000 acres of durum this spring, up 190,000 acres from a year ago. If conditions permit, producers will harvest 540,000 acres. **Winter wheat** seeded acreage was estimated at 1.50 million acres, up 43% from 1999. Statewide, as of June 25, winter wheat is 94% headed compared with 67% last year and 67% for the 5-year average. Winter wheat acreage for harvest has been lowered from the June 1 forecast to 1,350,000 acres.

Montana **barley** producers seeded 1.25 million acres this year, down 50,000 acres from a year ago and expect to harvest 1.05 million acres of grain. **Oat** acreage decreased 20,000 acres from last year at 150,000 acres with 65,000 acres intended to be harvested for grain. **Corn** producers seeded 60,000 acres for all purposes, down 5,000 acres from last year. Growers intend to harvest 18,000 acres for grain, unchanged from 1999. **Dry bean** planted acreage increased 2,500 acres from last year at 29,000 acres. **Sugar beet** acreage decreased 1,100 acres to 60,700. **Hay** harvested acreage is expected to decrease 8% from last year with **alfalfa** acreage decreasing to 1.55 million acres and **all other hay** decreasing to 850,000 acres.

At the **U.S.** level, the 2000 **all wheat** planted area is estimated at 62.9 million acres, up slightly from 1999. Harvested area is expected to total 54.4 million acres, up 1 percent from last year. The **winter wheat** area harvested for grain is now expected to total 35.4 million acres, up 2 percent from the June 1 forecast, but down less than 1 percent from the 1999 acreage for grain. This is the smallest area for grain since 1972. **Spring wheat** planted area is slightly above the previous estimate, but still down fractionally from 1999. Acreage planted for 2000 harvest is estimated at 15.5 million, 1 percent above the 1999 total. Grain area is expected to total 15.1 million acres, up 2 percent from last year. The large acreage decline in Montana was more than offset by a larger increase in North Dakota. The Montana decrease is due primarily to dry spring conditions, while North Dakota is returning to a more normal acreage level. The **durum wheat** planted area for 2000 harvest is estimated at 4.05 million acres, up slightly from last year. Area to be harvested for grain is expected to total 3.99 million acres, 12 percent above last year's level. Crop condition in the California Imperial Valley was excellent as harvest began in mid-May. Seeding progress was ahead of normal in the Northern Durum growing States.

Nationally, **barley** growers seeded 5.70 million acres for 2000, up 9 percent from the 5.22 million acres seeded a year ago. North Dakota is increasing barley by 400 thousand acres, or 30 percent, and Minnesota is increasing barley by 70 thousand acres, or 35 percent. Of the 27 States that estimate barley seeding, 12 States are increasing acreage, 8 States are reducing acreage, and 4 States are showing no change from 1999.

U.S. **corn** planted for all purposes is estimated at 79.6 million acres, up 3 percent from last year. Growers expect to harvest 73.1 million acres for grain, up 4 percent from 1999. Farmers responding to the survey indicated that 99 percent of the intended corn acreage had been planted at the time of the interview compared to an average of 96 percent for the past ten years.

Nationally, **hay** producers expect to harvest 62.2 million acres of hay in 2000, down 2 percent from the 63.2 million acres harvested the previous year. **Alfalfa** and alfalfa mixtures are estimated at 23.8 million acres, down 1 percent from last year. **All other hay** is estimated at 38.4 million acres, down 2 percent from last year. (See table on page 3)

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accuate, reliable statistics.

June 1, 2000 Grain Stocks

All wheat stocks in Montana on June 1, 2000 totaled 60.9 million bushels, down 14 percent from the same quarter last year. Stocks stored on the farm accounted for 45.0 million bushels of the total with the remaining 15.9 million bushels stored off farm. All **spring wheat** stocks, at 43.6 million bushels, were down 10 percent from last year and accounted for 72 percent of the total wheat stocks. **Winter wheat** stocks were estimated at 17.3 million bushels, down 23 percent from last year. **Durum wheat** stocks were estimated at 4.3 million bushels, down 3.5 million bushels from last year. All wheat disappearance for the March-May quarter was 47.9 million bushels, compared with 36.4 million for the same quarter last year. **Barley** stocks in all positions on June 1, 2000 were down 21 percent from last year and were set at 12.3 million bushels. **Oat** stocks were up 24 percent from a year ago and were estimated at 1.4 million bushels.

U.S. Cattle on Feed Up 9 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.93 million head on June 1, 2000. The inventory was 9 percent above June 1, 1999 and 13 percent above June 1, 1998.

Placements in feedlots during May totaled 2.30 million, 12 percent above 1999 and 13 percent above 1998. Net placements were 2.19 million. During May, placements of cattle and calves weighing less than 600 pounds were 382,000, 600-699 pounds were 470,000, 700-799 pounds were 794,000, and 800 pounds and greater were 658,000.

Marketings of fed cattle during May totaled 2.17 million, 9 percent above 1999 and 11 percent above 1998. Other disappearance totaled 115,000 during May, 16 percent above 1999 and up 24 percent from 1998.

May Red Meat Production For Montana

Montana slaughter plants produced 1.8 million pounds, dressed weight, of red meat during May 2000, down 3 percent from last year, and up 11 percent from last month. Cattle slaughter, at 2,300 head was up 200 head from last year. The average live weight of 1,131 pounds was down 7 pounds from a year ago.

There were 1,200 head of hogs slaughtered in Montana during May, down 1,400 head from a year ago. The average live weight, at 258 pounds, increased 21 pounds from last year. Sheep slaughter amounted to 300 head, 100 head higher than last year. The average live weight of 129 remained unchanged from a year ago.

U.S. commercial red meat production totaled 3.88 billion pounds in May, 8 percent higher than the 3.60 billion pounds produced in May 1999 and 3 percent higher than the previous record high for May set in 1996. Beef production, at 2.30 billion pounds, was 7 percent above the previous year and equaled the previous record high for May set in 1996. Cattle slaughter totaled 3.18 million head, up 6 percent from 1999. The average live weight was up 8 pounds from the previous year, at 1,196 pounds.

Veal production totaled 19.0 million pounds, 13 percent above May a year ago. Calf slaughter totaled 92 thousand head, up 3 percent from May 1999. The average live weight was 29 pounds above last year, at 340 pounds.

Pork production totaled 1.54 billion pounds, 9 percent higher than the previous year and 1 percent higher than the previous record high for May set in 1995. Hog kill totaled 7.95 million head, 7 percent above 1999. The average live weight was 4 pounds above the previous year, at 263 pounds.

Lamb and mutton production, at 17.0 million pounds, was down 3 percent from the previous record low for May set in 1999. Sheep slaughter totaled 259 thousand head, 4 percent below last year. The average live weight was 135 pounds, unchanged from May a year ago.

January - May red meat production was 18.9 billion pounds, 1 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was up 2 percent, pork was down 2 percent, and lamb & mutton was down 2 percent

U.S. May Milk Production Up 2.6 Percent

Milk production in the 20 major States during May totaled 12.8 billion pounds, up 2.6 percent from production in these same States in May 1999. April revised production, at 12.4 billion pounds was up 3.3 percent from April 1999. The April revision represented a decrease of 0.3 percent or 42 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,638 pounds for May, 28 pounds above May 1999. The number of cows on farms in the 20 major States was 7.80 million head, 63,000 head more than May 1999 and 9,000 head more than April 2000.

U.S. May Egg Production Up 2 Percent

U.S. egg production totaled 7.11 billion during May 2000, up 2 percent from the 6.94 billion produced in 1999. Production included 5.97 billion table eggs and 1.14 billion hatching eggs, of which 1.07 billion were broiler-type and 68.0 million were egg-type. The total number of layers during May 2000 averaged 327 million, up 2 percent from the total average number of layers during May 1999. May egg production per 100 layers was 2,176 eggs, up slightly from 2,166 eggs in May 1999.

All layers in the U.S. on June 1, 2000 totaled 325 million, up 2 percent from a year ago. The 325 million layers consisted of 266 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.83 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 2000, averaged 69.4 eggs per 100 layers, down 1 percent from the 69.8 a year ago.

Laying flocks in the 30 major egg producing States produced 6.66 billion eggs during May, up 2 percent from May 1999. The average number of layers during May, at 306 million, was up 1 percent from a year earlier.

U.S. Hog Inventory Down 2 Percent

U.S. inventory of all hogs and pigs on June 1, 2000, was 59.4 million head. This was 2 percent below June 1999, but 2 percent above March 1, 2000.

Breeding inventory, at 6.23 million head, was down 4 percent from June 1, 1999, but up slightly from March 1, 2000. Market hog inventory, at 53.2 million head, was 2 percent below last year, but 2 percent above last quarter.

The March-May 2000 U.S. pig crop, at 25.8 million head, was 2 percent less than 1999, and 4 percent less than 1998. Sows farrowing during this period totaled 2.91 million head, 3 percent below last year. The sows farrowed during this quarter represented 47 percent of the breeding herd. The average pigs per litter rose to 8.89 pigs saved per litter for the March-May period, compared to 8.80 pigs last year. Pigs saved per litter by size of operation ranged from 7.80 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.85 million sows farrow during the June-August 2000 quarter, 2 percent below the actual farrowings during the same period in 1999, and 7 percent below 1998. Intended farrowings for September-November 2000, at 2.86 million sows, are 1 percent above the same period last year, but 4 percent below 1998.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 32 percent of the total U.S. hog inventory, up from 30 percent last year.

June 2000 Cherry Production Forecast

Montana's sweet cherry growers expect to produce 1,100 tons this year, an increase of 53 percent from last year. Growers have not had optimal crop conditions due to late frosts and cool weather during pollination, but still forecast a much better crop than 1999's which was hampered by several late freezes. The 2000 forecast production is far below 1998's production of 2,050 tons.

U.S. sweet cherry production is forecast at 224,400 tons in 2000, down 2 percent from 1999. Washington growers are expecting the largest crop in the nation at 95,000 tons, a 42 percent increase from last year. Oregon, Utah, and Idaho also anticipate larger crops than last year, but California, Michigan, New York, and Pennsylvania predict decreases.

June 1, 2000 Winter Wheat Production Forecast

As of June 1, Montana winter wheat producers were expecting a yield of 35 bushels per acre, down 3 bushels from last year and 1 bushel below last month. If realized, total production would be 50.1 million bushels, which is 36 percent more than last year. Harvested acreage remains the same as last month at 1.43 million acres, up 460,000 acres from last year condition. As of June 4, the winter wheat crop was rated 14 percent very poor, 27 percent poor, 37 percent fair, 19 percent good, and 3 percent excellent. The general lack of moisture is placing considerable stress on the crop. The June 4 winter wheat condition rating showed 22 percent rated as good to excellent while the April 30 report showed 40 percent in that category.

Nationally, winter wheat production is forecast at 1.62 billion bushels, down 2 percent from the May 1 forecast and 5 percent below 1999. Based on June 1 conditions, the U.S. yield is forecast at 46.7 bushels per acre, down 0.8 bushel from the last forecast.

Hard Red production is down 3 percent from a month ago to 944 million bushels. White Winter is up 1 percent from last month. Soft Red is up 1 percent from the last forecast and now totals 448 million bushels.

Winter wheat harvested area for the U.S. is forecast at 34.7 million acres, unchanged from May 1, but down 2 percent from 1999. Heading has reached 93 percent in the 18 major States. Harvest progress was 8 percent, ranging from none in most states to 27 percent in Oklahoma and Texas.

Forecasted head counts from the Objective Yield surveys in the 6 Hard Red Winter States (Colorado, Kansas, Montana, Nebraska, Oklahoma, and Texas) are slightly below last year's final counts. Average head weights are well below last year's level. Winter wheat conditions in Kansas have dropped during May, leading to reduced yield potential. Temperatures in the 25-30 degree range hit the Eastern Plains of Colorado on May 13. Most damage was in the east central area of Colorado where the wheat was flowering. Crop progress is 2 weeks ahead of normal in Nebraska. Moisture supplies are adequate in most areas of Oklahoma. Lingering effects of the drought have had a significant impact on most of the major wheat producing areas of Texas.

Production of Durum wheat in Arizona and California is forecast at 14.8 million bushels. This is unchanged from May 1, but down 9 percent from 1999. Arizona harvest was nearly 20 percent complete by June 1. Harvest in the California Imperial Valley began in earnest in early May. San Joaquin Valley harvest was underway on a few fields by mid-May.

WINTER WHEAT: Production by Districts--1998, 1999 & Forecast June 1, 2000

1/ District data funded by the Montana Wheat & Barley Committee

Wheat Supply and Demand Estimates

Projected U.S. 2000/01 ending stocks of wheat are down 28 million bushels from last month as a smaller supply more than offsets reduced use. Forecast winter wheat production is 27 million bushels below last month because of reduced yields. Forecast beginning stocks are off 21 million bushels, but projected imports are up 5 million bushels. Total use is down 15 million bushels, with feed and residual use off 25 million bushels but food use up 10 million bushels.

The projected price range for 2000/01 is unchanged at $2.40 to $2.90 per bushel. Forecast 1999/2000 ending stocks are down from last month because of increases of 10 million bushels in food use and 15 million bushels in exports. Imports are up 4 million bushels.

Projected global 2000/01 wheat production is 4.6 million tons below last month as reductions for China, Eastern Europe, the United States, and Ukraine more than offset a higher Pakistan crop. Given the larger crop, projected imports for Pakistan are reduced 2 million tons. These lower imports are partially offset by higher expected purchases by China and Eastern Europe. The smaller East European crops also are expected to reduce exports and ending stocks. China and the United States account for most of the remaining reduction in projected 2000/0 1ending stocks. Supplies in the major foreign exporters are little changed from last month and remain relatively large.

(See table on back page.)

Agricultural Prices Received for May

Crop prices for the full month of April 2000 were mostly higher compared with March 2000 prices. Montana winter wheat average price was $2.70 per bushel, up 2 cents from March's level; durum wheat was $3.69 per bushel, down 2 cents; spring wheat was 5 cents higher at $2.95 per bushel. Feed barley was $1.68 and malt barley was $2.72 per bushel.

The mid-May price for alfalfa hay was $64.00 per ton, down $1.00 from last month. Other hay, at $56.00 per ton, was unchanged from April's price. The mid-May winter wheat price averaged $2.75 per bushel, spring wheat was $3.00, feed barley was $1.70, and malt barley averaged $2.70.

Livestock prices for the full month of April were mixed. Steer and heifer prices increased $1.80 to $87.50 per cwt. Cows were up 60 cents to $42.20 and the average price for calves was down $2.00 to $103.00 per cwt. Sheep prices decreased $1.50 to $39.40 per cwt, and lamb prices increased $4.30 to $90.80 per cwt. Milk prices were down 10 cents from last month at $12.20 per cwt. Steer and heifer prices for mid-May averaged $84.50 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $2.32, down 6 cents; spring wheat was $2.89, up 4 cents; the all barley price was $2.09, down 14 cents; and steer and heifer prices were $75.20, up $1.80.

The U.S. mid-May winter wheat price was $2.39 per bushel, spring wheat was $2.91 per bushel, all wheat was $2.56 per bushel, and all barley was $2.12. Steer and heifer prices were $73.20 per cwt, cow prices were $39.00, all hog prices were $48.80 per cwt, and all egg prices were 52.0 cents per dozen.

The preliminary All Farm Products Index of Prices Received in May was 102 based on 1990-92=100, up 2 points (2.0 percent) from the April index. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of cantaloupes, grapes, sweet corn, broilers, and peaches more than offset the relatively lower marketings of cattle, milk, cotton, and asparagus. These marketing changes accounted for all of the May index increase. Higher prices for lettuce, broccoli, hogs, and hay offset price decreases for strawberries, eggs, cattle, and tomatoes. Compared with May 1999, the All Farm Products Index was 4 points (4.1 percent) higher. Price increases from May 1999 for cattle, lettuce, hogs, and soybeans more than offset price decreases for oranges, milk, cantaloupes, and strawberries.

Farm Labor

April Milk Production Up 3.7 Percent

Milk production in the 20 major States during April totaled 12.4 billion pounds, up 3.7 percent from production in these same States in April 1999. March revised production, at 12.7 billion pounds was up 3.7 percent from March 1999. The March revision represented a decrease of 0.1 percent or 15 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,598 pounds for April, 44 pounds above April 1999. The number of cows on farms in the 20 major States was 7.79 million head, 66,000 head more than April 1999 and 12,000 head more than March 2000.

Montana and U.S. Red Meat Production Down for April

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during April, down 11 percent from April 1999. Cattle slaughter totaled 2,000 head, unchanged from a year ago. The average live weight, at 1,113 pounds was down 8 pounds from a year ago.

During April, there were 1,200 head of hogs slaughtered, 1,400 less than last year. The average live weight increased 20 pounds to 245 pounds. Sheep slaughter, at 300 head was 100 head more than last year. The average live weight remained unchanged at 130 pounds.

United States commercial red meat production totaled 3.46 billion pounds in April, down 9 percent from the 3.82 billion pounds produced in April 1999. Beef production, at 2.03 billion pounds, was 6 percent below the previous year. Cattle slaughter totaled 2.78 million head, down 6 percent from 1999. The average live weight was up 1 pound from the previous year, at 1,202 pounds.

Veal production totaled 17.0 million pounds, 6 percent below the previous record low for April set a year ago. Calf slaughter totaled 81 thousand head, down 17 percent from April 1999. The average live weight was 40 pounds above last year, at 343 pounds.

Pork production totaled 1.39 billion pounds, down 14 percent from the previous year. Hog kill totaled 7.21 million head, 15 percent below 1999. The average live weight was 2 pounds above the previous year, at 262 pounds.

Lamb and mutton production, at 23.0 million pounds, was up 12 percent from April 1999. Sheep slaughter totaled 345 thousand head, 12 percent above last year. The average live weight was 136 pounds, unchanged from April a year ago.

January - April red meat production was 15.1 billion pounds, 1 percent lower than the comparable figure a year earlier. Accumulated beef production was 1 percent higher than last year, veal was 1 percent lower, pork was 4 percent lower, and lamb & mutton was down 1 percent.

1999 Agricultural Chemical Use Estimates for Cattle and Cattle Facilities

U.S. cattle producers applied 2.16 million pounds of insecticides to beef and dairy cattle in 1999. Applications made to beef cattle accounted for 72 percent of the total while insecticide use on dairy cattle accounted for 28 percent.

Xylene was the top active ingredient in total quantity used at 459,700 pounds followed by tetrachlorvinphos at 287,300 pounds and piperonyl butoxide at 154,300 pounds. These three active ingredients accounted for 42 percent of the U.S. total.

Of the total chemical applications made to cattle in 1999, the method of application was 37 percent by spray, 28 percent by pour-on, 9 percent by rubbing device, 9 percent by dust and 7 percent by injectable shot. All other methods (dip, mineral block, pill, ear tags, and other) accounted for the remaining 10 percent of applications.

A total of 1.55 million pounds of insecticides was applied to beef cattle in 1999. The top active ingredients in total pounds used on beef cattle were xylene, at 452,400 pounds, tetrachlorvinphos at 219,300 pounds, malathion at 140,900 pounds and famphur at 129,200 pounds.

(Continued on back)

Montana May Potato Stocks Up 3 Percent, U.S. Down 3 Percent

Montana potato producers held 300,000 cwt. of potatoes in storage on May 1, down 3 percent from a year ago. The stocks represent 9 percent of the 1999 total production, compared with last year's stocks which also represented 9 percent of the 1998 total production.

Nationally, May 1, 2000 potato stocks totaled 85.7 million cwt, down 3 percent from a year ago and 8 percent below two years ago. Storage accounted for 20 percent of fall production, down 1 percentage point from a year ago.

U.S. disappearance from the start of harvest to May 1 totaled 335 million cwt this season, down slightly from last year but 4 percent above two years ago. April disappearance of 41.9 million cwt was down 3 percent from last year but 1 percent above two years ago. Seasonal shrink and loss of 29.9 million cwt was up 2 percent from last year and 17 percent above two years ago.

Processing of 1999 crop potatoes this season totaled 163 million cwt, down 3 percent from the 1998 crop but 5 percent above the 1997 crop. In April, processors in the eight major States used 17.3 million cwt of potatoes, down 6 percent from last year and 2 percent below two years ago.

Western States held 68.8 million cwt of potatoes in storage on May 1, 2000, up 4 percent from last year but 6 percent below 1998. Oregon's stocks were up 36 percent from a year ago, Washington was equal to last year, and Idaho's stocks were down 3 percent. Stocks in these three Northwest States were up 3 percent from last year and accounted for 70 percent of U. S. stocks. Colorado's stocks were up 12 percent and California's storage was up 22 percent from last year. Montana's stocks, mostly seed, were up 3 percent.

U.S. Cattle on Feed Up 9 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.91 million head on May 1, 2000. The inventory was 9 percent above May 1, 1999 and 12 percent above May 1, 1998.

Placements in feedlots during April totaled 1.69 million, slightly below 1999 but 6 percent above 1998. Net placements were 1.60 million. During April, placements of cattle and calves weighing less than 600 pounds were 299,000, 600-699 pounds were 307,000, 700-799 pounds were 568,000, and 800 pounds and greater were 511,000.

Marketings of fed cattle during April totaled 1.87 million, 4 percent below 1999 and 1 percent below 1998. April 2000 had two fewer weekdays than April 1999, which limited slaughter and affected the year-to-year relationship for marketings.

Other disappearance totaled 90,000 during April, 13 percent below 1999 and 2 percent below 1998.

Cattle on Feed in Historic 7 States Up 9 Percent

Cattle on feed May 1, 2000, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.36 million, up 9 percent from the previous year and 13 percent above May 1, 1998.

Placements in feedlots during April totaled 1.45 million, slightly above 1999 and 7 percent above 1998.

Marketings during April totaled 1.59 million, 5 percent below 1999 and down 1 percent from 1998. April 2000 had two fewer weekdays than April 1999, which limited slaughter and affected the year-to-year relationship for marketings.

Other disappearance during April was 71,000 head, 9 percent below 1999 but 16 percent above 1998.

April Egg Production Up 3 Percent

U.S. egg production totaled 7.01 billion during April 2000, up 3 percent from the 6.78 billion produced in 1999. Production included 5.91 billion table eggs and 1.10 billion hatching eggs, of which 1.04 billion were broiler-type and 67.0 million were egg-type. The total number of layers during April 2000 averaged 329 million, up 2 percent from the total average number of layers during April 1999. April egg production per 100 layers was 2,130 eggs, up 1 percent from 2,110 eggs in April 1999.

All layers in the U.S. on May 1, 2000 totaled 328 million, up 2 percent from a year ago. The 328 million layers consisted of 267 million layers producing table or commercial type eggs, 58.0 million layers producing broiler-type hatching eggs, and 2.94 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 2000, averaged 70.4 eggs per 100 layers, up 1 percent from the 70.0 a year ago.

Laying flocks in the 30 major egg producing States produced 6.57 billion eggs during April, up 3 percent from April 1999. The average number of layers during April, at 309 million, was up 2 percent from a year earlier.

Hired Workers up 2 Percent, Wage Rates up 4 Percent from a Year Ago

There were 1.05 million hired workers on the Nation's farms and ranches the week of April 9-15, 2000, up 2 percent from a year ago. There were 830,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 217,000 workers. Migrant workers accounted for 8.8 percent of the April hired workforce compared with 8.7 percent last year.

Farm operators paid their hired workers an average wage rate of $8.12 per hour during the April 2000 survey week, up 29 cents from a year earlier. Field workers received an average of $7.58 per hour, up 35 cents from last April. Livestock workers earned $7.56 per hour compared with $7.39 a year earlier. The field and livestock worker combined wage rate was up 31 cents from last year.

Hired farm worker wage rates were above a year ago in most regions. The largest increases occurred in the Pacific (Oregon and Washington), Lake (Michigan, Minnesota, Wisconsin) and Appalachian II regions. The higher wages were generally attributable to fewer seasonal workers reported on the payroll during the survey week in the Pacific and Appalachian II regions.

Regions showing declines in the hired farm worker wage rates were Mountain III, Mountain II (Colorado, Nevada, and Utah), Corn Belt II (Iowa and Missouri), Appalachian I (North Carolina and Virginia), and Hawaii. Slight declines of hired wage rates in these regions generally occurred due to an increase in field worker hours reported in each region.

1999 Agricultural Chemical Use Estimates (continued from front page)

Of the total chemical applications made to beef cattle in 1999, the method of application was 39 percent by pour-on, 18 percent by spray, and 11 percent by injectable shot. All other methods (dip, dust, mineral block, rubbing device, pill, ear tags, and other) accounted for the remaining 32 percent of applications.

A total of 606,400 pounds of insecticides was applied to dairy cattle in 1999. Piperonyl butoxide was the predominant active ingredient in total quantity used on dairy cattle at 101,700 pounds. Dichlorvos had the second highest quantity used at 96,200 pounds followed by cyfluthrin with 92,200 pounds.

Of the total chemical applications made to dairy cattle in 1999, the method of application was 65 percent by spray, 13 percent by pour-on, and 10 percent by both rubbing device and dust. All other methods (dip, mineral block, injectable shots, pill, ear tags, and other) accounted for the remaining 2 percent of applications.

A total of 354,400 pounds of insecticides was applied to cattle facilities in 1999. Tetrachlorvinphos had the highest quantity used at 125,200 pounds. Dimethoate had the second highest quantity used at 98,700 pounds followed by diazinon with 39,300 pounds.

A total of 148,400 pounds of insecticides was used to treat beef cattle facilities in 1999. Diazinon was the predominant active ingredient in treating beef cattle facilities with 39,300 pounds used. Malathion had the second highest quantity used at 15,100 pounds followed by dichlorvos with 14,600 pounds.

A total of 206,000 pounds of insecticides was applied to milk cattle facilities in 1999. Dimethoate accounted for 48 percent of the total at 98,700 pounds. Piperonyl butoxide accounted for 29,500 pounds or 14 percent of the total.

The 1999 agricultural chemical usage numbers are published by regions. Montana is included with Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. Our region applied 328,000 pounds of insecticides to beef and dairy cattle in 1999. Applications made to beef cattle accounted for 99 percent of the total. A total of 70,800 pounds of insecticides was applied to cattle facilities in our region in 1999. Ninety five percent of these applications were to beef cattle facilities.

A complete listing of insecticides and amounts used by region is contained in the national agricultural chemical usage release and can be viewed at http:www/nass.usda.gov/.

Ag Prices

May 1 Crop Production and Hay Stocks

As of May 1, **Montana winter wheat** producers were expecting a yield of 36 bushels per acre, down 2 bushels from last year. If realized, total production of 51.5 million bushels would be 40% more than a year ago due to an increase in acreage. In the fall of 1999, Montana producers seeded 1.5 million acres of winter wheat which is 450,000 acres more than the small acreage seeded the previous year. Producers expect to harvest 1.43 million acres, 460,000 acres more than what was harvested last year. The condition of the winter wheat crop was rated at 3% very poor, 11% poor, 43% fair, 39% good, and 4% excellent for the week ending May 7.

U.S. winter wheat production is forecast at 1.65 billion bushels, down 3% from 1999. Based on May 1 conditions, the U.S. yield is forecast at 47.5 bushels per acre, 0.3 bushels less than last year's record. If realized, this would be the second highest yield on record. Record yields are forecast in Ohio and North Carolina. Grain area totals 34.7 million acres, down 2% from last season. Dry conditions in Texas have led to abnormally high abandonment.

Montana hay producers had an estimated 1.01 million tons of hay on hand as of May 1, which is 8% less than the same time last year. Disappearance from December 1999 to May 1, 2000 totaled 3.44 million tons.

U.S. stocks of **all hay** on farms totaled 28.8 million tons on May 1, 2000, up 16% from May 1 of the previous year. This is the highest May stocks since 1987. Disappearance of hay from December 1, 1999 - May 1, 2000, totaled 80.1 million tons, 8% lower than the 1998 crop disappearance of 87.2 million tons for the same period. Stocks of hay on May 1, 2000 were higher compared to last year in 20 of the 48 estimating States. Mild winter conditions across the Upper Midwest and Plains, following favorable production in 1999, led to increased May stocks, especially in the Great Lakes area. Michigan and Wisconsin each reported the highest May stocks since 1980. The increased stocks in these States offset the decreased stocks in States along the Ohio Valley which were affected by last year's drought.

1999 Milk Production, Disposition, and Income

Montana's 1999 milk production, of 303 million pounds, increased 4 percent from 1998. An average of 18,000 milk cows were on farms and ranches during the year, unchanged from a year ago. The rate per cow averaged 16,833 pounds, 666 pounds more than 1998.

Cash receipts from marketings of milk during the year in Montana were 42.3 million dollars, slightly more than 1998. Producer returns averaged $14.60 per cwt, a decrease of 40 cents from last year. Marketings totaled 290 million pounds, up 4 percent from a year ago. A total of 13 million pounds of milk were used on farms and ranches where produced, 8 million pounds were fed to calves, and 5 million were consumed as milk, cream, and butter.

Nationally, milk production increased 3 percent in 1999 to 163 billion pounds. The rate per cow at 17,771 pounds, was 582 pounds above 1998. The annual average number of cows on farms at 9.16 million head, was 2,000 more than 1998.

Cash receipts from marketings of milk during 1999 at $23.2 billion dollars, was 4 percent below 1998. Producer returns averaged $14.38 per hundredweight, 7 percent below 1998. Marketings totaled 161 billion pounds, 3 percent above 1998. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.37 billion pounds of milk were used on farms where produced, 3 percent less than 1998. Calves were fed 83 percent of this milk with the remainder consumed in producer households.

1999 Cash Receipts From Meat Animals Up in Montana and U.S.

Cash receipts from the 1999 marketings of cattle, hogs, and sheep in Montana totaled $851 million, up 6 percent from 1998. Cash receipts from the sales of cattle and calves were up 7 percent from the previous year, while sheep cash receipts were off 3 percent and hog cash receipts were down 10 percent. Cash receipts from the sales of cattle and calves rose 7 percent from 1998 to $806 million. Increased cattle marketings and prices contributed to the increase in cash receipts. Marketings of cattle weighing 500 lbs or more, at 1.34 million head, were down slightly from 1998 due to increased marketings of calves less than 500 lbs. Marketings of calves weighing less than 500 lbs increased 15 percent from the previous year to 300,000 head. The average price received in 1999 for cattle weighing over 500 lbs rose $5.60 per cwt to $67.60 per cwt. Season average prices for calves weighing less than 500 lbs increased $11.30 per cwt to $89.90 per cwt.

Cash receipts from the sales of hogs in Montana dropped 10 percent from 1998 to $24.1 million dollars. While the marketings of hogs increased 12 percent from 1998 to 366,000 head, prices for hogs dropped dramatically from the previous year as the season average price fell $9.30 to $30.80 per cwt. Sheep and lamb cash receipts decreased 3 percent from 1998 to $20.7 million dollars. Marketings of sheep and lambs in 1999 were 47,000 and 266,000 head, respectively. Sheep marketings were down substantially from 1998 as breeding sheep inventories on January 1, 2000 were down 1 percent from the previous year. Lamb marketings were up slightly from 1998. The average price for lamb prices rose $3.20 per cwt to $76.80 per cwt and sheep were only off $.10 per cwt from 1998 to $29.10 per cwt.

In the United States, the 1999 gross income from cattle and calves, hogs and pigs, and sheep and lambs for the U.S. totaled $46.0 billion, up 5 percent from 1998. Gross income rose for cattle and calves, but fell for hogs and pigs and sheep and lambs. Cattle and calves increased 9 percent, while hogs and pigs and sheep and lambs decreased 9 and 3 percent respectively.

Total 1999 cash receipts from marketings of meat animals increased 5 percent to $45.6 billion. Cattle and calves accounted for 80 percent of this total, hogs and pigs 19 percent, and sheep and lambs 1 percent. Production increased for cattle and calves, but declined for both hogs and pigs and sheep and lambs. Average prices were up from 1998 levels for cattle and calves and sheep and lambs, while hogs and pigs dropped.

U.S. cash receipts from marketings of cattle and calves increased from $33.4 billion in 1998 to $36.5 in 1999, a 9 percent increase. All cattle and calf marketings totaled 56.7 billion pounds in 1999, up 3 percent from last year. The U.S. annual average price per 100 pounds live weight for cattle was $63.40, an increase of $3.80 from 1998. For calves, the annual average price increased $8.90 to $87.70.

Cash receipts from hogs and pigs totaled $8.6 billion during 1999, down 9 percent from 1998. Marketings increased to 27.0 billion pounds in 1999, up 2 percent from 1998. The U.S. annual average price per 100 pounds live weight decreased $4.10 to $30.30 in 1999.

U.S. sheep and lamb cash receipts in 1999 were $469 million, down 3 percent from 1998. Marketings declined 7 percent to 689 million pounds. The U.S. annual average price per 100 pounds live weight for lambs increased from $30.60 in 1998 to $31.10 in 1999 while for sheep, the annual average price increased $2.20 to $74.50.

1999 Poultry Production and Value

Montana's value of egg production in 1999 was $3.4 million, down 13 percent from 1998. Egg production in 1999 totaled 94 million eggs, up 12 percent from the previous year. The average price for eggs was 43 cents per dozen, a decrease of 12 cents from 1998.

Montana's value of sales from chickens in 1999, excluding broilers, was $17,000. Value of sales increased 13 percent from 1998. Chickens sold for an average price of 2 cents per pound, unchanged from the previous year.

The U.S. combined value of production from broilers, eggs, turkeys and the value of sales from chickens in 1999, was $22.4 billion, up slightly from the $22.3 billion in 1998. Of the combined total, 68 percent was from broilers, 19 percent from eggs, 13 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced in the U.S. during 1999 was $15.1 billion, down slightly from 1998. The total number of broilers produced in 1999 was 8.15 billion, up 3 percent from 1998. The total amount of live weight broilers produced in 1999 was 40.8 billion pounds, up 6 percent from 1998. The 1999 average price per pound on a live weight equivalent basis was 37.1 cents per pound, compared to 39.3 cents per pound in 1998.

Value of egg production in 1999 was $4.32 billion, down 3 percent from the $4.44 billion in 1998. Egg production totaled 82.7 billion eggs, up 4 percent from the 79.8 billion eggs produced in 1998. In 1999, eggs averaged 62.7 cents per dozen, compared with 66.8 cents in 1998.

The value of turkeys produced during 1999 was $2.84 billion, up 6 percent from the $2.68 billion the previous year. Turkey production in 1999 totaled 6.95 billion pounds live weight, compared with 7.05 billion pounds in 1998. The average price received by producers during 1999 was 40.8 cents per pound, compared with 38.0 cents in 1998.

The value of sales from chickens (excluding broilers) in 1999 was $67.7 million, down 10 percent from the $75.5 million a year ago. Prices averaged 7.0 cents per pound, compared with 8.1 cents in 1998. The number of chickens sold in 1999 totaled 205 million, up 6 percent from the total sold during the previous year.

(See table on back page.)

Agricultural Prices Received for March

Crop prices for the full month of March 2000 were mostly higher compared with February 2000 prices. Montana winter wheat average price was $2.68 per bushel, up 1 cent from February's level; durum wheat was $3.71 per bushel, down 13 cents; spring wheat was 1 cent higher at $2.90 per bushel. Feed barley was $1.59 and malt barley was $2.75 per bushel.

The mid-April price for alfalfa hay was $65.00 per ton, unchanged from last month. Other hay, at $56.00 per ton, was up $3.00 from March's mid-month price. The mid-April winter wheat price averaged $2.60 per bushel, spring wheat was $2.90, feed barley was $1.60, and malt barley averaged $2.80.

Livestock prices for the full month of March were mostly higher. Steer and heifer prices increased 30 cents to $85.70 per cwt. Cows were up $4.80 to $41.60 and the average price for calves was unchanged at $105.00 per cwt. Sheep prices increased $1.30 to $40.90 per cwt, and lamb prices were up $6.50 to $86.50 per cwt. Milk prices were unchanged from last month at $12.30 per cwt. Steer and heifer prices for mid-April averaged $86.10 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $2.38, down 1 cent; spring wheat was $2.85, up 3 cents; the all barley price was $2.23, up 10 cents; and steer and heifer prices were $73.40, up $2.20.

The U.S. mid-April winter wheat price was $2.29 per bushel, spring wheat was $2.73 per bushel, all wheat was $2.55 per bushel, and all barley was $2.13. Steer and heifer prices were $73.80 per cwt, cow prices were $39.60, all hog prices were $46.90 per cwt, and all egg prices were 65.5 cents per dozen.

The preliminary All Farm Products Index of Prices Received in April was 99 based on 1990-92=100, up 4 points (4.2 percent) from the March index. Higher prices for hogs, broilers, eggs, and strawberries more than offset price decreases for cotton, corn, grapefruit, and broccoli. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of cattle, strawberries, milk, and oranges more than offset the relatively lower marketings of soybeans, corn, cotton, and hogs. These marketing changes accounted for one point of the April index increase. Compared with April 1999, the All Farm Products Index was 3 points (3.1 percent) higher. Price increases from April 1999 for hogs, cattle, tomatoes, and calves more than offset price decreases for lettuce, milk, oranges, and carrots

United States Index Summary

INDEX (1990-92=100)	March 1999	April 1999	March 2000	April 2000

1999 Specialty Crops County Estimates

For the first time ever, we have estimated the oilseed and pulse crops by county for the state. The state-level estimates have been forecast in the past, but they were included in an "other" category and not published separately for Montana. However, there was a demand for these estimates and funding was provided by the Montana Department of Agriculture.

Carbon was the largest **pinto bean** producing county in the state for 1999 with 56,500 cwt produced. The second and third leading counties were Yellowstone and Prairie with 46,100 cwt and 44,000 cwt produced, respectively. Looking at garbanzo beans indicates that Roosevelt county produced the most in 1999 with total production of 30,600 cwt. The second leading county was Daniels at 18,500 cwt and the next in line was Chouteau county at 15,100 cwt.

For the 1999 **lentil** crop, Sheridan was the number one county with [illegible],300 cwt produced. The number two county was Hill with total production at 23,500 cwt, and the third largest was Roosevelt county with 22,200 cwt. The first **dry edible pea** county estimates indicated that Hill county was the largest producer in 1999 with 92,600 cwt, followed by Big Horn county at 73,600 cwt and Chouteau county at 68,600 cwt.

For the 1999 **canola** crop, Pondera was by far the largest producing county at 15.16 million pounds. The second leading county was Teton with 6.29 million pounds produced and was closely followed by Sheridan county at 6.26 million pounds. The same trend held true for **safflower** production as Richland was clearly the number one county with 11.1 million pounds produced. The next leading county was McCone at 4.9 million pounds, followed by Roosevelt's production of 3.2 million pounds.

The leading mustard seed producing counties were all in the same general area of the Northeastern part of the state. The number one county was Sheridan with 8.0 million pounds produced, followed by Valley and McCone at 3.4 and 1.7 million pounds, respectively. Sheridan was also the leading county for **flaxseed** production in Montana for 1999 at 99,000 cwt. The next leading county was Valley with 44,000 cwt and was closely followed by Daniels county at 42,000 cwt. Blaine county led **sunflower** production in the state with 1.64 million pounds. The second leading county was Judith Basin at 1.08 million pounds and was closely followed by Richland county's production of 1.03 million pounds.

All of the previous information as well as planted acres, harvested acres, and yields by county, district, and state levels will be available this week from the Montana Agricultural Statistics Service. They will be available in printed form or can be accessed by visiting our website at www.nass.usda.gov/mt/. The Montana Agricultural Statistics Service compiles the only annual county estimates for Montana. These county statistics are based on an acreage and production survey conducted during the fall of 1999. Questionnaires were sent to a sample of farmers and ranchers throughout Montana asking for information on the 1999 acreage and production of their crops. Thanks to those who participated!

Montana Red Meat Down While U.S. Red Meat Production Sets Record High for March

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during March, compared to 1.8 million pounds last March and 1% lower than last month. There were 1,800 head of cattle slaughtered, 100 head less than a year ago. The average live weight of cattle slaughtered increased 18 pounds to 1,149 pounds.

Hog kill in March totaled 1,300 head, 1,800 head less than March 1999. The average live weight increased 22 pounds to 250 pounds. There were 200 head of sheep slaughtered in March, the same as a year ago at this time. The average live weight of sheep slaughtered dropped a pound to 129 pounds.

Montana Red Meat Production

(Continued from front page)

Commercial red meat production for the United States totaled 4.04 billion pounds in March, up 1% from the previous record high of 4.02 billion pounds produced in March 1999. Beef production, at 2.30 billion pounds, was 3% above the previous year. Cattle slaughter totaled 3.13 million head, up 3% from 1999. The average live weight was down 1 pound from the previous year, at 1,215 pounds.

Veal production totaled 20.0 million pounds, 2% below the previous record low for March set a year ago. Calf slaughter totaled 103 thousand head, down 12% from March 1999. The average live weight was 33 pounds above last year, at 320 pounds.

Pork production totaled 1.70 billion pounds, down 2% from the previous year. Hog kill totaled 8.81 million head, 3% below 1999. The average live weight was 3 pounds above the previous year, at 262 pounds.

Lamb and mutton production, at 24.0 million pounds, was down 17% from March 1999 and down 8% from the previous record low for March set in 1997 and 1998. Sheep slaughter totaled 344 thousand head, 19% below last year. The average live weight was 140 pounds, up 3 pounds from March a year ago.

January - March red meat production was 11.6 billion pounds, 2% higher than the comparable figure a year earlier. Accumulated beef production was 4% higher than last year, veal was 1% higher, pork was 1% lower, and lamb & mutton was down 6%.

U.S. Cattle on Feed Up 8 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.19 million head on April 1, 2000. The inventory was 8 percent above April 1, 1999 and 11 percent above April 1, 1998. The inventory included 6.79 million steers and steer calves, up 8 percent from the previous year. This group accounted for 61 percent of the total inventory. Heifers and heifer calves accounted for 4.35 million head, up 7 percent from 1999.

Placements in feedlots during March totaled 2.02 million, 1 percent below 1999 but 18 percent above 1998. Net placements were 1.92 million. During March, placements of cattle and calves weighing less than 600 pounds were 331,000, 600-699 pounds were 406,000, 700-799 pounds were 715,000, and 800 pounds and greater were 564,000. Marketings of fed cattle during March totaled 2.05 million, 3 percent above 1999 and 10 percent above 1998. Other disappearance totaled 101,000 during March, 42 percent above 1999 and 7 percent above 1998.

Montana and U.S. Quarterly Milk Production Up

During the January - March 2000 quarter, Montana milk cows produced 77 million pounds of milk, up 3 million from the same quarter a year ago. Montana milk cows numbered 18,000 head, unchanged from last year.

Milk production in the 20 major States during March totaled 12.7 billion pounds, up 3.8 percent from production in these same States in March 1999. February revised production, at 11.7 billion pounds, was up 8.2 percent from February 1999. However, adjusting production for the additional day due to the leap year causes February milk production to be up 4.5 percent on a per day basis. The February revision represented a slight decrease of 1 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,634 pounds for March, 49 pounds above March 1999. The number of cows on farms in the 20 major States was 7.77 million head, 57,000 head more than March 1999 and 4,000 head more than February 2000.

The January - March quarterly production of milk for the U.S. was 42.6 billion pounds, 5.1 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.19 million head, 58,000 head more than the same period last year.

U.S. March Egg Production Up 2 Percent

U.S. egg production totaled 7.22 billion during March 2000, up 2 percent from the 7.05 billion produced in 1999. Production included 6.10 billion table eggs and 1.12 billion hatching eggs, of which 1.05 billion were broiler-type and 67.0 million were egg-type. The total number of layers during March 2000 averaged 331 million, up 2 percent from the total average number of layers during March 1999. March egg production per 100 layers was 2,182 eggs, down slightly from 2,185 eggs in March 1999.

All layers in the U.S. on April 1, 2000 totaled 331 million, up 3 percent from a year ago. The 331 million layers consisted of 271 million layers producing table or commercial type eggs, 57.3 million layers producing broiler-type hatching eggs, and 2.84 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 2000, averaged 70.9 eggs per 100 layers, down slightly from the 71.0 a year ago.

Laying flocks in the 30 major egg producing States produced 6.79 billion eggs during March, up 2 percent from March 1999. The average number of layers during March, at 311 million, was up 2 percent from a year earlier.

Montana March Potato Stocks Down 5 Percent, U.S. Down 3 Percent

Montana potato producers held 1.65 million cwt. of potatoes in storage on April 1, down 5 percent from a year ago. The stocks represent 50 percent of the 1999 total production, compared with last year's stocks representing 55 percent of the 1998 total production.

Nationally, April 1, 2000 potato stocks totaled 128 million cwt, down 3 percent from a year ago and 5 percent below two years ago. Storage accounted for 30 percent of fall production, down 1 percentage point from a year ago.

U.S. disappearance from the start of harvest to April 1 totaled 293 million cwt this season, up slightly from last year and 5 percent above two years ago. March disappearance of 42.5 million cwt was slightly above last year and 2 percent above two years ago. Seasonal shrink and loss of 27.9 million cwt was up 2 percent from last year and 10 percent above two years ago.

Processing of 1999 crop potatoes so far this season totaled 146 million cwt, down 2 percent from the 1998 crop but 6 percent above the 1997 crop. In March, processors in the eight major States used 20.5 million cwt of potatoes, down 2 percent from last year but 4 percent above 1998.

Western States held 97.2 million cwt of potatoes in storage on April 1, 2000, up 1 percent from last year but 4 percent below 1998. Oregon's stocks were up 29 percent from a year ago, but were offset by a 5 percent decline in Washington and a 4 percent drop in Idaho. Stocks in the three Northwest States were the same as last year and accounted for 66 percent of U. S. stocks. Colorado's stocks were up 9 percent and California's potato stocks were up 17 percent from last year. Montana's stocks, mostly seed, were off 5 percent

Montana Intends to Seed More Wheat; Nationally Seedings are Down

Montana **spring wheat** producers expect to seed 3.7 million acres in 2000, and if these expectations hold, seedings would be down 11 percent from 1999, and would be the lowest acreage since 1994. **Winter wheat** seedings remained unchanged from the December estimate at 1.50 million acres, up 450,000 from last year. **Durum wheat** acreage, at 530,000 acres, is up from 360,000 acres planted in 1999, up 47 percent from last year. Adding the winter wheat seeded last fall to other spring and durum wheat intended seedings shows 5.73 million acres of **all wheat**, up nearly 3 percent from last year's acreage.

Montana **barley** producers intend to plant an estimated 1.2 million acres, down 8 percent from last year. The intended seeded acreage for **oats** is expected to be 130,000 acres, down 40,000 acres from 1999, and growers intend to harvest 60,000 acres of this crop for grain, 10,000 acres less than last year. **Corn** growers intend to plant 75,000 acres, up 10,000 acres from last year. Farmers intend to plant an estimated 61,000 acres of **sugar beets**, down 800 acres from 1999. The area planted to **dry beans** is expected to total 29,000 acres, up 9 percent from last year. An estimated 2.5 million acres of **hay** are expected to be harvested, which is 100,000 acres less than 1999's harvested acreage.

Nationally, **other spring wheat** growers intend to plant 14.8 million acres this year, down 4 percent from 1999. This would be the smallest area since 1988. About 13.8 million acres of the total are Hard Red Spring wheat. Large acreage reductions are expected in Montana and South Dakota, while Minnesota and North Dakota growers intend to plant more acres than last year. **Winter wheat** planted area for harvest in 2000 is 43.2 million acres, down less than 1 percent from 1999 but 1 percent above the previously published level. Most of the increase from the "Winter Wheat Seedings" report occurred in Texas and several Southeastern states where planting continued after December 1. Of the total, about 30.5 million acres are Hard Red Winter, 9.3 million acres Soft Red Winter, and 3.5 million acres White winter.

Area seeded to **durum wheat** is expected to total 3.61 million acres, down 11 percent from 1999. Due to strong durum prices, Montana growers intend to plant their largest total since 1957. This is more than offset by an expected 16 percent decrease in North Dakota, the largest durum producing state. Seeding in the San Joaquin and Imperial Valleys of California progressed rapidly during January and February.

U.S. **barley** growers intend to seed 5.73 million acres for 2000, up 10 percent from the 5.22 million acres seeded a year ago. Montana is decreasing barley acreage by 100,000 acres, or 8 percent. North Dakota and Minnesota are increasing acres by 41 and 35 percent, respectively. Of the 27 States that estimate barley seeding, eight States are reducing acreage, 12 States are increasing acreage, and four States are showing no change from 1999. Three States have been added this year and have no history.

Oats seeded and to be seeded by U.S. farmers for the 2000 crop year is expected to total 4.35 million acres, down 320,000 acres from last year's final planted acres. Growers expect to harvest 2.47 million acres for grain, 1 percent above the final 1999 harvested acreage. (Coninued on back page.)

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 1,500 Montana farmers and ranchers during March. Names were selected on a statistical probability basis. **Special thanks** to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

March 1, 2000 Grain Stocks

All wheat stocks in Montana on March 1, 2000 totaled 108.7 million bushels, up 2 percent from March 1, 1999. Stocks stored on the farm accounted for 88.0 million bushels of the total with the remaining 20.7 million bushels stored off farm. All spring wheat stocks, at 84.4 million bushels, were up 18 percent from last year and accounted for 78 percent of the total wheat stocks. Winter wheat stocks were estimated at 24.3 million bushels, down from 35.8 million bushels last year. Durum wheat stocks were estimated at 9.1 million bushels, up 10 percent from last year. All wheat disappearance for the December 1999 - February 2000 quarter was 53.1 million bushels, compared with 53.5 million for the same quarter last year. Barley stocks in all positions on March 1, 2000 totaled 22.05 million bushels, down 15 percent from a year ago. Oats stocks in all positions were estimated at 2.25 million bushels, up 20 percent from last year.

Nationally, all wheat stored in all positions on March 1, 2000 totaled 1.41 billion bushels, down 3 percent from a year ago. On-farm stocks are estimated at 423 million bushels, down 10 percent from last year. Off-farm stocks, at 989 million bushels, are up 1 percent from a year ago. The indicated December 1999 - February 2000 quarter disappearance is 473 million bushels, up 6 percent from the same period in 1999. Durum wheat stocks in all positions on March 1, 2000 totaled 81.4 million bushels, down 8 percent from a year ago. On-farm stocks at 51.7 million bushels, are down 11 percent from 1999. Off-farm stocks totaled 29.7 million bushels, down 2 percent from a year ago. The indicated December 1999 - February 2000 quarter disappearance of 28.6 million bushels is up 43 percent from the same period a year earlier.

Barley stocks in all positions on March 1, 2000 are estimated at 170.2 million bushels, 15 percent below last year. Of the total barley stocks on hand, 59.3 million bushels are stored on farms, 32 percent below a year ago. Off-farm stocks, at 110.9 million bushels, are only 2 percent below 1999. Indicated disappearance during the December 1999 - February 2000 quarter totaled 71 million bushels, 8 percent lower than the same period a year earlier. Oats stored in all positions on March 1, 2000 totaled 101 million bushels, 10 percent below the stocks on March 1, 1999. Of the total stocks on hand, 52.9 million bushels were stored on farm, 14 percent above this time last year. Off-farm stocks totaled 48.5 million bushels, 5 percent below a year earlier. Indicated disappearance during the December 1999-February 2000 quarter totaled 34.5 million bushels, 12 percent more than the same period a year ago.

Corn stocks in all positions on March 1, 2000 totaled 5.61 billion bushels, down 2 percent from March 1, 1999. Of the total stocks, 3.30 billion bushels were stored on farms, down 8 percent from a year ago. Off-farm stocks, at 2.31 billion bushels, were up 9 percent from a year ago. The December 1999 - February 2000 quarter indicated disappearance is 2.42 billion bushels, 3 percent above the disappearance of 2.36 billion bushels during the same period a year earlier.

1/ Terminals, mills, interior elevators. 2/ Montana stocks for winter wheat and all spring wheat are made possible through funds provided by the Montana Wheat & Barley Committee. 3/ Included in all spring wheat and all wheat. 4/ Not included in order to avoid disclosing individual operations. * Revised.

Agricultural Prices Received for February

Crop prices for the full month of February 2000 were mixed compared with January 2000 prices. Montana winter wheat average price was $2.67 per bushel, up 4 cents from January's level; durum wheat was $3.84 per bushel, up 11 cents; spring wheat was 1 cent lower at $2.89 per bushel. Feed barley was $1.58 and malt barley was $2.71 per bushel.

The mid-March price for alfalfa hay was $65.00 per ton, down $2.00 from last month. Other hay, at $53.00 per ton, was down $4.00 from February's mid-month price. The mid-March winter wheat price averaged $2.60 per bushel, spring wheat was $2.90, feed barley was $1.60, and malt barley averaged $2.70.

Livestock prices for the full month of February were mostly higher. Steer and heifer prices decreased $1.50 to $85.40 per cwt. Cows were up $1.30 to $36.80 and the average price for calves was up $2.00 to $105.00 per cwt. Sheep prices increased $6.30 to $39.60 per cwt, and lamb prices were unchanged at $80.00 per cwt. Milk prices were up 50 cents from last month at $12.30 per cwt. Steer and heifer prices for mid-March averaged $85.60 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $2.37, up 5 cents; spring wheat was $2.82, up 2 cents; the all barley price was $2.13, up 8 cents; and steer and heifer prices were $71.20, down 40 cents.

The U.S. mid-March winter wheat price was $2.37 per bushel, spring wheat was $2.85 per bushel, all wheat was $2.57 per bushel, and all barley was $2.14. Steer and heifer prices were $72.80 per cwt, cow prices were $38.60, all hog prices were $41.30 per cwt, and all egg prices were 57.4 cents per dozen.

The preliminary All Farm Products Index of Prices Received in March was 96 based on 1990-92=100, up 4 points (4.3 percent) from the February index. Higher prices for cattle, lettuce, broilers, and broccoli more than offset price decreases for eggs, strawberries, celery, and apples. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of milk, strawberries, broilers, and tomatoes more than offset the relatively lower marketings of cattle, cotton, corn, and oranges. These marketing changes accounted for one point of the March index increase. Compared with March 1999, the All Farm Products Index was unchanged. Price decreases from March 1999 for milk, oranges, eggs, and rice offset price increases for hogs, cattle, calves, and lettuce.

United States Index Summary

INDEX (1990-92=100)	February 1999	March 1999	February 2000	March 2000

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996

Prospective Plantings (continued)

If farmers' intentions are realized, this would be the lowest planted acres recorded since 1866, breaking the previous record low of 4.64 million acres set in 1996. Acres intended to be harvested for grain would be the second lowest on record, slightly above last year's record low 2.45 million acres.

Dry bean growers intend to plant 1.84 million acres of dry beans in 2000, down 9 percent from both last year and two years ago. **Corn** growers nationally intend to plant 77.9 million acres of corn for all purposes in 2000, up 1 percent from 1999, but down 3 percent from 1998. Expected acreage is down in Nebraska, the Great Lakes region, and mid-Atlantic States due mostly to dry conditions. Intended acreage is up in the central Corn Belt, Northern Plains, Southeast, and West. The area planted to **sugar beets** is expected to total 1.58 million acres, 1 percent above the 1999 crop year. If growers' intentions are realized, planted acres will increase in 6 of the 12 sugar beet producing States.

Hay producers expect to harvest 63.1 million acres of hay in 2000, down less than 1 percent from the 63.2 million acres harvested the previous year. Acreage reductions are expected in 15 states, while growers in 9 states intend to harvest the same number of acres as 1999. The States with increased expectations are mostly in the East where last year's dry conditions reduced hay stocks. In New York the acres of all hay harvested is expected to increase by 300,000 acres, or 20 percent. South Carolina is expecting a 30,000 acre increase, or 10 percent. All other States are within less than 10 percent of 1999 harvested acres.

HIGHLIGHTS:

Farms and Land in Farms
Honey Production
Wheat & Barley Movement
All Wheat County Estimates
Ag Prices Received

Farm Numbers Continue Gradual Upward Trend

The number of farms and ranches in Montana increased to 28,000 during 1999, 500 more than a year earlier mostly because of the rise in numbers of smaller farms. The Montana 1999 and 1998 farm and ranch numbers were sub-grouped by economic sales classes for the first time. There were 11,500 farms compared with 12,000 in 1998 in the economic sales class of $1,000 - $9,999; 10,700 farms in 1999 up from 10,000 last year in the economic sales class of $10,000 - $99,999 and 5,800 farms this year in the economic sales class of $100,000 or more compared with 5,500 in 1998. The land in farms and ranches is estimated at 57.0 million acres, down .5 million from 1998. The economic sales breakdown of land in farm and ranches follows: $1,000 - $9,999, 4.1 million acres and 4.0 million in 1998; $10,000 - $99,999, 17.0 million acres, up from 16.9 million last year; $100,000 or more - 35.9 million acres, down from 36.6 million acres in 1998.

U.S. 1999 farm numbers are estimated at 2.19 million, up fractionally from 1998. The increase in farm numbers can be attributed to the continued rise in the number of small farms. Total land in farms, at 947.3 million acres, was down 0.7% or 6.2 million acres from last year. This decline in land in farms continues the historical trend of less land in farms. The average farm size decreased 3 acres from 1998 to 432 acres. The U.S. number of farms in the $1,000-$9,999 economic sales class increased 15,690 to 1,196,640 in 1999. Those with sales in the $10,000-$99,999 economic sales class decreased 3,760 from 1998 to 648,550 farms. The $100,000 and over sales class dropped 9,220 farms from 1998 to 348,880 in 1999. The drop in this class is attributed to low commodity prices during 1999. The South Region showed the largest increase in number of farms, up 2,300 or 0.2 percent. The North Central Region was the only region to decline in farm numbers during 1999. This region was down 500 farms or less than 0.1% from 1998. Farm numbers during 1999 increased in 13 states, declined in 13 states, and remained unchanged in 24 states. States with an increase of 1,000 farms were Kentucky, Michigan, Minnesota, Mississippi, NewYork, Oklahoma, Oregon, Texas, and Virginia. States with a decrease of 1,000 farms were Alabama, Arkansas, Indiana, Iowa, and Pennsylvania. Farm and ranch land declined in a total of 26 states while the remaining 24 were unchanged. Texas continues to lead the Nation with 130.5 million acres of land in farms and ranches, down 1 million acres from the previous year.

Montana and United States Honey Production Down

Montana's honey producers with five or more colonies produced 8.54 million pounds of honey in 1999, down 39% from 1998. A substantial drop in honey yields caused the large decrease in production. Honey yields were off 52 pounds per colony from 1998 to average 70 pounds per colony. There were 122,000 colonies producing honey in 1999. Stocks of honey on hand on December 15, 1999 totaled 2.1 million pounds, down 61% from 1998.

Prices for Montana honey averaged 60 cents per pound in 1999, down 4 cents per pound from 1998. The value of honey production in 1999 was 5.1 million dollars, down 43% from the 1998 honey crop of 9.0 million dollars. Montana ranked sixth in the Nation in the number of honey producing colonies and seventh in honey production and value of production in 1999.

U.S. 1999 honey production from producers with five or more colonies totaled 205 million pounds, down 7% from 1998. There were 2.69 million colonies producing honey in 1999, up 2% from 1998. Yield per colony averaged 76.3 pounds, down 7.4 pounds from the 83.7 pounds in 1998. Colonies which produced in more than one State were counted in each State and yields per colony may, therefore, be understated. Colonies were not counted if honey was not harvested. Producer honey stocks were 79.4 million pounds on December 15, 1999, down 2% from a year earlier.

U.S. 1999 crop prices averaged 59.9 cents per pound, down 8% from 65.5 cents in 1998. Prices are based on retail sales by producers and sales to private processors and co-ops. At the State level, prices reflect the portions of honey sold retail, coop and private. Coop and Private prices were lower for all color classes in 1999.

Wheat and Barley Movement

Wheat shipped to out-of-state destinations during the June-November 1999 period, at 71.4 million bushels, was 8% higher than the same period last year. Shipments to eastern destinations totaled 4.1 million bushels, up 146% from the 1.7 million bushels last year. Movement to the west was 63.4 million bushel, up 2% from the 62.1 million bushels a year earlier. Other destinations, mostly to the south, received 3.9 million bushels up 77% from last year. Rail movement amounted to 65.1 million bushels, 91% of total shipments, compared with 92% last year.

Barley shipped to out-of-state destinations, June-November 1999, was 13.4 million bushels, up 38% from the same period last year. Eastern destination shipments totaled 4.8 million bushels up 101% from last year. Shipments to western destinations at 7.1 million bushels up 16% from last year. Shipments to other destinations were up from last year's 1.2 million bushels to 1.5 million bushels this year. Barley hauled by rail was 89% of total movement up from 85% for the same period last year.

See table on back page.

1/ Counties with less than 500 acres planted are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

Agricultural Prices Received for January

Crop prices for the full month of January 2000 were mixed compared with December 1999 prices, according to Montana Agricultural Statistics Service. Montana winter wheat average price was $2.63 per bushel, unchanged from December's level; durum wheat was $3.73 per bushel, up 3 cents; spring wheat was 10 cents lower at $2.90 per bushel. Feed barley was $1.60 and malt barley was $2.74 per bushel.

The mid-February price for alfalfa hay was $67.00 per ton, up $1.00 from last month. Other hay, at $57.00 per ton, was unchanged from January's mid-month price. The mid-February winter wheat price averaged $2.60 per bushel, spring wheat was $2.90, feed barley was $1.50, and malt barley averaged $2.70.

Livestock prices for the full month of January were mostly higher. Steer and heifer prices increased 70 cents to $86.90 per cwt. Cows were up 50 cents to $35.50 and the average price for calves was up $7.20 to $103.00 per cwt. Sheep prices increased 50 cents to $33.30 per cwt, and lamb prices decreased $6.50 to $80.00 per cwt. Milk prices were down 90 cents from last month at $11.80 per cwt. Steer and heifer prices for mid-February averaged $86.10 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $2.32, up 5 cents; spring wheat was $2.80, down 7 cents; the all barley price was $2.05, down 19 cents; and steer and heifer prices were $71.60, up 80 cents.

The U.S. mid-February winter wheat price was $2.42 per bushel, spring wheat was $2.81 per bushel, all wheat was $2.58 per bushel, and all barley was $2.14. Steer and heifer prices were $70.80 per cwt, cow prices were $37.00, all hog prices were $39.60 per cwt, and all egg prices were 68.6 cents per dozen.

The preliminary All Farm Products Index of Prices Received in February was 92 based on 1990-92=100, up 2 points (2.2 percent) from the January index. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of milk, cattle, broilers, and hogs more than offset the relatively lower marketings of corn, soybeans, tobacco, and cotton. These marketing changes accounted for most of the February index increase. Higher prices for hogs, eggs, corn, and soybeans offset price decreases for lettuce, broilers, milk, and apples.

Compared with February 1999, the All Farm Products Index was 4 points (4.2 percent) lower. Price decreases from February 1999 for milk, lettuce, oranges, and cotton more than offset price increases for cattle, hogs, calves, and apples.

United States Index Summary

INDEX (1990-92=100)	Jan. 1999	Feb. 1999	Jan. 2000	Feb. 2000

1999 Montana Red Meat Production Up and U.S. Sets Record Highs

Montana slaughter plants produced 22.2 million pounds, dressed weight, of red meat during 1999, compared with 19.4 million pounds in 1998. There were 24,500 cattle slaughtered during 1999, up 12% from the previous year. The total live weight of 27.2 million pounds was up 10% from a year earlier. The average live weight was down 20 pounds to 1,108 pounds.

There were 31,800 hogs slaughtered in Montana, an increase of 3,700 head from 1998. Total live weight of 7.8 million pounds was up 28% from 1998. The average live weight was 244 pounds per head compared with 218 the previous year. Sheep slaughter amounted to 3,500 head, an increase of 300 head from a year earlier. The average live weight of 128 pounds was 2 pounds lighter than the previous year. Total live weight of all sheep and lambs slaughtered in 1999 increased 35,000 pounds from 1998 to 446,000 pounds.

On January 1, 2000 there were 12 Montana federally inspected slaughter plants, down 1 from 1999. There were 144 non-federally inspected plants on January 1, 2000, up 11 from the same date a year ago.

United States red meat production in commercial plants and on farms totaled 46.3 billion pounds in 1999. This was 2% higher than the previous record high set in 1998. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 46.1 billion pounds. Beef production, at 26.5 billion pounds, was up 3% from a year earlier and 2% higher than the previous record high set in 1976. Veal production totaled 233 million pounds, down 11% from the previous record low set last year. Pork production, at 19.3 billion pounds, eclipsed the previous record high set a year earlier by 2%. Lamb and mutton production totaled 247 million pounds, falling 2% below the previous record low set a year ago.

Commercial cattle slaughter during 1999 totaled 36.1 million head, up 2% from 1998, with federal inspection comprising 98.2% of the total. The average live weight was 1,210 pounds, up 7 pounds from a year ago. Steers comprised 49.6% of the total federally inspected slaughter, heifers 32.8%, dairy cows 7.3%, other cows 8.5%, and bulls 1.8%. Commercial calf slaughter totaled 1.28 million head, down 12% from a year ago with 97.6% under federal inspection. The average live weight was 291 pounds, up 6 pounds from a year earlier.

Commercial hog slaughter totaled 101.5 million head, up 1% from 1998 with 98.2% of the hogs slaughtered under federal inspection. The average live weight was up 3 pounds from last year, at 259 pounds. Barrows and gilts comprised 96.3% of the total federally inspected slaughter. Commercial sheep and lamb slaughter, at 3.70 million head, was down 3% from 1998 with 96.1% comprised by federal inspection. The average live weight rose 1 pound from 1998 to 133 pounds.

There were 909 slaughtering plants under federal inspection on January 1, 2000, compared with 931 last year. Of these, 759 slaughtered at least one head of cattle during 1999 with 15 slaughtering over 55% of the total cattle killed. There were 728 plants that slaughtered hogs, with 12 accounting for over 50% of the total. Likewise, 9 of the 327 plants that slaughtered calves accounted for over 55% of the total and 2 of the 561 plants that slaughtered sheep or lambs in 1999 comprised nearly 40% of the total head.

February Red Meat Production

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during February, 2000, down 18% from February 1999 and down 13% from the previous month. Cattle slaughter totaled 1,800 head, 100 head less than a year ago. The average live weight, at 1,126 pounds, was up 8 pounds from last year.

During February, there were 1,300 hogs slaughtered, 1,700 less that a year ago. The average live weight, at 252 pounds was 23 pounds higher than last year. The number of sheep slaughtered, at 200 head was the same as the previous year. The average live weight increased a pound from last February to 127 pounds.

Commercial red meat production for the United States totaled 3.77 billion pounds in February, up 7% from the previous record high for February of 3.54 billion pounds produced in 1999. Beef production, at 2.17 billion pounds, was 9% above the previous year and 6% higher than the previous record high for February set in 1996. Cattle slaughter totaled 2.94 million head, up 8% from 1999. The average live weight was up 4 pounds from the previous year, at 1,225 pounds.

Veal production totaled 18.0 million pounds, 6% above February a year ago. Calf slaughter totaled 95 thousand head, down 5% from February 1999. The average live weight was 32 pounds above last year, at 318 pounds.

Pork production totaled 1.55 billion pounds, up 4% from the previous record high for February set last year. Hog kill totaled 8.07 million head, 2% above 1999. The average live weight was 2 pounds above the previous year, at 261 pounds.

Lamb and mutton production, at 20.0 million pounds, was equal to the previous record low for February set a year ago. Sheep slaughter totaled 293 thousand head, 2% below last year. The average live weight was 138 pounds, up 3 pounds from February a year ago.

January - February red meat production was 7.5 billion pounds, 2% higher than the comparable figure a year earlier. Accumulated beef production was 4% higher than last year, veal was 2% higher, pork was unchanged, and lamb & mutton was up 3%.

Montana and U.S. Farm Real Estate Values Up

The average value of farm real estate in Montana on January 1, 2000 was $300 per acre, up $4.00 from 1999. The average value of cropland dropped $3.00 to $458 per acre, compared with a year ago. The average value of irrigated cropland came in at $1,320, $10.00 more than a year ago while non-irrigated cropland fell $5.00 per acre to $335 per acre on January 1, 2000. Pasture average value per acre increased $5.00 to $205 per acre. Montana farm real estate values have been steadily increasing over the past five years.

U.S. farm real estate values, including all land and buildings, averaged $1,050 per acre on January 1, 2000, up 2.9% from January 1, 1999. The $30 per acre increase in farm real estate value during 1999 continued the climb that began in 1987. However, the 2.9% increase is the smallest percentage gain since 1992. The overall increase was slowed by cropland values which rose only 2.1% during 1999. Cropland values had been increasing recently by more than 5% a year.

The average value of cropland in the U.S. rose 2.1% to a value of $1,440 per acre. The largest percentage increases, at 7.6% and 7.5%, were in the Southeast and Lake Regions, respectively. While in the Corn Belt, cropland values began to show the impact of low commodity prices by decreasing 1.0%. Cropland values were highest in the Pacific region at $3,460 per acre and lowest in the Northern Plains at $668 per acre. Cropland values varied widely across States.

Pasture average value per acre for the U.S. increased 2.8%, to $517 per acre. The Mountain and Southern Plains accounting for half of the pastureland in the U.S. both showed increases close to 2%. Pasture values were highest in the Northeast Region, at $2,090 per acre, and lowest in the Northern Plains Region at $230 per acre.

Montana March Potato Stocks Up 2 Percent, U.S. Down 2 Percent

Montana potato producers held 2.70 million cwt. of potatoes in storage on March 1, up 2% from a year ago. The stocks represent 81% of the 1999 total production, compared with last year's stocks representing 83% of the 1998 total production.

Nationally, March 1, 2000 potato stocks totaled 170 million cwt, down 2% from a year ago and 3% below two years ago. Storage accounted for 40% of fall production, down 1 percentage point from a year ago.

U.S. disappearance from the start of harvest to March 1 totaled 251 million cwt this season, up slightly from last year and 5% above two years ago. February disappearance of 35.7 million cwt was 1% below last year and down 3% from two years ago. Seasonal shrink and loss of 25.7 million cwt was up 1% from last year and 20% above two years ago.

Processing of 1999 potato crop so far this season totaled 126 million cwt, down 2% from the 1998 crop but 6% above the 1997 crop. In February, processors used 19.6 million cwt of potatoes, up 1% from the last two years.

Western States held 126 million cwt of potatoes in storage on March 1, 2000, up 1% from last year but 2% below 1998. Oregon's stocks were up 22% from a year ago, but were mostly offset by a 5% decline in Washington and a 2% dip in Idaho. Stocks in the three Northwest States were up less than 1% from last year and accounted for 64% of U. S. stocks. Colorado's stocks were up 8% and Montana's were up 2%. California's potato stocks were up 13% from last year.

U.S. February Egg Production Up 6 Percent

U.S. egg production totaled 6.66 billion during February 2000, up 6% from the 6.28 billion produced in 1999. Production included 5.63 billion table eggs and 1.03 billion hatching eggs, of which 969 million were broiler-type and 60.0 million were egg-type. The total number of layers during February 2000 averaged 330 million, up 2% from the total average number of layers during February 1999. February egg production per 100 layers was 2,019 eggs, up 4% from 1,946 eggs in February 1999.

All layers in the U.S. on March 1, 2000, totaled 331 million, up 2% from a year ago. The 331 million layers consisted of 271 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.71 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 2000, averaged 69.5 eggs per 100 layers, down slightly from the 69.6 a year ago.

Laying flocks in the 30 major egg producing States produced 6.26 billion eggs during February, up 5% from February 1999. The average number of layers during February, at 310 million, was up 2% from a year earlier.

U.S. Cattle On Feed Up 9 Percent

Cattle and calves on feed for slaughter market in the United States with feedlot capacity of 1,000 or more head totaled 11.33 million head on March 1, 2000. The inventory was up 9% from the 10.42 million head on March 1, 1999 and 9% above March 1, 1998.

Placements in feedlots during February totaled 1.88 million, 4% above 1999 and 26% above 1998. Net placements were 1.80 million. During February, placements of cattle and calves weighing less than 600 pounds were 351,000, 600-699 pounds were 476,000, 700-799 pounds were 596,000, and 800 pounds and greater were 457,000.

Marketings of fed cattle during February totaled 2.05 million, 12% above 1999 and 11% above 1998.

Other disappearance totaled 78,000 during February, 20% above 1999 and 13% above 1998.

U.S. February Milk Production Up 8.2 Percent

Milk production in the 20 major States during February totaled 11.7 billion pounds, up 8.2% from production in these same States in February 1999. However, adjusting production for the additional day due to the leap year causes February milk production to be up 4.5% on a per day basis. January revised production, at 12.3 billion pounds was up 4.9 % from January 1999. The January revision represented an increase of 0.2% or 24 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,505 pounds for February, 101 pounds above February 1999 without adjusting for the extra day. The number of cows on farms in the 20 major States was 7.77 million head, 72,000 head more than February 1999 and 3,000 head more than January 2000.

1999 Montana Sheep and Lamb Losses

Montana sheep and lamb producers lost 64,000 animals to weather, predators, disease and other causes during 1999, representing a total value of more than $3.7 million. The total number of sheep and lambs lost dropped 4 percent from 1998 but the total value of inventory lost in 1999 increased 1 percent. Decreased losses are partially due to total sheep and lamb inventory dropping 8 percent from the previous year. Higher average market prices this past year resulted in the increased value of sheep and lambs losses. Sheep and lamb deaths amounted to 8.6 percent of the January 1 inventory and lambs born -- slightly more than the previous year.

Predators caused an estimated $1.1 million in losses in 1999, down slightly from the previous year. Losses due to predators amounted to 2.7 percent of the January 1 inventory and lambs born and 32 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 74 percent of the predator caused losses and 24 percent of all death losses in the state. The number of sheep and lambs lost to coyotes was 15,100 head, up 200 head from 1998. The value of losses attributed to coyotes was $0.8 million. The number of sheep and lambs lost to all predators totaled 20,300 head, down 1,500 head from last year. Lamb losses by all predators amounted to 16,500 head, down 7 percent from last year. The number of sheep lost to all predators totaled 3,800, down 300 head from a year ago.

The total value of non-predatory losses was $2.2 million in 1999, slightly less than the previous year. Non-predatory losses accounted for 58 percent of all losses. The largest non-predatory cause of losses were diseases at 12,400 head. Sheep lost to non-predatory factors totaled 12,000 head, 13 percent lower than 1998. Non-predatory lamb losses came in at 24,800 head, 100 head lower than a year ago.

More producers reported sheep and lambs lost to unknown causes. There was a 6 percent increase in the number of sheep and lambs lost to unknown causes from the previous year. Lambs lost to unknown causes totaled 4,700 head, 300 head higher than 1998. Unknown causes claimed 2,200 sheep, 100 more head than last year. The value of sheep and lambs lost to unknown causes rose to $0.4 million.

1/ Using average reported value for Ewes 1+. 2/ Lamb values equal to market year average price received for lambs multiplied by an average weight of 60 pounds per lamb. 3/ Totals may not add due to rounding. 4/ Not available. – Denotes less than 100 head.

U.S. March 1 Hog Inventory Down 3 Percent

U.S. inventory of all hogs and pigs on March 1, 2000, was 58.1 million head, down 3 percent from March 1999, and 2 percent below December 1, 1999.

Breeding inventory, at 6.22 million head, was down 5 percent from March 1, 1999, and down slightly from December 1, 1999. Market hog inventory, at 51.9 million head, was 3 percent below last year, and 2 percent below last quarter.

The December1999-February 2000 U.S. pig crop, at 24.8 million head, was 2 percent less than 1999, and 3 percent less than 1998. Sows farrowing during this period totaled 2.82 million head, 2 percent below last year. The sows farrowed during this quarter represented 45 percent of the breeding herd. The average pigs per litter rose to 8.79 pigs saved per litter for the December-February period, compared to 8.73 pigs last year. Pigs saved per litter by size of operation ranged from 7.50 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.87 million sows farrow during the March-May 2000 quarter, 4 percent below the actual farrowings during the same period in 1999, and 7 percent below 1998. Intended farrowings for June-August 2000, at 2.85 million sows, are 2 percent below the same period last year and 7 percent below 1998.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 31 percent of the total U.S. hog inventory, up from 30 percent last year.

The year-to-year relationships for December-February pig crop and sows farrowing was affected by an extra day in February 2000 due to leap year. This extra day increased the percent change from the previous year. For example, adjusting the pig crop to an average daily basis for the United States would indicate a December-February pig crop 3 percent below 1999.

1999 Crop Values

The value of Montana's 1999 all wheat crop fell 4% from 1998 to $492.8 million. Total production was down ten%, but the season average price increased 17 cents per bushel. The 1999 season average price for all wheat was $3.20 per bushel compared with $3.03 last season.

The estimated value of Montana's winter wheat crop fell 20% from the last year to $108.7 million. The preliminary season average price was up 15 cents to $2.95, but with 1999 production being the smallest since 1985 the overall crop value was reduced. Spring wheat's value of production was estimated at $351.0 million, up 4% from 1998. The season average price increased 12 cents to $3.25. Production for each of the last two years was 108.0 million bushels. Durum wheat's season average price increased 27 cents from 1998 to $3.50, but the total crop value of $33.1 million was down 15% from 1998 because production decreased 22% in 1999.

Total value of production for barley was estimated at $123.6 million, down 5% from the previous year. The 1999 season average price, at $2.15, was down 12 cents from 1998. Lower production in 1999 and lower average price resulted in the lower production value.

The season average price for all hay decreased $7.50 from last year to $64.50 per ton. Slightly higher production and the lower price reduced the value of production 10% to $317.6 million. Alfalfa hay's 1999 season average price was estimated at $65.50, down $7.50 from last year while other hay's season average price decreased $6.50 to $56.00.

Canadian & US January Cattle Inventory Down 1%

This release is a result of a joint effort by Statistics Canada and NASS to release the number of cattle and calves by class and calf crop for both countries within one publication. This information was requested by the U. S. cattle industry to provide producers additional information about potential beef supplies. U. S. inventory numbers were previously released on January 28, 2000.

All cattle and calves in the **U. S. and Canada combined** totaled 110.7 million head on January 1, 2000, 1% below a year earlier. All cows and heifers that have calved, at 48.0 million head, were slightly below the 48.2 million head on January 1, 1999. The combined calf crop was 43.9 million, down slightly from 44.1 a year earlier.

All cattle and calves in the **United States** as of January 1, 2000, totaled 98.0 million head, 1% below the 99.1 million head on January 1, 1999 and 2% below the 99.7 million head two years ago. All cows and heifers that have calved, at 42.7 million head, were slightly below the 42.9 million head on January 1, 1999 and 1% below the 43.1 million head two years ago. The U.S. calf crop was 38.7 compared with 38.8 in 1998.

All cattle and calves in **Canada** as of January 1, 2000, totaled 12.7 million head, 2% below the 12.9 million head on January 1, 1999 and 4% below the 13.2 million head two years ago. All cows and heifers that have calved, at 5.3 million head, were 1% below the 5.4 million head on January 1, 1999 and 3% below the 5.5 million head two years ago. The Canadian calf crop was 5.1 compared with 5.2 last year.

U.S. Cattle on Feed Up 10%

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.58 million head on February 1, 2000. The inventory was 10% above February 1, 1999 and 7% above February 1, 1998.

Placements in feedlots during January totaled 2.23 million, 15% above 1999 and 29% above 1998. Net placements were 2.16 million. During January, placements of cattle and calves weighing less than 600 pounds were 494,000, 600-699 pounds were 696,000, 700-799 pounds were 654,000, and 800 pounds and greater were 382,000. Marketings of fed cattle during January totaled 2.05 million, 1% above 1999 and 3% above 1998. Other disappearance totaled 69,000 during January, 1% below 1999 and 30% below 1998.

Alfalfa Seed Production for 1999

Alfalfa seed production for 1999 was estimated at 5.30 million pounds, up from the 4.95 million pounds produced in 1998. Harvested acreage at 20,000 acres was up from 18,000 acres in 1998. The state average yield was estimated at 265 pounds per acre, down from 275 pounds per acre a year ago. Irrigated yields averaged 404 pounds per acre, up from 375 pounds per acre in 1998 and non-irrigated yields averaged 95 pounds per acre, down 15 pounds per acre from last year.

Producers used an average of 1.1 gallons of leaf cutter bees per acre on all acres harvested for alfalfa seed in 1999, compared with 1.3 gallons per acre in 1998. Leaf cutter bees were used on 71% of the reported irrigated acres at the rate of 2.5 gallons per acre and 13% of the reported non-irrigated acres at the rate of 1.8 gallons per acre.

Proprietary varieties made up 85% of this year's production, up 25 points from 1998. Common uncertified varieties accounted for 15% of the production and common certified varieties represented less than 1%.

The average price received for the 1999 crop was $1.20 per pound, up 3 cents from 1998's average price.

See table on next page.

1/ Funded by the Alfalfa Seed Committee in cooperation with the Montana Department of Agriculture.

Montana Privately-Owned Grazing Rates Increased

The average grazing fees paid by Montana producers for grazing livestock on privately owned, non-irrigated grazing land were up for all methods in 1999. The average amount paid for grazing livestock on an AUM (animal unit month) basis was up 60 cents from 1998 to $13.20 per month. Cattle producers paid $15.00 per cow-calf pair in 1999, up 70 cents from the previous year. The average per head rate was $14.00 per month in 1999, up 70 cents from last year.

In the 17 States that estimate grazing fees in the United States, the average charge on an AUM basis was $11.10 per month in 1999, down 30 cents from the previous year. Cow-calf rates averaged $12.80 per month, down 20 cents and per head rates averaged $11.50 per month, down 10 cents from 1998.

All grazing fees are for privately, owned non-irrigated grazing land. Rates charged for public land, irrigated land, and harvested cropland were excluded. The average AUM rate also includes reported AUM rates plus reported cow-calf rates that were converted to an AUM basis. The cow-calf rate was converted to AUM basis using the following formula: (1 AUM=cow-calf *0.833).

Montana February Potato Stocks up 5%, U.S. down 2%

Montana potato producers held 3.0 million cwt. of potatoes in storage on February 1, up 5% from a year ago. The stocks represent 90% of the 1999 total production, the same percentage as last year's stocks.

The 15 major potato states held 206 million cwt, down 2% from a year ago and 3% below two years ago. Storage accounted for 49% of fall production, down 1 percentage point from a year ago. Stocks by type were 1% reds, 10% round whites, 3% long white (Shepodys), and 86% russets, with more russets but fewer reds than a year ago.

Disappearance in the 15 states from the start of harvest to February 1 totaled 215 million cwt this season, up 1% from last year and 7% above two years ago. January disappearance of 32.4 million cwt was 12% below last year and down 5% from two years ago. Shrink and loss of 23.4 million cwt was down 1% from last year but 21% above two years ago.

Processing of 1999 crop potatoes so far this season totaled 106 million cwt, down 3% from the 1998 crop but 7% above the 1997 crop. In January, processors used 15.6 million cwt of potatoes, down 17% from last year but 1% above two years ago.

Western States held 150 million cwt of potatoes in storage on February 1, 2000, up 1% from last year but 2% below 1998 Oregon's stocks were up 18% from a year ago, but were mostly offset by a 4% decline in Washington and a 1% dip in Idaho. Colorado's stocks were up 6% and Montana's were up 5%. California's potato stocks were up 10%.

1/ Stocks include processor holdings and seed to plant following year's crop. Seed usage in 1999 totaled 29.5 million cwt.

1999 Milk Cows, Farms and Production for Montana, U.S.

The inventory of milk cows on Montana farms averaged 18,000 head in 1999, unchanged from a year ago. The average milk production per cow as 16,833 pounds, up 4 percent from last year. A total of 303 million pounds of milk was produced in 1999, 12 million pounds more then 1998. There were 650 Montana operations with one or more milk cows in 1999, 50 fewer than a year ago.

U.S. milk cows totaled 9.16 million head, down slightly from 1998. The annual production of milk for the U.S. during 1999 was 162.7 billion pounds, 3.4 percent above 1998. This was the third consecutive year of increased milk production and a new record high. Production per cow in the U.S. averaged 17,771 pounds for 1999, 582 pounds above 1998. Average annual rate of milk production per cow has increased 20 percent since 1990. There were 111,220 operations with milk cows in the U.S. during 1999, a 5 percent decrease from the previous year.

U.S. January Milk Production Up 4.7 Percent

Milk production in the 20 major States during January totaled 12.2 billion pounds, up 4.7 percent from production in these same States in January 1999. December revised production, at 11.9 billion pounds was up 4.0 percent from December 1998.

Production per cow in the 20 major States averaged 1,576 pounds for January, 58 pounds above January 1999. The number of cows on farms in the 20 major States was 7.76 million head, 69,000 head more than January 1999 and 6,000 head more than December 1999.

January Egg Production Up 2 Percent

U.S. egg production totaled 7.15 billion during January 2000, up 2 percent from the 6.98 billion produced in 1999. Production included 6.06 billion table eggs and 1.09 billion hatching eggs, of which 1.02 billion were broiler-type and 65.0 million were egg-type. The total number of layers during January 2000 averaged 329 million, up 2 percent from the total average number of layers during January 1999. January egg production per 100 layers was 2,176 eggs, up 1 percent from 2,165 eggs in January 1999.

All layers in the U.S. on February 1, 2000 totaled 329 million, up 2 percent from a year ago. The 329 million layers consisted of 270 million layers producing table or commercial type eggs, 56.0 million layers producing broiler-type hatching eggs, and 2.69 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 2000, averaged 69.0 eggs per 100 layers, down slighlty from the 69.1 a year ago.

Hired Workers down 3 Percent, Wage Rates up 2 Percent from a Year Ago

There were 836,000 hired workers on the Nation's farms and ranches the week of January 9-15, 2000, down 3 percent from a year ago. There were 666,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 170,000 workers. Migrant workers accounted for 7.3 percent of the January hired workforce compared to 6.0 percent last year.

Farm operators paid their hired workers an average wage of $8.12 per hour during the January 2000 survey week, up 18 cents from a year earlier. Field workers received an average of $7.32 per hour, up 9 cents from last January. Livestock workers earned $7.64 per hour compared with $7.31 a year earlier. The Field and Livestock worker combined wage rate was up 18 cents from last year.

Hired farm worker wage rates were above a year ago in most regions. The largest increases occurred in the Northeast I and Corn Belt I regions. The higher wages were generally attributable to higher paid workers retained on the payroll during the winter months in these regions.

Regions showing declines in the hired farm worker wage rates were Mountain II , Appalachian I (North Carolina and Virginia), Appalachian II (Kentucky, Tennessee, and West Virginia), and Hawaii. Slight declines in the hired wage rates resulted from additional seasonal workers added to the payrolls in Mountain II; fewer higher paid, full-time workers reported in Appalachian I; and seasonal workers still stripping tobacco in Appalachian II.

Red Meat Production

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during January 2000, down 16 percent from last year, and 13 percent below than last month. Cattle slaughter, at 1,900 head was 200 head less than a year ago. The average live weight of 1,128 pounds increased 13 pounds from last year.

There were 2,000 head of hogs slaughtered in Montana during January, down 1,600 head from a year ago. The average live weight, at 256 pounds, was up 19 pounds from last year. Sheep slaughtered amounted to 300 head, compared with 200 slaughtered last January. The average live weight of 128 pounds was one pounds heavier than last year.

Commercial red meat production for the United States totaled 3.78 billion pounds in January 2000, down 1 percent from the 3.83 billion pounds produced last January. January 1999 contained 21 weekdays (including two holidays) and 5 Saturdays. January 2000 contained 21 weekdays (including one holiday) and 5 Saturdays (including one holiday). Beef production, at 2.18 billion pounds, was slightly above the previous year. Cattle slaughter totaled 2.94 million head, down 1 percent from1999. The average live weight was up 9 pounds from the previous year, at 1,229 pounds. Veal production totaled 17.0 million pounds, 2 percent below January a year ago and equal to the previous record low for January set in 1998. Calf slaughter totaled 93 thousand head, down 12 percent from January1999. The average live weight was 33 pounds above last year, at 311 pounds. Pork production totaled 1.57 billion pounds, down 4 percent from the previous year. Hog kill totaled 8.14 million head, 5 percent below 1999. The average live weight was 3 pounds above the previous year, at 262 pounds. Lamb and mutton production, at 19.0 million pounds, was up 7 percent from January 1999. Sheep slaughter totaled 282 thousand head, 5 percent above last year. The average live weight was 137 pounds, up 3 pounds from January a year ago.

Montana Jan. 1 Cattle & Calf Inventory Unchanged, US Down

Montana's cattle and calf inventory was 2.6 million head on January 1, 2000, unchanged from a year ago. While the total inventory was unchanged, the mix of cattle and calves in the inventory changed from 1999. The number of other heifers, steers and calves declined, while the number of beef cows, beef cow replacements, and bulls were up from last year.

The number of beef cows that had calved, at 1.582 million head, was up 2% from revised January 1, 1999 figure of 1.552 million head. The number of milk cows in the state remained steady at 18,000 head. Beef heifer replacements, weighing 500 pounds or more, were up 12% from the previous year to 380,000 head. Milk heifer replacements were the same as the previous year at 10,000 head. The number of other heifers weighing 500 lbs or more, decreased 20% from last year to 180,000 head. The large decrease in other heifers is attributed to more heifers being marketed during the year and more being retained as beef replacements. Since the number of beef heifer replacements includes beef heifers to calve in 2000 and 2001, producers decisions regarding how many beef heifers will actually be retained and be bred to calve in 2001 may change depending on market conditions during the upcoming year.

The number of steers weighing 500 lbs or more, dropped 6% from 1999 to 230,000 head. Calves weighing less than 500 lbs, at 95,000 head, were down 14% from last year's record low calf inventory of 110,000 head. Improved prices resulted in more steers, heifers, and calves being marketed during the year. Bulls weighing 500 pounds or more increased 5% to 105,000 head. The number of bulls in inventory ties the previous record high inventory set in 1974. The number of cattle and calves on full feed that will be sent directly to slaughter were unchanged from 1999 at 70,000 head.

During 1999, 1.570 million calves were born in Montana, up 3% from the revised 1998 calf crop of 1.520 million. The increased number of cows in inventory and favorable weather conditions during calving resulted in the higher calf crop.

The number of Montana operations with one or more head of cattle in the state dropped 500 operations in 1999 to 13,500. The decrease is a result of fewer operations with less than 500 head. The number of beef cow operations with one or more beef cows declined from 1998 to 12,300, while the number of operations with one or more milk cows declined to 650.

In the **U.S.**, the number of all cattle and calves on January 1, 2000, totaled 98.0 million head, 1% below the 99.1 million on January 1, 1999 and 2% below the 99.7 million two years ago. All cows and heifers that have calved, at 42.7 million, were slightly below the 42.9 million on January 1, 1999 and 1% below the 43.1 million two years ago. Beef cows, at 33.5 million, were down 1% from both January 1, 1999 and two years ago. Milk cows, at 9.19 million, were up 1% from January 1, 1999 but slightly below two years ago.

Other U.S. class estimates on January 1, 2000, and changes from January 1, 1999 and 1998, respectively, are as follows:
-- All heifers 500 pounds and over, 19.5 million, down 1% and down 1%.
-- Beef replacement heifers, 5.53 million, down slightly and down 4%.
-- Milk replacement heifers, 3.95 million, down 3% and down 1%.
-- Other heifers, 10.0 million, down 1% and slightly below two years ago.
-- Steers weighing 500 pounds and over, 16.7 million, down 1% and down 3%.
-- Bulls weighing 500 pounds and over, 2.29 million, up 1% and up 1 %.
-- Calves under 500 pounds, 16.8 million, down 3% and down 3%.
-- All cattle and calves on feed for slaughter, 14.0 million, up 6% and up 3%.

The 1999 U.S. calf crop was estimated at 38.7 million head, down slightly from 1998 and down 1% from 1997. Calves born during the first half of the year are estimated at 28.5 million, the same as 1998 but down slightly from 1997.

The number of operations with cattle totaled 1,095,960 during 1999, down 2% from 1998 and 5% below 1997. Beef cow operations in 1999 were down 1% from 1998 and 3% below 1997. Milk cow operations were 5% below last year and 10% below two years ago.

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys. Interviewers contacted about 2,000 Montana farmers and ranchers in early January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

U.S. Cattle on Feed Up 7%

Cattle and calves on feed for slaughter market in the U.S. for feedlots with capacity of 1,000 or more head totaled 11.46 million head on January 1, 2000. The inventory was 7% above January 1, 1999 and 3% above January 1, 1998. The inventory included 6.83 million steers and steer calves, up 6% from the previous year. This group accounted for 60% of the total inventory. Heifers and heifer calves accounted for 4.56 million head, up 10% from January 1, 1999.

Placements in feedlots during December totaled 1.65 million, 9% above 1998 and 6% above 1997. Net placements were 1.56 million. During December, placements of cattle and calves weighing less than 600 pounds were 465,000, 600-699 pounds were 498,000, 700-799 pounds were 422,000, and 800 pounds and greater were 261,000. Marketings of fed cattle during December totaled 1.84 million, 1% above 1998 and 5% above 1997. Other disappearance totaled 90,000 during December, 6% above both 1998 and 1997.

January 1, 2000 Sheep Inventory

Montana's sheep and lamb inventory set a new record low at 370,000 head on January 1, 2000, down 3 percent from last year. While the sheep and lamb inventory decreased, breeding ewe numbers increased over last year and the number of replacement lambs on hand January 1 decreased. Unstable prices and predators in 1999 were key factors in the continued decline.

Breeding sheep and lamb numbers decreased 5,000 head from last year to 340,000 head. Ewes one year and older were up 1 percent to 274,000 head. Rams one year and older at 9,000 head, were unchanged from the previous year. Replacement lambs at 57,000 head were down 9,000 head from a year ago. The 1999 lamb crop was 340,000 head, a drop of 4 percent from the 1998 lamb crop.

There were 30,000 market sheep and lambs on hand January 1. Only 2,000 head were market sheep. Of the 28,000 total market lambs, 7 percent weighed less than 65 pounds, 15 percent weighed 65-84 pounds, 52 percent were in the 85-105 pound category, and 26 percent were over 105 pounds. There were 1,900 sheep and lamb operations in Montana during 1999, 100 less than a year ago.

In the United States, all sheep and lamb inventory on January 1, 2000, totaled 7.03 million head, down 3 percent from 1999 and 10 percent below two years ago. Inventory has declined since 1942 when it reached a peak of 56.2 million head.

Breeding sheep inventory declined to 5.16 million head on January 1, 2000, down 3 percent from 5.30 million head on January 1, 1999. Ewes one year old and older, at 4.23 million head, were 2 percent below last year. The 1999 lamb crop of 4.72 million head was down 6 percent from 1998 to a new record low. The 1999 lambing rate was 109 per 100 ewes one year old and older on January 1, 1999, compared with 110 in 1998.

Market sheep and lambs on January 1, 2000, totaled 1.86 million head, down 3 percent from January 1, 1999. Market lambs comprised 96 percent of the total. Twenty-four percent were lambs under 65 pounds, 17 percent were 65 - 84 pounds, 26 percent 85 - 105 pounds, 29 percent were over 105 pounds, and 4 percent were market sheep. The number of U.S. operations with sheep during 1999 totaled 66,800, down 3 percent from 1998 and 8 percent from 1997.

Agricultural Prices Received for December

Crop prices for the full month of December 1999 were mostly lower compared with November 1999 prices. Montana winter wheat average price was $2.63 per bushel, down 13 cents from November's level; durum wheat was $3.70 per bushel, down 4 cents; spring wheat was 6 cents lower at $3.00 per bushel. Feed barley was $1.56 and malt barley was $2.70 per bushel.

The mid-January price for alfalfa hay was $66.00 per ton, up $1.00 from last month. Other hay, at $57.00 per ton, was unchanged from December's mid-month price. The mid-January winter wheat price averaged $2.70 per bushel, spring wheat was $2.90, feed barley was $1.55, and malt barley averaged $2.70.

Livestock prices for the full month of December were mostly higher. Steer and heifer prices increased $1.60 to $86.20 per cwt. Cows were up $1.50 to $35.00 and the average price for calves was up $3.50 to95.80 per cwt. Sheep prices increased $3.80 to $32.80 per cwt, and lamb prices increased $4.50 to $86.50 per cwt. Milk prices were down $4.50 from last month at $12.70 per cwt. Steer and heifer prices for mid-January averaged $87.10 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $2.27, down 15 cents; spring wheat was $2.87, down 8 cents; the all barley price was $2.24, up 9 cents; and steer and heifer prices were $70.80, down 10 cents.

The U.S. mid-January winter wheat price was $2.35 per bushel, spring wheat was $2.82 per bushel, all wheat was $2.52 per bushel, and all barley was $2.19. Steer and heifer prices were $70.70 per cwt, cow prices were $35.20, all hog prices were $36.30 per cwt, and all egg prices were 58.0 cents per dozen.

The preliminary All Farm Products Index of Prices Received in January was 90 based on 1990-92=100, down 2 points (2.2 percent) from the December index. Lower prices for broilers, milk, turkeys, and tomatoes more than offset price increases for corn, lettuce, soybeans, and cotton. The seasonal change in the mix of commodities farmers sell also affects the overall index. Lower seasonal marketings of cotton, tobacco, grapes, and cottonseed more than offset the relatively higher marketings of corn, soybeans, cattle, and rice. These marketing changes account for one point of the January index decrease.

Compared with January 1999, the All Farm Products Index was 7 points (7.2 percent) lower. Price decreases from January 1999 for milk, soybeans, cotton, and corn more than offset price increases for cattle, hogs, lettuce, and apples.

United States Index Summary

1999 Wool Production

Montana wool growers produced 3.2 million pounds of wool during 1999, down 7 percent from 1998. The 1999 average price per pound of wool decreased 28 cents to 50 cents per pound, causing the value of all wool produced to decrease 40 percent for a total value of $1.6 million dollars. The total head shorn decreased 8 percent from 1999 to 336,000 head. The average fleece weight increased from 9.3 pounds in 1998 to 9.5 pounds in 1999.

Shorn wool production in the United States during 1999 was 46.5 million pounds, down 5 percent from 1998. Sheep and lambs shorn totaled 6.15 million head, a decrease of 4 percent from 1998. The average price paid for wool sold in 1999 was $0.38 per pound, compared to $0.60 in 1999. The total wool value of $17.9 million dollars was down 39 percent from $29.4 million dollars in 1998.

Chicken Inventory and Egg Production Up

There were 410,000 total chickens on Montana farms and ranches on December 1, 1999, compared with 380,000 on hand last year. The December 1, 1999 inventory included 290,000 layers 20 weeks old and older, 44,000 pullets between 13 and 20 weeks old, and 75,000 pullets 13 weeks and under. The total value of all chickens on December 1, 1999 was $1.2 million, up 8% from the previous December. The average value per bird, at $2.90, remained unchanged from last year.

Montana chickens produced 94 million eggs during the year ending November 30, 1999, up 12% from last year. The state had an average of 290,000 layers in 1999, unchanged from a year ago. The average production per layer on hand was 324 eggs, up 12% from the previous year.

The U.S. total number of chickens on hand on December 1, 1999 (excluding commercial broilers) was 436 million birds, up 3% from last year. Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 1999, totaled 368 million, up 2% from December 1, 1998. Of the 368 million potential layers, 90% were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks.

U.S. egg production during the year ending November 30, 1999 totaled a record high 82.7 billion eggs, up 4% from the previous year's total of 79.7 billion eggs. Table egg production, at 69.8 billion eggs, increased 4% from 1998. Hatching egg production, at 12.9 billion eggs, increased 4%. U.S. layer numbers during 1999 averaged 322 million, up 3% from the year earlier. The annual average production per layer on hand in 1999 was 257 eggs, compared with the 1998 average of 255 eggs per layer.

The total value of all chickens on December 1, 1999 was $1.15 billion, up 1% from December 1,1998. The average value decreased from $2.69 per bird on December 1, 1998, to $2.65 per bird on December 1, 1999.

Small Grains

Montana's 1999 **winter wheat** production was estimated at 36.86 million bushels, down 24% from 1998 and the lowest production since the severe drought of 1985. Producers harvested 970,000 acres, down 280,000 acres from 1998. The 1999 average yield was 38 bushels per acre, which is one bushel lower than last year's average.

Nationally, the 1999 winter wheat crop production was estimated at 1.70 billion bushels, down 10% from 1998. The U.S. yield is estimated at 47.8 bushels per acre; a new record high average, nearly a bushel better than last year's former record. Acreage for grain was estimated at 35.6 million acres, down 11% from last year. This is the smallest harvested area since 1972.

Montana's 1999 **spring wheat** production was estimated at 108 million bushels, unchanged from 1998. The 1999 and 1998 productions are tied for the third largest crop on record behind only 1995 and 1997 productions. The seeded acreage was 4.15 million acres, 350,000 acres greater than 1998. Producers harvested 4.0 million acres, 400,000 acres more than a year earlier. Yields averaged 27 bushels per acre, down 3 bushels from 1998, in part due to lack of precipitation in many areas of the state.

U.S. spring wheat production in 1999 was estimated at 503 million bushels, 5% less than 1998. Harvested area was 14.8 million acres, down 3% from last year. The U.S. yield was 34.1 bushels per acre, nearly a bushel less than last season.

Montana's **durum wheat** production for 1999 was estimated at 9.45 million bushels, down 22% from 1998. Harvested acreage was estimated at 350,000, down 80,000 acres from last year. The average yield was 27.0 bushels per acre, down one bushel from 1998. The planted and harvested acreage was lowered by 40,000 acres from the September small grains summary.

U.S. durum wheat production for 1999 totaled 99.3 million bushels, down 28% from last year. Grain area now totals 3.57 million acres, 4% less than a year ago. The U.S. yield was forecast at 27.8 bushels per acre, 9.2 bushels per acre below 1998.

Montana's **barley** planted acreage for 1999 has decreased to 1.3 million acres, 50,000 acres less than 1998. Producers harvested 1.15 million acres, also 50,000 acres less than were harvested for grain in 1998. Yields averaged 50 bushels per acre, up 2 bushels from last year. Production was estimated at 57.5 million bushels, nearly unchanged from last year.

U.S. barley production for 1999 is estimated at 282 million bushels, down 20% from the previous crop year. Average yield per acre, at 59.2, was down 0.9 bushels from 1998. The area harvested for grain was estimated at 4.76 million acres, 19% less than 1998.

Montana's **oats** production for 1999 is estimated at 3.22 million bushels, nearly unchanged from 1998. Planted acreage was estimated at 170,000 acres, 30,000 acres higher than last year. Harvested acreage was set at 70,000 acres, up 10,000 from 1998. Yields averaged 46.0 bushels per acre, 8 bushels below last year.

U.S. oats production for the 1999 crop year is estimated at 146.2 million bushels, 12% smaller than the 1998 production. This is the lowest production since records were first kept in 1866. The estimated yield, at 59.6 bushels per acre, is below last year's 60.2 bushel yield. Area harvested and to be harvested for grain in 1999 is 2.45 million acres, 11% below 1998. This is the smallest acreage harvested for grain on record.

Montana Quarterly Milk Production and U.S. December Milk Production Up

During the October-December quarter, Montana milk cows produced 76 million pounds of milk, 3 million pounds more than the same quarter a year ago. Montana milk cow numbers, at 18,000 head were unchanged from a year ago.

Milk production in the 20 major States during December totaled 11.9 billion pounds, up 3.8% from production in these same States in December 1998. November revised production, at 11.3 billion pounds, was up 4.5% from November 1998. The November revision represented an increase of 0.1% or 11 million pounds from last month's preliminary production estimate.

Production per cow in the 20 major States averaged 1,536 pounds for December, 47 pounds above December 1998. The number of cows on farms in the 20 major States was 7.76 million head, 52,000 head more than December 1998 and 2,000 head more than November 1999.

During the October-December period, milk produced in the U.S. was 40.4 billion pounds, 3.8% above the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 9.18 million head, 41,000 head more than the same period last year.

Montana Annual Crop Summary, 1996-99 1/

Crop	Year	Acreage		Yield Per Acre	Total Production	Market Year Avg. Price	Value of Production	U.S. Production

Montana and U.S. Red Meat Production Down

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during December 1999, down 24 percent from last year, but 3 percent higher than last month. Cattle slaughter, at 1,700 head was 400 head less than a year ago. The average live weight of 1,180 pounds increased 42 pounds from last year.

There were 1,800 head of hogs slaughtered in Montana during December, down 1,400 head from a year ago. The average live weight, at 252 pounds, was up 23 pounds from last year. Sheep slaughtered amounted to 200 head, half of the number slaughtered last December. The average live weight of 122 pounds was four pounds lighter than last year.

Commercial red meat production for the United States totaled 3.86 billion pounds in December, down 2 percent from the 3.94 billion pounds produced in December 1998. Beef production, at 2.11 billion pounds, was 1 percent above the previous year and slightly above the previous record high for December set in 1976. Cattle slaughter totaled 2.88 million head, down 1 percent from 1998. The average live weight was up 11 pounds from the previous year, at 1,225 pounds.

Veal production totaled 21.0 million pounds, 6 percent below the previous record low for December set a year ago. Calf slaughter totaled 113 thousand head, down 13 percent from December 1998. The average live weight was 25 pounds above last year, at 303 pounds.

Pork production totaled 1.70 billion pounds, down 5 percent from the previous year. Hog kill totaled 8.89 million head, 6 percent below 1998. The average live weight was 1 pound above the previous year, at 261 pounds.

Lamb and mutton production, at 24.0 million pounds, was up 1 percent from December 1998. Sheep slaughter totaled 356 thousand head, slightly above last year. The average live weight was 135 pounds, up 3 pounds from December a year ago.

January - December red meat production was 46.1 billion pounds, 2 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 10 percent, pork was up 2 percent and lamb & mutton was down 2 percent.

Montana January Potato Stocks up 5 Percent, U.S. down 3 Percent

Montana potato producers held 3.12 million cwt. of potatoes in storage on January 1, up 5 percent from a year ago. The stocks represent 94 percent of the 1999 total production, compared with last year's stocks which also represented 94 percent of the 1998 total production.

The 15 major potato States held 238 million cwt of potatoes on January 1, 2000, down 3 percent from the last two years. Storage accounted for 57 percent of 1999 fall production, one percentage point below last year. Stocks by type were 2 percent red, 11 percent round white, 4 percent long white (Shepody) and 83 percent russet; with more russets, and fewer whites than a year ago.

Disappearance in the 15 States from the start of harvest to January 1, 2000 was a record high 182 million cwt, up 3 percent from the same period last year and slightly above the previous record high in 1996. December's disappearance set a new record 36.2 million cwt, 4 percent more than a year ago. Shrink and loss jumped to 21.1 million cwt this season, down 3 percent from 1998, but 22 percent above two years ago. December losses, at 3.89 million cwt, reflect heavy clean-up in the north-central States.

Processors used 90.3 million cwt of 1999 crop potatoes so far this season, up fractionally from a year ago and 8 percent above two years ago. December usage was 15.7 million cwt, down 1 percent from last year's record high, but 3 percent above 1997.

Western States held 170 million cwt of potatoes in storage on January 1, 2000, down 1 percent from a year ago and 2 percent below two years ago. Colorado and Montana were up 5 percent each and Oregon stored 17 percent more potatoes this year than last. Idaho's stocks were off 3 percent and Washington's were down 6 percent.

U.S. Cattle on Feed Up 7 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.46 million head on January 1, 2000. The inventory was 7 percent above January 1, 1999 and 3 percent above January 1, 1998. The inventory included 6.83 million steers and steer calves, up 6 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.56 million head, up 10 percent from January 1, 1999.

Placements in feedlots during December totaled 1.65 million, 9 percent above 1998 and 6 percent above 1997. Net placements were 1.56 million. During December, placements of cattle and calves weighing less than 600 pounds were 465,000, 600-699 pounds were 498,000, 700-799 pounds were 422,000, and 800 pounds and greater were 261,000.

Marketings of fed cattle during December totaled 1.84 million, 1 percent above 1998 and 5 percent above 1997.

Other disappearance totaled 90,000 during December, 6 percent above both 1998 and 1997.

Cattle on Feed in Historic 7 States Up 8 Percent

Cattle on feed January 1, 2000, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.73 million, up 8 percent from the previous year and 3 percent above January 1, 1998. The inventory included 5.76 million steers and steer calves, up 6 percent from the previous year. This group accounted for 59 percent of the total inventory. Heifers and heifer calves accounted for 3.93 million head, up 11 percent from January 1, 1999.

Placements in feedlots during December totaled 1.41 million, 13 percent above 1998 and 8 percent above 1997.

Marketings during December totaled 1.60 million, 2 percent above 1998 and 7 percent above 1997.

Other disappearance during December was 75,000 head, up 9 percent from 1998 and 10 percent above 1997.

Winter Wheat Seeding for Harvest in 2000

In the fall of 1999 Montana producers seeded 1.5 million acres of winter wheat, 450,000 acres more than the small acreage seeded the previous year. During the last 10 years producers planted an average of about 2.0 million acres, so the acreage for harvest in 2000 is 25 percent below this average.

Precipitation has been below normal since October 1999 in nearly all of the winter wheat production areas of the state. A lack of snow cover is also a concern to producers. As of January 3, the winter wheat condition was rated at 11 percent poor, 57 percent fair, 30 percent good, and 2 percent excellent.

Nationally, winter wheat seeded area for 2000 is expected to total 42.9 million acres, down 1 percent from 1999. This is the smallest seeded area since 1972. Approximate class breakdowns are: Hard Red Winter, 30.3 million; Soft Red Winter, 9.2 million; White Winter, 3.4 million.

Most HRW states have planted less wheat. Montana and South Dakota are notable exceptions; New Mexico and North Dakota also have increased. Dry conditions have plagued growers from Texas to Nebraska. Extreme dryness has covered much of Texas since August, particularly in the eastern half of the State. Considerable acreage was either dry planted or not planted at all. Lack of moisture stressed wheat across Oklahoma, especially in the southern half of the State.

Late Season Crops

Montana producers harvested 18,000 acres of **corn for grain** in 1999, unchanged from last year's estimate. The average yield was 110.0 bushels per acre, down 5 bushels from last year. Production decreased 4 percent from 1998 to 1.98 million bushels. **Corn for silage** acreage was estimated at 45,000 acres, up 4,000 acres from 1998. Yields averaged 20 tons per acre, down one ton from a year ago.

Nationally, corn for grain production was estimated at 9.44 billion bushels, down 3 percent from the 1998 crop and down 1 percent from the November 1 forecast. The 1999 production ranks as the fourth highest production on record behind the 1994, 1998, and 1992 respective crop years. The U. S. yield of 133.8 bushels per acre, was down 0.6 bushel from last year. Corn silage production was estimated at 96.2 million tons, 1 percent higher than 1998. Yield declined to 15.9 tons per acre, down 0.2 ton from 1998.

Sugar beet producers in Montana harvested an estimated 61,700 acres in 1999, down 700 acres from a year ago. Yields increased 1.2 tons from last year to average 23.8 tons per acre. Total production was estimated at 1.47 million tons, up 4 percent from the previous year, setting a new production record.

U.S. production for sugar beets is estimated at a record high 33.3 million tons, 2 percent above the previous record established in 1998. Growers in the 12 sugar beet producing States planted 1,562,700 acres, 4 percent more than 1998, and harvested 1,527,100 acres, 5 percent more than last year and the highest since 1,540,500 acres were harvested in 1969. The estimated yield is 21.8 tons per acre, 3 percent below the 1998 yield of 22.5 tons.

Fall potato production in Montana totaled 3.33 million cwt, up 5 percent from last year. Producers harvested 10,900 acres compared with 10,600 in 1998. Yields increased 5 cwt per acre from a year ago to 305 cwt.

Total U.S. 1999 potato production from all four seasons is estimated at 478 million cwt, up less than 1 percent from 1998 but 2 percent above 1997. Harvested area, at 1.33 million acres, was down 4 percent from 1998. Average yield of 359 cwt per acre was up 16 cwt from the previous year.

All hay harvested in Montana was up 100,000 acres from last year at 2.6 million acres. All hay production was 5.055 million tons, up 1 percent or 35,000 tons from a year ago. **Alfalfa hay** harvested acreage was 1.65 million acres, down 50,000 acres from last season. The average yield was 2.2 tons per acre, which is unchanged from last year. **Other hay** harvested acreage was 950,000, up 150,000 acres from 1998. The average yield was 1.5 tons per acre compared with 1.6 tons per acre last year.

U.S. all hay production for 1999 was estimated at 159 million tons, down slightly from the October 1 forecast but up 5 percent from the 1998 total. Acreage harvested, at 63.2 million acres, is up slightly from the October forecast and up 5 percent from 1998. The average yield, at 2.52 tons per acre, was down 0.08 tons from the October forecast and down slightly from the previous year.

Montana **hay stocks** were estimated at 4.45 million tons on December 1, down 3 percent from last year. Montana hay growers seeded an estimated 200,000 acres of alfalfa during 1999, 70,000 acres more than last year. New seedings include those mixed with a nurse crop, other forage, or direct seedings. At the U.S. level 3.44 million acres of alfalfa was newly seeded in 1999.

Pulse Crops

Montana's **dry bean** growers produced an estimated 441,000 cwt in 1999, up 91,000 cwt from 1998. Growers harvested 25,500 acres with a yield of 17.3 cwt per acre compared with last year's 16,000 acres harvested with a yield of 21.9 cwt per acre.

U.S. production of dry edible beans is estimated at 33.2 million cwt for 1999, 9 percent above 1998 and 13 percent above two years ago. Area for harvest is estimated at 1.88 million acres, down 2 percent from 1998 but 7 percent above 1997. Average yield, at 1,770 pounds per acre, increased 184 pounds from 1998.

Pinto bean production for Montana in 1999 is estimated to be 296,000 cwt, which is 12 percent above last year's estimate. Harvested acreage, at 13,200, is 10 percent higher than the previous year. The yield is estimated at 2,240 pounds per acre, 40 pounds more than last year.

U.S. production of pinto beans in 1999 is estimated at 10.8 million cwt, which is 25 percent below 1998 and 1 percent below two years ago. Area for harvest is estimated at 644,900 acres, down 30 percent from 1998 and 9 percent below 1997. Average yield, at 1,681 pounds per acre, increased 109 pounds from 1998.

Montana's second production estimate for **garbanzo beans** was 133,000 cwt for 1999, which is 58 percent higher than last year. Harvested area is estimated at 11,800 acres, up 8,000 from last year. The yield is estimated at 1,130 pounds per acre, down from last year's estimate of 2,210 pounds per acre.

U.S production of garbanzo beans in 1999 is estimated 740,000 cwt, which is 77 percent higher than last year.

December 1, 1999 Grain Stocks

All wheat stocks in Montana on December 1, 1999 totaled 161.8 mil. bu., up 1 percent from December 1, 1998. Stocks stored on the farm accounted for 139.0 mil. bu. of the total with the remaining 22.8 mil. bu. stored off farm. All spring wheat stocks, at 122.8 mil. bu., were up 13 percent from last year and accounted for 76 percent of the total wheat stocks. Winter wheat stocks were estimated at 38.9 mil. bu., down from 52.2 mil. bu. last year. Durum wheat stocks were estimated at 12.6 mil. bu., up 34 percent from last year. All wheat disappearance for the September - November quarter was 29.0 mil. bu., compared with 41.2 million for the same quarter last year. Barley stocks in all positions on December 1, 1999 totaled 40.7 mil. bu., up 2 percent from a year ago. Oats stocks in all positions were estimated at 2.89 mil. bu., up 6 percent from last year.

September 1, 1999 all wheat stocks were revised to190.8 mil. bu., down 2.1 mil. bu. from the previous estimate. All spring wheat on-farm stocks were reduced by 2.0 mil. bu. to 124.0 million and off-farm stocks were reduced 100,000 bushels to 18.9 mil. bu.. Barley stocks were also revised to 56.3 mil. bu., 300,000 above the previous estimate. Oats stocks were revised to 3.05 mil. bu., down 25,000 from the previous estimate.

Agricultural Prices Received for November

Crop prices for the full month of November 1999 were mostly higher compared with October 1999 prices, according to Montana Agricultural Statistics Service. Montana winter wheat average price was $2.76 per bushel, down 6 cents from October's level; durum wheat was $3.74 per bushel, up 62 cents; spring wheat was 11 cents higher at $3.06 per bushel. Feed barley was $1.56 and malt barley was $2.64 per bushel.

The mid-December price for alfalfa hay was $65.00 per ton, down $1.00 from last month. Other hay, at $57.00 per ton, was $1.00 lower than November's mid-month price. The mid-December winter wheat price averaged $2.70 per bushel, spring wheat was $2.90, feed barley was $1.50, and malt barley averaged $2.70.

Livestock prices for the full month of November were also mostly higher. Steer and heifer prices increased $1.90 to $84.60 per cwt. Cows were down 40 cents to $33.50 but the average price for calves was up $1.90 to $92.30 per cwt. Sheep prices increased $4.80 to $29.00 per cwt, and lamb prices increased $7.40 cents to $82.00 per cwt. Milk prices were up 70 cents from last month at $17.20 per cwt. Steer and heifer prices for mid-December averaged $86.10 per cwt.

Nationally, prices for November and changes from October were as follows: winter wheat was $2.42, down 5 cents; spring wheat was $2.95, up 15 cents; the all barley price was $2.15, up 19 cents; and steer and heifer prices were $70.90, up 80 cents.

The U.S. mid-December winter wheat price was $2.18 per bushel, spring wheat was $2.82 per bushel, all wheat was $2.43 per bushel, and all barley was $2.14. Steer and heifer prices were $70.80 per cwt, cow prices were $34.70, all hog prices were $35.40 per cwt, and all egg prices were 61.3 cents per dozen.

The preliminary All Farm Products Index of Prices Received in December was 91 based on 1990-92=100, down 2 points (2.2 percent) from the November index. Lower prices for milk, soybeans, wheat, and oranges more than offset price increases for lettuce, hogs, calves, and corn. The seasonal change in the mix of commodities farmers sell also affects the overall index. Lower seasonal marketings of cattle, grapes, soybeans, and corn more than offset the relatively higher marketings of tobacco, wheat, milk, and broilers. These marketing changes account for about one-half point of the December index decrease.

Compared with December 1998, the All Farm Products Index was 7 points (7.1 percent) lower. Price decreases from December 1998 for milk, cotton, soybeans, and corn more than offset price increases for hogs, cattle, lettuce, and apples.

Pulse Crops (Continued)

Harvested area is estimated at 55,800 acres, which is almost double last year's acres. Average yield, at 1,326 pounds per acre, decreased 167 pounds from 1998

Dry peas production for 1999 in Montana is estimated at 663,000 cwt. Planted and harvested acreage is estimated at 50,000 and 39,000 acres, respectively. Average yield is set at 17.0 cwt per acre.

Production of dry peas in Idaho, Montana, Nevada, North Dakota, Oregon, and Washington in 1999 is estimated at 5.03 million cwt, down 15 percent from 1998 and down 13 percent from two years ago. Harvested acres were equal to or less than 1998 harvested acres for every state except Washington, which increased 2,000.

Montana's 1999 production of **lentils** is estimated at 208,000 cwt. Planted area is estimated at 19,000 acres and harvested acres are set at 16,000 acres. The average yield is estimated to be 13.0 cwt per acre.

Production of lentils in Idaho, Montana, North Dakota, and Washington for 1999 is estimated at 2.39 million cwt, up 23 percent from the 1998 crop but down 1 percent from two years ago. Planted and harvested acreage are above last year in both Idaho and Washington. Harvested area is estimated at 174,500 acres, 16,000 acres more than 1998, but 8,500 below two years ago. Average yield per acre, at 1,368 pounds, is 145 pounds above last year and 53 pounds above 1997.

Oilseeds

Montana's **flaxseed** production for 1999 is estimated to be 328,000 bushels. Planted and harvested acreage estimates are 21,000 and 20,500, respectively. The average yield is set at 16.0 bushels per acre.

Production of **mustard seed** in Montana during 1999 is estimated at 17.85 million pounds. Farmers planted 21,500 acres and harvested 21,000 acres. Yields averaged 850 pounds per acre.

U.S. mustard seed production, at 48 million pounds was 41 percent below the previous year. Mustard seed harvested area is estimated at 58,800 acres with an average yield of 816 pounds per acre, 39 pounds below 1998.

Montana **canola** growers planted 60,000 acres in 1999 and havested 58,000 acres with average yields of 1,200 pounds per acre. Total production is estimated at 69.6 million pounds.

U.S. canola production in 1999, at 1.36 billion pounds, down 12 percent from 1998. Nationally, harvested acres for canola, at 1.04 million acres, decreased 3 percent from 1998 but is still the second largest acreage on record behind 1998. Harvested yields for canola averaged 1,306 pounds and were 142 pounds below the 1998 yield.

Growers produced an estimated 33.15 million pounds of **safflower** in Montana for 1999, planting 41,000 acres and harvested 39,000 acres with an average yield of 850 pounds per acre.

U.S. safflower production, at 405 million pounds, decreased 2 percent below 1998. Safflower growers across the country planted an estimated 275,000 acres, a decrease of 9 percent from 1998. Safflower harvested area is estimated at 262,000 acres, down 8 percent. The yield for safflower, at 1,545 pounds per acre, was 99 pounds above the previous year.

Montana's 1999 **all sunflower** production estimate was set at 6.1 million pounds this year. Planted and harvested acreage estimates are 7,800 and 7,100, respectively. The average yield is estimated at 858 pounds per acre.

Nationally, 1999 sunflower production totaled 4.34 billion pounds, 18 percent below the 1998 production but 18 percent above 1997. The estimated yield per acre at 1,262 pounds, decreased 248 pounds from the record yield set in 1998. Planted area at 3.55 million acres was down fractionally from 1998 but 23 percent above the 1997 acreage. Harvested acres at 3.44 million acres decreased 1 percent.

Ag Economic Surveys

U.S. Cattle on Feed Up 6 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.75 million head on December 1, 1999. The inventory was 6 percent above December 1, 1998 and 3 percent above December 1, 1997.

Placements in feedlots during November totaled 2.17 million, 5 percent above 1998 but 2 percent below 1997. Net placements were 2.09 million. During November, placements of cattle and calves weighing less than 600 pounds were 766,000, 600-699 pounds were 657,000, 700-799 pounds were 416,000, and 800 pounds and greater were 331,000.

Marketings of fed cattle during November totaled 1.80 million, 5 percent above 1998 and 7 percent above 1997. Other disappearance totaled 83,000 during November, 6 percent above 1998 but 2 percent below 1997.

November Red Meat Production

Montana slaughter plants produced 1.5 million pounds, dressed weight of red meat during November, down 21 percent from November 1998, and down 7 percent from the previous month. Cattle slaughter totaled 1,700 head, 300 head less than a year ago. The average live weight, at 1,077 pounds, was down 49 pounds from last year.

During November, there were 2,200 hogs slaughtered, 900 head less than a year ago. The average live weight, at 251 pounds, was up 22 pounds from a year ago. The number of sheep slaughtered, at 200 head, was 100 head lower than a year ago. The average live weight decreased 1 pound from last year to 126 pounds.

Commercial red meat production for the United States totaled 3.89 billion pounds in November, up 4 percent from the previous record high for November set in 1995 and up 5 percent from the 3.72 billion pounds produced in November 1998. Beef production, at 2.15 billion pounds, was 2 percent above the previous record high for November set in 1995 and 7 percent above the previous year. Cattle slaughter totaled 2.94 million head, up 6 percent from 1998. The average live weight was up 5 pounds from the previous year, at 1,216 pounds.

Veal production totaled 19 million pounds, 2 percent below the previous record low for November set a year ago. Calf slaughter totaled 104 thousand head, down 7 percent from November 1998. The average live weight was 15 pounds above last year, at 300 pounds.

Pork production totaled 1.71 billion pounds, up 1 percent from the previous record high for November set last year. Hog kill totaled 8.90 million head, 1 percent above 1998. The average live weight was 1 pounds above the previous year, at 262 pounds.

Lamb and mutton production, at 22 million pounds, was up 12 percent from November 1998. Sheep slaughter totaled 329 thousand head, 10 percent above last year. The average live weight was 132 pounds, up 2 pounds from November a year ago.

January - November red meat production was 42.3 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 11 percent, pork was up 2 percent and lamb & mutton was down 3 percent.

November Milk Production Up 4.4 Percent

Milk production in the 20 major States during November totaled 11.3 billion pounds, up 4.4 percent from production in these same States in November 1998. October revised production, at 11.6 billion pounds was up 4.0 percent from October 1998. The October revision represented a decrease of 0.3 percent or 29 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,458 pounds for November, 51 pounds or 3.6 percent above November 1998. The number of cows on farms in the 20 major States was 7.76 million head, 58,000 head more than November 1998 and 7,000 head more than October 1999.

November Egg Production Up 4 Percent

U.S. egg production totaled 7.02 billion during November 1999, up 4 percent from the 6.72 billion produced in 1998. Production included 5.96 billion table eggs and 1.06 billion hatching eggs, of which 997 million were broiler-type and 61.0 million were egg-type. The total number of layers during November 1999 averaged 328 million, up 3 percent from the total average number of layers during November 1998. November egg production per 100 layers was 2,139 eggs, up 1 percent from 2,109 eggs in November 1998.

PLEASE RETURN

Montana Potato Production Up 5 Percent, December 1 Stocks Up 6 Percent

Montana potato growers produced 3,325,000 cwt of potatoes in 1999, 5 percent more than last year. The 1999 acreage was up 400 acres from last year and the average yield was 5 cwt more. There were 10,900 acres harvested with an average yield of 305 cwt per acre compared with 10,600 acres and an average yield of 300 cwt in 1998.

Producers held 3,220,000 cwt in storage on December 1, 6 percent more than stocks on hand a year earlier. December 1 stocks represented 97 percent of the 1999 production, 1 percent more than last year.

The 15 major potato States held 275 million cwt of potatoes on December 1, 1999, down 2 percent from last year and 1 percent below 1997. Storage accounted for 65 percent of 1999 fall production, 1 percentage point below last year. Stocks by type were 2 percent red, 12 percent round white, 5 percent long white (Shepody) and 81 percent russet; with fewer russets, and more round whites than a year ago.

Disappearance in the 15 States from the start of harvest to December 1, at 146 million cwt of potatoes, was up 2 percent from the same period last year and 8 percent more than two years ago. Shrink and loss, at 17.2 million cwt so far this year, was down 13 percent from losses in 1998, but up 12 percent from two years ago.

Processors used 74.6 million cwt of 1999 crop potatoes so far this season, up 1 percent from a year ago and 9 percent above two years ago.

Western States held 193 million cwt of potatoes in storage on December 1, fractionally below a year ago and 1 percent below two years ago. California and Oregon stored 14 percent more potatoes this year than last. Colorado gained 3 percent and Montana increased 6 percent. Idaho's stocks fell 4 percent and Washington's were off 2 percent.

Total U.S. production of fall potatoes for 1999 is forecast at 429 million cwt, down 1 percent from last year but up 1 percent from 1997. Area harvested, at 1.17 million acres, is down 4 percent from last year and 2 percent below two years ago. The average yield is 368 cwt per acre, a jump of 12 cwt from last year and 11 cwt above two years ago. Since the November forecast, additional acres have been lost in the Red River Valley of Minnesota and North Dakota from heavy rains before and during harvest. The Idaho acreage was trimmed 1 percent. Summer drought hurt potatoes in New York and Pennsylvania and caused scattered damage in Ohio, Indiana and Michigan. On the other hand, record large potato crops were recorded in Nebraska, Washington, and Wisconsin.

Ten Western States produced 295 million cwt in 1999, down slightly from last year but fractionally above two years ago. Acreage harvested, at 730,900 acres, decreased 2 percent from last year, and the average yield of 404 cwt per acre was up 6 cwt. Production in Idaho decreased 3 percent from last year and 5 percent from two years ago. Washington gained 2 percent and Oregon 7 percent. Colorado was up 2 percent and California increased 8 percent. Montana was up 5 percent and Nevada gained 2 percent from a year ago. Production in Utah dropped 20 percent and New Mexico slid 6 percent.

1/ Stocks include processor holdings and seed to plant following year's crop. Seed usage in 1999 totaled 29.5 million cwt.

December 1 Hog and Pig Inventory Down

The inventory of all hogs and pigs in Montana on December 1, 1999 was 150,000 head, a 21 percent decrease from a year ago. Breeding stock was down 11 percent from last December to 17,000 head. Market hog numbers decreased to 133,000 head, down 22 percent from last year.

From December 1998 to November 1999, 36,000 sows farrowed in Montana. This was a decrease of 6 percent from a year earlier. The number of pigs saved per litter increased by 1 percent to 9.03 and resulted in a pig crop of 325,000 head, a 6 percent decrease from last year. There were 600 farms with one or more hogs in Montana in 1999, down 8 percent from last year.

U.S. inventory of all hogs and pigs on December 1, 1999, was 59.4 million head. This was 4 percent below December 1998, and 2 percent below September 1, 1999.

Breeding inventory, at 6.24 million head, was down 7 percent from December 1, 1998, and down 1 percent from September 1, 1999. Market hog inventory, at 53.2 million head, was 4 percent below last year, and 2 percent below last quarter.

The September-November 1999 U.S. pig crop, at 25.2 million head, was 3 percent less than 1998, and 1 percent less than 1997. Sows farrowing during this period totaled 2.87 million head, 4 percent below last year. The sows farrowed during this quarter represented 46 percent of the breeding herd. The average pigs per litter rose to an average of 8.78 pigs saved per litter for the September-November period, compared to 8.66 pigs last year. Pigs saved per litter by size of operation ranged from 7.40 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.81 million sows farrow during the December 1999-February 2000 quarter, 3 percent below the actual farrowings during the same period in 1999, and 4 percent below 1998. Intended farrowings for March-May 2000, at 2.83 million sows, are 5 percent below the same period last year and 8 percent below 1998.

The number of hog operations with hogs totaled 98,460 during 1999, down 14 percent from last year and 19 percent below 1997. Places with 2,000 or more hogs on hand accounted for 7 percent of the operations and 69 percent of the inventory. This is the fourth time operations with inventories over 2,000 head have controlled over 50 percent of the total inventory. The number of operations with over 5,000 head of inventory at 2,005 accounted for 46.5 percent of the total inventory, up from 42 percent a year ago. The total number of hogs under contract, owned by these over 5,000 head operations, but raised by contractees, accounted for 32 percent of the total U.S. hog inventory up from 23 percent last year.

Ag Economic Surveys Will Measure Farm Financial Health

Montana farmers and ranchers will have the opportunity to "let their voice be heard" by participating in the 1999 agricultural economic surveys. These surveys, titled the 1999 Agricultural Economics and Land Ownership Survey and the 1999 Agricultural Resource Management Study, provide vital statistics about the economic condition of production agriculture. Most importantly, they are used by members of the agricultural community and their legislators when making important decisions that impact the future of America's farmers and ranchers.

Agricultural producers chosen to participate in these surveys will represent from 50 to 100 fellow producers, and will, therefore, make an important contribution to the overall welfare of America's farmers and ranchers. These are the only surveys which objectively measure the current financial health of our farms and ranches. Farmers/ranchers selected can expect a survey in the mail or a personal visit by an interviewer in early to mid-February.

Seven Reasons to Respond to the 1999 Agricultural Economic Surveys

1. Lower prices combined with higher costs, land values, and rents place economic strain on farmers...but how much?

2. Farmers and their organizations need reliable, objective, accurate data showing the current economic conditions on farms in order to have a strong voice with policymakers and financial organizations.

3. Survey results help determine disaster relief and direct payment funding.

4. Without these data, credit providers have very limited information and tend to take the most conservative financial positions.

5. Data provide basis for *Small Farm Report* to Congress, and are used to make estimates of farm self-employment and total family income. This shows the gap between the income needed by farm families and what they currently earn by farming.

6. These data provide the foundation to support USDA's farm business and household financial analyses including risk management, technology adoption, farmer information sources, vulnerability, and debt repayment ability.

7. Surveys results provide financial benchmark for the Farm Services Agency and other organizations. Federal programs, legislation, and impact studies would struggle under great uncertainty without these economic data.

"Best Wishes for the New Millennium"

Best Wishes from all of us at Montana Agricultural Statistics Service! As 1999 comes to a close and we approach the year 2000 we should take a minute to look back on what has happened this year. Poor prices and low moisture conditions last fall caused Montana winter wheat producers to seed the smallest winter wheat crop since 1937. Only 1.05 million acres of winter wheat were planted and 970 thousand acres were harvested.

Montana's spring wheat producers seeded the third largest crop on record behind only 1995 and 1997. Spring wheat production for 1999 was estimated at 108 million bushels, unchanged from 1998. Precipitation was good until July when dry weather prevailed through most of the summer. The dry summer conditions reduced yields 3 bushels from 1998, farmers averaged 27 bushels per acre.

Montana durum wheat growers planted 400,000 acres and harvested 390,000 acres, both significantly lower than last year. The average yield of 27.0 bushels per acre was unchanged from last year. Total production was estimated at 10.53 million bushels, down 13 percent from last year.

The winter of 1998-1999 was very open for livestock producers. Temperatures were above normal and ranchers had excellent conditions for calving. Losses were minimal because of the warm, open winter.

As we look to the New Millennium, Montana Agricultural Statistics Service will publish county estimates for oilseed crops, peas, lentils, and chickpeas for the first time. This information was requested by producers and funded by the Montana Department of Agriculture. We continue to look for ways we can provide service to agriculture.

To everyone involved in Montana's agriculture, thanks for your continued support. With your help, we can provide sound statistical facts that you can use to chart the future course of **Montana's Number One Industry--Agriculture**. We sincerely hope that you and your family have a joyous and safe holiday season. We hope the new millennium will be a great year for Montana agriculture!

Beef Prices Surge According to ERS Economist

Rising beef supplies and sharply higher prices are a welcome end to a decade of frustration for the U.S. beef industry reports an ERS economist. But more importantly what does this situation suggest for the next couple of years as beef supplies decline following unprecedented heifer slaughter. The return of dry conditions and poor winter grazing prospects throughout the south has reduced incentives to hold back heifers for the 2000 breeding season. Inspite of sharply higher cattle prices the industry is not comfortable with expansion ideas. Grain prices remain low and hay production was record large in 1999, although supplies will be very tight this winter throughout the south particularly with the prospect of poor small grain pasture.

Beef prices have been very strong in second half 1999 in spite of record beef production and large supplies of competing meats. Prices have also been favorable for relatively large supplies of pork and poultry. Strongest prices have been for beef grading Choice and higher, the type of beef sold in the hotel-restaurant and export markets. The Choice-Select box beef price spread is typically wide in the fall and narrow during the late winter-early spring, but the spread this fall has been unprecedented. The spread has widened from $1.50 a cwt in March when the proportion of beef grading Choice is the highest to $14-$16 in late summer-early fall when the proportion grading Choice is typically low. Although total beef supplies have been large, supplies of Choice and higher beef have been unusually strong as U.S. and world economies continue to strengthen. Demand for Select grade beef, the type increasingly sold in retail stores has been less impressive.

Total U.S. beef consumption is expected to rise nearly 2 percent this year, while beef exports are likely to rise 7 percent. Economic growth continues strong in the U.S. and world growth has returned, particularly in Asia. While beef prices are clearly higher, the reasons with larger supplies aside from the income effect are less clear. Supplies of higher quality beef have below market needs, but seasonally supplies of higher quality beef should be increasing, prices alone are encouraging feeding to Choice. Many hotels and restaurants have booked quality beef ahead to insure supplies. Tastes and preferences change relatively slowly and clearly supplies of competing meats remain large at very competitive prices.

Slaughter Mix Shift Continues

The slaughter mix will begin to shift toward an even larger proportion of steers in the mix over the next couple of years. Cow slaughter continues to decline, a trend unlikely to change until more heifers are added to the breeding herd. Heifer slaughter is near record large this year, with at least one quarter being record large. Cattle are already being placed on feed at lighter weights, a function of tightening feeder cattle supplies, poor fall and winter grazing prospects and low feed costs. While steer and heifer slaughter weights will decline over the next couple of years due to lighter placement weights, a larger proportion of steers in the slaughter mix and a likely continued though moderating premium on Choice beef with hold average slaughter weights near this year's expected 729 pound commercial dressed weight average.

Feeder Cattle Supplies

Supplies of feeder cattle outside feedlots on October 1 were down over 3 percent from a year earlier and the lowest supply since the early 1990s. Poor fall grazing conditions, good feedlot returns, and low feeding costs have resulted in a much larger proportion of the remaining feeder cattle supplies being placed on feed this fall, but will result in an even quicker draw down of supplies for 2000. Calf slaughter is down about 12 percent for the year and if not this year almost certainly next year will decline below the 1.2 million head low set in 1993. With a reduced cow herd and fewer heifers being retained for herd replacement the 2000 calf crop will mark the fifth consecutive decline. If more heifers begin to be retained for herd replacement in 2000 the feeder cattle supply will drop even more sharply.

Agricultural Prices Received for October

Crop prices for the full month of October 1999 were mixed compared with September 1999 prices, according to Montana Agricultural Statistics Service. Montana winter wheat average price was $2.82 per bushel, up 8 cents from September's level; durum wheat was $3.12 per bushel, up 20 cents; but spring wheat was 9 cents lower at $2.95 per bushel. Feed barley was $1.49 and malt barley was $2.54 per bushel.

The mid-November price for alfalfa hay was $66.00 per ton, down $1.00 from last month. Other hay, at $58.00 per ton, was $3.00 higher than October's mid-month price. The mid-November winter wheat price averaged $2.80 per bushel, spring wheat was $3.10, feed barley was $1.50, and malt barley averaged $2.55.

Livestock prices for the full month of October were also mixed. Steer and heifer prices increased $7.90 to $82.70 per cwt. Cows were down $2.90 to $33.90 and the average price for calves was unchanged at $90.40 per cwt. Sheep prices decreased $4.00 to $24.20 per cwt, but lamb prices increased 70 cents to $74.60 per cwt. Milk prices were up $1.50 from last month at $16.50 per cwt. Steer and heifer prices for mid-November averaged $83.00 per cwt.

Nationally, prices for October and changes from September were as follows: winter wheat was $2.47, up 1 cent; spring wheat was $2.80, down 6 cents; the all barley price was $1.96, down 7 cents; and steer and heifer prices were $70.10, up $3.00.

The U.S. mid-November winter wheat price was $2.36 per bushel, spring wheat was $2.87 per bushel, all wheat was $2.54 per bushel, and all barley was $2.13. Steer and heifer prices were $70.80 per cwt, cow prices were $33.00, all hog prices were $32.90 per cwt, and all egg prices were 64.3 cents per dozen.

The preliminary All Farm Products Index of Prices Received in November was 93 based on 1990-92=100, up 2 points (2.2 percent) from the October index. The seasonal change in the mix of commodities farmers sell affects the overall index. Higher seasonal marketings of cattle, milk, cotton, and cottonseed more than offset the relatively lower marketings of potatoes, soybeans, peanuts, and lettuce. These marketing changes account for most of the November index increase. Higher prices for broilers, eggs, potatoes, and corn slightly offset price decreases for milk, soybeans, oranges, hogs, and lettuce.

Compared with November 1998, the All Farm Products Index was 6 points (6.1 percent) lower. Price decreases from November 1998 for milk, cotton, soybeans, and corn more than offset price increases for cattle, hogs, apples, and calves.

United States Index Summary

INDEX (1990-92=100)	Oct. 1998	Nov. 1998	Oct. 1999	Nov. 1999

U.S. Cattle on Feed Up 6%

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 11.46 million head on November 1, 1999. The inventory was 6 percent above November 1, 1998 and 4 percent above November 1, 1997.

Placements in feedlots during October totaled 3.09 million, 9 percent above 1998 and up 6 percent from 1997. Net placements were 3.01 million. During October, placements of cattle and calves weighing less than 600 pounds were 1.02 million, 600-699 pounds were 797,000, 700-799 pounds were 687,000, and 800 pounds and greater were 588,000.

Marketings of fed cattle during October totaled 1.83 million, 3 percent above 1998 and 1 percent above 1997. Other disappearance totaled 80,000 during October, 54 percent above 1998 but 12 percent below 1997.

Cattle on Feed in Historic 7 States Up 6%

Cattle on feed November 1, 1999, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 9.77 million, up 6 percent from the previous year and 4 percent above November 1, 1997.

Placements in feedlots during October totaled 2.61 million, 9 percent above 1998 and 6 percent above 1997. Marketings during October totaled 1.56 million, 1 percent above both 1998 and 1997.

Other disappearance during October was 63,000 head, 40 percent above 1998 but 18 percent below 1997.

Montana and U.S. Red Meat Production for October

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during October 1999, down 22 percent from October 1998 and 24 percent below the previous month. Cattle slaughtered totaled 1,900 head, down 400 head from a year ago. The average live weight, at 1,085 pounds, was down 47 pounds from last year.

During October, there were 1,900 hogs slaughtered, 700 less than last year. The average live weight, at 248 pounds, was up 20 pounds from last year. The number of sheep slaughtered, at 300 head, was 100 head less than a year ago. The average live weight decreased 2 pounds from last year to 127 pounds.

U.S. commercial red meat production totaled 4.00 billion pounds in October, down 1 percent from the 4.03 billion pounds produced in October 1998. January - October red meat production was 38.4 billion pounds, 2 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 12 percent, pork was up 2 percent, and lamb & mutton was down 4 percent.

Beef production, at 2.26 billion pounds, was 1 percent above the previous year. Cattle slaughter totaled 3.09 million head, up 1 percent from 1998. The average live weight was down 1 pounds from the previous year, at 1,213 pounds.

Veal production totaled 19 million pounds, 12 percent below the previous record low for October set a year ago. Calf slaughter totaled 105 thousand head, down 16 percent from October 1998. The average live weight was 16 pounds above last year, at 298 pounds.

Pork production totaled 1.70 billion pounds, down 3 percent from the previous year. Hog kill totaled 8.95 million head, 4 percent below 1998. The average live weight was 2 pounds above the previous year, at 259 pounds.

Lamb and mutton production, at 20 million pounds, was down 4 percent from the previous record low for October set last year. Sheep slaughter totaled 305 thousand head, 6 percent below last year. The average live weight was 130 pounds, up 3 pounds from October a year ago.

October Milk Production Up 4.3% in Major States

Milk production in the 20 major States during October totaled 11.6 billion pounds, up 4.3 percent from production in these same States in October 1998. September revised production, at 11.2 billion pounds was up 4.9 percent from September 1998. The September revision represented a decrease of 0.3 percent or 37 million pounds from last months preliminary production estimate.

Production per cow in the 20 major States averaged 1,496 pounds for October, 50 pounds above October 1998.

The number of cows on farms in the 20 major States was 7.75 million head, 57,000 head more than October 1998 but 1,000 head less than September 1999. October is the first month that the dairy cow herd has not expanded from the previous month in the 20 major States since February of this year. The total increase from February to September was 51,000 head of cows.

1/ Counties with less than 500 head or individual operators having 60 percent or more of the head are combined into "other" counties to avoid disclosure of individual information.

Montana Wage Rates Up 8%, U.S. Up 4% From A Year Ago

The average wage received by all hired agricultural workers in Montana during 1999 was $6.95 per hour compared with the $6.42 per hour received in 1998. Field workers increased their wages by $.09 per hour from last year to earn $6.52 per hour. Field and livestock workers combined wages increased $.36 per hour from a year ago to $6.56 per hour.

There were 1.29 million hired workers on the Nation's farms and ranches the week of October 10-16, 1999, up 3 percent from a year ago. Farm operators directly hired 989,000 workers. Agricultural service employees on farms and ranches made up the remaining 296,000 workers. Migrant workers accounted for 12.0 percent of the October hired workforce compared to 11.0 percent last year.

Farm operators paid their hired workers an average wage of $7.83 per hour during the October 1999 survey week, up 23 cents from a year earlier. Field workers received an average of $7.31 per hour, up 16 cents from last October. Livestock workers earned $7.43 per hour compared with $7.28 a year earlier. The Field and Livestock worker combined wage rate was up 16 cents from last year.

The 1999 U.S. hired worker annual average wage rate was $7.77, up 4 percent from the 1998 annual average wage rate of $7.47. The Field and Livestock worker combined annual average wage rate was $7.22, up 3 percent from last year's annual average wage rate of $6.98.

1/ Excludes Agricultural Service Workers. 2/ Annual rates are averages of the published wage rates for each survey week weighted by the number of hours worked during the week. The annual average for all States, Regions, and the U.S. is based on data collected for January. 3/ Excludes AK.

Irrigation Equipment and Facilities Now a $1 Billion Industry

America's farmers used more water to irrigate their crops in 1998 than in 1994, and spent over a billion dollars on irrigation equipment, facilities, and land improvements that same year–a 25 percent increase from 1994–according to a new report issued by the U.S. Department of Agriculture.

The *1998 Farm and Ranch Irrigation Survey* provides a snapshot of irrigation practices in the agricultural industry during 1998, and shows interesting trends since the last survey conducted in 1994. Although previous surveys provided data for 18 water resource areas and 27 States, the 1998 results offer data for every State and 20 water resource areas. This new irrigation survey also includes first-time statistics on expenditures for computers for irrigation, water management and water distribution software.

The survey confirmed that corn continues to be the dominant irrigated crop, accounting for nearly one-fourth of irrigated land. Other top irrigated crops following corn were alfalfa hay, cotton, soybeans, and orchard land. Together, the five top crops accounted for 57 percent of all irrigated land. The value of irrigated crops as a percent of all crops rose dramatically over the past 15 years according to the 1997 Census of Agriculture, the basis for the 1998 irrigation survey. During that same time period, irrigated cropland acreage remained steady, indicating the positive effect of irrigation to increase productivity.

Initially, it may appear that the reported rise from 1.7 to 1.8 acre-feet of water applied per acre indicates a decline in irrigation efficiency from 1994 to 1998. However, most of this dramatic increase may be attributed to heavy snowfalls in the West during 1997, causing increased streamflow and subsequent use of this plentiful, "free" water through gravity irrigation. When the amount of water used for gravity irrigation in California, Arizona, and Nevada–the three states effected by the 1997 deluge of snow and which account for nearly 20 percent of the total irrigated acres in the Nation–is extracted from the United States total, a continued trend toward efficiency and less water use emerges.

Demonstrating their continued support of efficiency, farmers continued to favor more precise water distribution methods. Sprinkler use showed a 7 percent increase from 1994 to 1998. Drip/trickle acreage rose 20 percent, although it is only used on 4 percent of irrigated land. Conversely, the percentage of acres irrigated by gravity-flow continued a decline apparent since the second Farm and Ranch Irrigation Survey was conducted in 1984. Over half of the 50 million acres irrigated in 1998 were reported to have had improvements made to reduce energy use or conserve water. These improvements resulted in reduced water requirements on 19.2 million irrigated acres and decreased energy costs on 16.7 million irrigated acres.

The major irrigation source of water is wells, which account for 45 percent of all irrigation water and is used on 60 percent of irrigated land. Over 60 percent of farms using wells in 1998 used one or two wells. There is a notable difference in the average amount of water applied per acre depending on the source. Land irrigated with water from wells averaged only 1.4 acre-feet applied per acre, while land irrigated with water from off-farm water suppliers averaged 2.6 acre-feet.

(Continued on back page.)

Irrigation (Continued)

Although energy continues to be a top expense, average energy costs fell from $33.68 per irrigated acre in 1994 to $31.92 in 1998. Of the 49,000 farms that spent $643 million on irrigation machinery and equipment purchases in 1998, about three-quarters of the farms used the expenditure for equipment replacement, a fifth on expansion, and less than 5 percent on water conservation equipment.

The 1998 Farm and Ranch Irrigation Survey results are used by equipment manufacturers, dealers, extension agents, government agencies, farmer associations, water and utility companies, and others to benchmark current practices, determine the most effective measures to ensure efficient irrigation, and predict the pathway of the future. To discover the wealth of irrigation and other agricultural data available from NASS resources, including hundreds of commodity production and price reports, or to review a full catalog of NASS products/services, visit the NASS Home Page at www.usda.gov/nass/. The 1998 Farm and Ranch Irrigation Survey, 1997 Census of Agriculture reports, State and County Profiles, Highlights, and a slide show presenting *Quick Facts* are accessible by clicking "Census of Agriculture." October Egg Production Up 5 Percent

U.S. egg production totaled 7.13 billion during October 1999, up 5 percent from the 6.79 billion produced in 1998. Production included 6.03 billion table eggs and 1.09 billion hatching eggs, of which 1.03 billion were broiler-type and 63.0 million were egg-type. The total number of layers during October 1999 averaged 327 million, up 3 percent from the total average number of layers during October 1998. October egg production per 100 layers was 2,192 eggs, up 2 percent from 2,157 eggs in October 1998.

All layers in the U.S. on November 1, 1999, totaled 327 million, up 3 percent from a year ago. The 327 million layers consisted of 268 million layers producing table or commercial type eggs, 55.7 million layers producing broiler-type hatching eggs, and 2.64 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1999, averaged 70.4 eggs per 100 layers, up 1 percent from the 69.6 a year ago.

Laying flocks in the 30 major egg producing States produced 6.69 billion eggs during October, up 4 percent from October 1998. The average number of layers during October, at 306 million, was up 3 percent from a year earlier.

Crop Production Highlights
1999 Crop Year Summary
Ag Prices Received

First November 1 Crop Forecast to include Dry Peas & Lentils

The first forecast of Montana **dry edible pea** production was 663,000 cwt. Montana's dry edible pea estimates were not published last year so comparisons could not be made. Planted acreage for 1999 was estimated at 50,000 acres, and 39,000 acres were harvested. The yield forecast is 1,700 pounds per acre.

Production of dry edible peas in Idaho, Montana, Nevada, North Dakota, Oregon, and Washington in 1999 is estimated at 5.03 million cwt, down 15 percent from 1998 and down 13 percent from two years ago. Overall, planted area in the U. S. reached 281,600 acres, 41,800 acres fewer than a year ago. Harvested acres stood at 263,600 acres compared with 309,100 acres last year. Average yields fell 12 pounds to 1,908 pounds per acre.

Montana's first **lentil** production forecast was 208,000 hundredweight for 1999. Planted acreage was set at 19,000 acres, and 16,000 acres were harvested. The yield is forecast at 1,300 pounds per acre.

Production of lentils in Idaho, Montana, North Dakota, and Washington is estimated at 2.39 million cwt, up 23 percent from the 1998 crop. Planted and harvested acreage are above last year in both Idaho and Washington. Harvested area is estimated at 174,500 acres, 16,000 acres more than in 1998. Average yield per acre, at 1,368 pounds, is 145 pounds above last year.

Montana **sugar beet** production was forecast at 1.473 million tons on November 1, 1999 up 1 percent from last month's forecast and up 4 percent from last year. Forecasted yield, of 23.8 tons per acre, is up 0.3 tons per acre from last month and is 1.2 tons per acre higher than last year. Harvested acreage is up 100 acres from last month at 61,900 acres, but this is 500 acres less than 1998. As of November 1, ninety-nine percent of the crop had been harvested which is 7 points higher than the five-year average.

U.S. sugar beet production is forecast at a record high 33.4 million tons, 2 percent above the previous record in 1998. Growers in the 12 sugar beet-producing States expect to harvest 1,525,200 acres, 5 percent more than last year and the highest since 1,540,500 acres were harvested in 1969. The yield is forecast at 21.9 tons per acre, below the 1998 yield of 22.5 tons.

Montana **fall potato** production is forecast at 3.216 million hundredweight, up 1 percent from last year. Harvested acres are estimated at 10,900 acres, up 300 acres from last year. The yield is forecast at 295 cwt per acre, 5 cwt per acre lower than last year. As of November 1, ninety five percent of the crop has been harvested which is 1 point above the five-year average.

Nationally, fall potato production for 1999 is forecast at 436 million cwt, up 1 percent from last year and 3 percent above 1997. Area harvested, at 1.18 million acres, is down 3 percent from last year and down less than 1 percent from two years ago. The average yield is forecast at 369 cwt per acre, a jump of 13 cwt from last year and 12 cwt above two years ago.

See table on next page.

Revised Small Grains Estimate from Producer Re-interviews

Montana and North Dakota producers with unharvested small grains during the September Agricultural Survey were re-interviewed to update the harvested acreage and yield. Montana's **durum wheat** yield was reduced by 1 bushel per acre from September and is now estimated at 27 bushels per acre. Durum wheat production, at 10.53 million bushels, is down nearly 4 percent from September 1999 and nearly 13 percent from the previous year. Planted and harvested acres remained unchanged from September for all small grains. **Winter wheat** and **spring wheat** production estimates also are unchanged from September. **Oats** yield is reduced by 3 bushels per acre to 46 bushels and production decreased 6 percent from September to 3.22 million bushels.

Nationally, **durum wheat** was the only wheat revised and production is set at 100.4 million bushels, down nearly 9 percent from the September estimate. Yield declined 0.7 bushels per acre and harvested acreage was reduced by 250,000 acres. **Oats** production declined 1 percent from September and is set at 146.5 million bushels.

Montana's on farm **oats stocks** were reduced 200,000 bushels from September to 2.8 million bushels. Montana's on farm **wheat stocks** remained unchanged from September.

Nationally, on farm **oats stocks** were reduced by 1.2 million bushels from the September estimate to 96.3 million bushels. **Barley** on farm stocks were reduced by 2.0 million bushels to 165.1 million bushels. On farm **durum** wheat stocks were reduced by 9.0 million bushels to 98.4 million bushels and **all wheat** was reduced by 10.0 million bushels to 893.1 million bushels. Revisions were made to on farm stocks only.

1999 Crop Year Summary

Poor prices and low moisture conditions last fall caused Montana winter wheat producers to seed the smallest winter wheat crop since 1937. Winter wheat seeding totaled 1.05 million acres down 25 percent from the previous year's 1.4 million. November precipitation was above normal for all of the northern part of the state and scattered locations across the state. The moisture was welcome and topsoil and subsoil moisture conditions improved dramatically during the month. The first 2 ½ weeks of December was dry and mild and producers were able to do some late field work. Precipitation was heavier during the last half of the month. For the entire month of December precipitation was above normal for most of the Northwest and normal to below normal for the rest of the state.

January was mild and dry. There were two periods of cold weather but unreasonably mild temperatures for the rest of the month. There was a beneficial snow storm during the later part of the month but during most of the month the winter wheat did not have adequate snow cover.

February was significantly warmer and drier than normal. Storm tracks continued north or south of the state as a strong westerly upper air flow kept arctic air out of the area. Winter wheat snow cover was rated 96 percent poor to very poor. March was also significantly warmer and drier than normal. Even though there was not much protective snow cover the winter wheat condition was rated mostly good. During the first half of April most locations had below normal precipitation. Precipitation increased in the last half of the month and the North Central and Central districts reported above normal precipitation for the entire month. The planting of all crops was ahead the five-year average except for potatoes and dry beans. Spring wheat was 54 percent seeded as of May 2 verses the five-year average of 44 percent.

The second week in May there was enough precipitation in most locations to slow fieldwork considerably. Planting fell behind the 5-year average for row crops. The crop conditions at the end of May were reported mostly good.

Crop conditions improved during June for most crops. As of June 28 the winter wheat crop was rated at 99 percent good to excellent while the crop was only 75 percent headed on this date compared with 76 percent for the average. Spring wheat and oats conditions were similar while barley was rated at 51 percent good and 14 percent excellent. Crop progress was behind the 5-year average except for hay harvested.

July temperatures were above normal and soil moisture conditions deteriorated. By August 1 only 12 percent of the topsoil moisture was rated adequate and none was rated surplus. Winter wheat conditions and yield expectations declined. By the first of August, 31 percent of the winter wheat crop was harvested compared with 22 percent for the five-year average. Progress of hay harvested was still ahead of normal at the end of the month.

Most of the state received little precipitation during August. Harvest progress was behind normal for all crops except winter wheat, corn silage, and dry beans. By the end of the month about 91 percent of the winter wheat, 52 percent of the spring wheat, 50 percent of the barley and 58 percent of the oats were harveste[illegible] The second cutting of alfalfa was 67 percent complete by August 29 compared with 73 percent for the average. Other hay was 92 percent harvested compared with the average of 96 percent. (Continued on back page.)

Agricultural Prices Received for September

Crop prices for the full month of September 1999 were mostly higher compared with August 1999 prices, according to Montana Agricultural Statistics Service. Montana winter wheat average price was $2.74 per bushel, up 14 cents from August's level; durum wheat was $2.92 per bushel, unchanged; and spring wheat was 14 cents higher at $3.04 per bushel. Feed barley was $1.43 and malt barley was $2.53 per bushel.

The mid-October price for alfalfa hay was $67.00 per ton, down $1.00 from last month. Other hay, at $55.00 per ton, was $3.00 lower than September's price. The mid-October winter wheat price averaged $2.70 per bushel, spring wheat was $2.95, feed barley was $1.50, and malt barley averaged $2.60.

Livestock prices for the full month of September were mixed. Steer and heifer prices increased 80 cents to $74.80 per cwt. Cows were down $2.10 to $36.80 and the average price for calves increased $2.30 to $90.40 per cwt. Sheep prices decreased 40 cents to $28.20 per cwt and lamb prices decreased $5.70 to $73.90 per cwt. Milk prices were up $1.60 cents from last month at $15.00 per cwt. Steer and heifer prices for mid-October averaged $81.20 per cwt.

Nationally, prices for September and changes from August were as follows: winter wheat was $2.46, up 12 cents; spring wheat was $2.86, up 1 cent; the all barley price was $2.03, down 34 cents; and steer and heifer prices were $67.10, up 90 cents.

The U.S. mid-October winter wheat price was $2.33 per bushel, spring wheat was $2.78 per bushel, all wheat was $2.49 per bushel, and all barley was $2.00. Steer and heifer prices were $70.10 per cwt, cow prices were $34.50, all hog prices were $34.10 per cwt, and all egg prices were 50.1 cents per dozen.

The preliminary All Farm Products Index of Prices Received in October was 92 based on 1990-92=100, down 5 points (5.2 percent) from the September index. The seasonal change in the mix of commodities farmers sell affects the overall index. Lower seasonal marketings of milk, wheat, tobacco, and grapes more than offset the relatively higher marketings of soybeans, corn, cotton lint and cottonseed. These marketing changes decreased the index four points. Price decreases from September account for one point of the decline. Lower prices for broilers, corn, milk, and eggs more than offset price increases for cattle, tobacco, oranges, and cucumbers.

Compared with October 1998, the All Farm Products Index was 7 points (7.1 percent) lower. Price decreases from October 1998 for soybeans, broilers, milk, and corn more than offset price increases for cattle, calves, hogs, and oranges.

1999 Crop Year Summary (Cont.)

In September, Montana's 1999 winter wheat production was estimated at 36.86 million bushels, down 24% from 1998 and the lowest production since the severe drought of 1985. The lower production in 1999 was the result of the lowest harvested acres since 1938. Producers harvested 970,000 acres, down 280,000 acres from the 1998 harvest. The 1999 average yield was 38 bushels per acre, which is one bushel lower than last year's average.

Spring wheat production was estimated at 108 million bushels, unchanged from 1998. The 1999 and 1998 productions are tied for the third largest crop on record behind only 1995 and 1997. Precipitation was good until July when dry weather prevailed through most of the summer. The seeded acreage was 4.15 million acres, 350,000 acres greater than 1998. The spring wheat crop was only 91 percent harvested as of September 26. Producers harvested or intended to harvest 4.0 million acres. Yields averaged 27 bushels per acre, down 3 bushels from 1998.

Durum wheat growers planted 400,000 acres and harvested or expect to harvest 390,000 acres in 1999. With above normal precipitation in the Northeastern part of the state, planting was delayed and durum wheat harvest was later than usual. The average yield was 28.0 bushels per acre, unchanged from 1998. Total production was estimated at 10.92 million bushels, down 9 percent from last year. In November the producers reporting unharvested durum wheat in September were re-interviewed to determine final harvested acreage and yield. This survey resulted in a 1 bushel reduction in the estimated durum wheat yield. Harvested acreage did not change in November.

Barley planted acreage decreased to 1.3 million acres, 50,000 acres less than 1998. Producers harvested 1.15 million acres, which was also 50,000 acres less than were harvested for grain in 1998. The yield averaged 50 bushels per acre, up 2 bushels from last year. Production was estimated at 57.5 million bushels, nearly unchanged from last year.

Oat production was estimated at 3.43 million bushels, up 6 percent from last year. Planted acreage was estimated at 170,000 acres, 30,000 acres higher than last year. Harvested acreage was set at 70,000 acres, up 10,000 from 1998. Yield averaged 49 bushels per acre, five bushels below last year. The re-interview survey in November resulted in a 3 bushel reduction in oat yield to 46 bushels per acre. There was no revision to harvested acreage.

On November 1, next year's winter wheat crop condition was rated 1 percent very poor, 6 percent poor, 28 percent fair, 62 percent good, and 3 percent excellent. Topsoil and subsoil moisture was rated at mostly short with none rated surplus.

October 1, 1999 Sugar Beet and Hay Production

Montana sugar beet production for October 1999 is forecast at 1.45 million tons, unchanged from last month's forecast but up 3 percent from last year. Forecasted yield, at 23.5 tons per acre, is unchanged from last month but is 0.9 tons per acre higher than 1998. Harvested acreage remains unchanged from last month at 61,800 acres but this is 600 acres less than last year. Sugar beets are 22 percent harvested as of October 3. This is 8 percentage points higher than last year and 6 percentage points higher than the five-year average.

U.S. sugar beet production is forecast at a record high 34.0 million tons, 4 percent above the previous record in 1998. Growers in the 12 sugar beet-producing states expect to harvest 1,525,400 acres, 5 percent more than last year and the highest since 1,540,500 acres were harvested in 1969. The yield is forecast at 22.3 tons per acre, slightly below the 1998 yield of 22.5 tons.

Forecasted **alfalfa hay** yield for Montana was increased from the August forecast by 0.1 ton per acre to 2.3 tons per acre. If realized this would be 0.1 ton higher than last year. Total production of alfalfa hay is estimated at 4.03 million tons, up nearly 8 percent from last year. Harvested acreage is estimated at 1.75 million acres, up 50,000 acres from last year. Other hay yields remain unchanged from August at 1.5 tons per acre but down 0.1 ton from 1998. Total production is set a 1.35 million tons, up 5 percent from last year. Harvested acreage is unchanged from August at 900,000 acres, up 100,000 acres from last year. All hay production is estimated at 5.38 million tons, up 7 percent from last year.

Nationally, all hay production is forecast at a record high 161 million tons, up slightly from the August forecast but 7 percent higher than 1998. The all hay yield is forecast at a record high 2.60 tons per acre, up 0.08 tons per acre from last year. Area harvested and to be harvested for all hay is unchanged from August, at 62.1 million acres, but up 3 percent from the previous year.

U.S. production of alfalfa and alfalfa mixtures is forecast at 85.5 million tons, 4 percent above 1998 and 9 percent above 1997. Yields are expected to average a record high 3.57 tons per acre, up 0.10 tons from both last year and August. Area harvested and to be harvested is unchanged from August, at 24.0 million acres, up 1 percent from 1998.

U.S. all other hay production is forecast at a record high 75.9 million tons, up 9 percent from 1998 and 3 percent above 1997. Yields are expected to average 1.99 tons per acre, down 0.05 tons from August but up 0.08 tons from last year. Area harvested and to be harvested is unchanged from August at 38.1 million acres, 5 percent above last year's total. (See table on next page.)

Montana and U.S. July-September Milk Production Up

Montana milk cows produced 76 million pounds of milk during the period of July-September 1999, compared with 72 million the same quarter a year ago. Montana milk cow inventory remained unchanged from a year ago at 18,000 head.

During the July-September period, the **U.S.** produced 39.8 billion pounds, 3.3 percent above the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.17 million head, 17,000 head more than the same period last year.

September Egg Production Up 6 Percent

U.S. egg production totaled 6.85 billion during September 1999, up 6 percent from the 6.48 billion produced in 1998. Production included 5.79 billion table eggs and 1.06 billion hatching eggs, of which 999 million were broiler-type and 61.0 million were egg-type. The total number of layers during September 1999 averaged 322 million, up 4 percent from the total average number of layers during September 1998. September egg production per 100 layers was 2,126 eggs, up 2 percent from 2,082 eggs in September 1998.

All layers in the U.S. on October 1, 1999, totaled 323 million, up 3 percent from a year ago. The 323 million layers consisted of 265 million layers producing table or commercial type eggs, 55.3 million layers producing broiler-type hatching eggs, and 2.72 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 1999, averaged 70.2 eggs per 100 layers, up 1 percent from the 69.3 a year ago.

Laying flocks in the 30 major egg producing States produced 6.44 billion eggs during September, up 5 percent from September 1998. The average number of layers during September, at 303 million, was up 3 percent from a year earlier.

1/Preliminary. 2/Planted for all purposes. 3/ Production forecast available November 10, 1999.

U.S. Cattle on Feed Up 5 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.27 million head on October 1, 1999. The inventory was 5 percent above October 1, 1998 and 3 percent above October 1, 1997. The inventory included 6.21 million steers and steer calves, up 4 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 4.02 million head, up 6 percent from 1998.

Placements in feedlots during September totaled 2.76 million, 4 percent above 1998 and 2 percent above 1997. Net placements were 2.70 million. During September, placements of cattle and calves weighing less than 600 pounds were 629,000, 600-699 pounds were 557,000, 700-799 pounds were 758,000, and 800 pounds and greater were 815,000.

Marketings of fed cattle during September totaled 1.96 million, 5 percent above 1998 and 8 percent above 1997. Other disappearance totaled 62,000 during September, 2 percent above 1998 and 17 percent above 1997.

Cattle on Feed in Historic 7 States Up 5 Percent

Cattle on feed October 1, 1999, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 8.78 million, up 5 percent from the previous year and 3 percent above October 1, 1997. The inventory included 5.28 million steers and steer calves, up 4 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 3.48 million head, up 6 percent from 1998. Placements in feedlots during September totaled 2.35 million, 4 percent above 1998 and 3 percent above 1997.

Marketings during September totaled 1.68 million, 7 percent above 1998 and 10 percent above 1997. Other disappearanc during September was 55,000 head, 8 percent above 1998 and 31 percent above 1997.

Montana and U.S. Slaughter Up From a Year Ago

Montana slaughter plants produced 2.1 million pounds, dressed weight, of red meat during September 1999, according to the Montana Agricultural Statistics Service. Red meat production is down 12 percent from last month, but up 21 percent from a year ago. Cattle slaughter totaled 2,300 head, up 400 head from a year ago. The average live weight was 1,100 pounds, down 30 pounds from last September.

The number of hogs slaughtered during the month was 2,800, same as a year ago. The average live weight was 247 pounds, up 20 pounds from last year. A total of 400 sheep slaughtered during the month, the same as September 1998. The average live weight was also the same as a year ago at 129 pounds.

United States commercial red meat production totaled 3.93 billion pounds in September, up 3 percent from September's previous record high of 3.83 billion pounds produced in 1998. Beef production, at 2.28 billion pounds, was 4 percent above the previous year and just above the previous record high for September set in 1976. Cattle slaughter totaled 3.10 million head, up 4 percent from 1998. The average live weight was down 3 pounds from the previous year, at 1,210 pounds.

U.S. veal production totaled 20.0 million pounds, 7 percent below the previous record low for September set a year ago. Calf slaughter totaled 121 thousand head, down 11 percent from September 1998. The average live weight was 12 pounds above last year, at 281 pounds.

Pork production totaled 1.62 billion pounds, up 2 percent from the previous record high for September set last year.

Hog kill totaled 8.64 million head, 1 percent above 1998. The average live weight was 2 pounds above the previous year, at 255 pounds.

Lamb and mutton production, at 19.0 million pounds, was up 2 percent from September 1998. Sheep slaughter totaled 307 thousand head, slightly above last year. The average live weight was 127 pounds, up 2 pounds from September a year ago.

January - September red meat production was 34.4 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 12 percent, pork was up 3 percent, and lamb & mutton was down 4 percent.

1999 Small Grains Summary
September 1 Grain Stocks
Ag Prices Received

Montana's 1999 winter wheat production was estimated at 36.86 million bushels, down 24% from 1998 and the lowest production since the severe drought of 1985. The lower production in 1999 was the result of the lowest harvested acres since 1938. Producers harvested 970,000 acres, down 280,000 acres from the 1998 harvest. The 1999 average yield was 38 bushels per acre, which is 1 bushel lower than last year's average. The yield was lowered 1 bushel from the September 1, 1999 forecast.

Spring wheat production was estimated at 108 million bushels, unchanged from 1998. The 1999 and 1998 productions are tied for the third largest crop on record behind only 1995 and 1997 productions. The Northeastern and some of the North Central sections of the state received more precipitation than the rest of the state. In these areas the spring wheat plantings were delayed. Precipitation was good until July when dry weather prevailed through most of the summer. The seeded acreage was 4.15 million acres, 350,000 acres greater than 1998. The spring wheat crop is only 91 percent harvested as of September 26. Producers harvested or intended to harvest 4.0 million acres, 400,000 acres more than a year earlier. Yields averaged 27 bushels per acre, down 3 bushels from 1998 in part due to lack of precipitation in many areas of the state.

Montana **durum wheat** growers planted 400,000 acres and harvested or expect to harvest 390,000 acres in 1999. With good precipitation in the Northeastern part of the state, producers obtained good yields. The abundant moisture in the Northeastern part of the state delayed planting and durum wheat harvest was later than usual. The average yield was 28.0 bushels per acre, unchanged from 1998. Total production was estimated at 10.92 million bushels, down 9 percent from last year.

Barley planted acreage in Montana decreased to 1.3 million acres, 50,000 acres less than 1998. Producers harvested 1.15 million acres, also 50,000 acres less than were harvested for grain in 1998. Yields averaged 50 bushels per acre, up 2 bushels from last year and up 4 bushels from the previous forecast. Production was estimated at 57.5 million bushels, nearly unchanged from last year.

Oat production was estimated at 3.43 million bushels, up 6 percent from last year. Planted acreage was estimated at 170,000 acres, 30,000 acres higher than last year. Harvested acreage was set at 70,000 acres, up 10,000 from 1998. Yields averaged 49 bushels per acre, 5 bushels above last year.

Nationally, the 1999 **winter wheat** crop production was estimated at 1.70 billion bushels. This is up 1 percent from the August forecast, but 10 percent below the 1998 level. The U.S. yield increased 0.4 bushels from August to 47.8 bushels per acre; a new record high average, nearly a bushel better than last year's former record. Acreage for grain was estimated at 35.5 million acres, down less than 1 percent from last forecast. This is the smallest harvested area since 1972. Planted area is 43.4 million acres, unchanged from the last forecast.

Other spring wheat production in 1999 was estimated at 509 million bushels, up fractionally from the last forecast, but 4 percent less than in 1998. Harvested area is now 14.9 million acres, down 2 percent from last year. The U.S. yield was 34.1 bushels per acre, up slightly from the last forecast, but nearly a bushel less than last season.

Durum wheat production for 1999 totaled 110 million bushels, down slightly from September 1 and 20 percent less than last year. Grain area now totals 3.86 million acres, down 1 percent from the last forecast, but still 4 percent more than a year ago. The U.S. yield was forecast at 28.5 bushels per acre, up three-tenths from the last forecast, but 8.5 bushels per acre below 1998. North Dakota's durum harvest was only 69 percent complete as of September 26 well behind the average 91 percent. Quality of the remaining wheat has been compromised by sprouting and related moisture damage.

U.S. **barley** production in 1999 is estimated at 284 million bushels, 1 percent above the last forecast, but down 19 percent from last year's estimate. This is the lowest production since 1953. Average yield per acre, at 59.5 bushels, up 1 bushel from the previous forecast, but down 0.5 bushels from 1998. The area harvested for grain is estimated at 4.78 million acres, down 1 percent from the last forecast and 19 percent less than a year ago. This is the lowest acreage since 1900.

U.S. **oats** production for the 1999 crop year is forecast at 147.9 million bushels, 11 percent smaller than the 1998 production. This is the lowest production since records were first kept in 1866. The forecasted yield, at 60.0 bushels per acre, is slightly below last year's 60.2 bushel yield. Area harvested and to be harvested for grain in 1999 is 2.47 million acres, 11 percent below 1998. This is the smallest acreage harvested for grain on record.

September , 1999 Grain Stocks

All wheat stocks in Montana on September 1, 1999 totaled 192.85 million bushels, down 4 percent from the same quarter last year. Stocks stored on the farm accounted for 165.0 million bushels and off farm stocks accounted for 27.85 million bushels. All **spring wheat** stocks, at 145.0 million bushels, were up 8 percent from last year and accounted for 75 percent of the total wheat stocks. **Winter wheat** stocks were estimated at 47.85 million bushels, down 29 percent from last year. **Durum wheat** stocks were estimated at 17.86 million bushels, up 7.11 million bushels a 66% increase from last year. All wheat disappearance for the March-May quarter was 33.53 million bushels, compared with 34.09 million for the same quarter last year.

Barley stocks in all positions on September 1, 1999 were up 10 percent from last year and were set at 56.0 million bushels. **Oat** stocks were down 3 percent from a year ago and were estimated at 3.08 million bushels.

Nationally, all wheat stored in all positions September 1, 1999 totaled 2.46 billion bushels, up 3 percent from a year ago and the highest September 1 level since the 1987-88 marketing year. On farm stocks are 903 million bushels, up 2 percent from last year. More than 20 percent of the stocks on farms were standing in fields at the time of data collection; North Dakota and Montana had the majority of the unharvested production. Off-farm stocks, at 1.56 billion bushels, are up 4 percent. Wheat disappearance for the first quarter of the marketing year is 825 million bushels, down 10 percent from the same period in 1998.

U.S. **durum wheat** stored in all positions September 1, 1999 totaled 147 million bushels, up 17 percent from a year ago to the highest September 1 level since 1986. Farm stocks are 107 million bushels, up 22 percent from last year. More than 60 percent of the stocks on farms were standing in fields at the time of data collection, mostly in North Dakota. Off-farm stocks, at 39.9 million bushels, are up 5 percent from last September. Durum disappearance for the first quarter of the marketing year is 24.5 million bushels, down 5 percent from the same period in 1998.

U.S. **barley** stocks in all positions on September 1, 1999 are estimated at 297 million bushels, 9 percent below last year. Of the total barley stocks on hand, 167 million bushels are stored on farms, 14 percent below a year ago. Off-farm stocks, at 130 million bushels, are only 2 percent below 1998. Indicated disappearance during the June - August 1999 quarter totaled 135 million bushels, 11 percent lower than the same period a year earlier.

U.S. **oats** stored in all positions on September 1, 1999 totaled 148 million bushels, 8 percent below the stocks on September 1, 1999. Of the total stocks on hand, 97.5 million bushels were stored on farms, 12 percent below this time last year. Off-farm stocks totaled 51.0 million bushels, 1 percent below a year earlier. Indicated disappearance during June - August 1999 totaled 102 million bushels, 24 percent more than the same period a year ago.

Agricultural Prices Received for August

Crop prices for the full month of August 1999 were mostly lower compared with July 1999 prices. Montana winter wheat average price was $2.60 per bushel, down 9 cents from July's level; durum wheat was $2.92 per bushel, down 6 cents; and spring wheat was 23 cents lower at $2.90 per bushel. Feed barley was $1.38 and malt barley was $2.96 per bushel.

The mid-September price for alfalfa hay was $68.00 per ton, up $5.00 from last month. Other hay, at $58.00 per ton, was also $5.00 higher than August's price. The mid-September winter wheat price averaged $2.70 per bushel, spring wheat was $2.90; feed barley price was $1.40; and malt barley averaged $2.90.

Livestock prices for the full month of August were mixed. Steer and heifer prices increased 20 cents to $74.00 per cwt. Cows were down 80 cents to $38.90 and the average price for calves increased $1.60 to $88.10 per cwt. Sheep prices decreased $4.30 to $28.60 per cwt. and lamb prices increased $1.50 to $79.60 per cwt. Milk prices were up 60 cents from last month at $13.40 per cwt. Steer and heifer prices for mid-September averaged $74.70 per cwt.

Nationally, prices for August and changes from July were as follows: winter wheat was $2.34, up 21 cents; spring wheat was $2.85, down 8 cents; the all barley price was $2.37, up 33 cents, again last month there was an increase in malt barley sales as a percent of the total barley sold; and steer and heifer prices were $66.20, up $1.00.

The U.S. mid-September winter wheat price was $2.41 per bushel, spring wheat was $2.82 per bushel, all wheat price was $2.56 per bushel, all barley was $2.14. Steer and heifer prices were $66.90 per cwt, cow prices were $34.90, all hog prices were $32.30 per cwt, and all egg prices were 56.7 cents per dozen.

The preliminary All Farm Products Index of Prices Received in September was 97 based on 1990-92=100, down 1 point (1.0 percent) from the August index. The seasonal changes in the mix of commodities farmers sell affect the overall index. Lower seasonal marketings of cattle, broilers, wheat, and grapes more than offset the relatively higher marketings of soybeans, peanuts, corn, and potatoes. The marketing changes would have decreased the index two points but were partially offset by the price increases. Price increases from August for milk, lettuce, tomatoes, and soybeans more than offset price decreases for hogs, grapes, potatoes, and onions.

Compared with September 1998, the All Farm Products Index was 2 points (2.0 percent) lower. Price decreases from September 1998 for broilers, soybeans, milk, and cotton more than offset price increases for cattle, hogs, calves, and wheat.

UNITED STATES INDEX SUMMARY

HIGHLIGHTS:

- Red Meat Production
- Cattle on Feed
- Milk Production
- Egg Production
- Hogs & Pigs Inventory
- Potato Disposition
- Cash Receipts

August Red Meat Production Up

Montana slaughter plants produced 2.4 million pounds, dressed weight, of red meat during August 1999, up 24 percent from August 1998 and up 14 percent from last month. Cattle slaughter totaled 2,600 head, up 500 head from a year ago. The average live weight was 1,107 pounds, 12 pounds lighter than last August.

There were 3,400 hogs slaughtered during August, 500 more than in August 1998. The average live weight was 247 pounds, up 21 pounds from a year earlier. Sheep slaughtered were up 100 head from last August to 500 head. The average live weight decreased 7 pounds from last August to 127 pounds.

Commercial red meat production for the United States totaled 3.91 billion pounds in August, up 4 percent from the 3.77 billion pounds produced in August 1998 and up 1 percent from the previous record high for August set in 1995. Beef production, at 2.31 billion pounds, was 4 percent above the previous year. Cattle slaughter totaled 3.15 million head, up 4 percent from 1998. The average live weight was down 4 pounds from the previous year, at 1,206 pounds. Veal production totaled 20.0 million pounds, slightly above August a year ago. Calf slaughter totaled 119 thousand head, down 5 percent from August 1998. The average live weight was 16 pounds above last year, at 282 pounds.

Pork production totaled 1.56 billion pounds, up 4 percent from the previous record high for August set last year. Hog kill totaled 8.41 million head, 3 percent above 1998. The average live weight was 2 pounds above the previous year, at 254 pounds.

Lamb and mutton production, at 19.0 million pounds, was up 10 percent from August 1998. Sheep slaughter totaled 296 thousand head, 8 percent above last year. The average live weight was 127 pounds, up 4 pounds from August a year ago.

January - August red meat production was 30.4 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 12 percent, pork was up 3 percent, and lamb & mutton was down 5 percent.

U.S. Cattle on Feed Up 5 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.53 million head on September 1, 1999. The inventory was 5 percent above September 1, 1998 and 4 percent above September 1, 1997.

Placements in feedlots during August totaled 2.41 million, 17 percent above 1998 but 1 percent below 1997. Net placements were 2.36 million. During August, placements of cattle and calves weighing less than 600 pounds were 492,000, 600-699 pounds were 480,000, 700-799 pounds were 731,000, and 800 pounds and greater were 710,000.

Marketings of fed cattle during August totaled 2.03 million, 4 percent above 1998 but slightly below 1997. Other disappearance totaled 55,000 during August, 6 percent above 1998 and 22 percent above 1997.

Cattle on Feed in Historic 7 States Up 5 Percent

Cattle on feed September 1, 1999, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 8.18 million, up 5 percent from the previous year and 4 percent above September 1, 1997.

Placements in feedlots during August totaled 2.07 million, 17 percent above 1998 but 2 percent below 1997. Marketings during August totaled 1.73 million, 3 percent above 1998 but 1 percent below 1997. Other disappearance during August was 42,000 head, the same as 1998 and 1997.

August Egg Production Up 4 Percent

U.S. egg production totaled 6.96 billion during August 1999, up 4 percent from the 6.69 billion produced in 1998. Production included 5.87 billion table eggs and 1.10 billion hatching eggs, of which 1.03 billion were broiler-type and 65.0 million were egg-type. The total number of layers during August 1999 averaged 320 million, up 3 percent from the total average number of layers during August 1998. August egg production per 100 layers was 2,175 eggs, up fractionally from 2,165 eggs in August 1998.

All layers in the U.S. on September 1, 1999, totaled 321 million, up 4 percent from a year ago. The 321 million layers consisted of 263 million layers producing table or commercial type eggs, 55.9 million layers producing broiler-type hatching eggs, and 2.68 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1999, averaged 71.0 eggs per 100 layers, up 2 percent from the 69.3 a year ago.

Laying flocks in the 30 major egg producing States produced 6.54 billion eggs during August, up 4 percent from August 1998. The average number of layers during August, at 301 million, was up 3 percent from a year earlier.

U.S. August Milk Production Up 3.6 Percent

Milk production in the 20 major States during August totaled 11.5 billion pounds, up 3.6 percent from production in these same States in August 1998. July revised production, at 11.6 billion pounds was up 2.4 percent from July 1998.

Production per cow in the 20 major States averaged 1,488 pounds for August, 45 pounds above August 1998. The number of cows on farms in the 20 major States was 7.74 million head, 33,000 head more than August 1998 and 3,000 head more than July 1999.

U.S. Hog Inventory Down 4 Percent

U.S. inventory of all hogs and pigs on September 1, 1999, was 60.7 million head. This was 4 percent below September 1998, but slightly above June 1, 1999.

Breeding inventory, at 6.29 million head, was down 8 percent from September 1, 1998, and down 3 percent from June 1, 1999. Market hog inventory, at 54.4 million head, was 4 percent below last year, but 1 percent above last quarter.

The June-August 1999 U.S. pig crop, at 25.9 million head, was 3 percent less than 1998, but 1 percent more than 1997. Sows farrowing during this period totaled 2.93 million head, 4 percent below last year. The sows farrowed during this quarter represented 45 percent of the breeding herd. The average pigs per litter rose to an average of 8.86 pigs saved per litter for the June-August period, compared to 8.72 pigs last year. Pigs saved per litter by size of operation ranged from 7.80 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.85 million sows farrow during the September-November 1999 quarter, 5 percent below the actual farrowings during the same period in 1998, and 3 percent below 1997. Intended farrowings for December 1999-February 2000, at 2.81 million sows, are 3 percent below the same period last year and 4 percent below 1998.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 31 percent of the total U.S. hog inventory.

1998 Potato Production and Disposition

Montana's 1998 potato production totaled 3.18 million cwt, 4 percent below last year and 1 percent below 1996. Producers harvested 10,600 acres, 200 more than a year ago and 400 acres more than two years ago. Potato yields averaged 300 cwt per acre compared with 320 cwt in 1997.

Value of production from the 1998 crop was $25.3 million, up 8 percent from 1997. The average price was $7.95 per cwt, up 90 cents from the previous year's crop. Sales of Montana's 1998 potato crop totaled $22.0 million, which is 5 percent higher than last year's crop. Producers sold 2.8 million cwt from the 1998 crop compared with 3.0 million cwt a year ago.

Total U.S. potato production for 1998 is estimated at 476 million cwt, up 2 percent from 1997 but 5 percent below the record high in 1996. Harvested area, at 1.39 million acres, was up 3 percent from 1997 but 3 percent below 1996. The average yield of 343 cwt per acre was down 2 cwt from 1997 and 7 cwt below 1996. Seasonal production was below last year for winter and spring, while summer and fall potatoes were above the previous year. Winter production fell 13 percent, spring decreased 5 percent, summer increased 4 percent, and fall potatoes gained 2 percent. This is the second largest potato production on record in the United States.

Summer potato production was revised to 18.9 million cwt for 1998, up 4 percent from 1997 but 1 percent below 1996. Harvested area of 68,100 acres gained 5 percent from 1997, while the average yield of 278 cwt per acre was down 2 cwt from a year earlier.

Fall potatoes were finalized at 433 million cwt, up 2 percent from 1997 but 5 percent below the 1996 record. This is the second largest fall potato production in the United States. Area harvested in 1998 was estimated at 1.21 million acres, up 2 percent from 1997 but 3 percent below two years ago. The average yield, at 356 cwt per acre, was down 1 cwt from 1996. Final production of fall potatoes was 1 percent above the first forecast made in November 1998.

Value of all potato production was estimated at $2.63 billion, up fractionally from last year and 9 percent above 1996. The average price, at $5.56 per cwt lost 8 cents from a year earlier but was 65 cents above 1996.

Sales from the 1998 potato crop totaled 435 million cwt, up 1 percent from 1997 but 4 percent below 1996. Sales accounted for 90.8 percent of 1998 production. Non sales accounted for 41.2 million cwt of 1998 potatoes, up 9 percent from 1997 but 14 percent below 1996. Over the past five years, an average of 90.7 percent of the potatoes produced have been sold. The other 9.3 percent was either lost (shrinkage and loss) or used for seed, home use, and livestock feed on farms where grown.

Processors used 282 million cwt of raw potatoes from the 1998 crop, up 5 percent from 1997 but less than 1 percent below 1996. Table stock sales totaled 124 million cwt, 5 percent below last year. Seed sales of 25.1 million cwt were down 3 percent. Sales for livestock feed, at 3.11 million cwt, down 14 percent from 1997 and 74 percent below the 1996 diversion-enhanced program.

Chip potato use totaled 50.5 million cwt, 5 percent above last year. Freezers took 169 million cwt of raw potatoes, up 3 percent, while dehydrating jumped 15 percent to a record high 55.5 million cwt. Canning use, at 5.04 million cwt, was down 8 percent. Starch, flour and other products were made from 1.63 million cwt of potatoes, up 25 percent from last year.

Shrinkage and loss was estimated at 35.5 million cwt, up 10 percent from last year but 14 percent less than 1996. Livestock feed and home use totaled 1.36 million cwt, up 4 percent. Growers kept an additional 4.41 million cwt for seed on their own farms, a gain of 6 percent from the previous year.

Spring Wheat Forecast Down from Last Month

Montana's September 1, 1999 other spring wheat production forecast is 109.35 million bushels, down 4 percent from last month. If realized, this would be 1 percent higher than last year because of an increase in harvested acres. The average yield, at 27 bushels per acre, was down 1 bushel from the August 1, 1999 forecast and is 3 bushels per acre lower than last year. Harvested acres are unchanged from last month and are forecast at 4.05 million acres. Harvest progress is behind last year and the 5-year average. As of September 5, 1999, spring wheat is 69 percent harvested compared with 94 percent last year and 77 percent for the average.

Durum wheat production as of September 1, 1999 is unchanged from last month's forecast of 10.92 million bushels, down 9 percent from last year. Yields are expected to average 28 bushels per acre which is the same as last month and last year. Harvested acreage remained unchanged from last month at 390,000 acres compared with 430,000 acres in 1998.

Winter wheat production is not forecast on September 1,however, if we added the August winter wheat production forecast with current spring wheat and durum forecasts the total wheat crop would be estimated at 158.10 million bushels, down 6 percent from 1998.

The September 1, 1999 forecast for barley remains unchanged from last month and is set at 52.90 million bushels, down 8 percent from last year. Yield is forecast at 46 bushels per acre compared with 48 bushels per acre for 1998. Harvested acreage is unchanged from August and is forecast at 1.15 million acres which is 50,000 acres lower than 1998.

Sugar beet yield is down 0.5 tons per acre from last month, at 23.5 tons per acre, but harvested acreage remains unchanged at 61,800 acres. Total production is forecast at 1.45 million tons, up 3 percent from last year.

At the U.S. level, all wheat production for September 1, 1999 is placed at 2.31 billion bushels, down less than 1 percent from the August forecast and down 10 percent from 1998. The U.S. yield is forecast at 42.3 bushels per acre. This is down 0.3 bushels from last month. Other spring wheat production is forecast at 508 million bushels, down 1 percent from last month and down 4 percent from last season. The final forecast of U.S. average yield is 33.9 bushels per acre, 0.3 bushels per acre lower than a month ago. Hard red spring production is down 1 percent from August to 455 million bushels because yields declined in Montana and South Dakota. Heat was the factor in both states. The South Dakota harvest is finished. Better Idaho yields have white spring production up 1 percent to 52.5 million bushels.

U.S. durum wheat production for September 1, 1999 is forecast at 110 million bushels, down 3 percent from last month and 22 percent less than 1998. The U.S. yield is now forecast at 28.3 bushels per acre, down 0.9 bushels from August 1. North Dakota's crop is maturing slowly; only 19 percent was combined as of August 29.

U.S. barley production for 1999 is forecast at 283 million bushels, less than 1 percent higher than the August forecast but 20 percent below the 1998 production. Area harvested and to be harvested is unchanged from August, at 4.83 million acres, down 18 percent from the previous year. Yields are expected to average 58.5 bushels per acre, up 0.3 bushels from last month but 1.6 bushels below last year's yield.

Sugar beet production is forecast at record high 33.6 million tons, 3 percent above the previous record in 1998. Growers in the 12 sugar beet producing states expect to harvest 1,525,500 acres, 5 percent more than last year and the highest since 1,540,500 acres were harvested in 1969. The yield is forecast at 22.0 tons per acre, 0.5 ton below 1998.

Corn production is forecast at 9.38 billion bushels, down 2 percent from the last forecast and down 4 percent from 1998. Based on September 1, 1999 conditions, yields are expected to average 132.2 bushels per acre, down 2.5 bushels per acre from August and 2.2 bushels from a year ago. If realized, this would be the fourth largest production and third highest yield on record. Acreage for grain harvest is estimated at 71.0 million acres, unchanged from August.

NASS PROGRAM CHANGES: The National Agricultural Statistics Service has completed a preliminary review of it's statistical program to make sure it best meets the needs of data users in the future. These changes are documented at the following web site: http://www.usda.gov/nass/events/events.htm

This site can be reached through the NASS home page by clicking on "Coming Events and News" under AGENCY INFORMATION. The proposed program changes are the first subject.

1/ District data funded by the Montana Wheat & Barley Committee.

Ag Prices Received for July

Crop prices for the full month of July were lower compared with June prices. Montana winter wheat average price was $2.69 per bushel, down 12 cents from June's level; durum wheat was $2.98 per bushel, down 2 cents; and spring wheat was 2 cents lower at $3.13 per bushel. Feed barley was $1.48 and malt barley was $2.88 per bushel.

The mid-August price for alfalfa hay was $63.00 per ton, down $1.00 from last month. Other hay, at $53.00 per ton, was $2.00 lower than July's price. The mid-August winter wheat price averaged $2.65 per bushel, spring wheat was $3.00; feed barley price was $1.40; and malt barley averaged $2.90.

Livestock prices for the full month of July were mixed. Steer and heifer prices decreased $1.40 to $73.80 per cwt. Cows were up $1.00 to $39.70 and the average price for calves increased $2.60 to $86.50 per cwt. Sheep prices decreased $1.60 to $32.90 per cwt. and lamb prices decreased $2.00 to $78.10 per cwt. Milk prices were up 10 cents from last month at $12.80 per cwt. Steer and heifer prices for mid-August averaged $74.30 per cwt.

Nationally, prices for July and changes from June were as follows: winter wheat was $2.13 down 19 cents; spring wheat was $2.93, down 8 cents; the all barley price was $2.04, up 34 cents, mainly due to the increase in malt barley sales as a percent of the total barley sold; and steer and heifer prices were $65.20, down $1.50.

The U.S. mid-August winter wheat price was $2.30 per bushel, spring wheat was $2.85 per bushel, all wheat price was $2.43 per bushel, all barley was $2.13. Steer and heifer prices were $65.60 per cwt, cow prices were $37.00, all hog prices were $36.40 per cwt, and all egg prices were $0.59 cents per dozen.

The All Farm Products Index of Prices Received in August was 98 based on 1990-92=100, up 3 points (3.2 percent) from the preliminary July index. Price increases from July for milk, hogs, wheat, and corn more than offset price decreases for broilers, potatoes, oranges, and tomatoes. The seasonal changes in the mix of commodities farmers sell also affect the overall index. Higher seasonal marketings of tobacco, cattle, grapes, and sweet corn more than offset the relatively lower marketings of wheat, hay, milk, and broilers. These marketing changes contributed less than one point to the overall increase in the index.

Compared with August 1998, the All Farm Products Index was 3 points (3.0 percent) lower. Price decreases from August 1998 for broilers, soybeans, milk, and lettuce more than offset price increases for cattle, peaches, calves, and turkeys.

United States Index Summary

Montana Wheat & Barley Movement

Montana wheat shipped to out-of-state destinations during the December 1998-May 1999 period, at 96.8 million bushels, was 1% higher than last year. Over 90% of wheat shipped during this period headed west, totaling 87.6 million bushels, up 1% from a year earlier. Movements to eastern destinations increased 8% for this period, totaling 4.6 million bushels. Other destinations, mostly to the south, received 4.5 million bushels up 25% from last year.

Most of Montana's wheat is shipped by rail, totaling 89.4 million bushels, 92% of total shipments. Over one million more bushels of wheat were trucked during this period than last year. Wheat shipped by truck accounted for just under 8% of total shipments.

Montana barley shipped to out-of-state destinations during December 1998-May 1999 was 17.3 million bushels, up 10% from the same period last year. Forty-three percent of barley shipped out of Montana headed for destinations other than the west coast. Shipments to western destinations were down from the same period last year, at 9.9 million bushels. Eastern destination shipments totaled 5.1 million bushels up 18% from last year. Shipments to other destinations were up significantly from last year to 2.2 million bushels this year. Barley hauled by rail was 88% of total movement up from 87% for the same period last year.

U.S. Cattle on Feed Up 2 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.20 million head on August 1, 1999. The inventory was 2 percent above August 1, 1998 and 5 percent above August 1, 1997.

Placements in feedlots during July totaled 1.81 million, 6 percent below 1998 and 9 percent below 1997. **Net placements** were 1.76 million. During July, placements of cattle and calves weighing less than 600 pounds were 333,000, 600-699 pounds were 400,000, 700-799 pounds were 578,000, and 800 pounds and greater were 501,000. **Marketings** of fed cattle during July totaled 2.12 million, 3 percent above 1998 but slightly below 1997. **Other disappearance** totaled 52,000 during July, 4 percent above 1998 but 9 percent below 1997.

Cattle on Feed in Historic 7 States Up 2 Percent

Cattle on feed August 1, 1999, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 7.88 million, up 2 percent from the previous year and 5 percent above August 1, 1997. **Placements** in feedlots during July totaled 1.57 million, 7 percent below 1998 and 11 percent below 1997. **Marketings** during July totaled 1.82 million, 3 percent above 1998 but 2 percent below 1997. **Other disappearance** during July was 43,000 head, 5 percent above 1998 and 2 percent above 1997.

U.S. July Milk Production Up 2.3 Percent

Milk production in the 20 major States during July totaled 11.6 billion pounds, up 2.3 percent from production in these same States in July 1998. July milk production was down 1.2 percent from June 1999, compared to a decrease of 0.7 percent for the same period in 1998. June revised production, at 11.7 billion pounds was up 2.8 percent from June 1998.

Production per cow in the 20 major States averaged 1,496 pounds for July, 28 pounds above July 1998. The number of cows on farms in the 20 major States was 7.74 million head, 27,000 head more than July 1998 and 6,000 head more than June 1999.

Montana and U.S. Red Meat Production Up for July

Montana slaughter plants produced 2.1 million pounds, dressed weight, of red meat during July 1999, up 23 percent from a year ago and up 11 percent from the previous month. Cattle slaughter, at 2,300 head, was up 300 head from last year. The average live weight of 1,118 pounds was down 5 pounds from a year ago.

There were 2,900 hogs slaughtered in Montana during July, 500 head more than the previous year. Average live weight of 244 pounds was up 39 pounds from July 1998. Sheep slaughter, at 300 head, was unchanged from last year. The average live weight of 131 pounds was down 6 pounds from a year ago.

U.S. commercial red meat production totaled 3.78 billion pounds in July, equaling the previous record high for July set in 1998. Beef production, at 2.26 billion pounds, was 2 percent above the previous year and equaled the previous record high for July set in 1997. Cattle slaughter totaled 3.08 million head, up 1 percent from 1998. The average live weight was up 3 pounds from the previous year, at 1,206 pounds. Veal production totaled 19.0 million pounds, 11 percent below the previous record low for July set a year ago. Calf slaughter totaled 111 thousand head, down 17 percent from July 1998. The average live weight was 19 pounds above last year, at 280 pounds.

U.S. pork production totaled 1.49 billion pounds, down 3 percent from the previous year. Hog kill totaled 7.91 million head, 4 percent below 1998. The average live weight was 4 pounds above the previous year, at 256 pounds.

U.S. lamb and mutton production, at 17.0 million pounds, was down 3 percent from the previous record low set for July set in 1998. Sheep slaughter totaled 265 thousand head, 6 percent below last year. The average live weight was 132 pounds, up 4 pounds from July a year ago.

January - July red meat production for the U.S. was 26.5 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 14 percent, pork was up 3 percent, and lamb & mutton was down 7 percent.

U.S. All Hired Workers up 1 Percent, Wages up 5 Percent from Last July

There were 1.46 million hired workers on the Nation's farms and ranches the week of July 11-17, 1999, up 1 percent from a year ago. There were 1.14 million workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 319,000 workers. Migrant workers accounted for 12.5 percent of the July hired workforce compared to 13.7 percent last year.

Farm operators paid their hired workers an average wage rate of $7.58 per hour during the July 1999 survey week, up 33 cents from a year earlier. Field Workers received an average of $7.05 per hour, up 27 cents from last July. Livestock Workers earned $7.15 per hour compared with $6.91 a year earlier.

Hired farm worker wage rates in all regions were above a year ago. The largest increases occurred in the Southeast, Lake, and Northern Plains (North Dakota, South Dakota, Nebraska, and Kansas) regions. An increasingly competitive economic environment, coupled with a need to attract more skilled farm labor, continued to push hired farm wage rates higher in the above regions and nationwide.

July Egg Production Up 3 Percent

U.S. egg production totaled 6.91 billion during July 1999, up 3 percent from the 6.72 billion produced in 1998. Production included 5.80 billion table eggs and 1.11 billion hatching eggs, of which 1.04 billion were broiler-type and 67.0 million were egg-type. The total number of layers during July 1999 averaged 320 million, up 4 percent from the total average number of layers during July 1998. July egg production per 100 layers was 2,159 eggs, down 1 percent from 2,175 eggs in July 1998.

All layers in the U.S. on August 1, 1999, totaled 319 million, up 3 percent from a year ago. The 319 million layers consisted of 260 million layers producing table or commercial type eggs, 56.1 million layers producing broiler-type hatching eggs, and 2.80 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1999, averaged 69.2 eggs per 100 layers, down 1 percent from the 70.2 a year ago.

Laying flocks in the 30 major egg producing States produced 6.50 billion eggs during July, up 2 percent from July 1998. The average number of layers during July, at 301 million, was up 3 percent from a year earlier.

Montana and U.S. Farms with Internet Access More Than Doubles

A total of 38 percent of Montana farms and ranches now have Internet access, compared with 15 percent with Internet access in 1997, according to the Montana Agricultural Statistics Service. A total of 65 percent of farms and ranches had access to a computer in 1999, compared with 54 percent two years ago. Fifty-two percent of all Montana farms and ranches own or lease a computer, up from 41 percent in 1997. Farms and ranches using computers for their agricultural business increased from 33 percent in 1997 to 36 percent in 1999.

Farm computer usage numbers are also published by regions. Montana is included with Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. In 1999, 64 percent of the farms and ranches in this region have access to a computer, 55 percent own or lease a computer; 37 percent are using a computer for their agricultural business; and 41 percent have Internet access. Computer access for crop farms in the region increased 2 percent to 62 percent. The percentage of crop farms having Internet access almost doubled to 44 percent. The percentage of livestock producers in the region that had access to computers increased to 66 percent, compared with 47 percent two years ago. Thirty seven percent of the livestock producers in the region have Internet access, compared with 16 percent in 1997.

A total of 29 percent of U.S. farms and ranches now have Internet access, compared with 13 percent with Internet access in 1997. A total of 47 percent of farms and ranches had access to a computer in 1999, compared with 38 percent two years ago. Forty percent of all U.S. farms and ranches own or lease a computer, up from 31 percent in 1997. Farms and ranches using computers for their agricultural business increased from 20 percent in 1997 to 24 percent in 1999.

In 1999, 77 percent of U.S. farms and ranches with sales of $250,000 or more have access to a computer; 72 percent own or lease a computer; 65 percent are using a computer for their agricultural business; and 52 percent have Internet access. For farms and ranches with sales of $249,999 or less; 45 percent have access to a computer; 37 percent own or lease a computer; 21 percent use a computer for their agricultural business; and 27 percent have Internet access.

HIGHLIGHTS:

August 1 Crop Production Forecast
Ag Prices Received
Farm Production Expenses

Heat and Dry Weather Takes Toll on Small Grains

Montana producers expect to harvest 37.83 million bushels of winter wheat. The expected yield of 39 bushels per acre is down 3 bushels from last month, but equals last year's average. If realized, total production would be down over 22 percent from last year due to reduced harvested acreage. Hot, dry weather has reduced the yield. Crop progress shows 56 percent of the winter wheat harvested by August 8 compared with 43 percent for the 5-year average. Other spring wheat production is forecast at 113.40 million bushels with a yield of 28 bushels per acre. If realized, the yield would be 4 bushels below last month's forecast and 2 bushels per acre below last year. Total production would be 5 percent above 1998 because of an increase in harvested acres. As of August 8, harvest was 10 percent complete compared with 6 percent for the average, and 49 percent of the crop was rated in good to excellent condition compared with 71 percent a month ago. The durum wheat yield estimate decreased 2 bushels from last month to 28 bushels per acre. Durum production of 10.92 million bushels is 9 percent below last year.

Barley producers are also expecting a smaller crop with anticipated yields averaging 46 bushels per acre, down 7 bushels from last month. Total production is forecast to be 52.9 million bushels, down 13 percent from last month and down 8 percent from last year. As of August 8, the barley crop was rated at 27 percent in good to excellent condition compared with 64 percent the first week in July. Oat production is forecast at 4.48 million bushels, down 7 percent from last month, but up 38 percent from last year due to the increase in harvested acres. The yield is down 4 bushels per acre from last month, but up 2 bushels from last year. Harvested acreage is up 20,000 acres from 1998 to 80,000 acres.

At 2.2 tons per acre, Montana hay producers are expecting the same alfalfa yields as last year, while expected yields for other hay at 1.5 tons per acre are lower than last year. Both types of hay are expected to have higher harvested acres than last year. Total production is forecast at 5.20 million tons compared with 5.02 million tons last year.

Montana corn production is estimated at 2.56 million bushels, up 24 percent from last year. Yields are expected to average 135 bushels per acre, up 20 bushels from last year. Forecasted dry bean yield is 2,180 pounds per acre with total production of 338,000 cwt, up 27 percent from last year due to an increase in harvested acres. If realized, this would be the largest dry bean production since 1943. Sugar beet production is forecast at 1.48 million tons, up 5 percent from last year.

At the U.S. level, all wheat production is placed at 2.31 billion bushels, down 1 percent from the July forecast and down 9 percent from 1998. Based on August 1 conditions, the U.S. yield is forecast at 42.5 bushels per acre, down 0.2 bushels from last month. The final winter wheat production forecast is 1.69 billion bushels. This is up 1 percent from last month, but down 10 percent from 1998. The U.S. yield is forecast at 47.4 bushels per acre, up 0.4 bushels from last month to a new record high. Durum wheat production is forecast at 114 million bushels, down 14 percent from last month and 19 percent from 1998. Lower yields and a 150,000 acre drop in North Dakota harvested area caused the decline. The U.S. yield is forecast at 29.2 bushels per acre, 3.5 bushels less than last month. Other spring wheat production is forecast at 512 million bushels, down 3 percent from both last month and 1998. There were no changes in acreage intended for harvest. The U.S. yield is forecast at 34.2 bushels per acre, 0.7 bushels less than July 1. Of the production total, 460 million bushels are hard red spring wheat, down 3 percent from last month.

U. S. barley acreage for planted and harvested for 1999 were lowered 70,000 and 59,000 acres, respectively, from June. Barley planted for all purposes is estimated at 5.17 million acres, down 1 percent from June and 19 percent below 1998. Acreage expected to be harvested for grain in 1999, at 4.83 million acres, is 18 percent lower than the 1998 harvested grain acreage. Production for 1999 is forecast at 281 million bushels, down 5 percent from July and down 20 percent from 1998. Yields are expected to average 58.2 bushels per acre, a decrease of 2.1 bushels from July and 1.9 bushels from last year. Yields were decreased in Idaho, Kansas, Minnesota and Montana while increases were in Oregon, Pennsylvania, and South Dakota.

Dry bean production is forecast at 31.5 million cwt for 1999, up 2 percent from a year earlier and 7 percent above two years ago. This is the highest production since 1991's 33.8 million cwt.

All hay production for 1999 is forecast at a record high 160.8 million tons, up 6 percent from 1998 and 5 percent higher than 1997. The all hay yield is forecast at 2.59 tons per acre (also a record), up 3 percent from last year. Acreage for harvest of all hay is estimated at 62.1 million acres, 3 percent higher than 1998. This is an increase of 100,000 acres from the June estimate as a result of an increase in the other hay estimate in North Dakota.

Corn production is forecast at 9.56 billion bushels, down 2 percent from last year but up 4 percent from 1997. Based on August 1 conditions, yields are expected to average 134.7 bushels per acre, up 0.3 bushels from a year ago. If realized, this would be the third largest production and second highest yield on record. Acreage for grain harvest is estimated at 71.0 million acres, down 84,000 acres from June.

PLEASE RETURN

Ag Prices Received for June

Crop prices for the full month of June were mixed compared with May prices. Montana winter wheat average price was $2.81 per bushel, down 8 cents from May's level; durum wheat was $3.00 per bushel, up 15 cents; and spring wheat was 10 cents higher at $3.15 per bushel. Feed barley was $1.54 and malt barley was $2.20 per bushel.

The mid-July price for alfalfa hay was $64.00 per ton, up $2.00 from last month. Other hay, at $55.00 per ton, was $3.00 higher than June's price. The mid-July winter wheat price averaged $2.70 per bushel, spring wheat was $3.10; feed barley price was $1.45; and malt barley averaged $2.30.

Livestock prices for the full month of June were mostly higher. Steer and heifer prices increased $3.90 to $75.20 per cwt. Cows were up 80 cents to $38.70 and the average price for calves increased $2.70 to $83.90 per cwt. Sheep prices increased $6.10 to $34.50 per cwt. and lamb prices increased $1.90 to $80.10 per cwt. Milk prices were up 10 cents from last month at $12.70 per cwt. Steer and heifer prices for mid-July averaged $72.90 per cwt.

Nationally, prices for June and changes from May were as follows: winter wheat was $2.32, down 4 cents; spring wheat was $3.01, up 8 cents; the all barley price was $1.70, down 11 cents; and steer and heifer prices were $66.70, up $1.50.

The U.S. mid-July winter wheat price was $2.07 per bushel, spring wheat was $2.93 per bushel, all wheat price was $2.15 per bushel, all barley was $1.73. Steer and heifer prices were $64.60 per cwt, cow prices were $38.20, all hog prices were $31.20 per cwt, and all egg prices were $0.57 cents per dozen.

The All Farm Products Index of Prices Received in July was 94 based on 1990-92=100, down 4 points (4.1 percent) from June. Price decreases from June for cattle, wheat, hogs, and corn more than offset price increases for milk, potatoes, oranges, and asparagus. The seasonal changes in the mix of commodities farmers sell also affect the overall index. Lower seasonal marketings of milk, cantaloupes, potatoes, and oranges more than offset the relatively higher marketings of wheat, tomatoes, grapes, and grain sorghum.

Compared with July 1998, the All Farm Products Index was 8 points (7.8 percent) lower. Price decreases from July 1998 for wheat, corn, soybeans, and broilers more than offset price increases for cattle, turkeys, potatoes, and oranges.

United States Index Summary

INDEX 1990-92=100	June 1998	July 1998	June 1999	July 1999

U.S. Production Expenditures Up Slightly in 1998

U.S. farm production expenditures totaled $183.6 billion in 1998, up 0.2 percent from the revised 1997 total of $183.2 billion. The largest contributors to the increase were; trucks and autos, up 15.8 percent; tractors and self propelled farm machinery, up 11.1 percent; seeds and plants, up 7.5 percent; and farm improvements and construction, up 5.7 percent. These increases were partially offset by decreases in; fuels, down 10.0 percent; rent, down 6.3 percent; and feed, down 4.9 percent. The largest two expenditure categories were feed and farm services; each accounted for 13.6 percent of U.S. total production expenses. The farm services category includes expense items such as custom work, utilities, marketing charges, veterinary services, transportation costs, and miscellaneous business expenses.

Average expenditures per U.S. farm in 1998 were $83,987 compared to $83,856, as revised for 1997. On the average, U.S. farm operations in 1998 spent $11,439 on feed; $11,439 on farm services; $7,916 on rent; $8,694 on labor; and $6,498 on livestock and poultry purchases. Revised estimates for 1997 indicated that U.S. farms spent an average of $12,040 on feed; $11,307 on farm services; $8,455 on rent; $8,377 on labor; and $6,500 for livestock and poultry purchases.

The Farm Production Region contributing most to total 1998 U.S. farm production expenditures was the Corn Belt with expenses of $34.8 billion, 19 percent of the U.S. total. Expenditures in the Corn Belt were up 2.7 percent from the 1997 level of $33.9 billion. In total expenditures, the Corn Belt was followed by the Pacific Region at $29.1 billion (1997 - $29.9 billion); Northern Plains $22.6 billion (1997 - $22.6 billion); Lake States $19.1 billion (1997 - $19.3 billion); and the Southern Plains at $15.6 billion (1997 - $16.0 billion).

United States July 1 Cattle Inventory Down 1 Percent

All cattle and calves in the United States as of July 1, 1999, totaled 106.8 million head, 1 percent below the 107.7 million on July 1, 1998 and 2 percent below the 109.2 million two years ago.

All cows and heifers that have calved, at 32 million, were 1 percent below the 43.6 million on July 1, 1998 and 2 percent below the 44.1 million two years ago. Beef cows, at 34.1 million, were down 1 percent from July 1, 1998 and 2 percent below two years ago. Milk cows, at 9.15 million, were down 1 percent from July 1, 1998 and 2 percent below two years ago.

Other class estimates on July 1, 1999, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 16.6 million, down 1 percent and down 3 percent.
- Beef replacement heifers, 4.8 million, down 4 percent and down 9 percent.
- Milk replacement heifers, 3.7 million, up 3 percent and up 3 percent.
- Other heifers, 8.1 million, no change and down 1 percent.
- Steers weighing 500 pounds and over, 14.4 million, down 1 percent and down 3 percent.
- Bulls weighing 500 pounds and over, 2.1 million, down 5 percent and down 9 percent.
- Calves under 500 pounds, 30.5 million, down slightly and down 1 percent.
- All cattle and calves on feed for slaughter, 11.4 million, up 4 percent and up 5 percent.

The 1999 calf crop is expected to be 38.3 million, down 1 percent from 1998 and down 2 percent from 1997. This would be the smallest calf crop since 1952. Calves born during the first half of the year are estimated at 28.2 million, down 1 percent from 1998 and 1997.

July U.S. All Sheep and Lamb Inventory Totals 9.00 Million Head

All sheep and lamb inventory in the United States on July 1, 1999, totaled 9.00 million head, 4 percent below July 1, 1998. Breeding sheep inventory declined to 5.35 million head on July 1, 1999, 4 percent below July 1998. Market sheep and lambs (including newborn lambs), at 3.65 million head, were 5 percent below last July. Of the July 1, 1999 breeding herd, 4.38 million head were ewes one year old and older, 215,000 head were rams one year old and older, and 755,000 head were replacement lambs.

Market sheep and lambs, at 3.575 million head, were 4 percent below last July. Of the total market lambs, 59.3 percent were under 65 pounds, 20.4 percent were 65 to 84 pounds, 13.0 percent were 85 to 105 pounds, and the remainder, 7.3 percent, were over 105 pounds on July 1.

The 1999 Lamb Crop in the United States is expected to total 4.75 million head, down 2 percent from the 1998 lamb crop of 4.87 million head. Lambs born during January through June 1999 totaled 4.21 million head or 89 percent of the yearly total. An additional 540,000 head are expected to be born during the period July through December 1999.

The July 1 sheep and lamb numbers are published by regions. Montana is included with Colorado, South Dakota, Utah and Wyoming. The total number of sheep and lambs in the region was 3.0 million head, down 3 percent from a year ago. This region accounted for 33.9 percent of the total U.S. sheep and lambs.

The region's breeding sheep and lambs inventory was 1.7 million head, down 3 percent from last year. Of the total breeding sheep and lambs, 1.4 million head were ewes one year and older, 50,000 head were rams one year and older, and 230,000 head were replacement lambs.

All market sheep and lambs for the region totaled 1.4 million head, down 3 percent from a year ago. Of the total market lambs, 71.5 percent were under 65 pounds, 12.8 percent were 65 to 84 pounds, 7.7 percent were 85 to 105 pounds, and the remaining 8.0 percent were over 105 pounds.

Lambs born during January and June 1999 in the region reached 1.5 million head. An additional 20,000 are expected to be born during the period July through December 1999.

U.S. Cattle on Feed Up 4 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.56 million head on July 1, 1999. The inventory was 4 percent above July 1, 1998 and 7 percent above July 1, 1997. The inventory included 5.73 million steers and steer calves, up 5 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 3.78 million head, up 3 percent from 1998.

Placements in feedlots during June totaled 1.78 million, 14 percent above 1998 and 24 percent above 1997. Net placements were 1.72 million. During June, placements of cattle and calves weighing less than 600 pounds were 295,000, 600-699 pounds were 372,000, 700-799 pounds were 629,000, and 800 pounds and greater were 488,000.

Marketings of fed cattle during June totaled 2.14 million, 5 percent above 1998 and 1997. Other disappearance totaled 63,000 during June, 12 percent below 1998 but 5 percent above 1997.

PLEASE RETURN

Montana and U.S. Red Meat Production Up for June

Montana slaughter plants produced 1.9 million pounds, dressed weight, of red meat during June 1999, up 11 percent from both last month and last year. Cattle slaughter, at 2,000 head, was 100 lower than last year. The average live weight of 1,142 was 23 pounds higher than last year.

There were 3,000 head of hogs slaughtered in Montana during June, up 700 head from a year ago. The average live weight of 241 pounds, increased 41 pounds from last year. Sheep slaughter amounted to 200 head, unchanged from a year ago. The average live weight of 128 pounds was down 5 pounds.

Commercial red meat production for the United States totaled 3.94 billion pounds in June, up 6 percent from the 3.73 billion pounds produced in June 1998 and up 4 percent from the previous record high for June set in 1995. Beef production, at 2.32 billion pounds, was 3 percent above the previous year and 2 percent higher than the previous record high for June set in 1995. Cattle slaughter totaled 3.21 million head, up 3 percent from 1998. The average live weight was down 2 pounds from the previous year at 1,195 pounds.

Veal production totaled 19.0 million pounds, 6 percent below the previous record low for June set a year ago. Calf slaughter totaled 105 thousand head, down 11 percent from June 1998. The average live weight was 14 pounds above last year at 297 pounds.

Pork production totaled 1.58 billion pounds, up 10 percent from the previous year and 8 percent higher than the previous record high for June set in 1995. Hog kill totaled 8.32 million head, 8 percent above 1998. The average live weight was 4 pounds above the previous year at 259 pounds.

Lamb and mutton production, at 17.0 million pounds, was 11 percent below the previous year and 6 percent below the previous record low for June set in 1996. Sheep slaughter totaled 270 thousand head, 8 percent below last year. The average live weight was 130 pounds, down 4 pounds from June a year ago.

January - June red meat production was 22.8 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 14 percent, pork was up 4 percent, and lamb & mutton was down 7 percent.

Pelt Production Down 2 Percent

Mink pelt production for 1998 in the United States totaled 2.94 million pelts, down 2 percent from 1997. Wisconsin, the major mink producing State, produced 800,500 pelts.

By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 40.6 percent; Mahogany - 24.8 percent; Gunmetal - 15.3 percent; Ranch Wild - 6.0 percent; Demi-buff - 3.9 percent. The remaining color classes accounted for 9.4 percent.

Mink pelts produced during the 1998 crop year were valued at $72.9 million dollars, down 26 percent from $99.1 million a year ago. The average price per pelt for the 1998 crop year was $24.80, down from $33.10 in 1997.

Female mink bred to produce kits in 1999 totaled 659,900, down 10 percent from the previous year. Percent of total females bred to produce kits in 1999 by color class are: Standard - 39.4 percent; Mahogany - 22.5 percent; Gunmetal - 16.8 percent; Ranch Wild - 6.0 percent; Sapphire - 5.8 percent. The remaining color classes accounted for 9.5 percent.

There were 439 mink farms producing pelts in 1998, down 3 percent from a year ago. Leading States were Utah with 115 farms, Wisconsin with 94 farms and Minnesota with 44. There were 31 mink farms which also raised fox in 1998, the same as the previous year.

Montana Wheat and Barley Varieties 1999

Neeley remained the leading variety of **winter wheat** seeded in Montana for the twelfth consecutive year, with over 210 thousand acres planted in the state. **Tiber** moved into the second place position with over 175 thousand acres of winter wheat planted in the state. **Rampart** leaped into third place position with almost quadrupled seeded acres of over 101 thousand. **Rocky** fell back into fourth place this year with a decrease of almost 50% to 95 thousand acres. These top four varieties accounted for 55 percent of the winter wheat acreage seeded in 1999. These same four varieties accounted for 49 percent in 1998.

McNeal was the leading **spring wheat** variety planted for the second consecutive year, accounting for almost 40 percent of the seeded acreage with nearly 1.65 million acres planted. **Amidon** remained in second place this year with over 581 thousand acres planted. **Ernest** moved up to third place due to a significant increase in planted acres, accounting for 403 thousand acres planted this year. **Westbred Rambo** moved down to fourth place this year with 291 thousand acres planted in the state. The top four varieties accounted for over 70 percent of the spring wheat acreage seeded in 1999. These same four varieties accounted for 59 percent in 1998.

Kyle continued to be the leading **durum** variety for the sixth consecutive year. Over 214 thousand acres of Kyle were planted in the state, accounting for 54 percent of the total seeded acres. **Vic** continues to move up in ranking from its third place position last year. Vic accounts for almost 31 thousand planted acres or 8 percent. **Sceptre** moved down from second place last year to it's third place position accounting for 18.5 thousand planted acres. **Renville** moved into the fourth place position this year accounting for over 18 thousand planted acres. These top four varieties account for 71 percent of total acres seeded to durum wheat. This is comparable to the 66 percent reported in 1998 for the same four varieties.

Montana farmers planted 1.25 million acres of **barley** in 1999, down 100 thousand acres from last year. Over 59 percent of the acres seeded to barley were malting and brewing varieties recommended by the American Malting Barley Association. **Harrington,** a malting-type variety, remained the top variety planted in the state for the sixth consecutive year. It was seeded on nearly 625 thousand acres or 50 percent of Montana barley acreage. **B 1202** maintained the second place position for the fifth consecutive year with about 65 thousand acres, or 5.2 percent of the barley planted. **Morex** moved up to rank third among AMBA approved malting barley varieties with a slight increase in seeded acreage to about 21 thousand acres, or 1.7 percent of the seeded acres. **Chinook** moved down to fourth place among AMBA approved malting barley varieties, dropping almost 10 thousand acres from a year ago to 15.6 thousand acres. **Baronesse** remained the leading **feed-type** barley for the fourth consecutive year and the number two variety overall. Over 94 thousand acres of Baronesse were planted this year, down significantly from the 163 thousand acres seeded in 1998. **Hector** also maintained its position as second most popular feed-type barley despite a reduction in seeded acreage for the past two years. In 1999, nearly 61 thousand acres of Hector were planted. **Haybet** moved into the third place position with almost 55 thousand acres seeded and 4.4 percent of the barley acreage. **Gallatin** moved down to fourth place in 1999. It accounts for over 4 percent of total seeded acreage with 51 thousand acres of the variety planted in the state.

1/ Revised. W White wheat variety. M American Malting Barley Association, Inc. recommended for malting and brewing for Montana, 1999.

This report was made possible with funds provided by the Montana Wheat & Barley Committee. A more detailed report may be obtained from our office upon request.

Montana and U.S. April-June Milk Production Up

Montana milk cows produced 77 million pounds of milk during the period of April-June 1999, compared with 74 million pounds the same quarter a year ago. Montana milk cows inventory remained unchanged from a year ago at 18,000 head.

The quarterly production of milk for the U.S. was 42.0 billion pounds, 3.0 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.15 million head, 20,000 head less than the same period last year.

June Egg Production Up 4 Percent

U.S. egg production totaled 6.72 billion during June 1999, up 4 percent from the 6.46 billion produced in 1998. Production included 5.63 billion table eggs and 1.09 billion hatching eggs, of which 1.02 billion were broiler-type and 67.0 million were egg-type. The total number of layers during June 1999 averaged 320 million, up 3 percent from the total average number of layers during June 1998. June egg production per 100 layers was 2,104 eggs, up 1 percent from 2,088 eggs in June 1998.

All layers in the U.S. on July 1, 1999, totaled 320 million, up 3 percent from a year ago. The 320 million layers consisted of 259 million layers producing table or commercial type eggs, 57.3 million layers producing broiler-type hatching eggs, and 2.81 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1999, averaged 70.1 eggs per 100 layers, up fractionally from the 70.0 a year ago.

Laying flocks in the 30 major egg producing States produced 6.35 billion eggs during June, up 4 percent from June 1998. The average number of layers during June, at 302 million, was up 3 percent from a year earlier.

Ag Prices Received
U.S. Wheat Supply, Disappearance, and Price

Montana's All Wheat Production Up 8 Percent

Montana's **all wheat crop** is expected to be 8 percent larger than last year, but nearly the same size as the 1997 crop. As of July 1, producers expect to harvest 182.04 million bushels of all wheat, up from the 168.79 million harvested last season. The area for harvest is expected to be 5.41 million acres, 130,000 more than were harvested in 1998. Conditions have been generally favorable for wheat production so far this year. Many areas of the state have benefitted from timely moisture, however some communities remain dry as of July 1.

The forecast for **winter wheat** improved during June as producers now expect to average 42.0 bushels per acre, up two bushels from the June forecast. Generally favorable June weather conditions improved prospects for the crop. Production is forecast to be 40.74 million bushels, up only slightly from the June forecast because of a reduction in harvested acres now estimated at 970,000 acres. The July forecast for winter wheat production is the smallest since 1988.

The first **spring wheat** production forecast is 129.6 million bushels, 20 percent larger than produced in 1998. The harvested acres are expected to be 4.05 million, 13 percent larger than last year. The expected yield of 32.0 bushels compares with 30.0 averaged last year. If this forecast is realized, 1999 production would be the second largest crop, exceeded only by the record 1995 spring wheat production. Montana's spring crop is in good to excellent condition, but lags average development. **Durum wheat** is forecast to be 11.7 million bushels, 3 percent smaller than the 1998 crop. The acreage for harvest, at 390,000, is 9 percent smaller than harvested last year. The expected yield is 30.0 bushels, 2 bushels better than last year.

Barley yields are estimated to average 53.0 bushels per acre in 1999, 5 bushels better than last year's Montana average. Barley production is forecast to be 60.95 million bushels compared with 57.60 million produced last year. Growers expect to harvest 1.15 million acres, 50,000 fewer than harvested in 1998. **Oats** producers expect to harvest 4.8 million bushels of grain, nearly 50 percent more than produced last year. The 1999 area for harvest is expected to be 80,000 acres compared with 60,000 harvested for grain in 1998. The expected yield of 60.0 bushels is 6 bushels above last year's average.

Nationally, **winter wheat** acres for harvest are forecast at 35.6 million, down 11 percent from 1998. Harvest progress in the 19 major producing states had reached 45 percent completion by July 4. This trailed well behind last year's rapid harvest and lagged normal by eight points. Forecasted head counts from the Objective Yield surveys in the six HRW states (Colorado, Kansas, Montana, Nebraska, Oklahoma, Texas) are up slightly from last month, and weight per head is up a collective 15 percent and is near last year's record. **Other spring wheat** harvested area is forecast at 15.0 million acres, down 1 percent from last year. Minnesota's crop is in mostly fair-to-good condition while the Dakota's spring wheat crops are rated as mostly good. Scab has been reported in eastern North Dakota districts. **Durum wheat** area for 1999 grain harvest is expected to total 4.05 million acres, up 9 percent from last year. Modest yield increases are expected in Minnesota and South Dakota Durum. North Dakota's late planted crop trails average development by several days.

Barley production for 1999 is forecast at 295 million bushels, down16 percent from a year ago and down 18 percent from 1997. The first forecast for 1999 indicates that producers expect yields to average 60.3 bushels per acre, a slight increase from last year. Area harvested and to be harvested, at 4.89 million acres, is 17 percent below the 5.87 million acres harvested the previous year.

Oats production is estimated at 161.3 million bushels, 4 percent below last year's 167.1 million bushels. If realized, production would be the third lowest on record. The estimated yield is 61.1 bushels per acre, up 0.7 bushel from 1998. This would be the third highest yield on record. Area for harvest was unchanged from the previous estimate of 2.64 million acres.

Montana Cash Rents Increase

The average cash rent for Montana cropland went up $2.40 from last year to $24.00 per acre. The average cash rent for irrigated cropland, at $55.90, increased $4.40 per acre from 1998. The non-irrigated cropland average rose $2.00 to $19.00 per acre. Average pasture rents increased $.50 from 1998 to $5.00 per acre in 1999.

The average cash rent for U.S. cropland went up $0.50 from last year to $67.00 per acre. The Lake, Corn Belt and Northern Plains which account for the majority of cash rented cropland acreage, showed little change from 1998. The Lake region fell $0.50 while the Corn Belt increased by $1.00 and the Northern Plains was unchanged from the previous year.

The majority of States showed increases in rental rates while other States held at the same level or dropped slightly. California again had the highest cash rent for irrigated cropland at $260 per acre. Illinois, Indiana, and Iowa had cropland rents at $111, $99, and $113 per acre, respectively. Arizona, Colorado, Idaho, California, Oregon, and Washington all showed irrigated cropland exceeding $100 per acre. States in the Corn Belt and Northern Plains all remained at the same level or showed slight increases except for Kansas and Nebraska which showed slight decreases.

The average pasture cash rent for the U.S. increased 1.1 percent from $8.80 to $8.90 per acre. Regionally, the Northern Plains, Southern Plains, and Mountain regions all were up from $0.30 to $0.40 per acre. The Northeast and Lake regions showed the largest pasture rents at $29.00 and $26.70 per acre, respectively.

States in the Northern Plains all showed increases in pasture cash rent of $0.10 to $0.40 while Wisconsin and Pennsylvania had the highest rates at $38 and $36 per acre. Colorado, Idaho, and New Mexico all had pasture rental rates below $5 per acre.

July 1, 1999 Potato Planted and Harvested Acreage

Montana potato producers planted 11,000 acres in 1999, an increase of 400 acres from last year and the largest acreage planted since 1950. The first forecast of potato production will be on November 10, 1999.

Area planted in the **U.S.** to **fall potatoes** in 1999 is estimated at 1.22 million acres, down 2 percent from last year but 1 percent above 1997. Harvest is expected from 1.20 million acres, down 2 percent from a year ago but 1 percent above two years ago. Planting and early development has been slow in much of the western and north-central States.

1/ District estimates of stocks funded by the Montana Wheat & Barley Committee.

Agricultural Prices Received for May

Crop prices for the full month of May were mostly lower than April prices. Montana winter wheat average price was $2.89 per bushel, down 3 cents from April's level; durum wheat was $2.85 per bushel, up 5 cents; and spring wheat was 7 cents lower at $3.05 per bushel. Feed barley was $1.47 and malt barley was $2.46 per bushel.

The mid-June price for alfalfa hay was $62.00 per ton, up $2.00 from last month. Other hay, at $52.00, was $4.00 per ton higher than May's price. The mid-month winter wheat price averaged $2.80 per bushel, spring wheat was $3.10; feed barley price was $1.50; and malt barley averaged $2.40.

Livestock prices for the full month of May were mixed. Steer and heifer prices decreased $1.10 to $71.30 per cwt. Cows were up 80 cents to $37.90 and the average price for calves decreased $3.50 to $81.20 per cwt. Sheep prices increased 60 cents to $28.40 per cwt. and lamb prices increased $9.00 to $78.20 per cwt. Milk prices were unchanged from last month at $12.60 per cwt. Steer and heifer prices for mid-June averaged $72.60 per cwt.

Nationally, prices for May and changes from April were as follows: winter wheat was $2.36, down 12 cents; spring wheat was $2.93, down 2 cents; the all barley price was $1.81, up 4 cents; and steer and heifer prices were $65.20, down 80 cents.

The U.S. mid-June winter wheat price was $2.37 per bushel, spring wheat was $3.01 per bushel, all wheat price was $2.48 per bushel, all barley was $1.78. Steer and heifer prices were $66.80 per cwt, cow prices were $36.10, all hog prices were $33.80 per cwt, and market egg prices were 55.3 cents per dozen.

The All Farm Products Index of Prices Received in June was 98 based on 1990-92=100, down 1 point (1.0 percent) from May. The decrease was mostly due to the seasonal change in the mix of commodities farmers sell. The normal decrease in marketings of oranges, tomatoes, strawberries, and cattle more than offset the relatively higher marketings of wheat, grapes, hay, and cantaloupes. The change in marketings was accompanied by a slight decrease in overall prices. Price decreases from May for cantaloupes, hogs, peaches, and hay more than offset price increases for oranges, milk, cattle, and celery.

Compared with June 1998, the All Farm Products Index was 4 points (3.9 percent) lower. Price decreases from June 1998 for hogs, corn, soybeans, and milk more than offset price increases for cattle, carrots, tomatoes, and turkeys.

United States Index Summary

Montana's Planted Wheat Acreage Smallest Since 1994

All wheat planted acreage in Montana was estimated at 5.60 million, 50,000 acres less than last year and the smallest acreage since 1994. **Spring wheat** producers planted 4.15 million acres of spring wheat this year, up 9% from last year but down 1% from what they intended to plant March 1. While excess moisture delayed seeding in some areas of the state, most of the state has benefitted from the good to excellent moisture ratings this spring. At the end of June spring wheat was 42% in boot compared with 60% for the 5-year average. Fifteen percent of the spring wheat crop was headed compared with 20% for the 5-year average. Producers intend to harvest 4.05 million acres of spring wheat. **Durum** producers planted 400,000 acres of durum this spring, down 11% from a year ago. If conditions permit, producers will harvest 390,000 acres. **Winter wheat** seeded acreage was estimated at 1.05 million acres, down 25% from 1998 and the smallest planted acreage of winter wheat since 1937. Statewide, at the end of June, winter wheat is 75% headed compared with 92% last year and 76% for the 5-year average. Winter wheat acreage for harvest has been revised down to 970,000 acres.

Montana **barley** producers seeded 1.25 million acres this year, down100,000 acres from a year ago. Harvested barley acreage was estimated at 1.2 million acres. **Oat** acreage increased 20,000 acres from last year at 160,000 acres with 80,000 acres intended to be harvested for grain. **Corn** producers seeded 65,000 acres for all purposes, up 5,000 acres from last year. Growers intend to harvest 19,000 acres for grain, up 1,000 acres from 1998. **Dry bean** planted acreage increased 3,400 acres from last year to 16,000 acres. **Sugar beet** acreage decreased 2,100 acres to 61,900. **Hay** harvested acreage is expected to increase 6% from last year with **alfalfa** acreage increasing to 1.75 million acres and **all other hay** increasing to 900,000 acres. Good moisture supplies this spring caused most of the increase in other hay acreage.

At the **U.S.** level, the 1999 **all wheat** planted area is estimated at 62.9 million acres. The planted total is down 5% from 1998 while the harvested area is down 7%. This is the lowest planted acreage since 1973 and the lowest grain area since 1988. The **winter wheat** harvested acreage is now expected to total 35.6 million, down 1% from the June 1 forecast and 11% less than the 1998 acreage for grain. This will be the smallest area for grain since 1972. Planted area is still 43.4 million acres, down 7% from last year. **Spring wheat** acreage planted this year is placed at 15.3 million, down 2% from 1998. Grain area is expected to total 15.0 million acres, down 1% from last year. These are the smallest areas since the 1988 drought. Hard red spring wheat accounts for about 14.0 million of the acreage for grain. Planting progress in the five largest producing states had reached 85% completion as of May 30, trailing well behind the 5-year average largely due to a wet May. The **durum** planted area for 1999 harvest is estimated at 4.17 million acres and acres cut for grain are expected to total 4.05 million. Both acreages are up 9% from 1998 to the highest levels since 1982. Above normal precipitation delayed durum seeding in Montana and kept planting progress well behind average in North Dakota; seeding was 85% complete as of June 13.

Nationally, **barley** growers seeded 5.24 million acres for 1999, down 17% from the 6.34 million acres seeded a year ago and the smallest acreage since records were first kept in 1926. Barley growers in North Dakota and Minnesota are decreasing seedings by 580,000 and 240,000 acres, respectively.

Corn planted for all purposes in the U.S. is estimated at 77.6 million acres, down 3% from last year. Growers expect to harvest 71.0 million acres for grain, down 2% from 1998.

Nationally, **hay** producers expect to harvest 62.0 million acres of hay in 1999, up 3% from the 60.0 million acres harvested the previous year. **Alfalfa** and alfalfa mixtures are expected to total 24.0 million acres, up 1% from 1998. **All other hay** is estimated at 38.0 million acres, up 4% from last year.

New Potato Release Shows June Stocks at 12% of Production

The first June Potato Stocks Report issued by National Agricultural Statistics Service shows the 15 major fall potato States held 51.4 million cwt of potatoes on June 1, 1999. This storage level accounted for 12 percent of 1998 fall production, compared with 21 percent in storage on May 1. Disappearance totaled 374 million cwt from the start of harvest to June 1. Processor usage in the eight major States totaled 187 million cwt for the season, with 18.9 million cwt of potatoes used in May. The June stocks report was added to the previous monthly stocks program of December through May at the request of the Potato Industry. Historical comparisons are not available.

Western States held 40.3 million cwt of potatoes in storage on June 1, 1999. Idaho's stocks totaled 25.5 million cwt, covering 18 percent of their production and accounting for 63 percent of the Western States' remaining stocks. Washington's stocks were 7.5 million cwt or 8 percent of their fall production. Oregon, at 4.2 million cwt, held 16 percent of their production. Montana storages were essentially empty on June 1.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

PLEASE RETURN

June 1, 1999 Grain Stocks

All wheat stocks in Montana on June 1, 1999 totaled 70.6 million bushels, up 5 percent from the same quarter last year. Stocks stored on the farm accounted for 54.0 million bushels of the total with the remaining 16.6 million bushels stored off farm. All **spring wheat** stocks, at 48.3 million bushels, were up 12 percent from last year and accounted for 68 percent of the total wheat stocks. Winter wheat stocks were estimated at 22.3 million bushels, down 7 percent from last year. **Durum wheat** stocks were estimated at 7.8 million bushels, up 5.1 million bushels from last year. All wheat disappearance for the March-May quarter was 36.4 million bushels, compared with 37.0 million for the same quarter last year. **Barley** stocks in all positions on June 1, 1999 were up 72 percent from last year and were set at 15.5 million bushels. Oat stocks were up 47 percent from a year ago and were estimated at 1.2 million bushels.

May Red Meat Production Up For Montana

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during May 1999, up 15% from last year, and up 6% from last month. Cattle slaughter, at 1,800 head, was unchanged from last year. The average live weight of 1,137 pounds was up 28 pounds from a year ago.

There were 2,700 head of hogs slaughtered in Montana during May, up 900 head from a year ago. The average live weight, at 235 pounds, increased 27 pounds from last year. Sheep slaughter amounted to 200 head, unchanged from last year. The average live weight of 130 pounds was down a pound.

U.S. commercial red meat production for the United States totaled 3.60 billion pounds in May, up 1% from the 3.58 billion pounds produced in May 1998. Beef production, at 2.15 billion pounds, was 1% above the previous year. Cattle slaughter totaled 3.00 million head, up 1% from 1998. The average live weight was unchanged from the previous year, at 1,188 pounds.

Veal production totaled 17.0 million pounds, 10% below the previous record low for May set a year ago. Calf slaughter totaled 89 thousand head, down 12% from May 1998. The average live weight was 9 pounds above last year, at 311 pounds.

Pork production totaled 1.42 billion pounds, down slightly from the previous year. Hog kill totaled 7.44 million head, 2% below 1998. The average live weight was 3 pounds above the previous year, at 259 pounds.

Lamb and mutton production, at 18.0 million pounds, was down 7% from the previous record low for May set in 1998. Sheep slaughter totaled 270 thousand head, 4% below last year. The average live weight was 135 pounds, down 4 pounds from May a year ago.

January-May red meat production was 18.8 billion pounds, 3% higher than the comparable figure a year earlier. Accumulated beef production was 3% higher than last year, veal was down 16%, pork was up 3%, and lamb & mutton was down 6%.

U.S. May Milk Production Up 3.5%

Milk production in the 20 major States during May totaled 12.4 billion pounds, up 3.5% from production in these same States in May 1998. April revised production, at 12.0 billion pounds, was up 3.5% from April 1998. Production per cow in the 20 major States averaged 1,610 pounds for May, 54 pounds above May 1998. The number of cows on farms in the 20 major States was 7.72 million head, 3,000 head more than May 1998, and 8,000 head more than April 1999.

U.S. Cattle on Feed Up 3%

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.98 million head on June 1, 1999. The inventory was 3% above June 1, 1998 and 4% above June 1, 1997.

Placements in feedlots during May totaled 2.04 million, slightly above 1998 and 9% above 1997. Net placements were 1.94 million. During May, placements of cattle and calves weighing less than 600 pounds were 290,000, 600-699 pounds were 425,000, 700-799 pounds were 717,000, and 800 pounds and greater were 607,000.

Marketings of fed cattle during May totaled 1.99 million, 1% above 1998 but 4% below 1997. Other disappearance totaled 99,000 during May, 6% above 1998 but 15% below 1997.

U.S. Hog Inventory Down 3%

U.S. inventory of all hogs and pigs on June 1, 1999, was 60.5 million head. This was 3 percent below June 1998, but 1 percent above March 1, 1999.

Breeding inventory, at 6.52 million head, was down 6 percent from June 1, 1998, but virtually unchanged from March 1, 1999. Market hog inventory, at 54.0 million head, was 2 percent below last year, but 1 percent above last quarter.

The March-May 1999 U.S. pig crop, at 26.3 million head, was 3 percent less than 1998, but 4 percent more than 1997. Sows farrowing during this period totaled 2.99 million head, 3 percent below last year. The sows farrowed during this quarter represented 46 percent of the breeding herd. The average pigs per litter rose to an average of 8.80 pigs saved per litter for the March-May period, compared to 8.75 pigs last year. Pigs saved per litter by size of operation ranged from 7.80 for operations with 1-99 hogs to 9.00 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.94 million sows farrow during the June-August 1999 quarter, 4 percent below the actual farrowings during the same period in 1998, but virtually unchanged from 1997. Intended farrowings for September-November 1999, at 2.87 million sows, are 4 percent below the same period last year and 2 percent below 1997.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 30 percent of the total U.S. hog inventory.

May Egg Production Up 4%

U.S. egg production totaled 6.92 billion during May 1999, up 4 percent from the 6.67 billion produced in 1998. Production included 5.81 billion table eggs and 1.12 billion hatching eggs, of which 1.05 billion were broiler-type and 69.0 million were egg-type. The total number of layers during May 1999 averaged 320 million, up 3 percent from the total average number of layers during May 1998. May egg production per 100 layers was 2,164 eggs, up 1 percent from 2,153 eggs in May 1998.

All layers in the U.S. on June 1, 1999, totaled 320 million, up 3 percent from a year ago. The 320 million layers consisted of 260 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.87 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1999, averaged 70.0 eggs per 100 layers, up 1 percent from the 69.1 a year ago.

Laying flocks in the 30 major egg producing States produced 6.54 billion eggs during May, up 4 percent from May 1998. The average number of layers during May, at 302 million, was up 3 percent from a year earlier.

June 1, 1999 Cherry Production Forecast

Montana sweet cherry producers expect 1999 total production to be 1,300 tons, down 37 percent from 1998. Most growers attributed the decrease to late frosts in the spring and cool weather during pollination. This cool weather made it difficult for bees to effectively pollinate the trees. The frosts weren't hard enough to kill the trees the way they did in 1989, but will significantly affect this year's production.

U.S. sweet cherry production is forecast at 217,000 tons, up 3 percent from 1998 but 4 percent below 1997. California expects to produce a much larger crop while Oregon, Washington and Michigan expect declines.

HIGHLIGHTS:

Winter Wheat Production
Wheat Supply and Demand Estimates
1998 Barley County Estimates
Ag Prices Received

New NASS Logo

The new National Agricultural Statistics Service (NASS) logo (shown in the upper left corner) was released for use on June 1, 1999. It more fully represents agriculture and statistics than the previous logo. Agriculture is represented by a visual of a field, barn, and a silo. Statistics is represented by bars against a statistical grid. Look for it on all our future publications and surveys.

June 1, 1999 Crop Production Forecast

As of June 1, Montana winter wheat producers were expecting a yield of 40 bushels per acre, up 1 bushel from last year and unchanged from last month. If realized, total production would be 40.0 million bushels and 18 percent less than last year. Harvested acreage remains the same as last month at 1.0 million acres, down 250,000 acres from last year and the smallest harvested acreage since 1939. As of June 6, the winter wheat crop was rated 4 percent poor, 27 percent fair, 55 percent good and 14 percent excellent.

At the U.S. level, winter wheat production is forecast at 1.61 billion bushels, down fractionally from last month and down 14 percent from 1998. Based on conditions around June 1, the U.S. yield is forecast at 44.7 bushels per acre, up 0.3 bushels from the last forecast. Grain area totals 36.0 million acres, down 1 percent from May 1.

Hard Red is down 1 percent from a month ago to 981 million bushels. White Winter is down 2 percent from last month. Soft White is up 2 percent from the last forecast and now totals 419 million bushels.

Winter Wheat: Production Forecast by Districts - June 1, 1999

District	1997	1998	1999	'99/'98
	1000 bushels			% chg.
Northwest	872	635	460	72
North Central	26,104	21,093	18,500	88

South Central	8,325	8,345	4,700	56
Southwest	2,115	1,935	1,890	98
MONTANA	55,100	48,750	40,000	82

Wheat Supply and Demand Estimates

Projected U.S. 1999/2000 ending wheat stocks are down slightly from last month due to a reduction of 3 million bushels in forecast winter wheat production. The projected price range is unchanged at $2.60 to $3.10 per bushel.

Projected global 1999/2000 wheat production is down slightly from last month, as smaller prospective crops in Canada, Turkey, Ukraine, and Russia more than offset larger crops in the EU and Pakistan. Prolonged wet conditions have cut planting prospects in Canada, while unusually cold weather in May reduced prospective production in Ukraine and Russia. The EU crop is up from last month because of favorable growing conditions in France and larger area in Germany. Preliminary harvest results indicate Pakistan's yields are higher than expected earlier.

Global 1999/2000 imports are little changed from last month, as higher Brazilian imports are offsetting lower imports by Pakistan. Export prospects are down for Canada and Turkey because of reduced production, but larger prospective exports for Argentina and Ukraine are offsetting.

Ag Prices Received for April

Crop prices for the full month of April were mostly lower than March prices. Montana winter wheat average price was $2.92 per bushel, up 12 cents from March's level; durum wheat was $2.80 per bushel, down 8 cents; and spring wheat was 3 cents lower at $3.12 per bushel. Feed barley was $1.42 and malt barley was $2.38 per bushel.

The mid-May price for alfalfa hay was $60.00 per ton, down $1.00 from last month. Other hay, at $48.00, was $4.00 per ton lower than April's price. The mid-month winter wheat price averaged $2.80 per bushel, spring wheat was $3.10; feed barley price was $1.35; and malt barley averaged $2.35.

Livestock prices for the full month of April were lower. Steer and heifer prices decreased $1.30 to $72.40 per cwt. Cows were down 60 cents to $37.10 and the average price for calves decreased 30 cents to $84.70 per cwt. Sheep prices decreased $4.10 to $27.80 per cwt. and lamb prices decreased 70 cents to $69.20 per cwt. Milk prices decreased $4.00 from last month to $12.60 per cwt. Steer and heifer prices for mid-May averaged $72.80 per cwt.

Nationally, prices for April and changes from March were as follows: winter wheat was $2.48, down 5 cents; spring wheat was $2.95, down 6 cents; the all barley price was $1.77, down 15 cents; and steer and heifer prices were $66.00, up 50 cents.

The U.S. mid-May winter wheat price was $2.42 per bushel, spring wheat was $2.94 per bushel, all wheat price was $2.58 per bushel, all barley was $1.78. Steer and heifer prices were $64.50 per cwt, cow prices were $36.30, all hog prices were $37.00 per cwt, and market egg prices were 35.0 cents per dozen.

The All Farm Products Index of Prices Received in May was 99 based on 1990-92=100, up 3 points (3.1 percent) from April. The index increase was due to the seasonal change in the mix of commodities farmers sell. The normal increase in marketings of cantaloupes, grapes, peaches, and sweet corn in May more than offset the relatively lower marketings of cattle, milk, cotton, and oranges. The change in marketings was accompanied by a slight increase in overall prices. Price increases from April for hogs, broilers, oranges, and hay more than offset price decreases for lettuce, strawberries, cattle, and eggs.

Compared with May 1998, the All Farm Products Index was 4 points (3.9 percent) lower. Price decreases from May 1998 for soybeans, corn, hogs, and wheat more than offset price increases for peaches, carrots, cucumbers, and turkeys.

United States Index Summary

INDEX 1990-92=100	Apr. 1998	May 1998	Apr. 1999	May 1999

Milk Production, Disposition, and Income
Milk Production — Farm Labor
Red Meat Production — Potato Stocks
Cattle on Feed — Egg Production
Agricultural Chemical Use

1998 Milk Production, Disposition, and Income

Montana's 1998 milk production, of 291 million pounds, decreased 3 percent from 1997. An average of 18,000 milk cows were on farms and ranches during the year, 1,000 less than a year ago. The rate per cow averaged 16,167 pounds, 641 pounds more than 1997.

Cash receipts from marketings of milk during the year in Montana were 42 million dollars, 6 percent less than 1997. Producer returns averaged $15.00 per cwt, an increase of $1.80 from last year. Marketings totaled 280 million pounds, down 1 percent from a year ago. A total of 11 million pounds of milk were used on farms and ranches where produced, 7 million pounds were fed to calves, and 4 million were consumed as milk, cream, and butter.

Nationally, milk production increased 1 percent in 1998 to 157 billion pounds. The rate per cow at 17,192 pounds, was 321 pounds above 1997. The annual average number of cows on farms at 9.16 million head, was 94,000 less than 1997.

Cash receipts from marketings of milk during 1998 at $24.3 billion dollars, was 16 percent above 1997. Producer returns averaged $15.57 per hundredweight, 15 percent above 1997. Marketings totaled 156 billion pounds, 1 percent above 1997. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.36 billion pounds of milk were used on farms where produced, 1 percent less than 1997. Calves were fed 83 percent of this milk with the remainder consumed in producer households.

U.S. April Milk Production Up 3.4 Percent

Milk production in the 20 major States during April totaled 12.0 billion pounds, up 3.4 percent from production in these same States in April 1998. March revised production, at 12.2 billion pounds was up 4.6 percent from March 1998. Production per cow in the 20 major States averaged 1,553 pounds for April, 52 pounds above April 1998. The number of cows on farms in the 20 major States was 7.71 million head, 1,000 head less than April 1998, but 4,000 head more than March 1999.

Montana and U.S. Red Meat Production Up for April

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during April, up 12 percent from April 1998. Cattle slaughter totaled 1,700 head, unchanged from a year ago. The average live weight, at 1,128 pounds was up 2 pounds from a year ago.

During April, there were 2,700 head of hogs slaughtered, 800 more than last year. The average live weight increased 18 pounds to 232 pounds. Sheep slaughter, at 200 head was 100 head more than last year. The average live weight decreased 1 pound to 130 pounds.

Commercial red meat production for the United States totaled 3.82 billion pounds in April, up 3 percent from April's previous record high of 3.70 billion pounds produced in 1998. Beef production totaled 2.16 billion pounds, 3 percent higher than the previous year and just above the previous record high for April set in 1996. Cattle slaughter totaled 2.97 million head, up 2 percent from 1998. The average live weight was up 12 pounds from the previous year, at 1,201 pounds.

Veal production, at 18.0 million pounds, was 11 percent below the previous record low for April set a year ago. Calf slaughter totaled 97 thousand head, down 12 percent from April 1998. The average live weight was 4 pounds above last year, at 303 pounds.

Pork production, at 1.63 billion pounds, was up 4 percent from the previous record high for April set in 1998. Hog kill totaled 8.53 million head, 2 percent above 1998. The average live weight was 3 pounds above the previous year, at 260 pounds.

Lamb & mutton production totaled 21.0 million pounds, down 18 percent from a year ago and down 5 percent from the previous record low for April set in 1997. Sheep slaughter totaled 310 thousand head, 19 percent below last year. The average live weight was 136 pounds, up 3 pounds from April a year ago.

January - April red meat production was 15.2 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 17 percent, pork was up 4 percent, and lamb & mutton was down 6 percent.

April Egg Production Up 3% Percent

U.S. egg production totaled 6.77 billion during April 1999, up 3 percent from the 6.60 billion produced in 1998. Production included 5.69 billion table eggs and 1.08 billion hatching eggs, of which 1.01 billion were broiler-type and 67.0 million were egg-type. The total number of layers during April 1999 averaged 321 million, up 3 percent from the total average number of layers during April 1998. April egg production per 100 layers was 2,109 eggs, down fractionally from 2,117 eggs in April 1998.

All layers in the U.S. on May 1, 1999, totaled 320 million, up 3 percent from a year ago. The 320 million layers consisted of 261 million layers producing table or commercial type eggs, 56.8 million layers producing broiler-type hatching eggs, and 2.77 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 1999, averaged 69.5 eggs per 100 layers, down fractionally from the 69.6 a year ago.

Laying flocks in the 30 major egg producing States produced 6.40 billion eggs during April, up 2 percent from April 1998. The average number of layers during April, at 303 million, was up 3 percent from a year earlier.

LEASE RETURN

1998 Cash Receipts From Meat Animals Down 12 Percent in Montana and U.S.

Cash receipts from the 1998 marketings of cattle, hogs, and sheep in Montana totaled $792 million, down 12 percent from 1997. Decreased prices for cattle, hogs and sheep and decreased cattle marketings contributed to the lower cash receipts. Cash receipts from the sales of cattle and calves dropped 10 percent from 1997 to $745 million. Marketings of cattle weighing 500 lbs or more, at 1.33 million head, were down 9 percent from 1997, while marketings of calves less than 500 lbs increased 4 percent to 260,000 head. The average price received in 1998 for cattle weighing over 500 lbs dropped $2.50 per cwt to $62.00 per cwt. Season average prices for calves weighing less than 500 lbs were off $6.10 per cwt to $78.60 per cwt.

Cash receipts from the sales of hogs in Montana dropped 24 percent from 1997 to $25.8 million dollars. While the marketings of hogs increased from 288,000 in 1997 to 326,000 head in 1998, prices for hogs dropped dramatically as the season average price was $40.10 per cwt, down $15.20 per cwt. Sheep and lamb cash receipts decreased 28 percent from 1997 to $21.4 million dollars. Marketings of sheep and lambs were 91,000 and 262,000 head, respectively. Sheep marketings were up from 1997 but lamb marketings were down from 1997 as sheep and lamb inventories continue to decline in the state. The average price for lamb prices fell $24.20 per cwt to $73.60 per cwt and sheep dropped $8.20 per cwt from 1997 to $29.20 per cwt.

The total 1998 cash receipts in the United States from marketings of meat animals fell 12 percent to $43.6 billion. Cattle and calves accounted for 77 percent of this total, hogs and pigs 22 percent, and sheep and lambs 1 percent. Production increased for cattle and calves and hogs and pigs, but declined for sheep and lambs. Average prices fell from 1997 levels for all three species.

Cash receipts from marketings of U.S. cattle and calves decreased from $36.0 billion in 1997 to $33.7 in 1998, a 6 percent decrease. All cattle and calf marketings totaled 55.8 billion pounds in 1998, down 2 percent from last year. The U.S. annual average price per 100 pounds live weight for cattle was $59.60, a decrease of $3.50 from the $63.10 in 1997. For calves, the annual average price decreased $0.10 to $78.80.

Cash receipts from U.S. hogs and pigs totaled $9.4 billion during 1998, down 28 percent from 1997. Marketings increased to 26.5 billion pounds in 1998, up 10 percent from 1997. The U.S. annual average price per 100 pounds live weight fell from $52.90 in 1997 to $34.40 in 1998.

Cash receipts from marketings of U.S. sheep and lambs in 1998 were $483 million, down 24 percent from 1997. Marketings declined 5 percent to 742 million pounds. The U.S. annual average price per 100 pounds live weight for lambs decreased from $90.30 in 1997 to $72.30 in 1998 while for sheep, the annual average price decreased $7.30 to $30.60.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.02 million head on May 1, 1999. The inventory was 3 percent above May 1, 1998 and 1 percent above May 1, 1997.

Placements in feedlots during April totaled 1.67 million, 5 percent above 1998 and 8 percent above 1997. Net placements were 1.57 million. During April, placements of cattle and calves weighing less than 600 pounds were 283,000, 600-699 pounds were 389,000, 700-799 pounds were 567,000, and 800 pounds and greater were 431,000. Marketings of fed cattle during April totaled 1.93 million, 3 percent above 1998 and 1 percent above 1997. Other disappearance totaled 104,000 during April, 13 percent above 1998 and 6 percent above 1997.

Montana May Potato Storages nearly empty, U.S. down 6 Percent

Montana potato producers held 270,000 cwt. of potatoes in storage on May 1, nearly twice last year's storage level, but about the same quantity normally held. The stocks represent 8 percent of the 1998 total production, compared with last year's stocks representing 5 percent of the 1997 total production.

Nationally, May 1, 1999 potato stocks totaled 87.6 million cwt, down 6 percent from a year ago and 15 percent below two years ago. Storage accounted for 21 percent of 1998 fall production, 1 percent less than a year ago.

U.S. disappearance from the start of harvest to May 1 totaled 337 million cwt, up 5 percent from last year but 1 percent below the record high two years ago. April disappearance totaled 43.3 million cwt, 5 percent above last year but down 3 percent from April 1997. Shrink and loss to date is estimated at 30.1 million cwt, up 18 percent from last year.

Processing of 1998 crop potatoes so far this season totaled 168 million cwt, up 8 percent from the 1997 crop and equal to the 1996 crop. April processing used a record 19.2 million cwt of raw potatoes, up 9 percent from last year and 3 percent above two years ago.

Western States held 68.1 million cwt of potatoes in storage on May 1, 1999, down 7 percent from last year and 15 percent below May 1997. Idaho's stocks were down 6 percent and account for 57 percent of the Western States' total. California's stocks were down 25 percent and Colorado dropped 17 percent. Washington's stocks were down 9 percent but Oregon stored 8 percent more than a year ago.

1998 Agricultural Chemical Use Estimates for Winter and Spring Wheat

Montana winter wheat producers applied nitrogen fertilizer to 90 percent of the acreage planted for the 1998 crop, according to the Montana Agricultural Statistics Service. A total of 67.9 million pounds of nitrogen fertilizer was applied to the 1.40 million acres of winter wheat planted in Montana . Of the planted area, 88 percent received phosphate fertilizer while potash was used on 31 percent of the acres. Total application of phosphate was 30.7 million pounds and potash was 5.1 million pounds.

Continued on back page.

Hired Workers down 1 Percent, Wage Rates up 5 Percent from a Year Ago

There were 998,000 hired workers on the Nation's farms and ranches the week of April 1-17,1999, down 1 percent from a year ago. There were 844,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 154,000 workers. Migrant workers accounted for 8.7 percent of the April hired workforce compared to 6.6 percent last year.

Farm operators paid their hired workers an average wage rate of $7.84 per hour during the April 1999 survey week, up 35 cents from a year earlier. Field workers received an average of $7.23 per hour, up 23 cents from last April. Livestock workers earned $7.36 per hour compared with $6.99 a year earlier.

Hired farm worker wage rates in all regions were above a year ago. The largest increases occurred in the Northeast I (New England and New York), Southeast (Alabama, Georgia, and South Carolina), Mountain II (Colorado, Nevada, and Utah), and Mountain III (Arizona and New Mexico) regions. The higher wage rates in these regions were primarily attributable to offering higher wages to attract workers in an increasingly competitive economic environment.

The June Agricultural Survey is Underway

You may be part of a sample of Montana producers that will be asked by interviewers to participate in the survey between May 24 and June 11. **Please say yes!** This survey is particularly vital because it will provide the first clear indications of the potential production of major commodities in 1999.

The information gathered is widely used. Producers rely on the data to reach valid production, marketing, and investment decisions. Industry analysts, extension agents and farm organizations use the information in a variety of ways that benefit farmers. We safeguard the confidentiality of all survey responses. Information from individual operations is combined with other responses to provide the needed data. Montana Agricultural Statistics Service works with all farmers and ranchers to provide meaningful, accurate, and objective statistics that help keep Montana's and the Nation's agriculture informed.

1998 Agricultural Chemical Use

(continued from page 2)

Montana winter wheat producers applied 889,000 pounds of herbicides to 89 percent of the planted winter wheat acres in 1998. The most common herbicide used was 2, 4-D with 66 percent of the acreage sprayed. Dicamba and Glyphosate were the next popular herbicides used at 37 and 29 percent, respectively, of the planted acreage covered.

Montana spring wheat producers planted 3.8 million acres of spring wheat in 1998. Sixty-one percent of these acres had nitrogen fertilizer applied to them. A total of 129.6 million pounds of nitrogen was applied. Phosphate was applied to 55 percent and potash to 22 percent of the planted spring wheat acreage. Total application of phosphate was 64.5 million pounds and potash was 10.3 million pounds.

Montana spring wheat producers applied 1.8 million pounds of herbicides to 81 percent of the total spring wheat acres planted in 1998. The most widely used herbicide was 2, 4-D with 57 percent of the acreage sprayed. Dicamba was the second most common herbicide used on 21 percent. Glyphosate was used on 17 percent of the planted acres.

Winter wheat producers applied nitrogen fertilizer to 89 percent of the area planted for 1998 harvest in the surveyed States. Phosphate fertilizers were applied to 63 percent of the collective acreage, ranging from just 9 percent in Oregon to Ohio's 93 percent. All surveyed States treated at least a portion of the acreage with herbicides; 2,4-D was again the most prevalent in terms of area and total application.

Nitrogen fertilizer was applied to 94 percent of all spring wheat acreage in the surveyed Durum states and 87 percent in the other spring states. Phosphate coverage was similar in both crops, at 76 percent and 77 percent for Durum and other spring plantings, respectively. The three most popular herbicides in terms of Durum area covered were 2,4-D, dicamba, and tribenuron-methyl in that order. However, MCPA and fenoxaprop were second and third behind 2,4-D on other spring fields.

The agricultural chemical use estimates in this report refer to on-farm use of commercial fertilizers and pesticides on the targeted crops for the 1998 crop year. Farm and ranch operators were enumerated late in the growing season or after the farm operator had indicated that planned applications were completed. The data was compiled from two surveys conducted in the Fall of 1998: The Agricultural Resources Management Study (ARMS) and the Fall Area Survey (FAS).

May 1 Crop Production and Hay Stocks

As of May 1, **Montana winter wheat** producers were expecting a yield of 40 bushels per acre, up 1 bushel from last year. If realized, total production of 40.0 million bushels would be 18 percent less than a year ago due to a decrease in acreage. Dry conditions and low grain prices last fall led producers to plant 1.05 million acres, the smallest winter wheat crop since 1937. Producers expect to harvest 1.0 million acres which would be the smallest harvested acreage since 1939. The condition of the winter wheat crop was rated at 2 percent very poor, 6 percent poor, 35 percent fair, 53 percent good, and 4 percent excellent for the week ending May 9.

U.S. winter wheat production is forecast at 1.61 billion bushels, down 14 percent from 1998. Based on conditions around May 1, the U.S. yield is forecast at 44.4 bushels per acre, 2.5 bushels less than last year's record high. Grain area totals 36.3 million acres, down 9 percent from last season. All classes of winter wheat are down from the previous estimate with soft red winter wheat showing the smallest percentage drop.

May 1 Hay Stocks

Montana hay producers had an estimated 1.10 million tons of hay on hand as of May 1, 4 percent less than the same time last year. Disappearance from December 1998 to May 1, 1999 totaled 3.46 million tons.

U.S. stocks of **all hay** on farms totaled 24.8 million tons on May 1, 1999, up 14 percent from May 1 of the previous year. Disappearance of hay from December 1, 1998 - May 1, 1999, totaled 87.0 million tons, 7.2 percent higher than the 1997 crop disappearance of 81.2 million tons for the same period. Stocks of hay on May 1, 1999, were higher compared with last year in 33 of the 48 estimating states. Mild winter conditions, combined with good hay production, led to stocks increases across much of the nation. Florida and the Southern Plains were adversely affected by drought conditions and showed sharp decreases in hay stocks.

1998 Poultry Production and Value

Montana's value of egg production in 1998 was $3.9 million, down 8 percent from 1997. Egg production in 1998 totaled 84 million eggs, down 4 million from the previous year. The average price for eggs was 55 cents per dozen, a decrease of 2 cents from 1997.

Montana's value of sales from chickens in 1998, excluding broilers, was $15,000. Value of sales decreased 42 percent from 1997 due to a large drop in the number of pounds sold, from 1.3 million in 1997 to 768,000 in 1998. Chickens sold for an average price of 2 cents per pound, unchanged from the previous year.

The U.S. combined value of production from broilers, eggs, and turkeys and the value of sales from chickens in 1998, was $22.2 billion, up 3 percent from the $21.7 billion in 1997. Of the combined total, 68 percent was from broilers, 20 percent from eggs, 12 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced in the U.S. during 1998 was $15.1 billion, up 7 percent from the $14.2 billion in 1997. The total number of broilers produced in 1998 was 7.93 billion, up 2 percent from 1997. The total amount of live weight broilers produced in 1998 was 38.6 billion pounds, up 3 percent from 1997. The 1998 average price per pound on a live weight equivalent basis was 39.3 cents per pound, compared to 37.7 cents per pound in 1997.

Value of egg production in 1998 was $4.35 billion, down 4 percent from the $4.54 billion in 1997. Egg production totaled 79.7 billion eggs, up 3 percent from the 77.5 billion eggs produced in 1997. In 1998, eggs averaged 65.5 cents per dozen, compared with 70.3 cents in 1997.

The value of turkeys produced during 1998 was $2.66 billion, down 8 percent from the $2.88 billion the previous year. Turkey production in 1998 totaled 7.00 billion pounds live weight, compared with 7.23 billion pounds in 1997. The average price received by producers during 1998 was 38.0 cents per pound, compared with 39.9 cents in 1997.

The value of sales from chickens (excluding broilers) in 1998 was $75.5 million, up 6 percent from the $71.5 million a year ago. Prices averaged 8.0 cents per pound, compared with 7.7 cents in 1997. The number of chickens sold in 1998 totaled 194 million, up 1 percent from the total sold during the previous year.

2/ Includes death, rendered, and other losses during the 12-month period.

Ag Prices Received for March

Crop prices for the full month of March declined from February. Montana winter wheat average price was $2.80 per bushel, down 12 cents from February's level; durum wheat was $2.88 per bushel, down 25 cents; and spring wheat was 11 cents lower at $3.15 per bushel. Feed barley was $1.39 and malt barley was $2.39 per bushel.

The mid-April price for alfalfa hay was $61.00 per ton, up $1.00 from last month, but the other hay price of $52.00 was unchanged from March. The mid-month winter wheat price averaged $2.80 per bushel, spring wheat was $3.10, feed barley price was $1.40, and malt barley averaged $2.30.

Livestock prices for the full month of March were mixed. Steer and heifer prices decreased $2.70 to $73.70 per cwt. Cows were up $1.50 to $37.70 and the average price for calves decreased 70 cents to $85.00 per cwt. Sheep and lamb prices both increased 80 cents to $31.90 and $69.90 per cwt, respectively. Milk prices decreased 90 cents from last month to $16.60 per cwt. Steer and heifer prices for mid-April averaged $73.20 per cwt.

Nationally, prices for March and changes from February were as follows: winter wheat was $2.53, down 3 cents; spring wheat was $3.01, down 9 cents; the all barley price was $1.92, up 8 cents; and steer and heifer prices were $65.50, up $1.90. The U.S. mid-April winter wheat price was $2.51 per bushel, spring wheat was $2.78 per bushel, all wheat price was $2.71 per bushel, all barley was $1.80. Steer and heifer prices were $65.30 per cwt, cow prices were $35.10, all hog prices were $30.50 per cwt, and market egg prices were 43.2 cents per dozen.

The All Farm Products Index of Prices Received in April was 98 based on 1990-92=100, up 1 point (1.0 percent) from March. The increase is due to the seasonal change in the mix of commodities farmers sell. The normal increase in marketings of strawberries, cattle, oranges, and milk more than offset the relatively lower marketings of soybeans, corn, wheat, and hogs. The change in marketings also more than offset a decline in overall prices. Price decreases from March for milk, eggs, broilers, and corn more than offset price increases for lettuce, hogs, onions, and carrots.

Compared with April 1998, the All Farm Products Index was 6 points (5.8 percent) lower. Price decreases from April 1998 for hogs, milk, corn and soybeans more than offset price increases for strawberries, carrots, lettuce, and grapefruit.

United States Index Summary

INDEX 1990-92=100	Mar. 1998	Apr. 1998	Mar. 1999	Apr. 1999

featuring...Sheridan County

Sheridan County, lying in the extreme northeastern portion of Montana, claims 1,073,056 acres. Sheridan County is a prairie county and three-fourths of the land is tillable. The soil is of glacier origin providing a rich base for small grain production

In 1996, Sheridan County was ranked 24th in the state for all cash receipts from farming with $35,690,000. Livestock receipts totaled $6,148,000 and ranked 49th. Crops generated $29,563,000 and a ranking of 17th. Government payments accounted for the remaining $10,002,000.

Sheridan County ranks first in the State in durum wheat production and 18th in other spring wheat production for 1998. Hay is also grown in the county. The county livestock inventory for January 1, 1998 showed cattle and calves at 22,600 head, with 15,200 beef cows and heifers that have calved, and sheep and lamb inventory at 2,000 head. December 1, 1997 hogs and pigs inventory totaled 1,500 head.

Montana Land Values Increase

The average value of farm real estate in Montana on January 1, 1998 was $294 per acre, according to the Montana Agricultural Statistics Service. [illegible]e average value of farm real estate increased $3.00 per acre from 1997. From 1994 to 1998, the value of farm real estate has grown from $254 to $294 per acre, an increase of 16 percent.

At the U.S. level, the average value of farm real estate on January 1, 1998 was $974 per acre. The average value of farm real estate decreased $48 per acre from 1997. The value of farm real estate at the national level increased by 22 percent from 1994 to 1998. The Northeast region maintained the highest values in the nation while the Cornbelt, Lake, and Appalachian, regions showed the strongest percent gains. All regions showed percent increases of more than 16 percent except for the Northeast, which had the least gain at 6 percent.

U.S. Cattle on Feed Up 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.38 million head on April 1, 1999. The inventory was 3 percent above April 1, 1998 but slightly below April 1, 1997. The inventory included 6.28 million steers and steer calves, up 2 percent from the previous year. This group accounted for 61 percent of the total inventory. Heifers and heifer calves accounted for 4.05 million head, up 4 percent from 1998.

Placements in feedlots during March totaled 2.02 million, 18 percent above 1998 and 3 percent above 1997. Net placements were 1.95 million. During March, placements of cattle and calves weighing less than 600 pounds were 357,000, 600-699 pounds were 468,000, 700-799 pounds were 739,000, and 800 pounds and greater were 457,000.

Marketings of fed cattle during March totaled 1.98 million, 5 percent above 1998 and 12 percent above 1997.

Other disappearance totaled 71,000 during March, 24 percent below 1998 and 17 percent below 1997.

Cattle on Feed in Historic 7 States Up 3 Percent

Cattle on feed April 1, 1999, in the historic 7 States for feedlots with capacity of 1,000 or more head totaled 8.89 million, up 3 percent from the previous year but slightly below April 1, 1997. The inventory included 5.33 million steers and steer calves, up 2 percent from the previous year. This group accounted for 60 percent of the total inventory. Heifers and heifer calves accounted for 3.53 million head, up 6 percent from 1998.

Placements in feedlots during March totaled 1.73 million, 22 percent above 1998 and 2 percent above 1997.

Marketings during March totaled 1.66 million, 5 percent above 1998 and 11 percent above 1997.

Other disappearance during March was 52,000 head, 25 percent below 1998 and 16 percent below 1997.

Montana Red Meat Up and U.S. Red Meat Production Sets Record High for March

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during March, compared to 1.1 million pounds last March and 5 percent higher than last month. There were 1,400 head of cattle slaughtered, 200 head more than a year ago. The average live weight of cattle slaughtered decreased 31 pounds to 1,125 pounds.

Hog kill in March totaled 2,200 head, 300 head more than March 1998. The average live weight increased 18 pounds to 227 pounds. There were 100 head of sheep slaughtered in March, the same as a year ago at this time. The average live weight of sheep slaughtered remained the same at 131 pounds.

Commercial red meat production for the United States totaled 4.02 billion pounds in March, up 8 percent from the 3.73 billion pounds produced in March 1998 and up 7 percent from the previous record high for March set in 1995. Beef production, at 2.23 billion pounds, was 7 percent above the previous year. Cattle slaughter totaled 3.05 million head, up 5 percent from 1998. The average live weight was up 16 pounds from the previous year, at 1,216 pounds.

Montana Red Meat Up and U.S. Red Meat Production Sets Record High for March

(continued from page 1.)

Veal production totaled 20.0 million pounds, 12 percent below the previous record low for March set a year ago. Calf slaughter totaled 117 thousand head, down 8 percent from March 1998. The average live weight was 9 pounds below last year, at 286 pounds.

Pork production totaled 1.74 billion pounds, up 9 percent from the previous year and 6 percent higher than the previous record high for March set in 1995. Hog kill totaled 9.12 million head, 8 percent above 1998. The average live weight was 2 pounds above the previous year, at 259 pounds.

Lamb and mutton production, at 29.0 million pounds, was up 10 percent from March 1998. Sheep slaughter totaled 423 thousand head, 10 percent above last year. The average live weight was 137 pounds, down 1 pound from March a year ago.

January - March red meat production was 11.4 billion pounds, 3 percent higher than the comparable figure a year earlier. Accumulated beef production was 3 percent higher than last year, veal was down 19 percent, pork up 4 percent, and lamb and mutton was down 2 percent.

Montana March Potato Stocks Up 154 Percent, U.S. Down 2 Percent

Montana potato producers held 1.78 million cwt. of potatoes in storage on April 1, more than double last year's storage but about the same as normal. The stocks represent 56 percent of the 1998 total production, compared with last year's stocks representing 21 percent of the 1997 total production.

Nationally, April 1, 1999 potato stocks totaled 131 million cwt, down 2 percent from a year ago and 11 percent below two years ago. Storage accounted for 31 percent of 1998 fall production, 1 percent less than a year ago.

U.S. disappearance from the start of harvest to April 1 totaled 294 million cwt, up 5 percent from last year but 1 percent below the record high two years ago. March disappearance totaled a record high 43.2 million cwt, 4 percent above the last two years. Shrink and loss to date is estimated at 27.7 million cwt, up 18 percent from last year but 1 percent below two years ago.

Processing of 1998 crop potatoes so far this season totaled 149 million cwt, up 8 percent from the 1997 crop but less than 1 percent below the 1996 crop. March processing used a record 20.4 million cwt of raw potatoes, up 3 percent from last year and 8 percent above two years ago.

Western States held 97.6 million cwt of potatoes in storage on April 1, 1999, down 3 percent from last year and 10 percent below April 1997. Idaho's stocks were down 4 percent and account for 55 percent of the Western States' total. California's stocks were down 20 percent and Colorado dropped 13 percent. Washington's stocks were down 4 percent but Oregon stored 7 percent more than a year ago.

Montana and U.S. Quarterly Milk Production Up

During the January-March 1999 quarter, Montana milk cows produced 74 million pounds of milk, up 2 million from the same quarter a year ago. Montana milk cows numbered 18,000 head, unchanged from last year.

Milk production in the 20 major States during March totaled 12.1 billion pounds, up 4.0 percent from production in these same States in March 1998. February revised production, at 10.8 billion pounds was up 4.0 percent from February 1998.

Production per cow in the 20 major States averaged 1,577 pounds for March, 62 pounds above March 1998. The number of cows on farms in the 20 major States was 7.70 million head, 5,000 head less than March 1998, but 2,000 head more than February 1999.

The January-March quarterly production of milk for the U.S. was 40.5 billion pounds, 3.3 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.13 million head, 42,000 head less than the same period last year.

1998 Manufactured Dairy Products

Montana dairy plants produced 159,000 gallons of low-fat, hard ice cream during 1998, 13 percent less than the 1997 production. Low-fat, soft ice cream production totaled 1.3 million gallons, up slightly from last year's production. Low-fat ice cream mix production totaled 798,000 gallons, 5 percent more than last year.

Nationally, total cheese production, excluding cottage cheeses, was 7.50 billion pounds, 2 percent above the 1997 production. Wisconsin was the leading State with 28 percent of the production. American type cheese production, was 3.33 billion pounds, 1 percent above 1997 and accounted for 44 percent of total cheese in 1998.

Italian varieties, with 3.00 billion pounds produced was 4 percent above the 1997 production. Mozzarella accounted for 79 percent of the Italian production followed by Ricotta with 8 percent and Provolone with 7 percent. Wisconsin was the leading State in Italian cheese production with 29 percent of the production.

Production of butter in the United States during 1998 totaled 1.08 billion pounds, 6 percent less than 1997. Wisconsin accounted for 28 percent of the production, followed by California with 21 percent and Pennsylvania with 8 percent. Ice Cream Production increased in 1998. Regular ice cream production totaled 937 million gallons, up 3 percent from 1997. Low-fat ice cream, at 409 million gallons, was up 6 percent.

Nonfat dry milk for human food production, at 1.14 billion pounds, was down 7 percent from 1997. Dry whole milk, at 143 million pounds, was up 17 percent.

March Egg Production Up 3 Percent

U.S. egg production totaled 7.05 billion during March 1999, up 3 percent from the 6.87 billion produced in 1998. Production included 5.94 billion table eggs and 1.11 billion hatching eggs, of which 1.04 billion were broiler-type and 70.0 million were egg-type. The total number of layers during March 1999 averaged 323 million, up 3 percent from the total average number of layers during March 1998. March egg production per 100 layers was 2,183 eggs, down slightly from 2,187 eggs in March 1998.

All layers in the U.S. on April 1, 1999, totaled 323 million, up 3 percent from a year ago. The 323 million layers consisted of 262 million layers producing table or commercial type eggs, 57.3 million layers producing broiler-type hatching eggs, and 2.94 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1999, averaged 71.1 eggs per 100 layers, down fractionally from the 71.3 a year ago.

Laying flocks in the 30 major egg producing States produced 6.66 billion eggs during March, up 2 percent from March 1998. The average number of layers during March, at 305 million, was up 3 percent from a year earlier.

March 1999 Prospective Plantings

Montana **spring wheat** producers expect to seed 4.2 million acres in 1999, and if these expectations hold, seedings would be up 11 percent from last year, and would be the third highest seeding on record. Low prices and lack of fall moisture prompted producers to reduce winter wheat seeding last fall, but increased the number of acres to be seeded in the spring. **Winter wheat** seedings remained unchanged from the December estimate at 1.05 million acres, down 350,000 from last year and the smallest acreage since 1941. Lower prices are expected to reduce **durum wheat** acreage to 380,000 acres, down 16 percent from last year's 450,000 acres seeded. The 1998 seeded acreage for durum was the largest acreage seeded since 1981. Adding the winter wheat seeded last fall to the other spring and durum wheat intended seedings shows 5.63 million acres of **all wheat**, down less than 1 percent from last year's acreage, and 8 percent below 1997.

Barley intentions are estimated at 1.2 million acres, down 11 percent from last year. The intended **oats** acreage is 150,000 acres, up 10,000 acres from 1998, and growers expect to harvest half of this crop for grain, 25 percent more than last year. **Corn** intentions are estimated at 60,000 acres, unchanged from last year. **Sugar beet** acreage is estimated at 64,000 acres, unchanged from 1998. **Dry bean** intentions are up 5 percent at 13,200 acres. An estimated 2.5 million acres of **hay** are expected to be harvested, which equals 1998's harvested acreage.

Nationally, **other spring wheat** growers intend to plant 15.4 million acres this year, down 2 percent from 1998. This would be the smallest area since 1988. About 14.5 million acres of the total are Hard Red Spring wheat, also down 2 percent. Spring wheat prices are the lowest in several years. Despite current prices most states are increasing area planted from a year ago. However, the announced CRC Durum program, along with using alternative crops to break disease chains, has reduced North Dakota's intended area dramatically, causing the U.S. decline. **Winter wheat** planted area for harvest in 1999 remains at 43.4 million acres. This is down 7 percent from 1998. Class acreages are also unchanged from the seedings report. Some minor, offsetting Soft Red area changes did occur after mid-December. Area seeded to **durum wheat** is expected to reach 4.27 million acres this year, up 12 percent from 1998 and the largest total since 1982. The CRC announced for Durum has spurred planting intentions in the Dakotas despite low prices. The South Dakota acreage is the largest in ten years. Seeding in the Imperial Valley of California progressed normally through February.

U. S. **barley** growers intend to seed 5.27 million acres for 1999, down 17 percent from the 6.34 million acres seeded a year ago. Barley growers in North Dakota and Minnesota are decreasing seedings by 500,000 and 190,000 acres, respectively. Of the 27 States that estimate barley acreage, 17 States are seeding fewer acres, six States are showing no change, and four States are increasing acres. **Oats** seeded and to be seeded by U.S. farmers for the 1999 crop year are expected to total 4.73 million acres, down 200,000 acres from last years final planted acres. Growers expect to harvest 2.69 million acres for grain in 1999, down 3 percent from 1998. If intentions are realized, this would be the second lowest planted acres recorded since 1866, exceeding only the 1996 acreage of 4.64 million acres. Acres intended to be harvested for grain would also be the second lowest on record, above the 2.66 million acres harvested in 1996.

Dry Bean producers intend to plant 2.05 million acres of dry beans in 1999, up 2 percent from last year and up 9 percent from two years ago. **Corn** growers nationally, intend to plant 78.2 million acres of corn for all purposes in 1999, down 2 percent from both last year and 1997. If these intentions materialize, this would be the lowest planted acreage since 1995. Expected acreages are down in the upper Midwest, Southwest, Texas, and Southeast due to a shift to other crops. Intended acreage is up slightly in the central Corn Belt due in part to land coming back into production after flooding in 1998. The area planted to **sugar beets** is expected to total 1.55 million acres in the 12 producing states. If grower's intentions are realized, planted acreage will be 3.3 percent above last year. Relatively lower prices for alternative crops was cited for the increase in acres. Continued on page two.

Prospective Plantings (Continued)

Hay producers expect to harvest 60.1 million acres of hay in 1999, compared to 60.0 million acres in 1998. Acreage declines in 24 States were more than offset by the increases in 14 States. With recent rains in many areas, Texas, up 14 percent, may return to a more normal crop year. In ten states no change in hay acreage is expected.

March 1, 1999 Grain Stocks

All wheat stocks in Montana on March 1, 1999 were estimated at 105.2 million bushels, up 1.2 million bushels from the same quarter last year. Stocks stored on the farm accounted for 86.0 million bushels and the remaining 19.2 million bushels were stored off farm. All **spring wheat** stocks, at 70.7 million bushels, were down 4% from last year and represent 67% of the total wheat stocks. Winter wheat stocks were estimated at 34.5 million bushels, up from 30.4 million bushels last year. **Durum wheat** stocks were estimated at 8.28 million bushels, more than doubling the stocks held March 1, 1998. All wheat disappearance for the December - February quarter was 55.3 million bushels, compared with 45.3 million for the same quarter last year. **Barley** stocks in all positions on March 1, 1999 totaled 25.6 million bushels, up 19 percent from a year ago. The barley disappearance for the December - February quarter was 14.5 million bushels, compared with 14.7 million for the same quarter last year. **Oats** stocks in all positions were estimated at 1.9 million bushels, up 9% from last year.

Nationally, **all wheat** stored in all positions on March 1, 1999 totaled 1.44 billion bushels, up 24 percent from a year ago to the biggest March number since 1988. Farm stocks were 470 million bushels, up 18 percent from last year. Off-farm stocks, at 975 million bushels, were up 27 percent. Disappearance for the quarter ending March 1 was 451 million bushels, down slightly from the same period in 1998. **Durum wheat** stocks in all positions on March 1, 1999 total 88.2 million bushels, more than double last March 1. Like all wheat, this is the biggest March inventory since 1988. On-farm stocks are 58.2 million bushels, up 165 percent from last year. Off-farm stocks total 30.0 million bushels, up 47 percent. The indicated third quarter disappearance of 20.8 million bushels is down 16 percent from the same period a year earlier.

U.S. **barley** stocks in all positions on March 1, 1999 totaled 200 million bushels, up 11 percent from a year ago. Of the total barley stocks on hand, 86.9 million bushels were stored on farms, 6 percent above a year ago. March 1, 1999 off-farm stocks, at 114 million bushels, were 15 percent above last year. Indicated disappearance during the December-February quarter totaled 70 million bushels, 10 percent above the same period a year earlier.

Oats stored in all positions for the U.S. on March 1, 1999 totaled 109 million bushels, 2 percent below a year ago. Of the total stocks on hand, 62 million bushels were stored on farm, 5 percent above this time last year. Off-farm stocks totaled 48 million bushels, 9 percent below a year earlier. Indicated disappearance during the December-February quarter totaled 34 million bushels, 3 percent more than the same period a year ago.

Nationally, **corn** stocks in all positions on March 1, 1999, totaled 5.70 billion bushels, up 15 percent from March 1, 1998. Of the total stocks, 3.57 billion bushels were stored on farms, up 20 percent from a year ago. Off-farm stocks, at 2.13 billion bushels, were up 8 percent from a year ago. The December 1998-February 1999 indicated disappearance is 2.36 billion bushels, 2 percent above the disappearance of 2.31 billion bushels during the same period a year earlier. See district table on back.

1/ Terminals, mills, interior elevators. 2/ Montana stocks for winter wheat and all spring wheat are made possible through funds provided by the Montana Wheat & Barley Committee. 3/ Included in all spring wheat and all wheat. 4/ Not included in order to avoid disclosing individual operations. * Revised.

Ag Prices Received for February

Crop prices for the full month of February showed some improvement. The Montana winter wheat average price was $2.92 per bushel, up 24 cents from January's level; durum wheat was $3.13 per bushel, down 4 cents; and spring wheat was 5 cents higher at $3.26 per bushel. Feed barley was $1.46 and malt barley was $2.58 per bushel.

The mid-March price for alfalfa hay was $60.00 per ton, down $4.00 from last month, and the other hay price of $52.00 decreased $5.00 from February. The mid-month winter wheat price averaged $2.90 per bushel, spring wheat was $3.30, feed barley price was $1.30, and malt barley averaged $2.50.

Livestock prices for the full month of February are mostly higher. Steer and heifer prices increased $1.90 to $76.40 per cwt. Cows were up $2.30 to $36.20 and the average price for calves increased $1.80 to $85.70 per cwt. Sheep prices increased $1.70 to $31.10 per cwt, but lambs dropped $4.00 to $69.10 per cwt. Milk prices increased $0.90 from last month to $17.50 per cwt. Steer and heifer prices for mid-March averaged $73.30 per cwt.

Nationally, prices for February and changes from January were as follows: winter wheat was $2.56, down 11 cents; spring wheat was $3.10, up 3 cents; the all barley price was unchanged at $1.84, and steer and heifer prices were $63.60, up $1.40.

The U.S. mid-March winter wheat price was $2.56 per bushel, spring wheat was $3.10 per bushel, all wheat price was $2.74 per bushel, all barley was $1.86. Steer and heifer prices were $65.50 per cwt, cow prices were $34.70, all hog prices were $26.50 per cwt, and market egg prices were 53.1 cents per dozen.

The All Farm Products Index of Prices Received in March was 97 based on1990-92=100, up 1 point (1.0 percent) from February. This is a usual February to March increase due to the seasonal changes in the mix of commodities farmers sell. Higher seasonal marketings of strawberries, milk, broilers, and tomatoes more than offset the relatively lower marketings of cattle, cotton, oranges, and corn. Price decreases from February for milk, soybeans, broilers, and hogs more than offset price increases for cattle, lettuce, oranges, and eggs.

Compared with March 1998, the All Farm Products Index was 5 points (4.9 percent) lower. Price decreases from March 1998 for soybeans, corn, hogs, and wheat more than offset price increases for milk, lettuce, strawberries, and carrots.

United States Index Summary

INDEX 1990-92=100	Feb. 1998	Mar. 1998	Feb. 1999	Mar. 1999

U.S. Hog Inventory Down 1 Percent

U.S. inventory of all hogs and pigs on March 1, 1999, was 59.9 million head. This was 1 percent below March 1998, and 4 percent below December 1, 1998.

Breeding inventory, at 6.53 million head, was down 6 percent from March 1, 1998 and down 2 percent from December 1, 1998. Market hog inventory, at 53.3 million head, was slightly above last year, but 4 percent below last quarter.

The December 1998-February 1999 U.S. pig crop, at 25.3 million head, was 1 percent less than 1998, but 9 percent more than 1997. Sows farrowing during this period totaled 2.89 million head, 1 percent below last year. The sows farrowed during this quarter represented 43 percent of the breeding herd. The average pigs per litter rose to an average of 8.73 pigs saved per litter for the December-February period, compared to 8.70 pigs last year. Pigs saved per litter by size of operation ranged from 7.60 for operations with 1-99 hogs to 8.90 for operations with more than 5,000 hogs and pigs.

U.S. hog producers intend to have 2.88 million sows farrow during the March-May 1999 quarter, 7 percent below the actual farrowings during the same period in 1998 and 1 percent below 1997. Intended farrowings for June-August 1999, at 2.84 million sows, are 7 percent below the same period last year and 4 percent below 1997.

The total number of hogs under contract, owned by operations with over 5,000 head, but raised by contractees, accounted for 30 percent of the total U.S. hog inventory.

1998 Montana Red Meat Production Up and U.S. Sets Record Highs

Montana slaughter plants produced 19.4 million pounds, dressed weight, of red meat during 1998, compared with 15.3 million pounds in 1997. There were 21,900 cattle slaughtered during 1998, up 22 percent from the previous year. The total live weight of 24.7 million pounds was up 22 percent from a year earlier. The average live weight was up 2 pounds to 1,128 pounds.

There were 28,100 hogs slaughtered in Montana, an increase of 8,000 head from 1997. Total live weight of 6.1 million pounds was up 39 percent from 1997. The average live weight was 218 pounds per head compared with 220 the previous year. Sheep slaughter amounted to 3,200 head, an increase of 400 head from a year earlier. The average live weight of 130 pounds was 6 pounds higher than the previous year. Total live weight of all sheep and lambs slaughtered in 1998 increased 65,000 pounds from 1997 to 411,000 pounds.

The number of Montana federally inspected slaughter plants on January 1, 1999 was 13, down 1 from 1998. There were 133 non-federally inspected plants on January 1, 1999, up 4 from the same date a year ago.

Red meat production in commercial plants and on farms for the United States totaled 45.3 billion pounds in 1998. This was 4 percent higher than both last year's production and the previous record high set in 1995. Red meat includes beef, veal, pork, and lamb and mutton. Red meat production in commercial plants totaled 45.1 billion pounds. Beef production, at 25.8 billion pounds, was up 1 percent from a year earlier. Veal production totaled 261 million pounds, down 22 percent from last year's figure and down 9 percent from the previous record low set in 1993. Pork production rose 10 percent to 19.0 billion pounds, eclipsing the previous record high set in 1995 by 7 percent. Lamb and mutton production totaled 252 million pounds, 3 percent below the previous record low set in 1997.

Commercial cattle slaughter during 1998 totaled 35.5 million head, down 2 percent from 1997, with federal inspection comprising 98.1 percent of the total. The average live weight was 1,203 pounds, up 30 pounds from a year ago. Steers comprised 49.2 percent of the total federally inspected slaughter, heifers 32.3 percent, dairy cows 7.5 percent, other cows 9.3 percent, and bulls 1.7 percent. Commercial calf slaughter totaled 1.46 million head, down 7 percent from a year ago with 97.6 percent under federal inspection. The average live weight was 285 pounds, down 53 pounds from a year earlier.

Commercial hog slaughter totaled 101.0 million head, up 10 percent from 1997 with 98.3 percent of the hogs slaughtered under federal inspection. The average live weight was unchanged from a year earlier at 256 pounds. Barrows and gilts comprised 96.0 percent of the total federally inspected slaughter. Commercial sheep and lamb slaughter, at 3.80 million head, was down 3 percent from 1997 with 96.5 percent comprised by federal inspection. The average live weight fell 1 pound from 1997 to 132 pounds.

There were 930 slaughtering plants under federal inspection in 1998, compared with 966 last year. Of these, 795 slaughtered at least one head of cattle with 14 slaughtering over 50 percent of the total cattle killed. There were 757 plants that slaughtered hogs, with 11 accounting for 48 percent of the total. Likewise, 10 of the 339 plants that slaughtered calves accounted for 55 percent of the total and 2 of the 556 plants that slaughtered sheep or lambs in 1998 comprised 40 percent of the total head.

February Red Meat Production

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during February 1999, up 14 percent from February 1998, but down 15 percent from the previous month. Cattle slaughter totaled 1,400 head, 100 head more than a year ago. The average live weight, at 1,114 pounds, was down 24 pounds from last year.

During February, there were 2,100 hogs slaughtered, 500 head more than a year ago. The average live weight, at 228 pounds was 21 pounds higher than last year. The number of sheep slaughtered, at 100 head was the same as the previous year. The average live weight decreased 3 pounds from last February to 132 pounds.

Commercial red meat production for the United States totaled 3.54 billion pounds in February, up 2 percent from the 3.48 billion pounds produced in February 1998 and slightly higher than the previous record high for February set in 1996. Beef production, at 2.00 billion pounds, was 1 percent above the previous year. (Continued on next page.)

PLEASE RETURN

February Red Meat Production (continued from front)

Cattle slaughter totaled 2.72 million head, down 1 percent from 1998. The average live weight was up 17 pounds from the previous year, at 1,221 pounds.

Veal production totaled 17.0 million pounds, 19 percent below the previous record low for February set a year ago. Calf slaughter totaled 100 thousand head, down 12 percent from February 1998. The average live weight was 22 pounds below last year, at 286 pounds.

Pork production totaled 1.50 billion pounds, up 3 percent from the previous record high for February set last year. Hog kill totaled 7.90 million head, 3 percent above 1998. The average live weight was 1 pound above the previous year, at 259 pounds.

Lamb and mutton production, at 20.0 million pounds, was down 4 percent from the previous record low for February set in 1979, 1997, and 1998. Sheep slaughter totaled 299 thousand head, 3 percent below last year. The average live weight was 135 pounds, down 2 pounds from February a year ago.

January - February red meat production was 7.4 billion pounds, 1 percent higher than the comparable figure a year earlier. Accumulated beef production was 1 percent higher than last year, veal was down 23 percent, pork was up 1 percent, and lamb and mutton was down 9 percent.

Montana March Potato Stocks up 13 Percent, U.S. down 1 Percent

Montana potato producers held 2.65 million cwt. of potatoes in storage on March 1, up 13 percent from a year ago. The stocks represent 83 percent of the 1998 total production, compared with last year's stocks representing 71 percent of the 1997 total production.

Nationally, March 1, 1999 potato stocks totaled 174 million cwt, down 1 percent from a year ago and 8 percent below two years ago. Storage accounted for 41 percent of 1998 fall production, down 2 percentage points from a year ago.

U.S. disappearance from the start of harvest to March 1 totaled 251 million cwt, up 6 percent from last year but 1 percent below the record high two years ago. February disappearance totaled a record high 37.0 million cwt, 1 percent above last year and up slightly from two years ago. Shrink and loss to date of 25.2 million cwt was up 17 percent from last year but 3 percent below two years ago.

Processing of 1998 crop potatoes so far this season totaled 129 million cwt, up 9 percent from the 1997 crop but 2 percent below the 1996 crop. February processing used a record 20.6 million cwt of raw potatoes, up 6 percent from last year and 2 percent above the previous record two years ago.

Western States held 126 million cwt of potatoes in storage on March 1, 1999, down 2 percent from last year and 8 percent below March 1997. Idaho's stocks were down 3 percent and accounted for 54 percent of the Western total. California's stocks were down 11 percent and Colorado dropped 8 percent. Washington and Oregon potato stocks were equal to last year. Montana's storage was up 13 percent.

U.S. February Milk Production Up 4.3 Percent

Milk production in the 20 major States during February totaled 10.8 billion pounds, up 4.3 percent from production in these same States in February 1998. January revised production, at 11.7 billion pounds was up 3.5 percent from January 1998.

Production per cow in the 20 major States averaged 1,407 pounds for February, 60 pounds above February 1998. The number of cows on farms in the 20 major States was 7.70 million head, 16,000 head less than February 1998 and 4,000 head less than January 1999.

U.S. February Egg Production Up 3 Percent

U.S. egg production totaled 6.29 billion during February 1999, up 3 percent from the 6.11 billion produced in 1998. Production included 5.30 billion table eggs and 987 million hatching eggs, of which 927 million were broiler-type and 60.0 million were egg-type. The total number of layers during February 1999 averaged 323 million, up 3 percent from the total average number of layers during February 1998. February egg production per 100 layers was 1,947 eggs, down fractionally from 1,950 eggs in February 1998.

All layers in the U.S. on March 1, 1999, totaled 324 million, up 3 percent from a year ago. The 324 million layers consisted of 264 million layers producing table or commercial type eggs, 56.6 million layers producing broiler-type hatching eggs, and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1999, averaged 69.7 eggs per 100 layers, up fractionally from the 69.6 a year ago.

Laying flocks in the 30 major egg producing States produced 5.95 billion eggs during February, up 3 percent from February 1998. The average number of layers during February, at 305 million, was up 3 percent from a year earlier.

U.S. Cattle on Feed Up Slightly

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.40 million head on March 1, 1999. The inventory was up slightly from the 10.38 million head on March 1, 1998 and 1 percent above March 1, 1997.

Placements in feedlots during February totaled 1.79 million, 20 percent above 1998 but 1 percent below 1997. Net placements were 1.72 million. During February, placements of cattle and calves weighing less than 600 pounds were 333,000, 600-699 pounds were 492,000, 700-799 pounds were 596,000, and 800 pounds and greater were 367,000.

Marketings of fed cattle during February totaled 1.82 million, 1 percent below 1998 but 1 percent above 1997. Other disappearance totaled 65,000 during February, 6 percent below 1998 but 7 percent above 1997.

1998 Montana Sheep and Lamb Losses

Montana sheep and lamb producers lost 67,000 animals to weather, predators, disease and other causes during 1998, representing a total value of more than $3.6 million. The total number of sheep and lambs lost dropped 21 percent from 1997 and the total value of inventory lost in 1998 fell 39 percent. Extremely low market prices this past year resulted in a significant decrease in the value of sheep and lambs. The reduction in sheep and lamb losses is partly due to less severe weather in 1998 and lower sheep and lamb inventories which were 4 percent lower than the previous year. With sheep numbers declining there is a natural decline in sheep and lamb losses. The percentage of total sheep and lambs lost due to weather in 1998 is 62 percent less than 1997. Sheep and lamb deaths amounted to 8.4 percent of the January 1 inventory and lambs born -- slightly less than the previous year.

Predators caused an estimated $1.1 million in losses in 1998, down from $1.8 million the previous year. Losses due to predators amounted to 2.7 percent of the January 1, 1998 inventory plus the lambs born in 1998 and 33 percent of all sheep and lamb deaths. Coyotes remained the largest predator for both sheep and lambs. Coyotes accounted for 68 percent of the predator caused losses and 22 percent of all death losses in the state. The value of losses attributed to coyotes was $759,000. The number of sheep and lambs lost to all predators totaled 21,800 head, down 5,200 head from last year. Lamb losses by all predators amounted to 17,700 head, down 21 percent from last year. The number of sheep lost to all predators totaled 4,100, down 500 head from a year ago.

The total value of non-predatory losses was $2.2 million in 1998, compared with $3.6 million the previous year. Non-predatory losses accounted for 58 percent of all losses. The largest non-predatory cause of losses were weather conditions at 10,000 head.

Sheep lost to non-predatory factors totaled 13,800 head, 22 percent lower than 1997. Non-predatory lamb losses came in at 24,900 head, 20 percent lower than a year ago.

Fewer producers reported sheep and lambs lost to unknown causes. This resulted in a 27 percent decrease in the number of sheep and lambs lost to unknown causes from last year. Lambs lost to unknown causes totaled 4,400 head, 1,900 head lower than 1997. Unknown causes claimed 2,100 sheep, 500 less head than last year. The value of sheep and lambs lost to unknown causes decreased $266,900 to $360,200.

1998 Montana and U.S. Wool Production Down

Montana wool growers produced 3.4 million pounds of wool during 1998, down 6 percent from 1997. The 1998 average price per pound of wool decreased 23 cents to 78 cents per pound, causing the value of all wool produced to decrease 27 percent from the previous year to $2.7 million. The total head shorn decreased 5 percent to 367,000 head. The average fleece weight dropped from 9.4 pounds in 1997 to 9.3 pounds in 1998.

Shorn wool production in the United States during 1998 was 49.2 million pounds, down 8 percent from 1997. Sheep and lambs shorn totaled 6.43 million head, a decrease of 8 percent from 1997. The average price paid for wool sold in 1998 was $0.60 per pound for a total value of $29.4 million dollars, down 35 percent from $44.9 million dollars in 1997.

Farms and Land in Farms for 1998

Montana's number of farms for 1998 was estimated at 27,500, up 500 from the 1997 revised estimate of 27,000 and land in farms is estimated at 57.5 million acres. The average size of farm is 2,091 acres.

The number of farms in the United States in 1998 is estimated at 2.19 million, up fractionally from 1997. Total land in farms is 953.8 million acres, down 2.2 million acres from last year. The decline in land in farms continues to follow historical 997 nds. The average farm size decreased 1 acre from 1997 to 435 acres.

The West Region showed the largest increase in number of farms, up 4,500 farms or 1.5 percent. The largest decrease was in the North Central Region with a loss of 3,500 farms or 0.4 percent.

Eleven States increased in farm numbers while 10 States decreased from a year ago. California showed the largest increase with 2,000 farms while Texas, Georgia, Washington, and Ohio showed increases of 1,000 farms from last year. Wisconsin, Minnesota, Michigan, Kentucky, Iowa, and North Carolina had decreases of 1,000 farms each.

Continued on back page.

Wheat and Barley Movement

Wheat shipped to out-of-state destinations during the June-November 1998 period, at 67.8 million bushels, was 21% higher than the same period last year.

Shipments of all wheat to eastern destinations totaled 1.7 million bushels, down 57% from the 3.9 million bushels last year. Movement to the west was 63.8 million bushels compared with 51.1 million from a year earlier. Other destinations, mostly to the south, received 2.3 million bushels up 90% from last year.

Rail movement amounted to 62.3 million bushels, 92% of total shipments, compared with 93% last year.

Barley shipped to out-of-state destinations, June-November 1998, was 9.9 million bushels, down 15% from the same period last year.

Eastern destination shipments totaled 2.5 million bushels up 11% from last year. Shipments to western destinations at 6.2 million bushels were down 25% from last years 8.3 million bushels. Shipments to other destinations were up from last year's 1.1 million bushels to 1.2 million bushels this year.

Barley hauled by rail was 85% of total movement down from 90% for the same period last year.

1/ Counties with less than 500 acres planted are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acres less winter wheat replanted to spring wheat.

Ag Prices Received for January

The Montana winter wheat average price was $2.68 per bushel, durum wheat was $3.17 per bushel, and spring wheat was $3.21 per bushel. Feed barley was $1.51, and malt barley was $2.92 per bushel.

The mid-February price for alfalfa hay was $64.00 per ton, down $6.00 from last month, and the other hay price of $57.00 decreased $1.00 from January. The mid-month winter wheat price averaged $2.70 per bushel, spring wheat was $3.30, feed barley price was $1.40, and malt barley $2.90.

Livestock prices for the full month of January mostly higher. Steer and heifer prices increased $3.10 to $74.50 per cwt. Cows were up $3.30 to $33.90 and the average price for calves increased $6.20 to $83.90 per cwt. Sheep prices decreased $3.30 to $29.40 per cwt and lambs increased $1.50 to $73.10 per cwt. Milk prices decreased $1.00 from last month to $16.60 per cwt. Steer and heifer prices for mid-February averaged $76.80 per cwt.

Nationally, prices for January and changes from December were as follows: winter wheat was $2.67, unchanged, spring wheat was $3.07, down 19 cents, the all barley price was $1.84, down 16 cents, steer and heifer prices were $62.20, up $1.90.

The U.S. mid-February winter wheat price was $2.52 per bushel, spring wheat was $3.07 per bushel, all wheat price was $2.72 per bushel, all barley was $1.94, steer and heifer prices were $63.20 per cwt, cow prices were $34.60, all hog prices were $28.10 per cwt, and market egg prices were 50.1 cents per dozen.

The All Farm Products Index of Prices Received in February was 96 based on 1990-92=100, down 1 point (1.0 percent) from January. Price decreases from January for milk, soybeans, tomatoes, and corn more than offset price increases for cattle, hogs, oranges, and potatoes. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. Higher seasonal marketings of milk, cattle, broilers, and eggs more than offset the relatively lower marketings of corn, soybeans, tobacco, and cotton. These seasonal marketing changes limited the decline in the overall index.

Compared with February 1998, the All Farm Products Index was 5 points (5.0 percent) lower. Price decreases from February 1998 for corn, soybeans, hogs, and wheat more than offset price increases for milk, oranges, broilers, and almonds.

United States Index Summary

INDEX 1990-92=100	Jan. 1998	Feb. 1998	Jan. 1999	Feb. 1999
Prices Received	103	101	97	96
Prices Paid, Interest, Taxes, & Farm Wage Rates 1/	117	117	115	115
Ratio 2/	88	86	84	83

1/ Prices paid indexes (1990-92=100) published monthly beginning January 1996. 2/ Ratio of index of prices received by farmers to index of prices paid.

Farms & Land in Farms

continued from front page.

Texas remained the State with the most farms at 226,000, up 1,000 from a year earlier. Missouri was second with 110,000 farms, the same as last year, followed by Iowa with 97,000 farms, down 1,000 from 1997.

Texas continued to lead the nation in land in farms and ranches with 131.5 million acres, unchanged from 1997. There were 13 States with decreases of 100,000 acres or more in agricultural land from a year ago.

The U.S. number of farms in the economic sales class between $1,000-$9,999 increased 1,150 farms during 1998 to 1,192,200. Those with sales in the $10,000-$99,999 class decreased 3,760 farms from 1997 to 642,200 in 1998. The $100,000 and over sales class increased 3,610 farms from 1997 to 357,110 farms in 1998. These changes in the sales class mix of farms continues the trend of losing farms in the $10,000-$99,999 sales class, while gaining farms in both the $1,000-$9,999 and the $100,000 and over sales classes.

1998 Honey Production

Montana's honey producers with five or more colonies produced 14.0 million pounds of honey in 1998, up 9 percent from the previous year. There were 115,000 colonies producing honey in 1998, compared with 107,000 colonies in 1997. The yield of honey per colony was 122 pounds per colony, a slight increase from the previous year's yield of 120 pounds per colony. Stocks on hand on December 15, 1998 totaled 5.5 million pounds, up 29 percent from 1997.

Prices for Montana honey averaged 64 cents per pound in 1998 compared with 74 cents per pound in 1997. The value of honey production in 1998 was 9.0 million dollars, down 6 percent from the 1997 honey crop.

Montana had the second highest yield per colony in the nation in 1998. Montana also ranked fifth in the nation in honey production and value of production, and seventh in the number of honey producing colonies.

The Nation's honey production in 1998 from producers with five or more colonies totaled 220 million pounds, up 12 percent from 1997. There were 2.63 million colonies producing honey in 1998, up slightly from 1997. Yield per colony averaged 83.7 pounds, up 9.0 pounds from the 74.7 pounds in 1997. Colonies which produced in more than one state were counted in each state and yields per colony may therefore be understated. Colonies were not counted if honey was not harvested. Producer honey stocks were 80.8 million pounds on December 15, 1998, up 14 percent from a year earlier.

Prices for the 1998 crop averaged 65.5 cents per pound, down 13 percent from 75.2 cents in 1997. Prices are based on retail sales by producers and sales to private processors and co-ops. At the state level, prices reflect the portions of honey sold through retail, co-op and private marketing channels. Co-op and private prices were lower for all color classes in 1998.

Red Meat Production
Potato Stocks
Milk Production
Farm Labor
Egg Production
Grazing Fee Rates

1998 Crop Values Fall

The value of Montana's 1998 all wheat crop fell more than 15 percent from 1997 to $554.3 million. Total production was down seven percent and the season average price dropped 27 cents per bushel. The 1998 season average price for all wheat was $3.35 per bushel compared with the 1997 price of $3.62.

The estimated value of Montana's winter wheat crop fell 26 percent from the previous year to $138.9 million. The lowest production since 1988 and a lower season average price resulted in the large decrease. Spring wheat's value of production, estimated at $367.2 million, was down 14 percent from 1997. The season average price fell 18 cents to $3.40 and the lower production reduced the total value of the crop. Durum wheat's season average price decreased $1.18 from 1997 to $4.00, but the total 1998 value of production, at $48.2 million bushels was up 23 percent from 1997. The 60 percent increase in production offset the lower price to increase the value of production.

Total value of production for barley was estimated at $129.6 million, down 25 percent from the previous year. The 1998 season average price, at $2.25, was down 58 cents from 1997. Lower production in 1998 and lower average price resulted in the lower production value.

The season average price for all hay decreased $5.50 from last year to $73.50 per ton. Lower production and price reduced the value of production 14 percent to $360.6 million. Alfalfa hay's 1998 season average price was estimated at $74.50, down $5.50 from last year while other hay's season average price decreased $5.00 to $64.00.

U.S. Cattle on Feed Down 3 Percent

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 10.50 million head on February 1, 1999. The inventory was 3 percent below February 1, 1998 but 2 percent above February 1, 1997.

Placements in feedlots during January totaled 1.92 million, 11 percent above 1998 and 2 percent above 1997. Net placements were 1.85 million. During January, placements of cattle and calves weighing less than 600 pounds were 379,000, 600-699 pounds were 623,000, 700-799 pounds were 599,000, and 800 pounds and greater were 322,000. Marketings of fed cattle during January totaled 2.02 million, 2 percent above 1998 and slightly above 1997. Other disappearance totaled 70,000 during January, 29 percent below 1998 and 24 percent below 1997.

1998 Alfalfa Seed Production

Alfalfa seed production for 1998 was estimated at 4.95 million pounds, up significantly from the 3.54 millions pounds produced in 1997. Harvested acres increased to 18,000, up from the revised 13,500 acres harvested in 1997. The acreage harvested during 1997 was revised upward after review of the Census of Agriculture information, but the production level was not changed. The state average yield was estimated at 275 pounds per acre, up from 262 pounds a year ago. Irrigated yields averaged 375 pounds per acre and non-irrigated yields averaged 110 pounds per acre.

Producers used an average of 1.3 gallons of leaf cutter bees per acre on all acres harvested for alfalfa seed in 1998, compared with 1.5 gallons per acre in 1997. The 1997 number was reduced because of revisions to harvested acres.

Proprietary varieties made up 60 percent of this year's production, down 12 points from 1997. Common uncertified varieties accounted for 40 percent of the production and common certified varieties represented less than 1 percent.

The average price received for the 1998 crop was $1.17 per pound, down 8 cents from 1997's average price.

Alfalfa Seed: Estimates by Agricultural Statistics Districts, 1998

District	TOTAL			IRRIGATED			NON-IRRIGATED

Montana and U.S. Red Meat Production

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during January 1999, up 18 percent from last year and 9 percent lower than last month. Cattle slaughter, at 1,600 head, was 100 head more than last year. The average live weight of 1,112 pounds decreased 25 pounds from a year ago.

There were 2,700 head of hogs slaughtered in Montana during January, up 1,100 head from a year ago. The average live weight, at 230 pounds, was up 22 pounds from last year. Sheep slaughter amounted to 200 head, 100 head more than a year ago. The average live weight of 127 pounds was one pound heavier than last year.

Commercial red meat production for the United States totaled 3.83 billion pounds in January, down slightly from the 3.84 billion pounds produced in January 1998. Beef production, at 2.17 billion pounds, was 1 percent above the previous year. Cattle slaughter totaled 2.96 million head, down 3 percent from 1998. The average live weight was up 23 pounds from the previous year, at 1,220 pounds.

Veal production totaled 17.0 million pounds, 26 percent below January a year ago and 23 percent below the previous record low for January set in 1993. Calf slaughter totaled 105 thousand head, down 18 percent from January 1998. The average live weight was 26 pounds below last year, at 279 pounds.

Pork production totaled 1.63 billion pounds, down slightly from the previous year. Hog kill totaled 8.55 million head, slightly below 1998. The average live weight was unchanged from the previous year, at 259 pounds.

Lamb and mutton production totaled 18.0 million pounds, down 14 percent from January 1998 and 10 percent below the previous record low for January set in 1997. Sheep slaughter totaled 268 thousand head, 13 percent below last year. The average live weight was 134 pounds, down 2 pounds from January a year ago.

Montana February Potato Stocks Down 3 Percent, U.S. Down 1 Percent

Montana potato producers held 2.89 million cwt. of potatoes in storage on February 1, down 3 percent from a year ago. The stocks represent 91 percent of the 1998 total production, compared with last year's stocks representing 90 percent of the 1997 total production.

Nationally, February 1, 1999 potato stocks totaled 211 million cwt, down 1 percent from a year ago and 7 percent below two years ago. Storage accounted for 50 percent of fall production, down 1 percentage point from a year ago. Stocks by type were 2 percent reds, 10 percent round whites, 3 percent long white, and 85 percent russets, with more russets and round whites but fewer long whites than a year ago.

U.S. disappearance from the start of harvest to February 1 totaled 214 million cwt this season, up 6 percent from last year but 2 percent below the record high two years ago. January disappearance of 35.1 million cwt was 3 percent above last year but down slightly from two years ago. Shrink and loss of 22.5 million cwt was up 16 percent from last year but 3 percent below two years ago.

Processing of 1998 crop potatoes so far this season totaled 108.1 million cwt, up 9 percent from the 1997 crop but 2 percent below the 1996 crop. In January, processors claimed a record 19.0 million cwt of potatoes, up 23 percent from last year and 14 percent above two years ago. The two month total (December and January) was up 14 percent from a year earlier.

Western States held 150.2 million cwt of potatoes in storage on February 1, 1999, down 2 percent from last year and 7 percent below 1997. Idaho's stocks were down 2 percent from a year ago, and Oregon's were off 1 percent. Colorado and California were down 5 percent each and Montana's storage was down 3 percent. Washington's stocks were the same as last year.

1998 Milk Cows, Farms And Production For Montana And U.S.

The inventory of milk cows on Montana farms averaged 18,000 head in 1998, down 1,000 head from a year ago. The average milk production per cow was 16,167 pounds, up 4 percent from last year. A total of 291 million pounds of milk was produced in 1998, 4 million pounds less then 1997. There were 700 Montana operations with one or more milk cows in 1998, 50 fewer than a year ago.

U.S. milk cows totaled 9.2 million head, down slightly from a year ago. The average milk produced per cow was 17,192 pounds, up 2 percent from last year. U.S. milk production was 157.4 billion pounds in 1998, 1.3 billion pounds more than 1997. There were 116,430 operations with milk cows in the U.S. during1998, a 6 percent decrease from the previous year.

Hired Workers Up 5 Percent, Wage Rates Up 4 Percent From A Year Ago

There were 844,000 hired workers on the Nation's farms and ranches the week of January 10-16, 1999, up 5 percent from a year ago. There were 689,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 155,000 workers. Migrant workers accounted for 5.7 percent of the January hired workforce compared to 7.3 percent last year.

Farm operators paid their hired workers an average wage rate of $7.90 per hour during the January 1999 survey week, up 29 cents from a year earlier. Field workers received an average of $7.21 per hour, up 22 cents from last January. Livestock workers earned $7.31 per hour compared with $6.97 a year earlier.

Hired farm worker wage rates in most regions were above a year ago. The largest increases occurred in the Appalachian I, Corn Belt II, and Mountain II (Colorado, Nevada, and Utah) regions. The higher wage rates in the Appalachian I and Mountain II regions were generally attributable to more maintenance and machinery work done on farms this year.

Regions showing the largest declines in hired worker wage rates from last year were Mountain III (Arizona and New Mexico), and Pacific. Milder temperatures in these regions allowed farmers to hire more seasonal workers in advance of regular springtime fieldwork.

December Egg Production Up 2 Percent

U.S. egg production totaled 7.01 billion during December 1998, up 2 percent from the 6.84 billion produced in 1997. Production included 5.93 billion table eggs and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 64.0 million were egg-type. The total number of layers during December 1998 averaged 320 million, up 3 percent from the total average number of layers during December 1997. December egg production per 100 layers was 2,190 eggs, down slightly from 2,193 eggs in December 1997.

Montana And United States Grazing Fees Up In 1998

The average grazing fees paid by Montana producers for grazing livestock on privately owned, non-irrigated grazing land were up for all methods in 1998. The average amount paid for grazing livestock on an AUM (animal unit month) basis was up 30 cents from 1997 to $12.60 per month. Cattle producers paid $14.30 per cow-calf pair in 1998, up 40 cents from the previous year. The average per head rate was $13.30 per month in 1998, up 10 cents from last year.

In the 17 States that estimate grazing fees in the United States, the average charge on an AUM basis was $11.40 per month in 1998, up 40 cents from the previous year. Cow-calf rates averaged $13.00 per month, up 30 cents and per head rates averaged $11.60 per month, up 80 cents from 1997.

All grazing fees are for privately, owned non-irrigated grazing land. Rates charged for public land, irrigated land, and harvested cropland were excluded. The average AUM rate also includes reported AUM rates plus reported cow-calf rates that were converted to an AUM basis. The cow-calf rate was converted to AUM basis using the following formula (1 AUM=cow-calf *0.833).

Chicken Inventory & Annual Egg Production

Montana January 1, 1999 Cattle and Calf Inventory Unchanged, US Down

Montana's cattle and calf inventory was 2.6 million head on January 1, 1999, unchanged from a year ago. While the total inventory was unchanged, the inventory of beef cows and beef cow replacements declined and other heifers, milk cow replacements, and bulls increased from last year.

The number of beef cows that had calved, at 1.532 million head, was down 1% from January 1, 1998. The number of milk cows in the state remained steady at 18,000 head. Beef heifer replacements, weighing 500 pounds or more, were down 3% from the previous year to 340,000 head. However, milk heifer replacements rose 25% from the previous year to 10,000 head and other heifers weighing 500 lbs or more, increased 7% from last year to 225,000 head. The decrease in beef heifer replacements can be attributed to the poor cattle prices received during the year. The increase in other heifers is partly due to many producers being undecided about whether to breed this years heifers or background and/or finish them.

Calves weighing less than 500 lbs, at 120,000 head, were unchanged from last year's record low calf inventory. Bulls weighing 500 pounds or more increased 3% to 100,000 head. During the past 10 years, bull inventories have continued to trend upward from the 78,000 bulls on hand in 1989. The number of cattle and calves on full feed that will be sent directly to slaughter were down 12% from 1998 to 70,000 head. Reduced cattle prices during the year and changes in ownership and contracts for some feedlots resulted in fewer or no cattle being fed compared with a year ago.

During 1998, 1.50 million calves were born in Montana, down 1% from 1997. Calving conditions were much improved over the last two years. The number of operations during 1998 with one or more head of cattle in the state rose 400 operations from 1997 to 14,000. The increase is a result of more operations with 1-49 head and 50-99 head. The number of beef cow operations rose from 1997 to 12,700, while the number of operations with one or more milk cows declined to 700.

In the United States, all cattle and calves on January 1, 1999, totaled 98.5 million head, 1% below the 99.7 million on January 1, 1998 and 3% below the 101.7 million two years ago. All cows and heifers that have calved, at 42.6 million, were 1% below the 43.1 million on January 1, 1998 and 3% below the 43.8 million two years ago. Beef cows, at 33.5 million, were down 1% from January 1, 1998 and 3% below two years ago. Milk cows, at 9.14 million, were down 1% from January 1, 1998 and 2% below two years ago.

Other class estimates on January 1, 1999, and the changes from January 1 last year and two years ago, respectively, are as follows:

-All heifers 500 pounds and over, 19.6 million, down 1% and down 3 %.

-Beef replacement heifers, 5.55 million, down 4% and down 8%.

-Milk replacement heifers, 4.06 million, up 2% and slightly above two years ago .

-Other heifers, 9.99 million, down 1% and down 2%.

-Steers weighing 500 pounds and over, 16.8 million, down 2% and down 3%.

-Bulls weighing 500 pounds and over, 2.28 million, slightly above and down 3%.

-Calves under 500 pounds, 17.2 million, down 1% and down 4%.

-All cattle and calves on feed for slaughter, 13.2 million, down 3 % and slightly above two years ago.

The 1998 U.S. calf crop was estimated at 38.6 million head, down 1% from 1997 and down 3% from 1996. Calves born during the first half of the year are estimated at 28.4 million, down 1% from 1997 and down 3% from 1996.

The number of operations with cattle in the United States totaled 1,115,650 during 1998, down 3% from 1997 and 5% below 1996. Operations with beef cows totaled 855,860 operations in 1998, down 2% from 1997 and 3% below 1996. Milk cow operations, at 123,700, were 6% below last year and 11% below two years ago.

SPECIAL THANKS to all livestock producers responding to our January cattle and sheep inventory surveys. Field and telephone interviewers contacted about 2,000 Montana farmers and ranchers in early January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

U.S. Cattle on Feed Down 5%

Cattle and calves on feed for slaughter market in the U.S. for feedlots with capacity of 1,000 or more head totaled 10.63 million head on January 1, 1999. The inventory was 5% below January 1, 1998 but 1% above January 1, 1997. The inventory included 6.44 million steers and steer calves, down 5% from the previous year. This group accounted for 61% of the total inventory. Heifers and heifer calves accounted for 4.14 million head, down 4% from 1998.

Placements in feedlots during December totaled 1.50 million, 4% below 1997 and 12% below 1996. Net placements were 1.41 million. During December, placements of cattle and calves weighing less than 600 pounds were 396,000, 600-699 pounds were 492,000, 700-799 pounds were 362,000, and 800 pounds and greater were 246,000. **Marketings** of fed cattle during December totaled 1.81 million, 4% above 1997 and 8% above 1996. **Other disappearance** totaled 85,000 during December, the same as 1997 but 1% below 1996.

PLEASE RETU

Agricultural Prices Received for December

The Montana winter wheat average price increased 9 cents from November 1998 to $3.18 per bushel, durum wheat increased 60 cents to $4.36 per bushel, and spring wheat increased 17 cents to $3.62 per bushel. Feed barley was up 13 cents per bushel to $1.49, and malt barley was down 10 cents to $2.82 per bushel.

The mid-January price for alfalfa hay was $70.00 per ton, the same as last month, and the other hay price of $58.00 decreased $3.00 from December. The mid-month winter wheat price averaged $3.10 per bushel, spring wheat was $3.50, feed barley price was $1.45, and malt barley $2.80.

Livestock prices for the full month of December were mixed. Steer and heifer prices increased 40 cents to $71.40 per cwt. Cows were up 50 cents to $30.60 and the average price for calves increased $1.30 to $77.70 per cwt. Sheep prices increased $7.20 to $32.70 per cwt and lambs increased $3.00 to $71.60 per cwt. Milk prices increased 60 cents from last month to $17.60 per cwt. Steer and heifer prices for mid-January averaged $73.50 per cwt.

Nationally, prices for December and changes from November were as follows: winter wheat was $2.67, down 11 cents, spring wheat was $3.26, unchanged, the all barley price was $2.00, down 2 cents, steer and heifer prices were $60.30, down $2.00.

The U.S. mid-January winter wheat price was $2.71 per bushel, spring wheat was $3.20 per bushel, all wheat price was $2.86 per bushel, all barley was $1.99, steer and heifer prices were $62.40 per cwt, cow prices were $33.10, all hog prices were $25.70 per cwt, and market egg prices were 58.2 cents per dozen.

The All Farm Products Index of Prices Received in January was 98 based on 1990-92=100, down 1 point (1.0 percent) from December. Price increases from December for hogs, tomatoes, cattle, and oranges more than offset price decreases for turkeys, milk, lettuce, and broilers. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. Lower seasonal marketings of cotton, milk, tobacco, and cottonseed more than offset the relatively higher marketings of corn, soybeans, cattle, and rice. These seasonal marketing changes more than offset an increase in prices and accounted for the one point decline in the overall index.

Compared with January 1998, the All Farm Products Index was 5 points (4.9 percent) lower. Price decreases from January 1998 for corn, soybeans, hogs, and cattle more than offset price increases for milk, broilers, oranges, and tomatoes.

UNITED STATES INDEX SUMMARY

January 1, 1999 Sheep and Lamb Inventory Down

Montana's sheep and lamb inventory set a new record low at 380,000 head, down 8% from last year. Low prices, predators, and an overall depressed market in 1998 were key factors in the continued decline.

Breeding sheep and lamb numbers decreased 40,000 head from last year to 345,000 head. Ewes one year and older were down 14% to 270,000 head. Rams one year and older at 9,000 head, were 10% less than the previous year. Replacement lambs at 66,000 head were up 6,000 head from a year ago. The 1998 lamb crop was 355,000 head, a drop of 7% from January 1, 1997.

There were 35,000 market sheep and lambs on hand January 1 – all but 1,000 head were market lambs. Of the total market lambs, 6% weighed less than 65 pounds, 18% weighed 65-84 pounds, 58% were in the 85-105 pound category, and 18% were over 105 pounds. There were 2,000 sheep and lamb operations in Montana during 1998, 100 less than a year ago.

All sheep and lamb inventory in the United States on January 1, 1999, totaled 7.24 million head, down 8% from 1998 and 10% below two years ago. Inventory has declined since 1942 when it reached a peak of 56.2 million head.

Breeding sheep inventory declined to 5.31 million head on January 1, 1999, down 5% from January 1, 1998's 5.61 million head. Ewes one year old and older, at 4.34 million head, were 5% below last year.

Market sheep and lambs on January 1, 1999, totaled 1.92 million head, down 13% from January 1, 1998. Market lambs comprised 96% of the total. Twenty-six% were lambs under 65 pounds, 17% were 65 - 84 pounds, 27% 85 - 105 pounds, 26% were over 105 pounds, and 4% were market sheep.

The 1998 lamb crop of 5.01 million head was down 6% from 1997. This compares with the previous record low of 5.36 million head set a year ago. The 1998 lambing rate was 110 per 100 ewes one year old and older on January 1, 1998, compared with 109 in 1997.

The number of operations with sheep during 1998 totaled 68,810, down 5% from 1997 and 10% from 1996.

December U.S. Egg Production Up 2%

U.S. egg production totaled 7.01 billion during December 1998, up 2% from the 6.84 billion produced in 1997. Production included 5.93 billion table eggs and 1.07 billion hatching eggs, of which 1.01 billion were broiler-type and 64.0 million were egg-type. The total number of layers during December 1998 averaged 320 million, up 3% from the total average number of layers during December 1997.

Continued on back page

Montana Egg Production Down Five Percent

Montana chickens produced 84 million eggs during the year ending November 30, 1998, down 5% from last year. The state had an average of 290,000 layers in 1998, compared to 294,000 the previous year. The average production per layer on hand was 290 eggs, down 3% from a year ago.

There were 380,000 total chickens on Montana farms and ranches on December 1, 1998, compared with 405,000 on hand last year. The December 1, 1998 inventory included 290,000 layers 20 weeks old and older, 24,000 pullets between 13 and 20 weeks old, and 65,000 pullets 13 weeks and under. The total value of all chickens on December 1, 1998, was $1.10 million, down 15% from the previous December. The average value per bird was down 9% from last year, from $3.20 to $2.90.

U.S. egg production during the year ending November 30, 1998 totaled 79.7 billion eggs, up 3% from the previous year's total of 77.5 billion eggs. Table egg production, at 67.3 billion eggs, increased 3% from 1997. Hatching egg production, at 12.4 billion eggs, increased 3%. U.S. layer numbers during 1998 averaged 312 million, up 3% from the year earlier. The annual average production per layer on hand in 1998 was 256 eggs, compared with the 1997 average of 255 eggs per layer.

The total number of chickens on hand on December 1, 1998 (excluding commercial broilers) was 424 million birds, up 3% from last year. Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 1998, totaled 360 million, up 4% from December 1, 1997. Of the 360 million potential layers, 89% were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks.

The total value of all chickens on December 1, 1998 was $1.14 billion, up 2% from December 1,1997. The average value decreased from $2.72 per bird on December 1, 1997 to $2.69 per bird on December 1, 1998.

December U.S. Egg Production ...continued from page 2

December egg production per 100 layers was 2,190 eggs, down slightly from 2,193 eggs in December 1997.

All layers in the U.S. on January 1, 1999, totaled 319 million, up 2% from a year ago. The 319 million layers consisted of 261 million layers producing table or commercial type eggs, 56.0 million layers producing broiler-type hatching eggs, and 2.70 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1999, averaged 70.3 eggs per 100 layers, down fractionally from the 70.4 a year ago.

Laying flocks in the 30 major egg production states produced 6.61 billion eggs during December, up 2% from December 1998. The average number of layers during December, at 302 million, was up 2% from a year earlier.

Annual Crop Production -- 1998

Dry conditions during the fall of 1997 led winter wheat producers to plant the smallest acreage since 1941. Montana's 1998 winter wheat production was estimated at 48.75 million bushels, down 12% from 1997 and the lowest production since the severe drought of 1988. The 1998 average yield was 39 bushels per ac[illegible] which was 1 bushel more than last year's average and was fourth highest on record.

Poor prices and low moisture conditions in the fall of 1998 caused Montana winter wheat producers to seed the smallest winter wheat crop since 1937. Winter wheat seeding for 1999 harvest totaled 1.05 million acres, down 25 percent from last year's 1.4 million acres. Current moisture conditions are generally good, but the lack of snow cover is a concern to producers.

Spring wheat production was estimated at 108 million bushels, down 9% from last year, but the third largest crop on record only behind 1995 and 1997 production. The seeded acreage was 3.8 million acres, 450,000 acres less than 1997 and the smallest acreage seeded since 1994. Yields averaged 30 bushels per acre, up 1 bushel from 1997, but 1.4 bushels below the last five-year average which includes the exceptional yields produced in 1993 and 1995 in North Central Montana.

[illegible]ontana durum wheat growers planted 450,000 acres and harvested 430,000 acres, both significantly higher than last year and the largest planted acreage since 1981. The average yield was 28.0 bushels per acre, 2 bushels more than last year. Total production was estimated at 12.04 million bushels, up nearly 60 percent from last year and the largest durum production since 1956.

Barley planted acreage in Montana was estimated at 1.35 million acres, up 100,000 acres from 1997. Harvested acreage was estimated at 1.2 million acres, up 50,000 acres from last year. Average yields were set at 48 bushels per acre, down 5 bushels from last year. Total production was estimated at 57.6 million bushels, down 5 percent from last year.

Oat production was estimated at 3.24 million bushels, down 16 percent from last year. Planted acres, at 140,000, were unchanged from last year while harvested acres were down 10,000 acres and estimated at 60,000 acres. Yields averaged 54 bushels per acre, down 1 bushel from last year.

Montana producers harvested 18,000 acres of corn for grain in 1998, up 4,000 acres from last year. The average yield was 115.0 bushels per acre, down 20 bushels from last year. Production increased 10 percent from 1997 to 2.07 million bushels. Corn for silage acreage was estimated at 41,000 acres, down 4,000 acres from 1997. Yields averaged 21 tons per acre, the same as a year ago.

Sugar beet producers in Montana harvested an estimated 62,400 acres this year, up 4,100 acres from a year ago. Yields increased 1.6 tons from last year to average 22.6 tons per acre. Total production was estimated at 1.41 million tons, up 15 percent from the previous year, setting a new production record.

Montana dry bean growers produced an estimated 266,000 cwt in 1998, up 9,000 cwt from 1997 and the highest production since 1947. Growers harvested 12,200 acres with a yield of 21.8 cwt per acre compared with last year's 11,700 acres harvested with a yield of 22.0 cwt per acre.

Fall potato production in Montana totaled 3.18 million cwt, down 4 percent from last year. Producers harvested 10,600 acres compared with 10,400 in 1997. Yields decreased 20 cwt per acre from a year ago to 300 cwt.

All hay harvested in Montana was down 100,000 acres from last year at 2.5 million acres. All hay production was 5.02 million tons down 8 percent or 460,000 tons from a year ago. Alfalfa hay harvested acreage was 1.70 million acres, up 50,000 acres from last season. The average yield was 2.2 tons per acre compared with 2.4 tons per acre in 1997. Other hay harvested acreage was 800,000 and the average yield was 1.6 tons per acre, the same as last year. Montana hay stocks were estimated at 4.57 million tons on December 1, down 9 percent from last year. Montana hay growers seeded an estimated 130,000 acres of alfalfa during 1998, 20,000 acres less than last year. New seedings include those mixed with a nurse crop, other forage, or direct seedings.

1998 Sweet Cherry Production

Montana production of sweet cherries in 1998 was estimated at 2,050 tons, up 950 tons from last year's crop. This year's crop was larger than previous years and some trees that were replanted after the 1989 freeze are coming into production. Utilized production totaled 1,890 tons. The average price was $1,080 per ton, up $126 from a year ago.

U.S. sweet cherry production in 1998 was estimated at 209,700 tons, down 7 percent from 1997. Utilized production totaled 206,610 tons. The U.S. average price was $1,090 per ton, down $160 from a year ago.

Montana and U.S. Red Meat Production Up

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during December 1998, up 12 percent from last year and 6 percent higher than last month. Cattle slaughter, at 1,600 head, was unchanged from last year. The average live weight of 1,137 pounds increased 14 pounds from a year ago.

There were 2,300 head of hogs slaughtered in Montana during December, up 500 head from a year ago. The average live weight, at 230 pounds, was up 18 pounds from last year. Sheep slaughter amounted to 300 head, unchanged from a year ago. The average live weight of 119 pounds was three pounds lighter than last year.

Commercial red meat production for the United States totaled 3.94 billion pounds in December, up 6 percent from the 3.71 billion pounds produced in December 1997 and up 6 percent from the previous record high for December set in 1994. Beef production, at 2.10 billion pounds, was 4 percent above the previous year. Cattle slaughter totaled 2.90 million head, up 1 percent from 1997. The average live weight was up 21 pounds from the previous year, at 1,214 pounds.

Veal production totaled 22.0 million pounds, 17 percent below a year ago and 8 percent below the previous record low for December set in 1973 and 1993. Calf slaughter totaled 130 thousand head, down 10 percent from December 1997. The average live weight was 22 pounds below last year, at 279 pounds.

Pork production totaled 1.80 billion pounds, up 10 percent from the previous year and 10 percent higher than the previous record high for December set in 1994. Hog kill totaled 9.43 million head, 9 percent above 1997. The average live weight was unchanged from the previous year, at 260 pounds.

Lamb and mutton production, at 23 million pounds, was up 1 percent from December 1997. Sheep slaughter totaled 355 thousand head, 2 percent above last year. The average live weight was 132 pounds, down 4 pounds from December a year ago.

January - December red meat production was 45.1 billion pounds, 4 percent higher than the comparable figure a year earlier. Accumulated beef production was 1 percent higher than last year, veal was down 22 percent, pork was up 10 percent, and lamb and mutton was down 3 percent.

Montana January Potato Stocks down 3 Percent, U.S. down Only Slightly

Montana potato producers held 2.98 million cwt. of potatoes in storage on January 1, down 3 percent from a year ago. The stocks represent 94 percent of the 1998 total production, compared with last year's stocks representing 93 percent of the 1997 total production.

January 1, 1999 U.S. potato stocks totaled 246 million cwt, down slightly from a year ago and 6 percent below two years ago. Storage accounted for 58 percent of fall production, down 2 percent from a year ago. Stocks by type were 2 percent reds, 10 percent round whites, 4 percent long white, and 84 percent russets, with more russets but fewer long whites than a year ago.

Disappearance from the start of harvest to January 1 totaled 179 million cwt. this season, up 7 percent from last year but 2 percent below the record high two years ago. December disappearance of 36.1 million cwt was record high for the month. Shrink and loss of 20.0 million cwt was up 12 percent from last year but 4 percent below two years ago.

Processing of 1998 crop potatoes so far this season totaled 91.3 million cwt, up 9 percent from the 1997 crop but 3 percent below the 1996 crop. In December, processors claimed 18.1 cwt of potatoes, up 19 percent from last year and 15 percent above two years ago.

Western States held 173 million cwt of potatoes in storage on January 1, 1999, down 1 percent from last year and 5 percent below 1997. Idaho stocks were down 1 percent from a year ago, while Oregon was off 8 percent. Colorado and Montana were down 4 and 3 percent. Washington was up 5 percent and California gained 4 percent from a year ago.

Montana Quarterly Milk Production and U.S. December Milk Production Up

During the October-December quarter, Montana milk cows produced 73 million pounds of milk, 3 million pounds more than the same quarter a year ago. Montana milk cow numbers, at 18,000 head were unchanged from a year ago.

Milk production in the 20 major States during December totaled 11.4 billion pounds, up 3.0 percent from production in these same States in December 1997. November revised production, at 10.9 billion pounds was up 2.7 percent from November 1997.

Production per cow in the 20 major States averaged 1,478 pounds for December, 40 pounds above December 1997. The number of cows on farms in the 20 major States was 7.74 million head, 12,000 head more than December 1997 but 1,000 head less than November 1998.

During the October - December period, milk produced in the U.S. was 39.1 billion pounds, 2.4 percent above the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 9.19 million head, 12,000 head less than the same period last year.

Winter Wheat Seedings for Harvest in 1999 Smallest Since 1937

Poor prices and low moisture conditions last fall caused Montana winter wheat producers to seed the smallest winter wheat crop since 1937. Winter wheat seeding totaled 1.05 million acres, down 25 percent from last year's 1.4 million acres. Current moisture conditions are generally good, but the lack of snow cover is a concern to producers.

Nationally, winter wheat seeded area for 1999 is expected to total 43.4 million acres, down 7 percent from 1998. This is the smallest area since 1972. Class breakdowns approximate: Hard Red Winter, 30.9 million; Soft Red Winter, 9.0 million; White Winter, 3.5 million.

Hard Red Winter (HRW) wheat seeded area is about 30.9 million acres, down 5 percent from 1998. Most HRW states have planted less wheat. Nebraska and Texas are notable exceptions; Minnesota and New Mexico also have increased. In the rest of the Great Plains up into Montana, the declines total more than 1.6 million acres.

Arizona and California durum wheat seeded area for 1999 harvest is placed at 190,000 acres. This total is down 42 percent from their final 1998 planting. Seeding had made good progress in California's San Joaquin Valley during October into early November. Seeding in the Imperial Valley started in late November delayed by late vegetable harvests.

1998 Late Season Crops

Montana producers harvested 18,000 acres of corn for grain in 1998, up 4,000 acres from last year. The average yield was 115.0 bushels per acre, down 20 bushels from last year. Production increased 10 percent from 1997 to 2.07 million bushels. Corn for silage acreage was estimated at 41,000 acres, down 4,000 acres from 1997. Yields averaged 21 tons per acre, the same as a year ago.

Nationally, corn for grain production was estimated at 9.76 billion bushels, up 6 percent from the 1997 crop, but down 1 percent from the November 1 forecast. The 1998 production ranks second behind the 10.1 billion bushels produced in 1994. The U. S. yield of 134.4 bushels per acre was up 7.7 bushels from a year earlier.

Sugar beet producers in Montana harvested an estimated 62,400 acres this year, up 4,100 acres from a year ago. Yields increased 1.6 tons from last year to average 22.6 tons per acre. Total production was estimated at 1.4 million tons, up 15 percent from the previous year, setting a new production record.

U.S. sugar beet production is estimated at 32.7 million tons, 9 percent above the 1997 final production estimate, and 1 percent above the November 1 forecast. This is the largest production on record, 3 percent above the previous record of 31.9 million tons set in 1994. Harvested acres in the 12 sugar beet producing states is estimated at 1.45 million acres, 2 percent above 1997, but 4,600 acres below the November 1 forecast. Yield is estimated at a record 22.5 tons per acre, 0.2 ton above November 1 and 0.1 ton above the previous record set in 1981 and tied in 1987.

Montana dry bean growers produced an estimated 266,000 cwt in 1998, up 9,000 cwt from 1997 and the highest production since 1947. Growers harvested 12,200 acres with a yield of 21.8 cwt per acre compared with last year's 11,700 acres harvested with a yield of 22.0 cwt per acre.

U.S. production of dry edible beans is estimated at 30.8 million cwt for 1998, 5 percent above 1997 and 9 percent above two years ago. Area for harvest is estimated at 1.91 million acres, up 9 percent from both 1997 and 1996. The average yield, at 1,611 pounds per acre, dropped 59 pounds from 1997.

Fall potato production in Montana totaled 3.18 million cwt, down 4 percent from last year. Producers harvested 10,600 acres compared with 10,400 in 1997. Yields decreased 20 cwt per acre from a year ago to 300 cwt.

Total U.S. 1998 potato production from all four seasons is estimated at 478 million cwt, up 2 percent from 1997 but 4 percent below 1996. Harvested area, at 1.39 million acres, was up 3 percent from 1997. Average yield of 343 cwt per acre was down 2 cwt from the previous year.

All hay harvested in Montana was down 100,000 acres from last year at 2.5 million acres. All hay production was 5.02 million tons down 8 percent or 460,000 tons from a year ago. Alfalfa hay harvested acreage was 1.70 million acres, up 50,000 acres from last season. The average yield was 2.2 tons per acre compared with 2.4 tons per acre in 1997. Other hay harvested acreage was 800,000 and the average yield was 1.6 tons per acre, the same as last year.

U.S. all hay production for 1998 was estimated at 151 million tons, down sightly from the October 1 forecast and 1 percent below the 1997 total. Acreage harvested, at 60.0 million acres, is essentially unchanged from the October forecast and 2 percent below 1997. The average yield, at 2.52 tons per acre, was 1 percent below the October forecast and 1 percent above the previous year. Continued on back.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 2,500 Montana farmers and ranchers during December. Names were selected on a statistical probability basis. **Special thanks** to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

December 1, 1998 Grain Stocks

All wheat stocks in Montana on December 1, 1998 totaled 160.5 million bushels, up 8% from the same quarter last year. Stocks stored on the farm accounted for 135.0 million bushels of the total with the remaining 25.5 million bushels stored off farm. All spring wheat stocks, at 108.3 million bushels, was up 7% from last year and accounted for 67% of the total wheat stocks. Winter wheat stocks were estimated at 52.2 million bushels, up from 48.4 million bushels last year. Durum wheat stocks were estimated at 9.4 million bushels, up 68% from last year. All wheat disappearance for the September - November quarter was 41.2 million bushels, compared with 40.1 million for the same quarter last year. Barley stocks in all positions on December 1, 1998 totaled 40.1 million bushels, up 10 percent from a year ago. Oats stocks in all positions were estimated at 2.72 million bushels, down 22% from last year.

September 1, 1998 all wheat stocks were revised to 201.7 million bushels, up 1.7 million bushels from the previous estimate. The revisions were in off farm stocks with winter wheat up 1.9 million bushels to 13.5 million bushels and all spring wheat down 200,000 bushels to 17.2 million bushels. Barley stocks were also revised to 50.8 million bushels, 500,000 bushels above the previous estimate. Oats stocks were revised down by 10,000 bushels to 3.18 million bushels.

Nationally, all wheat in all storage positions on December 1, 1998 totaled 1.89 billion bushels, up 17 percent from a year ago to the biggest December inventory since 1990. Farm stocks are 680 million bushels and off-farm stocks equal 1.21 billion bushels. The farm number is up 13 percent, while the off-farm stocks are up 19 percent. The indicated second quarter disappearance of 494 million bushels is up 8 percent from the same period in 1997. Durum wheat stocks in all positions December 1, 1998 totaled 109 million bushels, up 62 percent from a year ago. Like all wheat, this is the biggest December inventory since 1990. Farm stocks, at 75.3 million bushels, are more than double those of 1997. Off-farm stocks are 34.0 million bushels, up12 percent. The indicated second quarter disappearance of 16.6 million bushels was down 19 percent from the same period a year earlier. Barley stocks in all positions on December 1, 1998 totaled 262 million bushels, up 8 percent from a year ago. Of the total barley stocks on hand, 141 million bushels were stored on farms, 5 percent above a year ago. December 1, 1998 off-farm stocks, at 122 million bushels, were 11 percent above last year. Indicated disappearance during the September-November quarter totaled 63.7 million bushels, 23 percent below the same period a year earlier.

See the District table on the back page.

1/ Terminals, mills, interior elevators. 2/ Montana stocks for winter wheat and all spring wheat are made possible through funds provided by the Montana Wheat & Barley Committee. 3/ Included in all spring wheat and all wheat. 4/ Not included in order to avoid disclosing individual operations. * Revised.

Agricultural Prices Received for November

The Montana winter wheat average price increased 6 cents from October 1998 to $3.09 per bushel, but durum wheat decreased 26 cents to $3.76 per bushel, and spring wheat decreased 5 cents to $3.45 per bushel. Feed barley was up 5 cents per bushel to $1.36, and malt barley rose 28 cents to $2.92 per bushel.

The mid-December price for alfalfa hay was $70.00 per ton, down $4.00 from last month, and the other hay price of $61.00 decreased $1.00 from November. The mid-month winter wheat price averaged $2.90 per bushel, spring wheat was $3.50, feed barley price was $1.35, and malt barley $2.80.

Livestock prices for the full month of November were mixed. Steer and heifer prices increased $1.70 to $71.00 per cwt. Cows were down $1.30 to $30.10, but the average price for calves increased 60 cents to $76.40 per cwt. Sheep prices increased 70 cents to $25.50 per cwt and lambs increased $1.60 to $68.60 per cwt. Milk prices increased 30 cents from last month to $17.00 per cwt. Steer and heifer prices for mid-December averaged $72.00 per cwt.

The U.S. average price for all wheat was $2.97 per bushel for the entire month of November, up 18 cents from October. The all arley price was $2.02, up 16 cents from the previous month. Steer and heifer prices for the U.S. were up 90 cents to $62.30 per cwt.

The U.S. mid-December all wheat price was $2.90 and all barley was $1.96 per bushel; steer and heifer prices were $59.40, ow prices were $29.70, and all hog prices were $14.70 per cwt; market egg prices were 63 cents per dozen.

The All Farm Products Index of Prices Received in December was 98 based on 1990-92=100, down 2 points (2.0 percent) from November. Price decreases from November for cattle, hogs, broilers, and soybeans more than offset price increases for eggs, milk, tomatoes, and corn. The seasonal changes in the mix of commodities farmers sell also affect the overall index level, however, these changes were essentially offsetting in December.

Compared with December 1997, the All Farm Products Index was 7 points (6.7 percent) lower. Price decreases from December 1997 for hogs, cattle, corn, and soybeans more than offset price increases for milk, broilers, oranges, and tomatoes.

United States Index Summary

INDEX 1990-92=100	Nov. 1997	Dec. 1997	Nov. 1998	Dec. 1998

1/ Composite of steers, heifers, and cows. 2/ Mid-month prices for sheep and lambs discontinued January 1996.

Late Season Crops (Continued from front page)

Production of dry peas in Idaho, Montana, Nevada, North Dakota, Oregon, and Washington in 1998 is estimated at 5.93 million cwt, 3 percent more than 1997's production and more than double the 1996 crop. Growers in Montana and North Dakota continue to seed more dry peas while dry pea acres in Idaho and Washington were both below 1997.

Production of lentils in Idaho, Montana, North Dakota, and Washington is estimated at 1.94 million cwt, down 19 percent from the 1997 crop. Harvested area is estimated at 158,500 acres, 24,500 acres less than 1997. Average yield per acre is 1,223 pounds, 92 pounds below last year

Montana and U.S. Hay Stocks

Montana hay stocks were estimated at 4.57 million tons on December 1, down 9 percent from last year. Montana hay growers seeded an estimated 130,000 acres of alfalfa during 1998, 20,000 acres less than last year. New seedings include those mixed with a nurse crop, other forage, or direct seedings. At the U.S. level 3.55 million acres of alfalfa was newly seeded in 1998.
